Game protection as it stands to-day is a by-word and a reproach to all those outside of a lunatic asylum. There is not one man out of ten thousand who deliberately or ignorantly infringes the game laws that is brought up with a round turn and made to pay the penalty for his selfish misconduct. Gallons of ink are wasted every year in discussing the subject, but until country squires are bred with thicker blood in their veins and stiffer spines the great majority of appeals to them will end in a farce. Cringing in face of their duty, from either an idiotic fear of having their barns and hay ricks burned down, their stock "pizened," or not "likin' to go agin a neighbor," they listen in owlish solemnity to indisputable charges. For show's sake they appeal to their better halves "to find out them law books" which have been mislaid. After a tedious delay, during which the law-breaker avails himself of the opportunity of decamping for parts unknown, the bound statutes are forthcoming, only to be thumbed and stared at and finally closed. The flat then goes forth "that it ain't no case." That settles it.

Or else the local constable (generally the boss poacher of the place) is hunted up and employed to arrest "them gunners who has been shootin' them birds that oughtn't." If they are city men the chances of a capture within the Statelines is extremely remote, while should the law-breakers be to the manner born they are let off, or, should the charges be forced to trial, they have the pleasure of being tried by twelve of their peers who knock off business for the day for what they generally see fit to call a "picnic," and after the acquittal of the wrong-doer the till of the village barroom reaps a harvest of dimes and the informing sportsman is execrated, and, if wise, "takes out." All this in the face of great inconvenience and some expense is apt to dishearten the most resolute or Quixotic game protectionist, and it is ten to one this experience in county law is his first and last, and for the rest of his sporting life he creepeth not out of his shell.

Baited Ponds.

In those places in the marshes and tule lands where game preserves are kept by shooting clubs, it is now the custom to bait the ponds. To do this wheat is scattered about on the surface and sinks in the shoal water where the ducks find it. At the early part of the season a yacht which was sent up with the boats, traps, etc., of a shooting club, took a ton and a half of wheat for this purpose. Periodically, wheat is scattered about on the ponds for the purpose indicated and it serves to keep the ponds attractive to the wild game. The birds will flock on to these baited ponds when they neglect those which have not been so prepared, so it pays to carry out the practice. The gamekeepers find it advisable also to cut ditches in the summer to let the water into the ponds so as to be sure of the natural feed in the ponds being renewed. Some seasons in a large section of swamp land the natural feed does not seem to grow and the ducks will desert such places for localities where there is more feed. But hunters who care to take the trouble can always prevent their ponds being barren by seeing that the water is allowed to flood them at the proper season.

All such things are now attended to by the keepers in the various game preserves, so that the gentlemen who belong to the clubs are assured of good sport, by enticing to their ponds, by means of abundance of food, flocks of game which might otherwise scatter about.

With the advent of the ducks and the rain comes the demand for rubber boots. The perfect rubber covering for hunting purposes is yet to be invented.

A HUNTING PARTY.—Mr. C. W. Kellogg, W. R. Bashford, Wm. Anderson and Geo. Schareff went out on a hunting and camping expedition last week. They camped on the Ralston ranch near San Gregorio, San Mateo county, where quail were found to be plentiful. In two days' shooting the party bagged seven dozen quail beside other game. The birds were very shy and hard to approach when on open ground, flying quickly to the brush on the least sound of the footfall of the hunters. There are a few deer on the Ralston ranch and other ranches in the vicinity but as the farmers allow only their friends to hunt on these farms the animals are seldom disturbed. The tent was pitched near the Corte Madera creek and the campers had some very good sport with their fishing tackle as the trout in that stream are of good size and take the bait in a manner that makes the sport interesting. One very large trout was caught that weighed over four pounds. As this fish was marked different from any of the others that had been caught it is supposed that it is one that was put in the McCloud river some time ago. Wherever it came from it is a perfect beauty. The party returned last Saturday having been out four days.

Since the rains ducks have put in their appearance in many localities. So far this year there has not been more than five canvas backs killed, although several large flocks have been seen but like most of the migratory birds seen this season, they are traveling towards the south. Sprig have been shipped to this market from the north and are quite as plentiful as any other wild fowl. Most all of the quail come from the lower counties; Bakersfield supplies San Francisco with the most, but a great many, too, come from Los Angeles. Up to the present time game of all kinds has been very scarce in this market and consequently the prices very high. The market hunters have been in their glory as they set their own figures for their game; two hunters in one of the northern counties have sent, since the opening of the season, over \$800 worth of game, mostly ducks, to San Francisco; they have made buy while the sun shone, but since the wet weather the prospect is that there will be more hunters, more game and lower prices.

A gentleman of considerable experience and observation says that "many persons are mistaken in the idea that rain is all that is necessary to bring ducks and wild fowl from the north." We have had plenty rain but the birds have not come in very plentifully yet; who ever heard of ducks that were afraid of water? What does start the birds from the north is the cold weather, as they can generally find good feeding grounds until the frosts come and freeze the marshes or form a coat of ice on the lakes and ponds; then the wild fowl migrate to warm climes. We have had earlier rains this year but the hunting this season is far behind that of last, as last year though the rains were much later, the frosts were much earlier and the ducks more plentiful.

Game of all kinds is very plentiful in the vicinity of Webber and Independence lakes. Those who would like large game can have all they want as there are a great many deer and bear; the latter make sad havoc among the live stock, especially the sheep. Grouse are also found here in large numbers. These birds are in good condition, of fine flavor and average about one half size larger than quail. The snow that frequently falls at this time of the year makes the hunting very interesting as the game can be easily tracked.

The rains have brought the ducks down into the lower bays, and over on the flats on the opposite side of the bays several large flocks have been seen. They are mainly coarse ducks, not generally considered edible, but the good ones come with them. It will not be long now before we see large flocks in the bays. Then the "fights" will begin—the regular "fights" morning and evening when so many hundreds of ducks are bagged by hunters.

The first canvasback of the season was killed at Knight's Landing and sent to Chas. Kaeding, of the firm of Liddle & Kaeding. It was not in good condition, but Mr. K. says that the old bird brought along the flavor, and he feels flattered with eating the first bird of the season.

Several hunting parties left for the tules and Contra Costa county hills in search of game Saturday. Those who went across the straits, report having met with pretty good luck, some getting two dozen quail each. The report from the duck hunters was not very favorable.

The trustees of the cemetery at Yreka have been annoyed by some hunters that are too lazy to scout the hills and have been shooting quail within the limits of the "city of the dead." Notice has been given prohibiting any more hunting in the cemetery.

We hear one of the shooting clubs is talking of a steam launch to be used for hunting purposes. In going about among the sloughs a steam launch is sometimes handy; but not very much slough hunting is done.

The shooting on the Tule Bell Club grounds, we hear is still poor, but the members expect that the last storms, will bring the duck down. Last year they had the best shooting in the marshes for over three months.

Messrs. Liddle and Brown were out hunting last Sunday and bagged over one hundred quail, and say there is excellent shooting in that neighborhood, but will not say where that place is.

Messrs. Colby and Smith, on Monday and Tuesday, at their ponds at Courtland, killed nearly five hundred sprig-tail, widgeon, teal and mallard; these men are hunting for the market.

Last week Mr. Lambert bagged, in one day's shooting near Courtland, two hundred fine widgeon. Courtland is an unhealthy place for wild fowl.

In Mendocino county panthers, wild-cats and "varmints" are very numerous in the woods near the coast, having been driven there by the recent fires.

A Mr. Williams residing near Cloverdale killed a buck last week which he claims is the largest of the season. He weighed 200 pounds.

During a three days' deer hunt in the southern portion of Monterey county recently twenty-seven deer were slaughtered.

Messrs. Davis and Bennett killed some three dozen quail in the vicinity of Sanelito, last Sunday.

A buck weighing 161 pounds was killed in an alfalfa patch near Amador last week.

Quail are reported plentiful in the Pacheco hills between Gilroy and Los Banos.

Game is reported plenty in the Sonoma marsh below the embarcadero.

A few English snipe have been found in the neighborhood of Alviso.

THE RIFLE.

Next Year's Contest at Wimbledon.

Now that the International Rifle Match of 1882 is over there is no harm in saying that a large number of thoughtful riflemen in this country, whenever they could overcome the promptings of pride, were almost inclined to hope that it would end in a victory for the visitors. No lack of patriotic spirit gave rise to this feeling, but a genuine and earnest interest in the progress of marksmanship, and a fixed opinion that defeat would do more than success to forward it in the ranks of the American National Guard. The process of reasoning is very simple. Unfailing victory has led to overconfidence; that to apathy, and apathy to decadence. The public have lost interest to a great extent in the sport, regarding the result of every foreign contest as a foregone conclusion; the military, from whose ranks the shooting men should naturally be recruited, had ceased to recognize the need for constant and conscientious work, imagining for the most part that all they had to do was pick up their guns and "lick creation." A good whipping, it was argued, under these circumstances, was likely to have about the same effect on the rifle world that it might on a spoiled child. An awakening to the great truth that labor is the price of success was looked for, and a consequent renewal of hard work. The rifle manufacturers and ammunition companies, too, might, it was thought, be stirred up to provide a gun for the American soldier that might in some degree be fit to match the splendid English weapon.

There is great reason to believe that all the best effects that were anticipated from defeat will be realized. The directors of the National Rifle Association are thoroughly alive to the requirements of the hour. The body of riflemen so far from being downcast by their defeat, are already looking forward to the possibility of victory at Wimbledon next summer. Whether the manufacturers of arms and ammunition can be induced to do anything of their own accord is doubtful, but independent experiments are already in progress looking to improvement in both, and there are hopes that when the next match is shot the American team will not be so miserably handicapped as it was this time.

The Board of Directors of the National Rifle Association will meet to-day, and then the whole subject will come up for discussion. Under the first shock of defeat a few persons advocated asking a delay of the British. "There is no hope of our winning next year," was the cry, "let us have the return match put off to 1884, and we will work hard to win then." A strong feeling has now grown up against this policy as both dishonorable and impolitic. "We entered into a definite contract as could be to go to Wimbledon next year," said a rifleman of high standing, speaking of this proposal. "If we had not done so the English would never have come here. They said so plainly. They have done their part; now let us do ours. If we do not we lay ourselves open to strictures that would be more bitter to us than a dozen defeats. See how teams from one part or another of the United Kingdom came here several successive years in the face of repeated failure. How would we look in contrast with them if our first reverse should make us suppliants for delay? Oh! no, we've got to go through with it, no matter what the result, or else confess ourselves very weak spirited indeed." These comments may be taken as the expression of the general opinion, but, nevertheless, it is probable that the subject will be broached at the meeting of the Board. The opposition will be very strong, however, and it is likely to be voted down—perhaps unanimously. Another concession will probably be asked of the British. It has already been spoken of to Sir Henry Halford, Colonel Walrond and Major Humphry, who are members of the Council of the Rifle Association of Great Britain, and they showed a disposition to grant it. According to the present conditions every member of either team must, at the time of the contest, have been one year a member in good standing of a volunteer or national guard organization. As the next match will take place in June or July this makes it impossible for crack shots, who might enlist after the result of the last match was known, to take part in the next one. This would be a serious disadvantage to the American side, though but little to the British. To cite cases in point: J. H. Brown, one of the best known long range shots in the country, has very lately joined the Twelfth Regiment; W. W. De Forest, a young rifleman of very great skill, has become a member of the Seventh. Several other good men are quite willing to join the militia if by doing so they can qualify for places on the next team. It is, of course, understood that these enlistments are *bona fide*. The men go in prepared to perform active service throughout a full term of enlistment, and it is to be hoped that on obtaining guarantees to that effect the British Council will admit them to the match. The National Rifle Association will not, however, be entirely dependent upon such cases for new material.

Many men already enrolled are coming forward, promising to train for the contest. A prominent member of the Amateur Rifle Club, who holds a commission on General Shaler's staff, has signified his intention of being a competitor for a place on the team. There are hopes that Colonel Bodine and several other old-time team men may go into practice; Mr. Farrow, who now holds the military championship, intends to practice military shooting all the fall and next spring, and several members of the Seventh regiment, well-known and tried shots, propose to take the field for places on the team. Altogether it is pretty certain that twelve men, much stronger as a body than the beaten team of 1882, can be got together. Now comes the question: "How shall they be chosen?" This is one of the points that will have to be most carefully considered by the National Rifle Association. There is a growing disgust against the system of competitions which has always prevailed heretofore. The best men, it is held, are never really the most successful in them; some of the best men are prevented by circumstances from even entering them. Nothing more is really known of a rifleman at the end of such a test than at the beginning, it is argued. The man who goes through with flying colors may break down under the great pressure of the final event. The really reliable man may be unwell, or a little out of practice, and so may fall behind. It is pointed out that the man who headed the list in the August competitions this year did not ultimately get on the team. The opinion is freely expressed by some that the competitive system is neither more nor less than a refuge for those in authority from the responsibility of picking a team from the whole body of riflemen on the basis of known records, and a shield to them from the criticisms of the disappointed. English teams are always selected in this way. The famous "English twenties," are selected in this manner year after year by the executive officer of the National Association, and all teams for important events are made up from men of proven skill, without any preliminary trials, while the strictness of British military discipline stifles every murmur on the part of the rejected. The team that came here this year was picked in the same

fashion by Sir Henry Halford, Colonel Walrond and Major Humphrey. It is true competitive scores were shot, but they were really of no avail, for the committee did not bring to America at all the man who made the highest average, because they considered him unreliable. It is quite probable that the American team of 1883 will be chosen in just this manner by a committee of the National Rifle Association—at least, a strong agitation in that direction will, it is expected, be made in the Board. A majority of members are also in favor of appointing the captain of the team instead of allowing the team to elect him. An elected team captain has never the same influence with his men that an appointed one exercises. The authority of this officer is supposed to be full, final and unquestionable. How can any one exercise such power over men, whose creature, in a certain sense, he is? One reason for proceeding in the manner indicated as regards the choice of both teams and captains is the very short time available before the next match comes on. To make the most of this short period a series of practice matches will be begun next month. They will be shot weekly, at 600, 800, 900 and 1,000 yards, which are the ranges at which careful training is most needed, and will be in all respects similar in conditions to the international event. They are to be open to all comers and snitable prizes will be offered.

But supposing the team chosen and supposing it to consist of the best possible men, a serious difficulty would still exist in the lack of proper weapons and ammunition for them. Sir Henry Halford said several times before he sailed that in his opinion the defeat of his opponents was more due to the guns than the men. All parties are now agreed upon this point. Several of the Englishmen's guns have been purchased, and experiment shows them to be far superior to the home article. A member of the American team who secured an English gun has had a wax impression taken of the chamber and the part of the barrel adjacent to it. He speaks with the greatest admiration of the admirable finish. He finds that the barrel is widened out the least bit at its rear end, so that the bullet never encounters a sharp edge which could damage the patch, but is launched as it were through a funnel direct into the rifling of the barrel. The deep, sharp groove of the American guns is also conceded now to have been a mistake. It damaged the bullets, interfering with their flight, and besides, caused "leading" in the bore. The shallow rifling of the English guns is recognized as far preferable for a match wherein cleaning is not allowed. Colonel Bodine and others are carefully studying the whole matter now, and it is thought very likely that they will be able in a month or two to give points to the gunsmiths which during the winter may fructify into a servicable weapon. Then there is the ammunition question. The members of the British team used seventy-five and eighty grains of powder, while the Americans used 90 to 103. Of course the soiling and consequent inaccuracy of the guns of the latter was much the greater of the two. But it appears that from superiority of manufacture the seventy-five grains of British powder was equal or superior in force to the American ninety, and the best men in this country say they cannot do with a smaller charge than this at low ranges. Some are in favor of adopting an English powder at once, but there is still some hope that a better grade may be procured here before the date of the match comes around.—*N. Y. Herald, Oct. 3.*

Shooting at Creedmoor.

Last week the Qualification and Champion Marksman's matches were shot for at Creedmoor. In the Qualification match at 100 and 300 yards, five shots at each distance, about 100 men competed, the entries numbering 272. The leading scores were as follows:

Name	100 yds.	300 yds.	Total.
J. L. Price, 7th Reg.	25	24	49
W. J. Underwood Jr., 7th Reg.	24	24	48
H. T. Lockwood, 7th Reg.	25	23	48
T. J. Dolan, 12th Reg.	25	22	47
G. W. Munson, 7th Reg.	25	21	46
J. S. Shepherd, 23d Reg.	21	24	45
J. James.	21	22	43
E. Lynes, 23d Reg.	22	21	43
F. Schulten, 14th Reg.	22	21	43

The first five won cash prizes of about \$13 each.

The Champion Marksman's Badge match had about 200 competitors out of 479 entries. Five shots at each of the distances of 200 and 500 yards were allowed, and all members of the New York National Guard making twenty-five out of the possible fifty points qualified for and won a State Marksman's badge. In addition to this inducement (and besides the gold badge offered as first prize) ten silver medals were presented by the association to as many marksmen, the names and scores of the winners being shown below, those marked * being winners at former competitions, and consequently ineligible at this:

Name	200 yds.	500 yds.	Aggregate.
Private W. T. Lockwood, * 7th Reg.	21	22	43
Private W. J. Underwood Jr., * 7th Reg.	22	22	44
Captain John Kerr, * 69th Reg.	19	24	43
Sergeant J. McNevin, * 13th Reg.	20	23	43
Private F. Schulten, 14th Reg.	20	23	43
Lieutenant P. Farrelly, 69th Reg.	19	23	42
Private T. Barton, 7th Reg.	20	21	41
Private W. P. Pickett, 23d Reg.	19	22	41
Sergeant J. S. Shepherd, * 23d Reg.	19	21	40
Private C. Le Bonfillier, 7th Reg.	21	19	40
Lieutenant J. B. Dewson, 7th Reg.	21	19	40
Private H. V. D. Black, 7th Reg.	18	21	39
Private J. M. Schuyler, 7th Reg.	18	21	39
Private W. J. Fitzmahoney, 7th Reg.	18	21	39
Private C. A. Jones, 13th Reg.	17	21	38

At Alameda Schuetzen Park, Sunday last, the California Schuetzen Club held their regular monthly medal shooting with the following results. The first class medal was won by H. Zecher, 365 rings; second class, J. H. Fisher Jr., 390 rings; third class, H. Holtz, 327. Next Sunday there will be a prize bulleye shooting among the members of this club. The interest they take in shooting is manifested by the continuous practice of the members of the organization.

The English Rifle Team, after visiting Niagara Falls, and other points of interest in and about New York, sailed for England, on Tuesday, Sept. 26, in the Union steamer Arizona. Previous to their departure a farewell reception was tendered them at the rooms of the New York Rifle Club, where informal and heartfelt expressions of good-will were given, and the visitors bidden *bon voyage*.

A BALL-ROOM car is the greatest novelty introduced on the Chicago, Milwaukee and St. Paul road, and recently a merry party of St. Louis belles and beaux made an excursion over the road and danced the "racquet" with the train moving at forty miles an hour.

YACHTING.

What Yachting Costs.

"That nice little show on Decoration day," said an experienced yachtman of New York, to a reporter for the *Mail*, "costs the yacht owners of the city not less than \$20,000. It takes money, I tell you, to put a yacht in condition for such a sail even when she is in commission and everything seems to be ready. It was something nice to see the sails of my sloop flapping in the wind as we rounded the Southwest Spit. Well, every flap costs me about \$50, that's all." This gentleman who has, perhaps, built, bought and sailed more sloop and schooner yachts than any other man in America, was in excellent position to tell something about the expenses of yachting. He had been opening his pockets very liberally for a dozen years or so, paying sailors and sailmakers, cooks, stewards, captains and painters, and he seemed inclined to tell his experience. He said that his first yacht, a sloop, cost him \$15,000. "When she was all ready," he continued, "the furniture in, the crew on board, and the pantry and wine closets stocked, I anchored her off Tompkinsville and invited a party of friends to go out and take a sail. Before the mainmast was hoisted for the first trip, that sloop cost me \$16,500. The season's sport, as I thought it then, or work, as I am inclined now to think was, stood me in \$8,000 more, or so close to \$25,000, all told, it would make your head swim." "What are some of the expenses of keeping up a good-sized yacht?" Exactly the same as keeping up a good-sized house, that is to say, just what the owner will stand. If he has \$20,000 to spare, and is easy in money matters and fond of company, a season of yachting will cost him \$20,000. If he is close, does things on a small scale and has little company, he may squeeze throut on \$3,000. You can get a sailing master like a watch, for any price. I pay mine \$2,500 a year, and consider him cheap. I have had one steward for four years at \$100 a month for the season. Champagne is pre-eminently the yachtman's weakness, and champagne costs money—good champagne. A man can drink twice as much without feeling any bad effects when he is on the salt water as when he is ashore. Then, besides these bills, you have your regular salary list, payable monthly. This varies in price with the size and character of the yacht. My list averages over \$600 a month. Some are more and some are less. I need not mention the trifling matter of cigars. They must be the best always, and cost nearly as much as the food."

Why Yachting is Expensive.

We have spoken of the subject several times and the following from the *New York Herald* corroborates our views: "One point to be touched upon is the inferior manner in which many of the new yachts are rigged. There can be seen masts with almost no shrouds on, no runners, light gear in every part, flying jibbooms that cannot be boned, sails that cannot be made to stand on account of the miserable gear, long foretopmasts that will not bear any strain because they are too long for their diameters and would buckle up if the sail was carried on them. There is one new boat, however, that would be fast if she was decently rigged. Perhaps she will be rigged within a year or two by putting on better rigging, as part after part is carried away. This is the common method, and there is more money in the plan for all concerned except the owners. The constant alterations is what makes yachting so expensive and vexatious. The late lamentable failures in some large and medium sized boats are due to this very thing. After a season of humiliation some change is made, and so it goes on, until at last the stately vessel remains at anchor, too bashful to go out in company with other fast boats. Why this vexation? In many cases it comes of simply pleasing sailing masters, to whom everything is referred. The fastest boats are those really run by their owners. Let no one for a moment imagine that there is any antagonism to sailing masters—a most worthy and deserving class of men. Their thoughts are properly taken up with care and management of their boats and how to get the most out of them, and this they will generally accomplish if left alone. The reasons, however, for a vessel's performance are entirely out of their line, and never should be left to them. When owners learn that the manning, fitting and rigging of boats should be done by men who make a business of that sort of work, and that the sailing should be done by some one else, then they will have smaller bills to pay, sell their boats for better prices, win more cups and go through the valley of humiliation less frequently."

WOOD OR IRON FASTENING FOR YACHTS.—In speaking of the subject of fastening for yachts, Dana Kirby, the well-known New York yacht builder, says in *Forest and Stream*:

I wish to reply first to your strictures on the construction of our large sloops. You say that "all these large sloops are structurally weak," that "Julia leaked like a basket," that "Gracie followed suit." All this may be true, but you go on to say that last fall the "new Pocahontas suffered the same complaint," which is at variance with the facts in the case. The new Pocahontas did not leak last fall. Her pumps were not touched during her trials nor after her return. If all vessels were built as solid and fastened as well as Pocahontas, there would be no leakage from straining in carrying sail. She was purposely built strong enough to go to sea, to Europe, or anywhere else desired. You speak of through fastening, to which I do not object, if it is the right kind and put in a proper manner. Gracie, I am told, is through fastened—that is, treenailed, which I suppose is what you mean, and no doubt Julia is fastened in the same way; yet, according to report, they wring and leak. Why? You say for want of through fastening. But as they are through fastened, that cannot be the trouble. In my judgment, treenail or wood fastening is evidently defective, particularly in light frames, and is not near as good as long spike, with iron butt bolts, and with nuts screwed up inside. This is the way Pocahontas is fastened, and she does not and will not wring or leak from carrying sail. The defects of treenail fastening are: First, That the plank in many places do not touch the frames. When a vessel is to be treenailed, plankers put but just spike enough in the plank to hold on. Of course it does not touch the frame in many places, and treenails will not draw it up, for they have no head. In fact, treenailers make no effort to get the plank "to," for they do not know whether it is "to" or not, for mostly it cannot be seen. Spikes will draw the plank close against the frames, because they have heads, and if long enough they cannot be drawn out, hence you get a more solid job. An inch wooden pin is not as strong as a $\frac{3}{4}$, 7-16 or $\frac{1}{2}$ inch square iron spike. Another defect in treenailing is in the boring the frame and plank for the treenails.

Now the frames for these larger sloops are probably not sided more than four inches. Pocahontas is four and one-half inches, and doubled, of course. Now a treenail, to be

good for anything, should not be less than an inch. Then, if two treenails to the frame, you cut out two inches of the frame, and wide plank would need three of four; there you would have but four, five or six inches of wood left in the frame. Boring the frame and plank in that manner cannot but weaken the frame and plank. Fastening the plank on with wood is but a clumsy old-fashioned way at the best. More through fastening would be necessary if a light frame is used, but then fasten with iron, not wood.

THE ANNASONA.—The forty ton cutter Annasona is the one which is expected to come over here from England next season to try for the American cup. Here is what *Bell's Life* says of her:

"The latest performances of this marvel have certainly been something astounding. Who would have thought that a 40-tonner could beat boats more than double her size in a strong breeze and sea, and that, too, without time allowance? Yet such was the fact, the Annasona handsomely defeating the Lorna, Mr. Morley's yawl, by five minutes clear. This supports what Duncan, who sailed the little Madge in America, said, that the boat to go across to New York for the America Cup would be a good clever 40-tonner. Mr. Hedderwick meant to go last year, and no doubt would go right off now with his vessel, but the American conditions make it 100 to one in their favor. There can be no doubt whatever now as to the Annasona's being the boat, and there can be as little doubt as to O'Neill's being the man, holding, as he does, a mate's deep-sea certificate."

NEW CUTTER.—We take the following from the *Boston Herald*: "The new cutter-building by Lawley & Son, at their yard in South Boston, for Rear Commodore Charles A. Welch, Boston Y. C., is 38ft 6in overall 31ft. load line, 10ft. beam, 7ft. draught, dush deck, with 6ft. under the car lines. The cabin will be 8ft. 4in. long, with modern improvements. The forecabin will be 12ft. long, and will be provided with accommodations for the crew. The frame is of best live oak, two inches square, doubled, space 12in. between centers. The planking is one and a half inches, best selected Michigan hard pine, four inches wide and runs the entire length without butts. On the keel there is an iron shoe, weighing six and a half tons, firmly secured by iron doors on the inside. The deck will be laid with clear white pine, one and a half inches square. The masts will be 30ft. long above deck, eight and a half inches at partners; housing topmast, 24ft. long; bowsprit, outboard, 16ft; gaff, 23ft. 6in.; boom, 31ft. 6in.; hoist of sail, 20ft."

The Sprockels Brothers' new yacht is to have sliding topmasts. She will not be launched until the joiner work is all completed, which will not be for several weeks yet. Her inside finish will be quite elaborate.

This is the time of year to go up river cruising as the nights are cool, the mosquitoes gone, the winds variable and light, and there is some game to be had.

We hear of no big yachts being contracted for this fall, though there has been some talk about one this summer.

The San Francisco Yacht Club will give a "closing day" dance at the club-house, Sancelito, this month.

Very few cruises took place this season. In fact, the yachting season has been a dull one.

The Aggie is on the dry dock being cleaned. She will soon be laid up for the season.

The Chispa is going for a cruise up Moutezuma Creek before being laid up.

The Clara is going off for an up river trip of a week or so.

The Emerald takes out quite a large party to-day.

The Chispa will be taken up into fresh water this winter.

Dr. Tucker has been out enringing in the Frolic.

Growth of Sportsmanship in America.

The versatile writer and classical scholar, Col. Thomas Pierson, in a recent biographical sketch of Frank Forester, alludes to the lasting influence of the sporting author as follows: "When he lived and wrote, the term sportsman, in this country, was associated with card-playing and similar diversions. He aimed to give the word higher, broader meaning. He believed that if our American men could be drawn from their offices and counting-rooms to forest and field, to breathe pure air and commune with nature, they would be benefited, physically, morally and mentally, and come to enjoy a larger existence. He expressed this belief in his conversations, and inculcated it in his writings. The revolution in public sentiment has gone rapidly forward. To be a sportsman now means to be skilled in the use of rod and gun, fond of the wholesome, exhilarating excitements which bring rest to mind and recuperation to body—and professional and business men are not averse to having the term applied to them. Ministers compose the majority membership of many fishing clubs. Game preserves are established, and game laws are enacted and enforced. Nation and State make ample provision for restocking rivers and streams. Ranges built at public expense afford recreation for private citizens, whose practiced aim has made a world-wide reputation for American riflemen, as valuable for us in moral effect as a small standing army. Young men of means are abandoning fashionable watering places for Adirondack lakes, Maine forests and western game regions."

THE YAK.—The yak is found in a wild as well as in a domesticated state. Formerly very little was known of the wild variety. Nothing can be made dissimilar than the two varieties. The wild one inhabits the loftiest peaks, seldom venturing below the perpetual snows, except during unusually severe weather. It is a fierce brute, and has been known to exceed sixteen hands in height. Hue records crossing a stream in which a wild herd of yak had been imbedded in the ice and frozen to death, their forms being perfectly distinguishable through the ice. To the Tartars it is a most useful animal, being employed not only as food but as a beast of burden, and its sure-footedness renders it invaluable for mountain traveling. Hue describes whole droves with their loads on their backs sliding down the frozen sides of steep mountains.

ROWING.

More about the Hillsdales.

Sampson of the *London Referee*, who is the most unsparring of English sporting critics, says of the race between the Thames four and the American amateurs:

"The Amateur Rowing Association is likely to survive the cruel handling it received for refusing to recognize the Hillsdale four. It is with deep regret I have to make the statement, but it has to be made, that worse business was never done in an amateur boat-race than that done by Hillsdale at Putney on Friday. Directly after the start they came over into the Thames men's water, and commenced to bore them right across the river. Thames, who had the Surrey station, gave away and though a foul seemed bound to follow every stroke it was avoided for a time by the home crew going close, and closer in-shore until both boats were a good sixty yards out of their proper courses. Just before reaching Craven Steps the long impending collision took place, but still the Hillsdales, though singularly enough one of them put up his hand to claim the foul, continued their boring tactics. They went off with a lead of a clear length, and seemed so determined to keep to the Surrey side that Hastie passed under their stern, and took the Middlesex station. Whatever may have been the cause of it, such a piece of business as this has, I think, never before been seen on the London river. Certainly no professionals would have dared do such a thing, even in the bad old days before the present boat-racing laws were framed. So untoward a beginning naturally disconcerted the Englishmen who were rowing; as for their friends on board the accompanying steamers, they groaned and hooted as though possessed by the celebrated seven devils. By and by, spectators calmed down again, and though for a long while it looked as if Thames must lose, a dignified silence followed the first noisy demonstration of disgust and anger.

If there was any advantage at the start, it was obtained by Thames, but the Hillsdales, striking twenty-six strokes in the first half minute, drew up at once, and ran rapidly in front. In the next half they struck twenty-three, total forty-nine or the first minute! They threw the water up in shoals, and their boat ran upon anything but an even keel, but the pace was tremendous. The Creek was reached in 1:10 Hillsdale leading by nearly their own length. It was, I imagine, to a foolish and ill-advised endeavor to take Thames' water that the unhappy business already described was due. Let this be as it may, no more deliberate and injurious piece of boring can be imagined. Thames' who rowed twenty-two in the first half-minute and twenty in the second, were going in handsome style until thrown out of gear by the extraordinary action of their opponents. After the foul they seemed considerably flustered, and as the Yankees continued to cross and cross in front of them, giving them their backwash in regular professional style, it is not surprising that the Thames men should be somewhat abroad, and that their boat should have yawed considerably. Hastie could not make out what to do. Every time he tried to go up, the Hillsdales barred his progress, and no one could tell for the life of him which side would, in the course of the next minute or so, be selected by the leading steersman. At the so-called mile-post—time, 4:26 the Hillsdales were two clear lengths in front, first time since they had left their stakeboats. At the top of the Eyot, the Thames men, who were now making for the Middlesex side, were only their own length behind. At Thorneycroft's they overlapped, when, all of a sudden, the Americans stopped rowing and the race was over.

When this occurred, the men had been rowing 12min 35 sec. No. 2 in the stopping boat held up a piece of bow's sliding seat so as to show that an accident had happened. After a cessation of less than ten seconds they went on again; but by now Thames were a long way ahead, and past all hope of catching. So far as form went, the Hillsdales rowed just as well after the accident as they rowed before it. They had never slid more than a handbreadth—indeed, I have seen men slide further upon fixed seats—and so the loss to bow was of the smallest importance. Thames had a blow or two and then went on again, coming out at the railway bridge so as to pass under the center arch. Here 14 sec divided the boats—17:15 and 17:29. Between here and home Hillsdale gained a trifle, the times as taken opposite the judge's boat being—Thames, 20:40 Hillsdale, 20:53. No appeal was made to the umpire. None was necessary, seeing that the men who suffered so severely from the foul, managed to get home in front despite it.

THE CHALLENGE CUP.—A meeting of representatives of the three clubs which intend to take part in the contest for the Challenge Cup offered by the BREEDER AND SPORTSMAN was held on Tuesday evening. Mr. Dobbin, president of the Golden Gate club, represented that organization. The Pioneer club was represented by L. C. White and Thomas Flynn, and the Ariel club by Leander Stevenson and the Branch brothers. The Ariel men expressed a decided preference for a course on Richardson's Bay which is not subject to the changes of tide and wind that make Long Bridge course so unfair. The representatives of the other clubs were opposed to crossing the Bay to find a course and thought the possible advantages of smooth water and a fair tide would not compensate for the trouble and expense of the trip. It was finally agreed to have the race on the Long Bridge, three-mile course which is much fairer than the two-mile course. The three-mile course gives a stretch of a quarter of a mile of good water at the start and is therefore not as objectionable as the two-mile course where the boat having the outside station is nearly always handicapped out of the race. The Pioneer representatives were anxious for a two-mile race but the others thought that anything less than three miles should not be rowed and were disposed to make it longer. Unless the crews do a little more training than is customary with Long Bridge courses, they will find the three-mile course long enough. The meeting was most harmonious and the majority rule being cheerfully recognized there was no trouble in settling the conditions of the contest.

RETURN OF THE HILLSDALES.—Among the passengers on the steamship *Indiana*, which arrived at Philadelphia on the 1st from Liverpool, were the four members of the Hillsdale Rowing Club who competed last month on the Thames with a crew of the Thames Rowing Club. They were met at the wharf by a committee of the Schuylkill Navy and escorted to the Colonade Hotel. The committee tendered them a banquet on behalf of the Schuylkill Navy on Tuesday evening, but the Hillsdale oarsmen were compelled to decline on account of private engagements at home.

The Hillsdale men are all in good health, and Captain Terwilliger said that while he regretted the misfortunes surrounding their English visit he was well satisfied that the masses in England were disposed to fair play and to show them every consideration. He said that they were barred from the races for which they were entered by the efforts of a few individuals who seemed determined to make their stay as unpleasant as possible. He expressed the firm belief that the race with the Thames crew could have been won by his men if the accident to the seat of their boat had not occurred, and he denied that the crew was in any way distressed at the time of the casualty. He confirmed this remark by producing the record of the race, which showed that after his men had stopped and allowed the English four to pass the Hillsdale boat gained several lengths on the Englishmen before the finish. He also said that the Englishmen had acknowledged that the Hillsdale four was the fastest crew they ever encountered. Two days before the race the crew rode over the course in practice in 20:17. A new race was asked for, but the Thames men declined to row on the day appointed, although they did appear next day in their club regatta.

ATHLETICS.

The Great Contest.

The entries for the great six-day pedestrian contest at Madison Square Garden comprise the most remarkable array of men ever gathered together in a race of the kind. Of the eight men entered for the race seven have beaten 565 miles and all of them have records better than 555 miles. The list comprises George Hazel, Charles Rowell, Patrick J. Fitzgerald, John Hughes, George D. Norenae, Frank Hart, Daniel J. Herty and Robert J. Vint. The winner will have no easy task, for to carry away the palm from all these giants requires a struggle compared to which former tests of endurance upon the track are insignificant. Hazel with his recent championship to defend; Rowell with his defeat of last spring to efface; Fitzgerald with his grand record of 585 miles to encourage him, and the large stake at issue, all tend to call forth superhuman efforts, and there is little doubt the October race will carry the record beyond even its present marvellous figures.

Rowell, who has returned to the city, expresses the utmost confidence in his ability to win, and feels assured he will not be affected by a return of the unfortunate sickness that ended his defeat last spring. Hazel, who is training on Long Island, is under the care of Harry Vaughan, and is also in excellent health and condition. He is confident that he will make it warm work for any one to take the championship away from him. Fitzgerald, who may be said to have been in constant training all summer, is now in better condition than when he made his big record. Hughes, Norenae, Hart, Vint and Herty are all doing finely, and the same admirable spirit and confidence mark the intemperance of each. The proposed arrangements for the race are in every respect excellent, and there is little doubt but that the attendance will be very large, an indication of which is had in the offer already received of \$6,500 for the bar privilege alone. The race will commence at midnight of Sunday, October 22.—*Herald*.

Human Endurance in the Water.

Man and animals are able to sustain themselves for long distances in the water, and would do so oftener were they not incapacitated, in regard to the former at least, by sheer terror, as well as complete ignorance of their real powers. Webb's wonderful endurance will never be forgotten. But there are other instances only less remarkable. Some years since, the second mate of a ship fell overboard while in the act of hoisting a sail. It was blowing fresh; the time was night, and the place some miles out on the stormy German ocean. The hardy fellow, nevertheless, managed to gain the English coast. Brock, with a dozen other pilots, was plying for fares by Yarmouth; and as the main sheet was belayed, a sudden puff of wind upset the boat, when presently all perished except Brock himself, who from four in the afternoon of an October evening to one the next morning, swam thirteen miles before he was able to hail a vessel at anchor in the offing. Animals themselves are capable of swimming immense distances, although unable to rest by the way. A dog recently swam thirty miles in America to rejoin his master. A mule and a dog, washed overboard in the Bay of Biscay, have been known to make their way to shore. A dog swam ashore at the Cape of Good Hope with a letter in its mouth. The crew of the ship to which the dog belonged all perished, which they need not have done had they only ventured to tread water as the dog did. As a certain ship was laboring heavily in the trough of the sea, it was found needful, in order to lighten the vessel, to throw some troop horses overboard. The poor things, my informant, a staff-surgeon, told me, when they found themselves abandoned, faced round and swam for miles after the vessel.

The University Field Day.

Next Saturday the University athletes, weather permitting, will give their closing meeting for the season, on the new grounds near the University. Their lady friends have taken a deep interest in athletics, and have undertaken the task of erecting a Grand Stand on the grounds. Feminine friendship is a grand incentive for all athletes, and as several events are open, the Olympics propose to go right over there and wear out the new kinder path (the only one, by the way, this side of the Rockies.) The Olympic Club athletes think they never have had a fair show at their University rivals, but hope for a change this time. If this meeting does not demonstrate the superiority of one or the other, the University athletes should send a large number of competitors to the O. A. C. games next Thanksgiving Day. The various handicaps of the two meetings will at least give the handicappers a fair idea of the relative merits of the members of each club, and insure close and interesting competitions in all future events.

The Record is Safe.

"Our Correspondent" in the *New York Clipper* has settled the matter satisfactorily. "Being known as one of the most accurate timers on the Pacific Coast," and "having timed Haley in 10 sec. on several occasions," the times with which he was credited in his 100 yds. race with Masterson was undoubtedly correct. The fact that "Our Correspondent" was not on the grounds the day of the race is a matter of too small moment to be noticed. Now let the young man connected with the *News Letter*, throw a few figures at him.

P. S. The *Clipper* itself remarks that it has written for "further information." Can we believe that it doubts its accredited "athletic" correspondent?

A Wise Reporter.

In the *News Letter* account of the 100 yards race between Haley and Masterson, the reporter has figured a little beyond his depth. Melville's time was 10 seconds, Cook's 9 $\frac{3}{4}$ and McIntyre's 9.45. The *News Letter* says: "If Cook was correct, Haley and Masterson had gone 7 feet 6 inches before Melville started his watch. If McIntyre was correct, they had traveled 2 yards before Melville had started his watch, or *vice versa*." It is our opinion that the Latin quotation could be more aptly applied by an expert mathematician.

FISH.

An Angler's Tournament.

The following description of the preparations for the forthcoming fly-casting tournament is from the New York *Herald* of the 5th inst.:

The preparations already made for the Anglers' Tournament, to be held on the borders of the Harlem Lake in Central Park, indicate that the occasion will bring together a fine company of fly-casters and expert handlers of the rod. There will be eight distinct contests, covering casting the fly for salmon and trout, together with bait-casting for striped bass as practiced at the seashore. The tournament is open to all comers, without restriction. From letters already received by the committee of arrangements it is likely that there will be over fifty entries for the several valuable prizes donated. The tournament will be entirely an anglers' one, without connection with any other sport. It will be a novelty, as it will be the first display of the sort ever given in this city, and, being held in Central Park, it can be witnessed by the public without charge. The contests, which will be held on October 19 and succeeding days, will be under the control of a committee of well known anglers and lovers of fishing sport as follows: Francis Endicott, president Richmond County (N. Y.) Game and Fish Protective Association, chairman; James Benkart, president South Side Sportsmans' Club of Long Island; Walter M. Brackett, vice-president Massachusetts Fish and Protective Society, Boston; Eugene G. Blackford, New York Fish Commissioner; S. M. Blatchford, Squibnocket club, New York; Martin B. Brown, Wawayanda club, New York; Henry F. Crosby, Willowemoc club, New York; Dr. A. Ferber, New York; James Goddes, Onondaga Fishing club, Syracuse; Dr. J. A. Henshall, Cynthia, Kentucky; Fred Mather, Forest and Stream, New York; Professor Alfred M. Mayer, Stevens Institute of Technology, Hoboken, N. J.; Baruet Phillips, secretary American Fish Cultural Association, New York; George W. Van Sielen, Willowemoc club, New York; James L. Vallotin, president Pasque Island club.

Yesterday afternoon the committee met at the office of the *Forest and Stream*, No. 39 Park Row, and discussed the arrangements. A set of rules to govern the competitions were adopted and at a meeting to be held during the coming week a scale of points will be adopted and the list of judges agreed upon. The rules read as follows:

Single Hand Casting.—1. No rod shall exceed eleven and a half feet in length and it shall be used with a single hand.

2. Any style of reel or line may be used, but a leader or casting line of single gut of not less than eight feet in length, to which three flies, one stretcher and two droppers shall be attached.

3. No allowance of distance shall be made for difference in length of rod.

4. Persons entering these contests shall draw lots to determine the order in which they shall cast and shall be ready to cast when called by the judges.

5. Each contestant shall be allowed five minutes to cast for distance and will then stand aside until called in his turn to cast for delicacy and accuracy, for which he will also be allowed five minutes.

6. The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified by the judges, at least once, each day of the casting. A mark shall be made on the ground from which the buoy line shall measure and the caster may stand with his toes touching this mark, but must not advance beyond it. Should he step back of it, unless so directed by the judges, the loss in distance shall be his.

7. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important. A contestant may claim time for repairs, which shall be allowed by the judges, or the judges may call the next in turn to cast while repairs are making.

Salmon Fly Casting.—The foregoing rules shall govern except that the rods shall not exceed twenty feet in length and may be used with both hands, and that only one fly will be required.

Heavy Bass Casting.—Rods shall not exceed ten feet in length, any reel may be used, but the line shall be of linen not less than twelve threads. The cast shall be made with sinkers weighing two and one-half ounces. (These will be furnished by the committee.) The casts shall be made in a lane formed by the buoy line and a line parallel to it and distant twenty feet. Each contestant shall be allowed five casts. His casts within the lines shall be measured, added and divided by five, and the result shall constitute his score.

Light Bass Casting.—The heavy bass rules shall govern except that the sinker shall be one ounce, and there shall be no restriction on lines.

The Pleasures of Fishing.

The author of that entertaining and instructive work, entitled "By Fell and Fjord," thus alludes to the pleasures of angling, and displays a keen appreciation of the art, with a facility for describing it which is seldom surpassed by any who wield the rod and pen:

"It is hard to say why it should be so enjoyable. Perhaps it is because no out-door pursuit lets the spirit of nature so imbue and saturate the mind as the gentle craft. Gardening, compared to it, is too active in its continuous work; sketching is a struggle; the scene is too rapidly changed in travel; a book, of course, brings its own thoughts, and doing nothing brings a kind of rusty retribution; but while lingering beside still or rushing waters, occupied but not absorbed, the whole power of the scene and the season seems to sink into our very heart. Thus, though the angler may enjoy good sport, we find he or she is generally content to do without it; the spaces when nothing happens are so pleasant that a rush of fish becomes sometimes even rather a trouble, and were it continuous would spoil the delicate flavor of the sport. We are of the opinion that fishing from a bank is much pleasanter than from a boat, though, of course, a lady, as she does not wade, is more likely to take a large fish from a boat. But there is a touch of monotony in rowing to and fro over much the same sort of water, perhaps getting chilled, and having little to do but look out for a rise; while wan-

dering by the river-side from pool to shallow, from shallow to run, is most fascinating, even if it infers wet feet, possible falls, and more trouble in securing the fish. But why do I speak of fish when so often it is rather

The water-sprites are singing
Their melodies unto me

while loitering on a sweet June day by one of those beautiful streams, whose ripple flows through one's summer dreams like delicate music? Yes, believe me, you people who glance with incredulous contempt at the literature of the gentle craft, the sweetest fancies haunt the still or running waters, the fairest imaginations people the solitude. Let it be a solitude—angling is no social sport. You may have a friend within call—probably you will forget whether you have or not; but a friend beside you is likely to be a disturbance or a rival."—*Turf, Field and Farm*.

PACIFIC COAST FISHERIES.—The denizens of the Pacific Coast are pre-eminently a fish-eating people, to which fact, perhaps, may be attributed the great brain force which is so characteristic of all who are so fortunate as to reside in this part of the world. Oregon catches 20,000 tons, California 12,000 tons, Alaska 55,000 tons and Washington Territory 2,800 tons. The salmon catch alone weighs 26,000 tons. The catch of shrimps and crabs amounts to 1,250 tons, and of abalones, oysters and mussels, 4,000 tons. The value of the annual catch (including the enhancement in price by canning salmon) is \$9,246,000. The fresh fish are valued at \$3,640,000; the crabs, shrimps, etc., at \$66,000; the oysters, mussels, abalones, etc., at \$703,000. The annual products of the fisheries of British Columbia are worth about \$1,400,000, and those of Pacific Mexico about \$400,000—making the total value of the annual fish catch of our coast almost \$11,000,000.

A FAMOUS ROGUE ELEPHANT SHOT.—Albert G. R. Theobald of the Forest Department has succeeded in shooting the famous elephant of the Poonasy Hills, in the Kollegal Taluk. Mr. Theobald was twice charged by the brute, which was a huge tusker, measuring eleven feet in height, and which kept the villagers in terror for a long time. This elephant was a few years back driven into the Kollegal Keddah, at Alambady, but he resisted every effort to capture him, and being such a large tusker, no pains were spared to secure him, though it was all in vain. Out of the 24 elephants captured with him, he killed no less than 19, and finally broke through the keddah gate in spite of the shots fired at him and the fires kept burning. After his escape he is known to have killed three, two women and a man, and many others had narrow escapes from his furious headlong charges. Besides human beings, he has killed several cattle, and destroyed great quantities of standing crops, causing immense loss to the ryots.

There is no more interesting fact in connection with the propagation of fishes than that of their return to the original spawning ground at the expiration of a given time. The young fish also hatched out at any point, will in their turn seek the same place for the purpose of reproduction. Numerous instances of this fact are on record; thus, Mr. Wilnot, who for several years past has been engaged in hatching out salmon at Newcastle, on the north shore of Lake Ontario, has presented to the United States Fish Commission the stuffed specimen of a female fish, from which he had taken eggs for three successive years, as were indicated by his marks, which were apparent on the skin. At the United States salmon hatching station on the Penobscot, Mr. Charles G. Atkins has been in the habit of tagging and numbering the fish which he pastures for his purposes and which are released in Penobscot Bay when he has finished operations with them. Of these quite an appreciable number have been taken in subsequent years, identified by their labels. A still further instance of this is shown in regard to the California salmon. Mr. R. D. Hume of Oregon marked a hundred fish, letting them go, and the next year he is said to have retaken ten of the number.

In comparison with the impurities brought to the river-bottom by the sawdust, and the consequent destruction of the fish eggs, its other injurious influences on the fisheries are hardly to be taken into account, although in themselves they are by no means inconsiderable. Thus, there can be hardly a doubt that when the water rises and causes the masses of sawdust which have gathered in the river to move, a large number of young fish are carried away with it and are gradually buried in the newly formed piles of sawdust. This is particularly the case during the spring, when the young fish are as yet very weak and cannot swim far. It is also highly probable that the sawdust floating about in the water kills a large number of young fish in the act of breathing, because they can hardly avoid swallowing particles of it which stick fast in the gills and thus eventually cause their death.

The sea eel grows twice as long as our river eel (specimens measuring six feet in length are by no means uncommon), and outwardly differs from the latter by the different formation of the jaws and dorsal fins. In the sea eel the latter begins immediately back of the pectoral fins, while in the river eel it is placed farther back. In the sea eel the upper jaw protrudes over the lower jaw; in the river eel the reverse is the case. The position and formation of the internal, especially the sexual organs, is very similar in both. But whilst the river eel grows up in the rivers and only goes into the sea to spawn, the sea eel never leaves the sea. The sea eel stands imprisonment very well, and grows rapidly.

The fishermen who go to Sancelito have, for the last four weeks, had exceptionally good sport off Lime Point, the fish running from one to three pounds in weight and a catch of sixty or seventy-five pounds is no unusual day's sport. It is said that tom-cod and smelt are beating along the Sancelito shores and a good day's fishing can be had at a very small expense.

A gentleman has just returned from a three weeks' trip to Webber Lake and says there is excellent fishing there. Thirty-five trout that average one and a quarter pounds is considered an easy day's catch. These trout take either spoon or fly quite readily and are very gamy. During a snow storm that occurred a few weeks ago the sport was simply "immense."

At some of the county fairs in the North Pacific country, in addition to a programme of races and a ladies' riding tournament, the managers provide a department for babies with appropriate prizes for the handsomest. All fashions move in cycles and this return to ancient custom is very popular with the provincials.

Trout are bought on the shores of Independence Lake for twenty-five cents a pound and shipped to Virginia City where they find a ready market at a good profit to the shipper. Over \$900 worth of trout was sold from this lake last season.

The St. Augustine (Fla.) *Weekly* says: "On Tuesday afternoon the fishermen reported that they have never seen for years past such an immense shoal of mullet near the North beach as on that day. The fish lined the shore as far as the eye could reach down the coast, and were of very large size. Although there were so many fish, it was impossible to catch any number of them, in consequence of the great number of sharks among the fish. If one did not cover a shark in the cast of his net, he would tackle the fish in the net as it was dragged ashore, and tear it to pieces. The quantity of mullet and sharks was a sight rarely seen."

That the menhaden have not all disappeared, is proved by the statement of Professor Baird, who, while on a recent trip in the steamer Fishhawk, when ten miles southwest of No Man's Island, passed through an immense school of them. The steamer was moving at the rate of nine miles an hour, and it was an hour and three-quarters passing through the school. The number of fish must have been almost beyond computation.

Dr. Gunther says there are seven thousand species of fish now known to men of science. When a man sits on the river banks half a day watching a cork idly floating on the stream, and comes home with a sun-burned nose and not a single specimen of these seven thousand species, he is inclined to think that Dr. Gunther is a patent-medicine advertisement.—*Norristown Herald*.

Some Scotch doctors in the Highlands use carrier pigeons to send prescriptions to their surgeries, and to bring them tidings of a patient's condition. The tricycle has become exceedingly popular with these gentlemen, and one of them boasts that he has ridden five thousand miles on his in a hilly country.

President Arthur and party have recently been on a fishing excursion to Eel Bay. Among the catch, which was a very large one, was a fine muscalonge captured by the President's hook, on which they dined *al fresco*.

Two weeks ago Chas. Kaeding received thirteen Eastern speckled trout, (*Salmo fontinalis*) that were raised in the neighborhood of Washoe. The fish weighed over one-half pound each.

On the west side of Mau Island, flounders are being caught in large numbers. There is some dispute among fishermen as to whether it is really the flounder or plaice.

Thousands of fish are destroyed in the vicinity of Esopus Island, up the Hudson River, by the use of torpedoes.

The bay at Monterey was literally alive last Sunday with amateur and professional mackerel fishermen.

W. A. J. Gift has sold his two-year-old tilly "Miss Gift," to Leland Stanford for the sum of \$2,000.

The fishing around the bay last Sunday was very poor, although a few good catches were made.

A Family of Monkeys.

Hindoo do not hurry themselves in anything they do, but the monkeys have lots of time to spare and plenty of patience, and in the end after the crow has stolen a little, and the dog had its morsel, and the children are all satisfied, the poor fragments of the meal are thrown out on the ground for the blunder-logue, the monkey people; and it is soon discussed—the mother feeding the baby before she eats herself. When every house thus, in turn, has been visited, and no chance of further "out-door relief" remains, the monkeys go off to the well. The women are all here again, drawing the water for the day, and the monkeys sit and wait, the old ones in the front, sententious and serious, and the youngsters rolling about in the dust behind them, till at last some girls see the creatures waiting, and, "in the name of rain," spill a loth full of water in a hollow of the ground, and the monkeys come round it in a circle and stoop down and drink, with their tails all curled up over their backs like notes of interrogation. There is no contention or jostling. A forward child gets a box over the ear, perhaps, but each one, as it has satisfied its thirst, steps quietly out of the circle and wipes its mouth. The day thus fairly commenced, they go off to see what luck may bring them. The grain-keeper's shop tempts them to loiter, but the experience of previous attempts makes theft hopeless; for the baunya, with all his years, is very nimble on his legs and an astonishing good shot with a pipkin. So the monkeys make their salams to him and pass on to the fields. If the corn is ripe they can soon eat enough for the day; but if not, they go wandering about picking up morsels, here an insect and there a berry, till the sun gets too hot, and then they creep up in the dark shade of the mango tops and snooze through the afternoon. In the evening they are back in the village again to share its comforts and entertainments. They assist at the convocation of the elders and the romps of the children, looking on when the faquir comes up to collect his little dues of salt, corn and oil, and from him in their turn exacting a pious toll. They listen gravely to the village musician till they get sleepy, and then one by one they clamber up into the peepul. And the men sitting round the fire with their pipes can see, if they look up, the whole colony of the blunder-logue asleep in rows in the tree above them.—*Under the Sun*—Phil Robinson.

A Strange Bird.

Mr. Benjamin Farley, who resides on Mr. Bose's place a few miles from town, says a strange bird appeared in his neighborhood about two months ago, and seems to have taken up his residence there, as he is seen every day near a spring in that section. The bird is about one-third larger than a pigeon, and has a hook bill. His color is—breast, a bright pink; neck, head and beak a perfect white; back, a sort of dull blue. The bird is quite tame when in a tree or bush. It is evidently a species of parrot—perhaps an escape from some private cage. Mr. Farley is anxious to have the bird classified.—*San Jose Mercury*.

The first number of the BREEDER AND SPORTSMAN to hand edited by Joseph Cairn Simpson and his talented associates. Some of the young men around town who delight to shoot at glass balls from a trap, chickens from the brush, bears from the bramble or any other ambitious sport away from home, should subscribe for it. Call around to this office, take a seat and peruse a specimen copy.—*East Oregonian*, July 14.

THE KENNEL.

The Setter in a New Light.

The popular idea of this dog is usually in accord with the style of dog most in vogue in the district. This is but natural, but it has given rise to a multitude of misconceptions about canine characteristics. Among sportsmen who disdain the ownership and companionship of any but well-trained, highly-intelligent animals the dog is looked upon as but little inferior to a good man, and not a few enthusiasts will tell you that the average dog is better than the average human. That is because they either are unacquainted with the average dog or are wont to associate with a mighty mean class of men. My observation of dogs leads me to say that they are a very mixed lot, and I agree with Phil Robinson that in the world of English literature good dogs have had the field all to themselves and have been put forward as the true type of the canine species when really to be correct writers should have taken their types for the purpose of generalization from among the mean dogs. Before the advent of Idstone, Foster, Shaw, Youatt, Stonehenge and Hutchins the lore of dogs was unwritten. These men started in on a virgin field. The public mind was in a clean state on the dog question and consequently in a good condition to receive impressions. All the writers named took a high moral ground about dogs. They put the dog on a pedestal and deified him so that now-a-days no man dare say a word against his character, as a class. The character of the average dog as portrayed by all previous writers is a fraud, and the world owes a debt of gratitude to Phil Robinson for his breezy exposure of that fraud, written without malice to the dog or fear of the dog's defenders. I love a dog well but I love my race better and I am about tired of having a dog's virtues put up for men to pattern by when all the virtue a dog possesses he gets from contact with man. The dog that gave his life to save his master's child and the dog that died while chasing a hare are held up as models of fidelity. They are nothing of the kind. The one was defending his own life also and got into all the trouble from his meddling interference with something that did not concern him, and the other died because he was fool enough to run at great speed on a hot day with a full stomach. He was so anxious to kill a poor, inoffensive hare that, like many a greedy man, he overmatched himself, and his own greed proved his downfall. About half the men you meet are cowards, but all the dogs are cowards at heart. A few men are thieves but I have yet to see the dog that would steal when he became hungry and nine-tenths of them will steal for the pure lust of greediness. Dogs are lazy, thriftless, improvident, cowardly, truckling, impudent, affectionate (when it pays), fawning, sycophantic, bullying, hypocritical, shiftless, aimless, dependent, irritable, presumptuous, assuming, vain to a degree, faithless, and forgetful. With this array of bad qualities against them what good qualities have they as an offset. They will do man's work, minister to his pleasure, guard his house, though for that matter a savory meal will debauch the best of them, and the dog never lived that would not let his master's house, herds and family go to the devil if he snuffed a chance for an amour with one of the opposite sex. When young they are good natured with the small and weak because they like fun, but when they arrive at the age of discretion they are not to be trusted and can better be ruled by fear than by affection. Take the setter for an instance. He is often called the king of the canine race though for my part I fancy that the dog world is a republic and not a monarchy. There are aristocratic dogs and the setter is one of them, but their pretensions are not allowed by their brethren and they may be fairly classed along with the snobs in this great Republic who, having more impudence and more cash than their fellow men, pretend to belong to a different tribe. As with the snob so it is with the setter. He is only arrogant when prosperous. Give a setter a good home, plenty to eat, care and attention, and not too much work in the field he is an overbearing, impudent, pretentious snob to the less fortunate members of his race. His dainty stent and upturned nose when he comes across a street cur are a study and can be compared to nothing human except the snoot of a well-fed mendicant who has got a place at his former companion who is out of pocket, out of elbows and out of place. With good health, a full belly, fine features full distended, well-combed hair, cleaned ears and carefully tended feet your well-bred setter is a thing of beauty. He towers above his fellows socially as does the British bank clerk when airing his short coat and dogskin gloves at a Samelite picnic. Full contentment is in his every look, self-satisfaction beams from his eye. He strides like a holiday-making servant girl in Sunday's best arrayed. His arrogant mien would shame a city supervisor and put to the blush the presenter of an address to a visiting magnate in a country village. He is handsome and he knows it, respected and he knows it, and a miserable fraud and he does not know it. Let him out without a tag, throw the hoodlum who runs the pound wagon across his path, let the lasso whirl around his neck, throw him into the pound pen, and what an abject self-confessed fraud he is. He mopes and sulks and squirms with your genuine out and out curish pariah, the tool and sport of ill-conditioned circumstances is as happy and chipper in the pound as anywhere else, your high bred setter in adversity has not pluck enough to snap when kicked, nor courage enough to growl when he finds his stomach protesting against its unwonted lack of food. He has no natural courage, no self-reliance and no hope, reversing the celebrated saying of Isaac Kalloch, "he is the solemnest thing in all animated nature except a Baptist minister caught in the wrong stall." At home in the midst of prosperity he is turbulent in the kitchen and around the stables, and truckling when by chance he is allowed in the parlor. He might bite a scullion or snap at a Chinese vegetable peddler but how the hypocrite fawns when his master in a fit of ill-humor gives him a rib-bursting kick. He knows he is a slave and a dog and does not resist the brutality. The much despised and oft-slandered cat would not do that. Rub her fur the wrong way and she will hiss and spit. Pull her ears and she will bite and scratch, kick her and she will either fly at you or leave the room in as well expressed a passion of rage as though she were a servant girl who had slammed the door after her when reprimanded for having put too much salt in the soup. The more your setter is beaten the more he will crawl on his belly and fawn and slobber over the hand that dealt the cruel and generally unnecessary blow.

A dog, a woman and a walnut tree,
The more you whip them the better they be.

Thus runs the old rhyme and, gentle reader, the old writers were closer observers of dog nature and human nature than

are the scribblers of to-day. The only fixed quality in the setter is his sense of fear. Once he gets afraid of any one or anything, all the world cannot remove his terror. Did you ever try to cure a gun-shy setter? If you did, you know something of a setter's cowardice? If you never tried it, my advice like Twain's to persons about to get married is "don't." The terror, cross stupidity and ignorance he will display will disenchanted you of dogs once and forever. You don't believe it? Well, ask any dog trainer what means he uses to break a dog. His answer will surely be "fear." He may talk some rot about the law of kindness, moral suasion and patience, but press him closely as to his methods and he will tell you of his whip and his spike collar and his cruel throat check and his force system and ball full of tacks until you are convinced that about the only chord in the dog's nature he finds it pays to work on is fear. Next to fear the largest part of the setter's make-up is cunning and that he inherits from his ancestor the wolf. Sometimes he puts most of his cunning to good use in the field, but often he displays the most marked ability in larceny, evasion of his share of any duty, naughty mischief and dishonesty generally. He will road a quail to the admiration of all, but will display more skill and zest in worrying a pet cat or perchance an industrious hen. Beat him for a fault and he is not cured but simply gives you twice as much trouble to catch him in its perpetration next time. When doubtful as to whether he was caught, the rogue will put on a look so demure that having seen him doing wrong you almost doubt the evidence of your senses. When he has done wrong and knows that you know it how he will fawn and crawl, and sneak and drag his tail between his legs until he looks as if he had no tail at all. How he will grovel and debase himself and wait for the expectant blow and when beaten he professes to be twice as fond of you as ever. I don't believe him. He makes up his mind to a dire revenge then and there but is too much of a coward to put it into effect. He intends to run away and leave you for ever, but the remembrance of the flesh pots and the warm kennel are stronger than his sense of injured dignity. The fellow is a natural lackey. Feed him and house him and he will serve you though your liver be a disgrace and your service a cruel one. A bone is a salve for a blow and a meal will make amends to him for the most brutal lashing that ever animal received. The next most prominent trait in his character is his inordinate, stupendous and unsurpassable vanity and self-conceit. See how he struts around after the order has been obeyed and how promptly he comes to heel to hear the words "good dog" that tickles his vanity. Call him fool, blockhead and knave and show by tone and gesture that the words are meant and he will erlige and cry worse than though you had broken a ramrod across his loins or lodged a dose of shot in his hide for flushing his birds. Caress another dog while he is around, the jealous fellow will sulk and vent his splenetic anger more openly than for any other cause. Call him "good dog" before a stranger and he goes crazy with self-satisfied vanity. Rebuke him in public and he will neither forget nor forgive the insult for months. He hunts according to orders not because he loves the sport, for his natural instinct is to rush into every bird he sees but because in the first place he is afraid to disobey, in the second he wants his vanity tickled by a few words of praise when the bird is retrieved, and he wants to show off just as a boy will show off his skill at play when strangers are around. The pointer's character has more good traits than the setter's but contains so much of evil that he is entitled to second on the list of bad dogs. EDWIN.

Will Herzberg Explain?

That little band of mutual admirers who run the *American Field* and who evince a desire to run also the balance of the country must feel rather chagrined to find published in the *Turf, Field and Farm* the following extract from an English publication called *Land and Water*:

There is now on foot in America a subscription for carrying out the suggestion of E. Armstrong to erect a monument to the memory of the late Mr. E. Laverack, and at the instance of the editor of the *American Field* (Chicago) Mr. E. A. Herzberg is energetically acting in gathering subscriptions, and undoubtedly he is well qualified to act in that capacity, for of all the Laverack supporters he has proved to demonstration that it is possible to reproduce the Laverack setter on its original lines with all its original surroundings. He has been able to resurrect even the very rocks and rushes upon which the original dogs—or, at least, one of them—stood when their portraits were taken. I had thought that the original type of setter, as bred by Mr. Laverack, was a thing of the past. This, by the instance now before me, is, however, quite a mistaken idea. The instance I refer to has, by publication of the animal's portrait in the *Chicago Field* for Jan. 1, 1881, become public property, and therefore it is permissible to comment upon it. The portrait is "a portrait of the pure Laverack setter dog Aldershot, owned by Mr. E. A. Herzberg of Brooklyn, New York, imported by him June 29, last year, (1880). Aldershot is a lemon belton, and was whelped September 11, 1878. He was bred by Mr. J. R. Robinson, of Sunderland, England, and is by Emperor Fred. Emperor Fred is by Blue Prince (Pride of the Border—Nellie), and out of Daisy (Blue Prince—Cora)." The above is a quotation from the *Chicago Field*, in the same number as that in which the portrait of Aldershot appeared. Now, here is where the remarkable coincidence appears. In Laverack's book there is a portrait of Fred IV. The picture is a moderate production of the chromo-lithograph order, and has many faults in drawing. The print of Aldershot is very much the same picture in drawing and surroundings, only the position of the dog is exactly reversed. I was so struck by the resemblance of the two portraits that I took a pair of compasses and measured all the limbs, the body, the head, and every other part of the two animals. The only difference I found was in the length of the stern, and I attribute this to the fact that the space at command of the newspaper printer would not allow of the extra thirty-second of an inch. America must be a grand country to admit of a breed being as true to original type as this, and to produce such men as Mr. Herzberg, who has (out of reverence for the memory of Laverack probably) even imported the rocks, stones and rushes upon which Fred IV stood when his portrait was taken. I am grieved to find, though, that his Yankee enterprise and the rest of it was not sufficient to devise a means of carrying off the English landscape in the background of the picture. Probably he could not get a ship big enough; but these are details which, like the remainder of the circumstances above narrated, seem to admit of considerable explanation from Mr. E. A. Herzberg.

Petaluma Coursing Club.—The Petaluma Coursing Club will hold the first meeting of the season on Mechem's Ranch about 6 miles from Petaluma, on Tuesday, October 24. An old dog and puppy stake will be run. Entries free to all dogs in the State. The grounds are said to be well able to afford fine sport and game is plentiful.

Fixed Events.

Coursing match—Petaluma Coursing Club—Open—Old dog and puppy stake, October 21th, at Mechem's Ranch, Petaluma.
Coursing match—Pacific Coast Coursing Club—Private—Old dog and puppy stake, October 25th and 26th, at Merced. Entries close Oct. 21st. J. Bryan, Secretary.
Coursing match—California Coursing Club's—Private—Old dog and puppy stake, November 15th and 16th, at Merced. Entries close Nov. 11th. J. J. Murphy, Secretary.

A VALUABLE WORK.—We have to acknowledge the receipt from the author of a copy of General Hutchison's valuable work on the most easy and expeditious methods of breaking dogs for the field. The work is one of the most valuable ever published and has reached its seventh edition already. No sportsman's or trainer's library is complete without a copy. The publisher is John Murray, Albermarle Street, London, and the price of the work in England is seven shillings and sixpence. The work contains a large number of illustrations and is beautifully printed and bound. The General's sketches of hunting at home and abroad are graphically written and will well repay perusal even by those who do not specially care for dogs, whether broken or unbroken.

Shipping Mules.

The correspondent of the London *Daily News* who went to the Egyptian war describes the common occurrence of shipping mules and horses in the following outburst of hyperbole:

"Sing, O Muse! the wrath of Pegasus, be-strapped in mundane canvas and leather, who struck deadly pain into the souls of Moslem syces and stretched Seedee Arabs with aching limbs upon their untimely couch! Pegasus had just seen a mule go up and knew what was coming; but he suffered himself to be half led, half dragged to the spot above which an iron chain, ending in a big thick hook, dangled, like the chain of Father Zeus, from heaven. Gora-wallahs, (native grooms) approached Pegasus soothingly, and patted and stroked his arched neck and inquiring nose. Pegasus appeared to be reassured; so did the four Gora-wallahs, watched by a dumb and curious multitude. Two of the four, one on either side, next passed something like a tarpaulin beneath the body of Pegasus; they did it tentatively, tenderly—with all the tenderness of fond mamma applying the first mustard poultice to her adored child. But Pegasus? a thought darted through his brain—a saddle not on his back, but on his stomach; horrid reversal of the constitution and course of nature—a spark from Tartarus dashed in the eye of Pegasus, upreared the strong neck, out flew the bright shod heels, and round went Pegasus at a mad gallop, enlarging, so to speak, the circle of his acquaintances, pitching syces and gora-wallahs head over heels, damaging bags of grain and pots of 'ghee' and shivering an empty cask into lucifer matches. Only the syce with the head-rope held his ground, or more correctly the horse held him—in nautical phrase, Pegasus dragged his anchor. After a while Pegasus was brought to, but only to treat the Port Trust and the Transport authorities to the same performance. Act one—to wit, the putting and the coaxing—always came off without a hitch; but act two as regularly began and ended in disaster. At the first touch of the canvas jacket on his stomach off Pegasus would spring, as if he were the long lost 'Mexican Plute,' improved by possessing all the treads of Gadar.

But at last—at last—the canvas was passed round and the iron hook, above the Pegasus spine, fastened with a click in less than a twinkling of the Pegasus ear; and in less than another twinkling a small boy—a real, not a figurative Cockney Arab—with light hydraulic touch sent Pegasus flying forty feet up and away into the empty air. How completely Pegasus lost all self-control, all sense of dignity! No classic repose about him in that singular crisis of his fate. One would grieve to think that Anora's steeds could ever have behaved as indecorously as their nineteenth-century relative, when they shook the darkness from their manes and bent the twilight into flakes of fire. He, too, our Pegasus, beat the air, he kicked it, he spurred it, and with such vigor that he looked as if he had sixteen legs instead of four; he wiggled in his canvas belt, he snorted, yelled, screamed, screeched most demoniacally. And now, O, Jupiter! the change from the Zenith to the Nalir of the ridiculous. As Pegasus hung poised for a moment forty feet over the yawning hole into which he was to be deposited, he became mute; his legs slowly lengthened downwards, hardening sphywise, into the rigidity of iron; his ears pointed, searchingly, outwards and downwards, seemingly, I am loth to say, more elongated than they really were; and from side to side, and upwards and downwards, surveying earth and sky, and the smoking chimney and the taper masts, and the 'Blue Peter' and the cook's caddy, and the signal halyards of the good ship Morton Hall, Pegasus continued turning his slow head in a confusion of astonishment and fright. And then—oh, that I should write it!—Pegasus was lowered into the hold like a limp dishcloth. I have met writers of slow growth who, with half-absent, half-introspective gaze, have given me another version of Pegasus in harness, but I never believed them. I have seen many a cart-horse or useful cob fulfilling his natural destiny 'in harness,' but Pegasus never, except at this memorable hour at the Prince's Dock, Bombay. To tell the whole story, I should have to repeat the above description 167 times, for 160 mules and 7 horses were lifted on board."

Pin Pool.

SACRAMENTO, September 18, 1882.

TO THE EDITOR OF THE BREEDER AND SPORTSMAN. Inclosed I send a diagram of the position of a pin, after a stroke in a game of pin pool. You will perceive that the pin is supported in position by one ball, and touches another, but it is still on the spot. Phelau claims the pin not to be down, while the rules, according to Brunswick & Balke Co. claim it to be down. Please decide which is right and you will oblige the pool players of California. JOE BOWERS.

Answer.—After submitting the question to all the acknowledged experts in this city, including J. W. Brunswick & Balke Co., the decision has been unanimous that the pin is up. In this we concur, as we fail to see how it could be held otherwise under any rule or practice now in vogue.

One day a week for loading shells for Sunday's sport, is laid out by a good many hunting men for the whole duck season.

A man who does not belong to a shooting club now-a-days does not get the cream of the shooting.

THE TURF.

Something About Brighton Beach.

A reporter of this journal lately met with Mr. James McGowan, the Secretary for the Brighton Beach Racing Association, and learned a number of things new to him regarding the turf. Mr. McGowan is an old-time sportsman, and a man who has been a leader of sporting events for a long time. He will be remembered as being for a long time associated with the late Mr. John Morrissey at Saratoga, and it will be remembered also that the great success attending the races at that famous watering place was, in a great measure, if not altogether, due to the wise management and knowledge of Mr. McGowan.

The reporter was informed of the ins and outs of horse racing, and the careful training and tender handling necessary to the full development of the "crack trotter;" the hot gruel, and the blanketings and rubbings, etc., which a crack receives before and after the race, all this was explained to him; how the horses are cured for when they are in good condition, and how they are doctored when they are not, all that was duly considered too. One would judge from the manner in which Mr. McGowan speaks that St. Jacobs Oil, the Great German Remedy, is as much and as successfully used on horses as on men. Mr. McGowan said:

"Since St. Jacobs Oil has been introduced as a remedy it has supplanted almost all other medicines, and it is not to be wondered at when we consider the vast amount of good performed by that wonderful remedy. St. Jacobs Oil has proved itself in my hands an infallible remedy. I have used it both at home and in my stables. At home it has cured both myself and my folks on a number of occasions. From all I can gather I actually believe it is used in most of the training stables in the United States. The stables in which St. Jacobs Oil cannot be found are few and far between and I know that some of the very finest stock on the track last season owe their success to a plentiful use, by their groomers, of St. Jacobs Oil. To refer again to personal use of it, I would say that I applied the oil for a case of rheumatism, and found in it all I could ask. My wife used it also, and it cured her; in short, it may be said to have no equal, whether for the human family or the dumb creation. A visit to Brighton Beach Race Track, through the coming season at any time, will convince the most skeptical of that, as he or they will find St. Jacobs Oil in use among the gatherers there, both for themselves and their horses.—*Brooklyn Eagle.*

A new paper from the Pacific Coast makes its appearance here, the San Francisco Breeder and Sportsman, the first number of which was issued July 1st. It is well got up and printed, and, although taking general notice of sporting matters, is devoted largely to breeding and trotting interests. The Toronto correspondent of the Breeder is Mr. James Lang, who is well qualified to attend to its interests.—*Toronto Mail.*

Market Report.

FLOUR—In demand at full figures. We quote: Best City Extra, \$5 37½; 50; Superfine, \$4 50; \$4 75. Vol. I. No. 17.
NO. 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, OCTOBER 21, 1882.

SUBSCRIPTION
FIVE DOLLARS A YEAR.

ALGONA. By Almont—Emma Kinhead, by Conscrip. Owned by J. B. Haggin, Rancho Del Paso.

Of all the celebrated race-horse breeders of Kentucky thirty years ago and over, none were better known than "Uncle Ned" Blackburn, as every one termed him, and it was just as generally acknowledged that he was without a peer in presenting the points of a favorite horse. The parson in Bracebridge Hall, immortalized by Washington Irving for his fervid eulogy on the brown gelding, would have fallen far short if attempting to equal one of Uncle Ned's fervent and graphic descriptions.

There was a dinner party at Equoria at which were congregated the talent, beauty and wealth of the old Common-

wealth, as Uncle Ned was as famous for his hospitality as his knowledge of equine points, and Mrs. Blackburn was equally as celebrated for directing the culinary affairs in a proper way. And, by the way, the old-fashioned Kentucky cookery was the perfection of gastronomic art, and to our taste, at least, could give odds to the most celebrated of the French professors. Among the guests was Henry Clay, and after the cloth was removed and the viands replaced with the decanters, he addressed the host: "Uncle Ned, there are several of us who are anxious to hear how you are going to overcome the obstacles in the way regarding Boston who,

we learn you have lately secured. Heretofore you have exhausted the English language in your panegyrics, and the trouble for you will be to find adjectives not already worn threadbare."

"Whip was the finest horse that ever trod the green pasture fields of Kentucky. American Eclipse was the only race-horse the world ever held. His son, Grey Medoc, was, if anything, his superior, and the speech you made from the hurricane deck of the steamer which bore him from Louisiana was thought worthy of the foremost papers of the Continent. Then there was Camden combining the Eclipse and

Sir Archy strains of America, with a daughter of the immortal Whisker for his maternal parent, and a host of others which have graced your stables. Now how about Boston?"

"Fill your glasses gentlemen, and I will tell you," was the response of Uncle Ned.

"Boston among horses, as Henry Clay among men, first, foremost, the best, no matter what the company they fall in."

This was a happy reply, and though for the time the great orator could not overcome his feelings so as to make a fitting answer, the hearty cheers which rang again and again from the assembly were proof of how apropos it was considered. In Kentucky especially. There might be other countries where the "first, foremost and best" might not have been granted; in the "race-horse region" it would have been considered the rankest heresy to question.

We are in somewhat the same predicament that was supposed to enangle Uncle Ned without the same chance to escape. Every illustration that has appeared in the BREEDER AND SPORTSMAN is of a horse that has the strongest claims for eulogistic description. Though some of them cannot be claimed to have achieved fame either in their own person or that of their descendants, they are admirable types of the classes to which they belong. So far a large majority have been trotters, and without wishing to give this peculiarly American class an undue preference, they come before the public more prominently than any others, and are also of the track horses more numerous. Again they have been within easier reach of our artist, and his business is such as to preclude the making of long trips at this season of the year. But with the single exception of the picture of the yearling, Antevolo, there is not a single one which is not well worthy of a place in our picture gallery, and even the baby serves to show that the combination of Hambletonian and thoroughbred blood results in offspring that can lay claim to "high quality."

To return, however, to the task of accompanying the admirable representation of Mr. Wytenbach with a written description, we will have to reiterate what we have previously stated. When the portrait of Piedmont was given, we considered him very nearly the best specimen of the trotting horse we had seen, that is, his form was nearer to our ideal of the speed formation than any horse which had not more thoroughbred blood. And now, we are in doubt whether he or Algona is entitled to the preference. There is a strong resemblance in these two sons of Almont, and still there is a difference which would require careful study before authoritatively awarding the certificate.

Algona is a bright chestnut, 16½ hands high. The shade could scarcely be improved, rather lighter than Piedmont and with equally as fine a coat. His chest is deep and the shoulders well-placed. The barrel is full with the back ribs long. From the loin to the nostrils he is almost a model, and his quarters are also good. Not quite so powerful as Piedmont displays, and this is a point in favor of the son of May Ferguson, though Algona is now highly finished, and with lighter action and more taking style. The limbs all through are first rate, and capital feet. It is unnecessary to extend the description further, especially when we would have to rehearse the terms used before, although it may be as well to say that he is a remarkably "even-balanced" horse, and that there is not a weak point in his conformation. His pedigree will bear the most exacting scrutiny. His sire has gained such a high and emphatically well-deserved reputation that it is only necessary to refer to it to a large majority of our readers, though the whole of the Pacific Coast is so much interested in the get of Almont that we transfer from General Withers' catalogue his account of the famous stallion:

Almont, dark red bay, black points, the black extending above knees and hock; fifteen hands two and one-fourth inches high; foaled in 1864. Weight, 1,150 pounds, by Alexander Abdallah.

First dam Sally Anderson, by Mambrino Chief.

Second dam Kate, by Alexander Pilot Sr.

Third dam a fine mare owned by the late W. H. Pope of Louisville, Ky., said to be and no doubt thoroughbred.

Almont made his first season in the stud in 1869, and the first of his produce started in 1873 at two and three years old. Four of his get started and all were winners. In 1874 five of his get started and four of them won, among them the four-year-old Allie West, who made a record of 2:29½, the fastest ever made by a four-year-old to that date. In 1875 eleven started and six were winners, among them Piedmont, who made a four-year-old record of 2:30½ in third heat, the fastest ever made to that date by a four-year-old in third heat; and Allie West after a full season in the stud reduced his record to 2:25. Up to and including 1876, Almont had thirteen winners. That year they started in twenty-four races; won first money in eight, second money in eight, and third money in two, winning money in over two-thirds of the races in which they started. In 1877 four new winners came out, among them Katie Jackson, four-year-old record of 2:25½ in third heat, and Alice West, four-year-old record of 2:29½ in fourth heat. 1878 brought out nine new winners, among them Aldine, with five-year-old record of 2:28½ in seventh heat. Easter Maid this year reduced her record to 2:29, and Alice West reduced hers to 2:27. In 1879 fourteen new winners came out. Ella Earl made a record of 2:25; Fanny Witherspoon (five years old), 2:26; Musette, 2:30, and Clermont, 2:30, and Alice West reduced her record to 2:26. In 1880 thirteen new winners were added to the list, and four new ones entered the 2:30 class, viz.: Piedmont, record 2:21½ (public trial of 2:18½); Alta (six years old), 2:25½, in sixth heat; Sammie G., 2:27, and Una, 2:29 in third heat. Musette reduced her previous record of 2:30 to 2:29½, in third heat, winning the second, third and seventh heats. Fanny Witherspoon reduced her record to 2:25 in sixth heat, winning fifth, sixth and seventh heats.

The results of the trotting season of 1881 added more to the reputation of the Almonts than any previous year. A number of his production won. Two new ones made records of 2:26 or better, and two others made records below 2:26. Early Rose made a record of 2:25½ in third heat, winning

fourth heat and race in 2:26½. Hamliu's Almont Jr. made a record of 2:26 in second heat, winning the third heat and race in 2:27½. Piedmont reduced his record to 2:17½, made in fourth heat, the fastest record ever made by any stallion in second, third or fourth heat, and only excelled by Smuggler's 2:15½, which was made in the first heat of a race which he lost, being beaten by Goldsmith Maid in 2:17½ in fourth heat. Piedmont won his race, making a record of 2:19½ in fifth heat, and 2:21 in sixth heat. Fanny Witherspoon made a record of 2:19½ in third heat and won the fourth heat in 2:20. Aldine won a six heat race, reducing her record to 2:26½ in third heat, and winning sixth heat in 2:27½. King Almont won a six heat race, making a record of 2:30½ in fifth heat, and Una made a two-mile record of 4:54½.

Almont now has to his credit about sixty winners of contested races, a larger number than ever sired by any trotting stallion of his age. Attention is called to the fact that one-fourth of all his winners of races have records of 2:30 or better, and that most of them have made their fastest records in the third and subsequent heats; thus showing gameness and endurance, as well as speed.

A critical examination of Almont's pedigree will in part explain why he has been so successful as a trotting sire. While an illustrious ancestry is indispensable to a successful sire, and no breeder should use in the stud any but a well bred stallion, there are other important requisites to be considered in the selection of a trotting sire. These will be noticed in the conclusion.

Almont was sired by Alexander Abdallah, who, as a trotting sire, was the greatest and most potent son of Rysdyk's Hambletonian. The Hambletonian family of trotters stand, by the record, far in advance of any other trotting family in the production of fast trotters. More than one-third of all the trotters that have ever made a record of 2:30 or better are descendants Rysdyk's Hambletonian in the direct male line. He himself sired thirty-five such trotters, the greatest number ever sired by any stallion, and fifty-six of his sons have already become the sires of 2:30 trotters, a number not approached by the sons of any other stallion. There are only eighty-five horses that have made records of 2:20 or better, and thirty-three of these are descendants of Rysdyk's Hambletonian in the direct male line. Of the 9,357 heats trotted in 2:30 and better, the descendants of Hambletonian have won 3,638, being largely over one-third of the whole number. Only sixty-nine have records below 2:20, and twenty-seven of these are descendant of Hambletonian, winning about half of all the heats ever trotted below 2:20. Mand S, with a record 2:10½, and St. Julien 2:11½, were sired by sons of Hambletonian.

The dam of Almont was by Mambrino Chief, who by the record stands second to Rysdyk's Hambletonian as a progenitor of 2:20 and better trotters; and had he lived as long, and enjoyed the same opportunities in the stud, would most probably have equaled, if not excelled him as a progenitor of fast trotters. Mambrino, though he only had a comparatively brief career in the stud, as he died in March, 1862, after having only made seven seasons in Kentucky, sired nine sons and daughters that made public records below 2:30; and seventy-four trotters with records of 2:30 or better have descended from him in the direct male line, winning 719 heats. Eight trotters with records of 2:20 or better have descended from him, a larger number than are to the credit of any other contemporaneous sire except Rysdyk's Hambletonian. Among these was the celebrated Lady Thorne, who beat all her competitors, including the noted Goldsmith Maid, in numerous races, and but for an injury received while being loaded on the cars, bid fair to trot close to, if not below, 2:10 if her driver's statement is to be credited.

The attention of breeders is directed to the important fact that the daughters of Mambrino Chief have produced more trotters with records below 2:30 than the daughters of Rysdyk's Hambletonian, though there are probably twenty times as many of Hambletonian's daughters in use as brood mares. Twenty-six trotters with records of 2:30 or better have been produced by granddaughters of Hambletonian, twenty-three of them having records below 2:30; only one of them, however, has entered the 2:20 class. Twenty-four trotters with records below 2:30 have been produced by granddaughters of Mambrino Chief, five of them with records of 2:20 or better, or just five times as many 2:20 or better trotters as the granddaughters of Hambletonian have produced. This showing is greatly to the credit of the Mambrino Chief family, as there are probably ten times as many mares sired by sons of Hambletonian as by the sons of Mambrino Chief. This clearly demonstrates the great value of the Mambrino blood, and tends strongly to prove that with equal chances in the stud Mambrino Chief would have been a formidable competitor of Hambletonian for the first position as a trotting sire.

Almont's grandam was by Alexander's Pilot Jr., a trotter himself and one of the most impressive sires that ever lived. It is to his blood that the breeders of fast trotters should resort for the double purpose of an outcross for the Hambletonian, Mambrino Chief, Clay and Morgan families, as well as for utilizing the valuable qualities of the thoroughbred. Experience has demonstrated that the Pilot blood fuses more readily with other strains than any other known to the breeder. There is nothing refractory about it. It seems to mingle readily with other trotting strains, and while it exercises a marked influence, does not, as is often the case with outcrosses, antagonize and neutralize the valuable qualities of the other families, but usually acts in harmony with and adds to them. For overcoming the tendency of the thoroughbred to gallop, and utilizing at the trotting gait their high nervous energies and great capacity for speed, no cross has proven so efficient. This is no mere theory, but has its foundation in well authenticated facts. Pilot Jr., out of the thoroughbred running mare Tell-Tale, by Telamon, produced Tuttle, who at five years old made a record of 2:26, the fastest to that date. Tuttle sired Voltaire, with record of 2:20½, and Indianapolis, with record of 2:21.

Out of the mare Croppy, by the thoroughbred horse Medoe, and her dam and grandam, both by thoroughbred running horses, and her third dam claimed to be thoroughbred, Pilot Jr. sired the fast trotter John Morgan, who in 1860 made a two-mile record of 5:00½, and in 1864 made a record of 2:24.

Bred to the thoroughbred mare Sally Russell, by Boston, the produce was Miss Russell, and Miss Russell produced Mand S, record 2:10½, the fastest ever made, and Nutwood, 2:18½, to the cover of different stallions.

Pilot Jr. sired the mare Waterwitch, and she produced to Mambrino Pilot (by Mambrino Chief, out of Juliet, by Pilot Jr.), second dam by Webster, thoroughbred son of Medoe; third dam by thoroughbred Blackburn's Whip), the great trotter Mambrino Gift, who made a record of 2:20, being the fastest stallion record up to that date.

Waterwitch also produced Scotland, with a record of 2:22½, sired by the thoroughbred running stallion Bonnie Scotland, imported.

These instances, selected from many others that could be cited, should convince breeders of the superlative value of the Pilot blood, either for an outcross on other trotting fam-

ilies, or to introduce and utilize the blood of the thoroughbred running horse in breeding trotters.

Pilot Jr. was a purely gaited and fast trotter himself, and seven of his sons and daughters made records of from 2:24 to 2:30. Many who never saw him and were not acquainted with his history suppose he was a pacer. He was no pacer, but was as square a trotter as there was in Kentucky, and his produce had much less disposition to pace than did the produce of Rysdyk's Hambletonian. He was a horse of fine style and high finish, making a fine appearance in harness, and moving with remarkable vim and resolution.

Kate, the grandam of Almont, resembled her sire, Pilot Jr., in color, finish and gait. Capt. R. C. Anderson, who owned Kate, in a letter speaks of her thus: "Her speed and steadiness at the trot in the pasture were so remarkable, that the wonderful and seemingly fabulous stories told of swift pacers and trotters on the plains with flying manes and flashing eyes, and head erect—great leaders of the herd, and rivaling the winds in their fleetness—seemed no longer improbable. I thought then, and I think still, that she was the greatest untrained and undeveloped trotter I ever saw at three years old. I say this in the face of the prodigious and almost incredible feats of precocious trotters since that day, and after witnessing the performances of that truly wonderful colt Crittenden at the same age."

The third dam of Almont was the Pope mare, claimed to be thoroughbred. Capt. Anderson, speaking of her in the same letter quoted from, says: "She was doubtless thoroughbred. Everything about her history and appearance served to confirm this belief. I remember her distinctly—a dark brown mare, without white, so gentle and sensible, so sweet tempered, and yet so handsome and spirited, that she might have been in the mind of the genial Washington Irving when he drew the pleasant picture of the country preacher, who, from his earnestness and zeal, seemed to be expounding the law and the prophets, but who, upon a near approach, proved to be expatiating eloquently on the merits of a dark brown horse."

"She was about 15½ hands high, with every mark of blood, even to the gait of the runner, in slow or rapid motion. She was taken by a friend from the blue grass region and sold to my uncle, Mr. Pope, as a thoroughbred, with the promise, upon his return from the South, to send the pedigree in full, and properly authenticated; but as people are proverbially negligent of such promises, and my uncle was indifferent, the matter was neglected, and when my investigations began the former owner had died, and the pedigree could never be obtained. She was bred once to Old Wagner, and the colt, a handsome chestnut, was sold to Indiana and lost sight of before my return to the farm. She went to Wagner at the request of Colonel Campbell, who admired the mare and insisted on giving my uncle a season to his horse."

Since the publication of the catalogue the Almonts have largely increased their renown. The famous mares Aldine and Early Rose, are now one of the sensations of the day, and the wonderful performance at Hartford, while not perhaps "technical" as some have claimed, appears to be well enough authenticated as to do away with reasonable doubts of the correctness of the report.

On the side of the dam Algona has strong support.

His first dam Emma Kinkead, by Conscript (son of Cassius M. Clay Jr., and brother to American Clay.)

Second dam, Effey Dean, by Mambrino Chief.

Third dam, by Powell's Bertrand, son of Bertrand, by Sir Archy, and his grandam by imported Mambrino.

Thus it will be seen that Algona has a double cross of Mambrino Chief and only one remove further off than Piedmont, and has also the backing of the thoroughbred.

Algona was foaled May 12, 1876, bred by General W. T. Withers, sold by him to John H. Danielson of California, of whom he was purchased by Mr. Haggin last spring.

That he is destined to be a successful stock-getter is beyond question. His form and pedigree would give ample token of that, and his only colt that has started in a race was Almoone at Stockton, when, though suffering from the prevailing epidemic, he was second in the last heat, in 2:43. For two-year-olds this was not a bad showing, though when all right he can show a much faster gait. Almoone resembles his sire very much, another strong point in a sire, and a few weeks ago he was purchased of Mr. Danielson at a large figure.

Deciding a Bet.

The suit of Dan McCarthy, the horse dealer, against C. P. Tinkham, to recover \$100 balance due on a bet, in which the defendant acted as stakeholder, was on trial before Judge Edmunds yesterday. It appeared from the testimony of McCarthy that he had bet \$100 with Dinny Melone that one of a pair of horses that the latter was offering for sale was fourteen years of age, while Melone bet \$100 that the animal was under eight years. Tinkham, a book-keeper for R. B. Woodward & Co., was made stakeholder, and McCarthy agreed to leave the decision of the bet to Melone. A few days after the bet was made Melone tendered McCarthy \$100, and placed it on the seat of his buggy, claiming that the bet had been decided by veterinary surgeons as against McCarthy, but he (Melone) would let him off for old acquaintance sake. McCarthy refused to accept the money except as in part payment of the bet, and said he should hold Tinkham responsible for the other \$100. McCarthy claimed that the horse was so old that his age could not be proved except by the certificate of his breeder, and this Melone failed to produce, although he knew the breeder.

Mr. Melone testified to having had the horse examined by several veterinary surgeons, and that they had all stated that he was under eight years of age, but that owing to an injury of his mouth, sustained while a colt, he might be taken for an old horse.

The Court rendered a decision for defendant, on the ground that any time prior to the decision of a bet the parties to the wager had a right to withdraw their bets, and that the \$100 paid McCarthy was his interest in the bet.

McCarthy left the court-room declaring that the only way to get even on Melone was to bet him \$100 that the horse was thirteen years of age, which he could prove, but Melone declined to accept the proposition.—*Call*.

The races expected to come off over the Boise City, Idaho, course were indefinitely postponed on account of continued rains. The Park association announce that the meeting will be held at the earliest day which the weather and condition of the track will allow.

TURF AND TRACK.

Oregon Turf Notes.

There is no more racing in this part of the country until next year, and our reports of the doings of Walla Walla and Baker City are somewhat meager. Patsy Duffy being out of training, and Red Boy having left the country, naturally detracts from the usual interest felt at those places, especially when we remember that Wreath and Frankie Devine, either of which we deemed able to beat Ordinance over a distance of ground, have broken down and been put to breeding. Frankie Devine is in foal to Chesapeake, Rosa Mansfield has been bred to Patsy Duffy, and Wreath to Marmaduke. Out of these unions will come some rapid horses.

The North-western District Society should go to work and open stakes for running and trotting colts foaled in 1881, and close them on the 1st of May, next. The entrance in each stake should be fifty dollars, payable in five installments of ten dollars each, open to all colts bred in Oregon, Washington and Idaho. The running stake should be three-quarters of a mile and the trot a mile and repeat. The produce of such mares as Trifle, Georgia A, Annie Laurie, Pirouette, Tidal Wave and Jewel, should make a good field, to say nothing of what might come from the Grand Ronde country. And as for the trotting state, we are confident that there would be at least fifteen entries from east of the mountains. There's where they raise the horses, but Portland is where the money is, and to Portland they must look for their market.

Billy Coombs, the handsome four-year-old who won the Oregon cup at Salem in such a hollow style, left here last Monday morning for Baker City. There was a purse of \$500 to be run for at that place yesterday, in which Billy would probably meet Ordinance, the flying daughter of War Dance. She has not been doing very well this season and it would not surprise us to hear that Billy had beaten her in spite of the short time allotted to him for his journey to that place. But if she has regained her form of last year by this time, she will make it very tropical for the brown stallion, as the race is mile heats, three in five, a distance better suited to her than to him, judging by his running at Salem. If all the horses that ever ran on the Oregon tracks could be put together in a four-mile dash, and DesChutes' rider instructed to "take the track and keep it," the race would lie between Billy Coombs, Fred Collier, Council Bluffs and Foster; and all the others would be beaten off. Red Boy included.

From the Walla Walla fair comes the astonishing intelligence that Charles Russell's two-year-old colt Metropolitan, by Echo, won the stake at that place beating Dr. Mack's filly Adelaide, by Alwood out of Bon Bon by Bellfounder, in the capital time of 2:45, 2:36½. While this is not equal to the performances of Wildflower and Marlet, it is certainly very fast trotting, as the best three-year-old time at Salem was outside of 2:55. And the most remarkable feature is that Dr. Mack's filly was close up in each heat. Russell's colt was bred in California and was bought at a high price, while the doctor's filly is "native and to the manor born." All horsemen are well aware that the mild California winters admit of colts being worked from November till April, while here the weather is so severe that they must be kept up and fed. It is therefore no wild guess to conjecture that for every day's work Adelaide has received on the track, Mr. Russell's colt has received two. A California three-year-old, worked as they worked the youngsters at Palo Alto and Sunny Slope, is as far advanced in training as an Oregon or Walla Walla colt of five years. Hence, all things considered, we don't think Dr. Mack has any real cause to feel bad over it; for Metropolitan would not have acquired a record that would have shut him out of the 2:40 class for next year had not the beautiful daughter of Alwood forced him to that figure. We believe that in Adelaide the doctor has a second Faustina and that the logic of future events will prove it. No other sire in Oregon or Washington Ter. has produced, in a single season, three such colts as An Revoir, America and Adelaide. And when Susy Mack's tidy bay filly, Souvenir, comes on the track next year we suppose it will be the doctor's turn to remind folks of that homely old adage about "the proof of the pudding." It is true that Alwood has had the daughters of Bellfounder as a foundation for the popularity which, we believe, awaits him as a trotting sire; but other sires have had the same chance and have not improved by it. Major Magone, of Grant county has purchased the gray stallion, Hannibal, by Reed's Hambletonian out of Kitty Lewis, by Silver Duke. Silver Duke (2:28½), died last week at Waukegan, Ill. The colt was sold for \$350 to W. G. Scoggin, at Mr. Reed's sale; and he has parted with him on private terms to the Major, who takes him up into the wilderness as a successor to Champion Knox, who left many fine fillies in that neighborhood. Hannibal has a fine gait and, when he gets his growth, he will be heard from as a game and resolute horse.—*T. B. Merry in the Oregonian.*

Dissatisfaction over the St. Leger.

The recent winning of the English St. Leger by Dutch Oven has given rise to all sorts of ugly rumors and talk regarding the manner in which Lord Falmouth's famous filly has been handled this season, and some of the comments upon her recent performance are anything but kindly in tone. The London *Sporting and Dramatic News*, which is generally very conservative regarding matters in which the good name of a trainer or owner of race-horses is involved, speaks out very plainly. "Dutch Oven," it says, has won the Leger, though men who have watched the filly's career carefully this season may well have hesitated to believe their eyes when they saw the finish of the race, or read the announcements in the newspapers. After this the turf analyst may well give up his studies; public form is certainly no guide. How many pounds did Shotover give Battlefield at Ascot? thirteen pounds we think it was, and she won in a canter by four lengths—Shotover, bear in mind, who is much inferior to Geheimniss. At Goodwood, Battlefield (9 st. 1 lb.) beats Dutch Oven (8 st. 10 lbs.) with the greatest of ease, and this puts Dutch Oven a long way behind Battlefield, who is a long way behind Shotover—21 lbs. at least. How far this running makes Geheimniss superior to Dutch Oven the reader may calculate for himself—about 2 st. 10 lbs. we should say; and yet Dutch Oven wins quite comfortably. Truly, had the mare belonged to some owners very ugly things would be said!

Answers to Correspondents.

James Mack, Stillwater, Nevada.—April Fool, b m, foaled 1868, bred by Sprague & Akers, Kansas, by Waterloo. First dam Fanuy Daily, by Blacknose. Second dam Amo Harper, by imported Sagbrough. Third dam Ellen Puckett, by Sir Richard. Fourth dam by Stockholder. Fifth dam by Old Conqueror. Sixth dam by Brinkley's Peacock. Bruce's American Stud Book, vol. 1st, page 410.

Last Day at Jerome Park.

The non-appearance of the California stables at Chicago is accounted for in the following reports of racing at Jerome Park where it appears they had engagements. The track was heavy from recent rains but was regarded by local chroniclers as "safe," a modern expression for "unfit for fast work." Clara D scored a win at one mile and an eighth, Gano ran second in a three-quarter mile dash in 1:19, Duchess of Norfolk third in a mile and three-quarters and Grismer was placed last in a field of six at three-quarters of a mile.

FIRST RACE.

Purse \$500, for all ages. Three-quarters of a mile. Dwyer Brothers name ch g Bootjack, by Bonnie Scotland, dam Sparrowgrass, 4 years old, 115 lbs (J. McLaughlin) 1
E. J. Baldwin names Gano, by Grinstead, dam Santa Anita, 2 years old, 90 lbs (Williams) 2
W. L. Cassidy names ch g Saunterer, by Leamington, dam Lemonade, 4 years old, 115 lbs (Barbee) 3
J. E. Kelly names ch f Bella, by Fiddlesticks, dam Bernice, 2 years old, 87 lbs (Sheridan) 4
W. Donahue name b c Strathspey, by Glenelg, dam La Polka, 4 years old, 118 lbs (W. Donahue) 5
F. Robinson names b c Little Phil, by Enquirer, dam Nanny McNairy, 4 years old, 118 lbs (Murphy) 6
Time 1:19.

Bootjack was a great favorite over the field. After a half a dozen breakaways the flag fell to a capital start, with Saunterer leading, Bootjack second, Strathspey third, the others nearly parallel. When the horses came to the foot of the bluff Bootjack had his head in front of Bella, Saunterer third, Strathspey fourth, Little Phil fifth, Gano sixth—all lapped one on the other. Going around the hill at the half-mile pole Bella was leading by a neck, Saunterer second, a head in front of Bootjack, he about the same distance in advance of Strathspey, Little Phil fifth, Gano sixth. When the horses came in view on the lower turn Bella was leading by three-quarters of a length, Saunterer second, one length in front of Bootjack, he half a length in front of Strathspey, Gano fifth, Little Phil sixth. As the horses passed the three-quarter pole Bella led by a head, Saunterer second, half a length in front of Bootjack and Strathspey, the latter pair nearly parallel, Gano fifth, Little Phil sixth. Getting into the homestretch an exciting struggle was indulged in by all the contestants, which terminated at the judges' stand by Bootjack winning the race by three-quarters of a length, Gano second, a head in advance of Saunterer, he half a length in front of Bella, Strathspey fifth, Little Phil sixth. Time, 1:19.

SECOND RACE.

Handicap sweepstakes, for two-year-olds, \$25 each, and only \$5 if declared out, with \$500 added; the second to receive \$125 out of the stakes. Three-quarters of a mile. L. A. Ehlers names ch c Circassian, by Alarin, dam Anstralind, 93 lbs (Riley) 1
Dwyer Brothers name ch g Wandering, by Wanderer, dam Ringlet, 96 lbs (Sheridan) 2
P. H. Ryan names ch f Adalgisa, by Count D'Orsay, dam Adosinda, 105 lbs (Barrett) 3
D. D. Withers names br c Buckstone, by Stonehenge, dam Mary Buckley, 102 lbs (Evans) 4
J. E. Kelly names b c Carlyle, by Ill Used, dam Caroline, 95 lbs (Brennan) 5
E. J. Baldwin names ch c Grismer, by Grinstead, dam Jennie D, 85 lbs (M. Donahue) 6
Time 1:20½.

Buckstone was the favorite. The youngsters had a capital start after a few break-aways, Carlyle leading, Circassian second, Wandering third, Adalgisa fourth, Grismer fifth, Buckstone sixth. When they came to the foot of the bluff Wandering led by a head, Carlyle second, Circassian third, Adalgisa fourth, Grismer fifth, Buckstone sixth. Wandering led out of sight around the hill by a head, Carlyle second, a length in front of Circassian, Adalgisa fourth, Buckstone fifth, Grismer sixth, all lapped one on the other. When the youngsters came in view on the lower turn Wandering was leading by a length, Buckstone second, a head in advance of Carlyle, Adalgisa fourth, Circassian fifth, Grismer sixth. When they passed the three-quarter pole Wandering and Buckstone were parallel, Circassian third, Adalgisa fourth, Carlyle fifth, Grismer sixth. A fine run up the homestretch and Circassian won the race by a length, Wandering second, half a length in front of Adalgisa, Buckstone fourth, Carlyle fifth, Grismer sixth. Time, 1:20½.

THIRD RACE.

Handicap sweepstakes of \$25 each, and only \$5 if declared out, with \$500 added; the second to receive \$125 out of the stakes. One mile and an eighth. E. J. Baldwin names b m Clara D, by Glenelg, dam The Nun, aged, 93 lbs. (M. Donahue) 1
Preakness Stable names b g Duke of Montalban, by King Alfonso, dam Magenta, 4 years old, 95 lbs (Riley) 2
C. Boyle names b c Springfield, by Bonnie Scotland, dam Bouquet, 4 years old, 108 lbs (Blaylock) 3
Graham Brothers name ch g Wandering, by Barney Williams, dam Maid Lyon, 3 years old, 96 lbs. (Brennan) 4
Dwyer Brothers name blk g Carley B, by Virgil, dam Ladylike, 3 years old, 110 lbs. (J. McLaughlin) 5
Appley & Johnson name b c Jack of Hearts, by Ill Used, dam Nellie James, 4 years old, 114 lbs. (Evans) 6
F. Robinson names b g Little Fred, by Reform, dam Yorkshire Lass, 3 years old, 103 lbs. (Barnes) 7
D. D. Withers names ch g Duplex, by King Ernest, or Macaron, dam Echo, 7 years old, 93 lbs. (Kenny) 8
Rockaway Stable names b g Rochester, by Vauxhall, dam Heatherbell, 6 years old, 80 lbs. (Purcell) 9
Time 2:01.

Carley B was the favorite, Jack of Hearts second choice. Duplex was first away, Brunswick second, Carley B third, the others close up. When the horses passed the judges' stand Clara D was leading by a head, Brunswick second, Duplex third, Carley B fourth, Little Fred fifth, Springfield sixth, Jack of Hearts seventh, Duke of Montalban eighth, Rochester ninth. Clara D drew clear of the others on the upper turn, and at the quarter pole she led a length and a half, Brunswick second, a length and a half in front of Carley B, he half a length in advance of Duke of Montalban, Little Fred fifth, Springfield sixth, Jack of Hearts seventh, Rochester eighth, Duplex ninth. Clara D came down to the foot of the bluff leading two lengths, Brunswick second, two lengths in front of Duke of Montalban, Carley B fourth, Little Fred fifth, Jack of Hearts sixth, the others as before noted. Clara D led around the hill out of sight by two lengths, and when she came in view on the lower turn she still had that advantage, with Brunswick second, Little Fred third, Carley B fourth, Springfield fifth, the others close up in a bunch. Clara D led a length at the three-quarter pole, Brunswick second, Little Fred third, the others still bunched. A fine run up the homestretch and Clara D won the race by a length, Duke of Montalban second, a neck in front of Springfield third, the latter a neck in advance of Brunswick, Carley B fifth, Jack of Hearts sixth, Little Fred seventh, Rochester eighth, Duplex ninth. Time 2:01.

FIFTH RACE.

Handicap sweepstakes of \$30 each, and only \$10 if declared, with \$800 added; the second to receive \$200 out of the stakes. One mile and three-quarters. E. J. McElmeel names b c General Monroe, by Tom Ewling, dam Minnie T. Morgan, 4 years old, 112 lbs. (Blaylock) 1
F. Gehard names b c Eole, by Eolus, dam War Song, 4 years old, 126 lbs. (Barbee) 2

T. Winter names b f Duchess of Norfolk, by Norfolk, dam Marian, 3 years old, 100 lbs. (M. Donahue) 3
F. Morris names b c Priam, by Prophet, dam Regardless, 4 years old, 104 lbs. (Evans) 4
G. B. Bryson names b g Bushwhacker, by Bonnie Scotland, dam Annie Bush, aged, 105 lbs. (J. McLaughlin) 5
R. Roche names b c Hilarity, by Bonnie Scotland, dam Benlah, 3 years old, 85 lbs. (Sheridan) 6
M. S. Barger names ch f Elkhorn Lass, by Glenelg, dam Finework, 3 years old, 90 lbs. (Riley) 7
Time—3:15.

Eole was the favorite. The horses had a capital start, Hilarity leading a trifle, Eole second, Duchess of Norfolk third, Priam fourth, the others close up. When they reached the foot of the bluff Priam had his head in front, Hilarity second, Eole third, Duchess of Norfolk fourth, Bushwhacker fifth, General Monroe sixth, Elkhorn Lass seventh. Going out of sight around the hill Hilarity was leading, Priam second, General Monroe third, Duchess of Norfolk fourth, Elkhorn Lass fifth, Eole sixth, Bushwhacker seventh. When the horses appeared in view on the lower turn Bushwhacker was in the lead, Priam second, Eole third, Elkhorn Lass fourth—these four very close together. Bushwhacker was first at the three-quarter pole, led up the quarter stretch and passed the judges' stand a head in front of Priam second, Eole third, Duchess of Norfolk fourth, Hilarity fifth, General Monroe sixth, Elkhorn Lass seventh, all in a bunch. Going around the upper turn Priam passed Bushwhacker and led by a head at the quarter pole, Eole second, Duchess of Norfolk third, General Monroe fourth, Bushwhacker fifth, the others struggling on close up. Coming down the hill, as they passed the foot of the bluff Priam led one length, General Monroe second, a length ahead of Eole, he a length in front of Duchess of Norfolk, Bushwhacker fifth, Hilarity sixth, Elkhorn Lass seventh. Priam, General Monroe, Eole and Duchess of Norfolk passed out of sight around the hill half a length apart in the order given, with the others somewhat spread out. When the horses appeared in view on the lower turn General Monroe had a neck the best of it, with Priam second, the latter a length in front of Duchess of Norfolk, she a head in advance of Eole, fourth, Bushwhacker fifth, Hilarity sixth, Elkhorn Lass seventh. As the horses passed the three-quarter pole General Monroe was leading, Eole second, Priam third, Duchess of Norfolk fourth, the others beaten and falling back. Getting into the home stretch the race was highly exciting. General Monroe came on in front of Eole, and finished a winner by three-quarters of a length, Eole four lengths ahead of Duchess of Norfolk, third, she four lengths ahead of Priam, Bushwhacker fifth, Hilarity sixth, Elkhorn Lass seventh. Time, 3:15.

Lady Thorne's Mysterious Mile.

We presume our readers have all heard of that very private trial in the year 1870, when Mace drove Lady Thorne a ghostly mile in the gray of the morning, and only two others, John L. Doty and Wm. H. Saunders, timed the mare. In regard to this trial her driver said: "I never saw Lady Thorne trot a full mile at her best but once, and there are two other men living beside myself who can tell how fast that was, but I shall never tell, and it is probable that they will not. It was so fast that it would not be credited by the public, and so we agreed that we would never mention the time. But I will say this much: it was a faster gait for the whole mile than I ever saw kept up by any other horse for a single quarter." For a round dozen of years did Dan Mace maintain his determination to "never tell," but in an unguarded moment, a short time ago, out popped the secret. On the occasion to which we refer Dan had become much interested in conversation with a gentleman about that year, 1870, when Lady Thorne was to meet Goldsmith Maid at Buffalo. She had beaten the Maid whenever they had contended on Eastern tracks, but the party of the little bay mare was quite confident of a victory at Buffalo. Dan, after the trial referred to, felt abundant confidence himself, and he related on this recent occasion how he met Mr. Smith, the owner of the Maid, and told him he would beat her.

"But," said Mr. Smith, "we can trot three heats better than 2:20."

"So can I," said Dan.

"We can trot three heats better than 2:18."

"So can I," said Dan.

"We can trot three heats better than 2:16."

"So can I," said Dan.

The gentleman to whom Mace related the foregoing conversation casually asked: "Why, Dan, how fast did you ever drive Thorne?"

Dan impulsively replied: "I drove her a mile just as fast as a mile was ever trotted in public, and the last half in 1:05."

The secret of a decade was now more fully out. Lady Thorne trotted a trial in 1870 in 2:10½, last half in 1:05, timed by two of the most experienced men on the turf, both still in the flesh, and driven by a man who now lacks only two years of his threescore.—*Wilkes' Spirit of the Times.*

The Boy With a Nag That Can Trot.

"So, Christopher, you have bought a horse," observed Mr. Gandy, as he pleasantly surveyed his son. "What business are you going into?"

"Business—er—o—business; well, my dear sir, the fact is, I have been tumbling on something that can trot."

"You shouldn't have done it, Christopher," said the old gentleman kindly; "you are not young enough, your bones are set, and you are too fat. You can never be an emperor of the arena, Christopher. Do not tumble or engage in any gymnastics on the animal again."

"Of course, I only meant that I have been lucky enough to discover something with speed, and have picked it up for a mere song."

"An—a colt?"

"Well, no, emphatically; but her pedigree is a poem—dam Mme. Spavin, sire Signor Botts; own sister to Blind Staggers and Soapgrease."

"You will soon do it," mused the old gentleman, as a soft light played about his eyes; "you will soon be there, Christopher. There are a great many of you scattered through the country; you blossom at every rural crossing, my boy. You will soon pose on a contrivance like a hay rake with the teeth out; you will round your shoulders to give an artistic outline to a spotted shirt with baggy sleeves and a balloony back, and as you sit on your vehicle by a pump you will look pensively out from under a cap peak built like the bill of a sugar scoop, and as you tilt your cigar ash to the level of your right eye, and keep silently fanning the tail of your animal with a two foot whip, you will lose yourself in the enchantment of turf reverie. The by standers may never know that you cannot distinguish the points of a mare from those of a mermaid, Christopher, but as long as you are oblivious to this knowledge, I see no reason why you should not enjoy your soothing reflections.—(Rochester Express).

Exhibition of Trotting by Mr. Work's Team.

There has been so much gossip of late at Delmonico's and the clubs about the great performance which was to be expected of Mr. Work's double team in a display of speed at the Fleetwood track on Thursday afternoon that many amateurs were induced to visit the place yesterday with high expectations. Fortunately the day and the track were fine for a fast performance. Everything was in favor of the horses, as is shown by the wonderful speed made by Governor Stanford's three-year-old of 2:27. At 4 o'clock, the appointed time, Mr. Mace was on the ground in apple-pie order with Mr. Work's team, Edward and Swiveller, attended by a runner to spur them to their utmost. Mr. Work and his friends were loud in their talk of the great things that were to be done, and his men felt sure that they were to witness the world with the noblest trotting performance ever achieved. Mr. W. H. Vanderbilt was there, looking on no doubt in great anxiety and alarm as to the event. But the upshot showed that nothing more is to be expected of horses or of men than the best they can do. Driven by Mace, the greatest double-team driver alive, Edward and Swiveller trotted their mile, according to the judges, in 2:20. Mr. Work's friends were sadly disappointed. The horses and their driver did their utmost, but they were asked to beat a record of 2:16, which good judges before the experiment was made had pronounced to be beyond their capacity. There was a large attendance and the colts all made a fine show.—*World*.

Foxhall's Yearling Sister.

"Rapiet," in the *Illustrated Sporting and Dramatic News*, says of Foxhall's sister: "One of the handsomest yearlings in training—not one of the biggest, but one of the best shaped—is certainly the yearling sister to Foxhall. 'Handsome is, etc.' The gallant little filly has, of course, had no opportunity of showing her powers of speed as yet and the only capacity she has exhibited is as a mouser! Her distinguished brother, as I reported after a visit some time since to Mr. William Day's, had adopted—or had been adopted by—a couple of kittens. His little sister kills her own mice, and rats as well. Two of the latter were recently found slain in her manger, and the little cannibal is reported to have killed and eaten a mouse! This is very singular, and a glance at her kind and intelligent head does not support the idea of her being ignorant of the fact that fillies are not carnivorous. If make and shape go for anything, anyhow, Foxhall's sister will be distinguished as a racer and not as a slayer of rats and mice, and such small deer."

Gate Money Race Courses in England.

Quite a number of gate money race courses have been and are being constructed in England, and many there be who are very strongly opposed to the invention. Their greatest objection appears to be that the number of race-horses is even now insufficient to provide good fields at the present meetings and that if additional ones are brought forward something else than thoroughbreds will have to be pressed into service. The Jockey Club is called upon to interfere and the prophecy is made that the day is not far distant when it will have to take decided steps on the gate money question. A very wise man once observed that it took a quarter of a century to make the British public understand the merits of any discussion going on, so that according to very high English turf authority it will be necessary for a move to be made long before the general public have made up their minds on the subject.

EQUESTRIENNES.—The equestrienne match came off at the Agricultural Park, Salinas, last Tuesday forenoon, seven ladies contesting for the prizes, which were awarded as follows:

- First Prize—Miss Emma Connelly, a silver water pitcher and cup.
 - Second Prize—Miss Jessie Sherwood, silver cake basket.
 - Third Prize—Miss Mary Woolridge, silver jewel case.
 - Fourth Prize—Miss Rosa Sherwood, silver butter dish.
 - Fifth Prize—Miss M. Gilkey, silver eard receiver.
 - Sixth Prize—Miss R. C. Ayers, pair silver napkin rings.
- Miss Jennie Williams was awarded a special prize of \$10.

John Hibberd of Bethnal Green, London, attempted the feat of walking twenty-one miles in three hours at the Prince of Wales Grounds, Bow, on September 18. The weather was all that could be desired for a task of the kind, as there was scarcely a breath of wind stirring and, fortunately for the pedestrian, kept so during the match. On getting the signal to go he started at a fair pace, and covered the first couple of miles in 15:23, four miles in 31:12, six miles in 47:35, and seven miles and a half, less fifty yards, in the first hour. Even money was now offered on the man. Eight miles occupied 1:4:18; ten miles, 1:21:23; twelve miles, 1:35:22; fourteen miles, 1:55:44, and at the expiration of the second hour had traversed fourteen miles and a half, less fifty-five yards, going in the fairest possible manner, G. Tag, of Haggerstone, occasionally relieving Gregory for a lap or two in taking him along. Odds were now offered on the pedestrian, but no one seemed inclined to bet on the result. Sixteen miles were completed in 2:13:14, eighteen miles in 2:31:32, twenty miles in 2:50:11, and the full distance, twenty-one miles, in 2:59:20, Hibberd thus winning by forty seconds.

The race for the Great Eastern Railway Handicap, won by Mr. Lorillard's Aranza, 91 lbs., was a run away affair. After the start had been delayed some minutes by the vagaries of Adrastus, who broke away and galloped the entire course, Aranza, on the left, made the running from War Horn and Mazurka, most prominent of the others being Hornpipe, Dunmore, Atlanta and Reputation. They ran thus until half-way down Bushes Hill, when Hornpipe took second place, but she could never get on terms with Aranza, who won easily by half a dozen lengths; War Horn was a bad third. Mazurka was fourth, Dunmore, Atlanta and Fetterless next, and Adrastus last throughout. Value of the stakes £502. Aranza was ridden by E. Martin, who last year won on John Ridd. Rain fell heavily while the race was being run, and Loates, who rode War Horn, was two pounds over weight when he returned to the scale, but as such a contingency is provided for by Rule 31, the horse retained third place.

The brown pacing mare Ouida, whose death was noted last week, was for several years on the turf and had a record of 2:25. She was engaged in the last race at the Stockton meeting, which she won, and at its finish was retired to the brood farm of her owner, Mr. Valensin. She died three days afterward. She had been bred to Buccaneer, and a post mortem revealed that she was in foal with a horse colt.

Mr. Goldsmith is driving Romero and Director together on the road and says they go like one horse. Romero has entirely recovered from the epizootic and the reports are that he shows a wonderful flight of speed when allowed to have his head.

Races at Yreka.

The horsemen congregated at the Yreka track became a little impatient at the repeated postponements made necessary by incessant rains, and amused themselves by getting up some independent races which are epitomized in the following summaries:

Oct. 7.—Running dash of half a mile for citizen's purse of \$50, entrance \$5 added, first horse to obtain three-fourths of money, and second horse one-fourth.

G. W. Rucker's Snip	1
Jas. Muse's Hancock	2
S. S. Ford's Ida Hammond	3
E. Flitner's Sorrel Jim	4

Time 53.

Track very heavy.

Oct. 9.—Society's purse of \$50, for running race, entrance \$5 added. First horse to first quarter, \$10; first horse to second quarter, \$15; first horse to third quarter, \$20; first horse out a mile, \$30.

Jas. Muse's Hancock	1
S. S. Ford's Ida Hammond	2
G. W. Rucker's Brick Pomeroy	3
E. Flitner's Nellie Mack	4
C. Tolman's Dick	5

Time 1:53.

Hancock won at all quarters.

On Monday the fair was inaugurated, and the storm having cleared away and a general sunshine put the tracks in good condition, the *Journal* notes that there were more horses quartered at the fair grounds than had been seen at any previous fair, and had not the continued storms and repeated postponements of the exhibition had a tendency to discourage the attendance, 1882 would have been the most successful fair ever seen in the Northern tier. As it was it compared favorably with any of the preceding. The turf events up to the time of our going to press were as follows:

Oct. 16, 1882.—Trotting, free for all; 3 in 5; purse \$500. First horse receives \$400; second horse, \$100. Entrance 10 per cent. of purse; 5 to enter, 3 to start.

Jay Beach's b s Altamont by Almont	1	1
Jas. Sutherland's b m Nellie	2	2
Geo. Stephenson's ch g Professor	dist.	

Time—2:40, 2:40, 2:37.

Same day—Running, dash of a mile and a half, free for all horses owned in the district; purse \$100; entrance, \$5 added.

Jas. Muse's Hancock	1
Harry B. Ida Hammond, Brick Pomeroy and Wilson also ran.	

Time—2:48.

Oct. 17.—Trotting, free for all untried horses owned in the District; 2 in 3; purse, \$75; entrance, \$5, added.

Wm. Eckheart's b s Curtis	1
Jay Beach's Favorite	dist.
J. Tierney's May D	dist.
Ned O'Neil's Ned	dist.

Time—3:26.

Same day—Running, half mile and repeat; free for all horses owned in the district; purse, \$75; entrance, \$5, added.

Jas. Muse's b g Up and Up	1
Geo. Rucker's Snip	2
Blaine's Harry B	3

Time—5:2, 5:2.

Same day—Trotting, free for all three-year-olds and under, owned in the district; 2 in 3; purse, \$75, entrance, \$5, added.

J. Beach's Nymphophone	1
J. McDonald's Sleepy Kate	2 dist.

Time—3:19, 2:57.

Oct. 18.—Trotting, free for all in the District; 3 in 5; purse \$100, and entrance, \$5, added.

J. Beach's b f Maggie Arnold by Almont—Alice Drake	2	1	1
Jas. Sutherland's b m Nellie	1	2	2

Time—2:46, 2:36, 2:37.

Same day—Running, dash of three-quarters of a mile.

A. D. Richard's Fred Wickline	1
Jas. Muse's b g Flying Gelding	2
S. Wilson's Jennie H	3

Time—1:20.

Oct. 19.—Running, free for all mile heats.

Time—1:50.

Same day—Trotting free for all horses that have never beaten three minutes.

J. Tiernans Tyler	1
Jas. Sutherland Sorrel Dick	dist.

Time—2:57.

Trotting at Melbourne.

We take the subjoined account of trotting on the new course of the Victoria Trotting Club from the *Australasian*. With only a small programme before the public it could hardly be expected that there would be a large attendance at Elsternwick park on Saturday. However, some 400 or 500 persons found their way to the newly-formed track, which was very heavy from recent rains, and consequently slow time was prophesied. There was a fair sprinkling of ladies in the grand stand, and though the sport was pronounced slow, the fair sex appeared to enjoy the outing on so fine a day. A start was made with the Maiden Trot, which attracted seven to the post, Leithamstead being most fancied, and though he did not occupy a prominent position for the first part of the journey, he came through in the last quarter and won cleverly, and repeating the performance in the next heat, he won the stake. The winner is by Panic's son Alarm, who is said to be sire of several promising trotters. Seven numbers went up for the three-minute class trot, and as Contractor was in capital form he was installed first favorite. The American quickly showed his superiority by drawing away from his opponents, and though he broke badly between the half-mile and three-quarter post, he soon settled down into a beautiful swinging gait, and distanced every thing but Native Cat, who was some sixty yards off. The time for the heat was 2:48, and considering that the track must have been some 10 or 12 seconds slow, this was a very meritorious performance. Of course as all but Native Cat had been distanced by Contractor, only the two started for the second heat, which was an easy thing for the American, who bowled along in fine style and without a skip or a jump trotted the mile in 2:54, only jogging home from the three-quarter pole. Repeating the performance in the third heat Contractor won the purse. As this brought the card to a very early close, it was decided to give a purse of 10 sovs. for the beaten lot, and for this three started. Yendon showed most speed for the first half mile, but he broke badly when Conquering Hero got on terms with him, and then the latter accomplished an easy victory. Mulholland, who drove Yendon in the three-minute class, was fined £5 for shouting loudly as the horses were on the back stretch, and the owner of Prince was fined £2 for not scratching in time. The following are the results:

MAIDEN TROT.
Of 40 sovs. Mile heats. Best two in three.
Mr. Jas. Scoble names g g Leithamstead, 6 years, by Alarm. (Upjohn)..... 1 1
Mr. F. English names b g Neptune, aged, (P. J. Brady)..... 2 2
Time—3:20, 3:16.

THREE-MINUTE CLASS.
Purse of 70 sovs. Mile heats. Best three in five.
Mr. J. J. Miller names b h Contractor, aged, by Ajax. (H. L. Shepherd)..... 1 1 1

Mr. F. C. Goyder names g g Native Cat, aged, (D. Collins)..... 2 2 2
Mr. J. A. Roberts names b g Yendon, aged, (Mulholland)..... dist.
Mr. J. Munday names b g Conquering Hero, aged, (Brady)..... dist.
Mr. P. J. Roddy names h m Black Diamond, aged, (E. Giles)..... dist.
Mr. J. J. Miller names b m Fright, 5 years, (M. Griffen)..... dist.
Time—2:48, 2:54, 2:55.

TWO-MILE FLUTTER

Of 10 sovs. For maidens and distanced horses.
Mr. J. Munday names b g Conquering Hero, aged, by Daniel Boone. (Brady)..... 1
Mr. J. A. Roberts names b h Yendon, aged, (Mulholland)..... 1
Mr. J. J. Miller names b m Fright, 5 years, (Shepherd)..... dist.
Time—5:53.

Monterey District Fair.

The fair of the Monterey District Association closed at Salinas last Tuesday, having commenced on the preceding Thursday. The weather was unfavorable throughout and the races and other exercises were held, as it were, between showers. Under such climatic conditions the attendance was of course, comparatively small. The number of horses on exhibition was unusual and showed very decided progress in that direction; of cattle, sheep and hogs the exhibition was small but the quality and breeding of the animals shown were of a superior order.

RESUME OF THE RACING.

MONTEREY DISTRICT FAIR, SALINAS, October 5th, 1882.—Running novelty race of one mile and a quarter, purse \$300, horse first to first quarter, \$50; first half, \$50; first three-quarter, \$50; first mile, \$50, mile and a quarter, \$100.

P. J. Shafter names b h Haddington	1
C. H. Waters' Lallah Cooler, Duncan's Queen Sabre, Jones' Stumpling Dick, C. H. Waters' Bay Charley and J. Handley's Brown Lucy also ran. Lallah Cooler won the first quarter in 29, Haddington winning all other quarters and the race.	

Time—2:16.

Same day—Trotting, free for all horses owned in the district.

S. K. Trefry names b g Bay Frank	1	2	1
D. W. Evans names b g Pajaro Chief	1	1	2
Wm. Peck's b g Leland Stanford, Z. Hebert's g m Maggie Vorhees and L. Anzer's g m Ella Pabro trotted but their placing is not given.			

Time—3:04, 2:54, 2:57, 2:49.

October 6th—Trotting for all horses owned in the district, purse \$300 three miles.

James Delaney names b g Gablian Joe	1	1
R. D. Brown's names s g Sorrel Frank	2	2
E. J. Swift names blk m Nell Briony	3	3
J. D. Carr names b s Gen. Lee	4	dist.

Time—2:40, 2:39, 2:40.

Same day—Running, free for all, half a mile.

J. Handley names b m Brown Lucy	1
C. H. Waters names b g Bay Charley	2
W. Cavanaugh names ch m Fanny	3
Alf Innes names g g Trouble	4
R. B. Cockrill names b s Bob	5

Time 52.

October 9th—Trotting free for all three-year olds owned in the district.

G. Fancher names b g Eddy	2	2	1	1
H. Tracy names g m Maggie	1	1	2	2
C. Rodriguez's ch m Queen Bee, Z. Hebert's h m Flora Carr and H. Falkenburg's ch g Bluster also trotted but their placing was not reported.				

Time—3:26, 3:16, 3:09, 3:12.

Same day—Trotting, free for all stallions owned in the district.

J. G. Sanchez names b s Billy Matthews	1
H. Tracy names Carr's Mambrino	dist.
J. D. Carr names b s Gen. Lee	dr.

Time—2:57.

Same day—Trotting, for all two-year-olds owned in the district.

J. A. Heard names b s Billy Donathan	1
Z. Hebert names b g Tommy	2

No time given.

On the 10th there was a race for District double teams which was trotted in the rain. As our report contains neither the placing of the teams nor the time of the heats it is useless for either the purposes of record or information and we omit it.

Stock Exhibits and Premiums.

Roadsters, best stallions 4 years old and over, J. D. Carr enters Carr's Mambrino, P. E. G. Anzar enters Splann. Premium to Carr's Mambrino, \$20.

Best mare 4 years old and over, P. E. G. Anzar enters Tilla T, which receives premium, \$10.

Best mare 4 years old, J. D. Carr enters Sweetness. Premium awarded, \$5.

Horses for all purposes, stallions 4 years old and over, M. Wolters enters Luceonia, J. D. Carr enters Gen. Lee, Jas. Delaney enters Tom Vernon, Chas. Luce enters Alisal Chief. R. Corey enters Vermont, Jr., Chrisman & Franks enter Patchen George. Vermont Jr., takes the premium, \$20.

Best stallion 3 years old, Jno. Brown enters Commodore, J. R. Hebron enters St. George, R. Corey enters Billy. Premium to St. George, \$15.

Best stallion 2 years old, Hiram Corey enters Clarence King, P. E. G. Anzar enters Billy Donathan. Premium to Clarence King, \$10.

Best stallion 1 year old, J. D. Carr enters Busted, C. Luce enters Star of the West. Premium to Busted, \$7.50.

Best sucking colts, J. D. Carr enters one colt, John Sexton enters Billy, J. B. Iverson enters Starr, H. Corey enters one colt, E. W. Cox enters one colt. Premium to Iverson's colt, \$5.

Best gelding 3 years and over, J. D. Carr enters Trouble and Gen. Johnson, D. A. Evans enters Pajaro Chief. Premium to Gen. Johnson, \$15.

Best mare 4 years old and over, George McIntyre enters Nell, J. B. Iverson enters Lizzie, J. D. Carr enters Clara. Premium to Clara, \$15.

Best mare 2 years old, J. D. Carr enters Mamie. Premium, \$7.50.

Best mare 1 year old, Jno. Sexton enters Belle. Premium, \$5.

Best mare 4 years old and over, with colt, J. D. Carr enters Lady Merrill and colt, same enters Lady Grey Eagle and colt, Jno. Sexton enters Lucy and colt, same enters Julia and colt, Robt. Garside enters Mollie and colt, same enters Julia and colt, H. Corey enters Belle and colt, John Brown enters Jenny and colt. Premium to Jenny, \$10.

Best mare 3 years old J. D. Carr enters Clara.

Drift horses, best stallion 3 years old and over, P. Conroy enters Frank the Plow Boy, Wm. Robson enters Prince Charlie, D. Hargens enters Prince. Premium to Prince Charlie.

Best stallion 2 years old, L. B. Wilmouth enters Pride. Premium, \$10.

Best mare 3 years old, H. Corey enters Rosa. Premium, \$10.

Best sucking colt, John Brown enters Favorite, John Sexton enters Billy, Robt. Garside enters Frank and John. Premium to Favorite, \$5.

Carriage horses, used and owned by one man, J. D. Carr enters Mac and Joe, J. B. Iverson enters Orphan Boy and Frank. Premium to Mac and Joe, \$10.

Best span of buggy horses, J. D. Carr enters Jackson and Lee, J. P. Sargent enters Lady May and Lady Washington, Wm. Gift enters Fly and Skip, T. F. Faw enters Jessie and Dick, Greg Sanchez enters Kate and Nellie. Premium to

Jackson and Lee, \$7 50.

Best single buggy horse, J. D. Carr enters Jerry, P. Kilburn enters Sarpedon. Premium to Sarpedon, \$5.

Sweepstakes, Best stallion with 4 or more of his colts, M. Wolters enters Lucionia and 4 of his colts, J. D. Carr enters Mambrino with 4 colts, Chas. Luce enters Alisal Chief and 4 colts. Premium to Lucionia, \$20.

Best mare with 4 or more colts, J. D. Carr enters Lady Morrill and 5 colts. Premium, \$20.

Best stallion of any age or breed, J. D. Carr enters Carr's Mambrino, same enters Gen. Lee, P. Conroy enters Frank the Plow Boy, D. Hargens enters Prince, R. Corey enters Vermont Jr. and Billy, P. E. G. Anzer enters Billy Donathan, J. R. Hebron enters St. George, H. Corey enters Clarence King. First premium to St. George, \$15, second premium to Vermont Jr., \$10.

Best mare of any age or breed, J. D. Carr enters Sweetness and Clara, H. Corey enters Belle, J. L. Kestner enters San Luis Maid. First premium to San Luis Maid, \$15, second premium to Clara, \$10.

Best gelding of any age or breed, J. D. Carr enters Trouble, P. Kilburn enters Sarpedon, J. D. Carr enters Gen. Jackson, D. W. Evans enters Pajaro Chief. Premium to Pajaro Chief, \$10.

Best colt of any age or breed, R. Garside enters one colt, J. B. Iverson enters Star, Chas. Luce enters Star of the West. Premium to Star.

Cattle, best Jersey Bull, George Pomeroy enters Captain Jack. Premium, \$5.

Best grade bull, B. Hitchcock enters Jack, Phil Collins enters George Graves. Premium to Jack, \$10.

Best graded cow 3 years old and over, Phil Collins enters Lady Escolle, G. McIntyre enters Pet and Rose, Jas. Delaney enters Belle. Premium to Lady Escolle, \$10.

Sheep, to all these sheep premiums were awarded. Merino, best ram, J. D. Carr enters Monarch, Jim and Chief.

Best ewe, J. D. Carr enters Beauty and Daisy.

Best 3 lamb rams, J. E. Carr enters three.

Best pen of not less than 5 lambs, J. D. Carr enters five.

Best family, of 2 rams, 2 ewes and lambs, J. D. Carr enters family.

Southdowns, J. D. Carr enters 1 ram, 1 ewe, 3 ram lambs, pen of 5 ewe lambs.

Best ram for all purposes, J. D. Carr enters Monarch.

Best ewe for all purposes, J. D. Carr enters Daisy.

Swine, Parker's Duroc pigs took the premiums.

Best boar of any breed, Wm. M. R. Parker enters Jack, J. R. Hebron enters Black Sam.

Best sow of any breed, W. M. R. Parker enters Sally.

Best pair of pigs under 6 months, W. M. R. Parker enters 1 pair pigs.

Poultry, H. C. Tuttle exhibits 1 pair Black Spanish fowls, 1 pair of Light Brahmas, 1 pair of Houdans, 1 pair of Brown Leghorns, 1 pair of Plymouth Rocks, 1 pair of Toulouse geese, George Pomeroy exhibits 1 pair of White Leghorns, C. P. Nance exhibits 1 pair Plymouth Rocks, each of the above received a premium.

Hinda Rose in Kentucky.

We are indebted to the Lexington, Ky., *Live Stock Record* for the following account of the trot for the Lexington Stakes on the first day of the Kentucky Breeders' meeting, the 11th inst:

The heavy rain that fell on Thursday necessitated a postponement of the trots until Wednesday. A heavy rain fell again that night and to-day the track had dried sufficiently to make the going safe but not fast. The Lexington Stakes for two-year-olds brought seven to the post, with the California filly, Hinda Rose a big favorite. She lost the first heat by getting away badly, but won the second and third in good style.

First heat—Early Dawn in the lead, Fugue second, Lexington Wilkes third, followed by Stuart, Wilkes Boy, Lizzie Wilkes and Hinda Rose, the later pacing. Fugue took the lead on the turn, was never headed, and won easily by four lengths; Hinda Rose who got squared before reaching the quarter and trotted fast was second, Wilkes Boy third, Early Dawn fourth, Lizzie Wilkes fifth, Stuart and Lexington Wilkes distanced. Quarter 40½, half 1:16½, three-quarters, 1:55½, heat 2:36½.

Second heat—Fugue in the lead, Hinda Rose second, Early Dawn third, Wilkes Boy fourth, Lizzie Wilkes fifth. Fugue broke at the quarter, Hinda Rose taking the lead, Fugue second, they trotted in this order to the three-quarter where Fugue broke and again within the distance, Hinda Rose winning the heat by six lengths, Fugue second, two lengths in front of Wilkes Boy, third, Lizzie Wilkes fourth, Early Dawn fifth; the three latter were afterwards declared distanced for running. Quarter 38½, half 1:15½, three-quarters 1:52½, mile 2:32.

Third heat, Hinda Rose in the lead, was never headed, Fugue lay at her wheel to well within the distance when she broke, Hinda Rose winning by six lengths, Fugue second. Quarter 39, half 1:16, three quarters 1:54½, heat 2:32.

SUMMARY.

Kentucky Trotting Horse Breeders' Association. First day, October 11, 1882—First trot, Lexington Stakes for two-year-olds, \$50 each, half forfeit, and \$10 declaration if made on or before June 1, 1882; \$100 added; two-thirds of the whole stake to the first horse; two-thirds of the remainder to second; the balance to the third. Mile heats. Eighty-five nominations, thirty-six of whom have declared. Value, \$1,830.

Palo Alto Stud names br f Hinda Rose, by Electioneer, dam Beautiful Bells, by The Moor. 2 1 1
H. C. McDowell names br f Fugue, by King Rede, dam Fuga, by Geo. Wilkes. 1 2 2

Betting, Hinda Rose, \$70; Fugue, \$45; field, \$12.
Second heat, Hinda Rose, \$50; field, \$40.
Third heat, no betting.

The Fair at Los Angeles.

The Los Angeles fair opened last Tuesday under favorable conditions notwithstanding the frequent rains and vexatious delays caused thereby. The details of the exhibition will receive extended notice next week. The number of horses and cattle at the grounds is largely in excess of any previous fair and the whole is a pronounced success. Through the non-receipt of our own report we clip the following account of the first day's races from the Los Angeles *Herald* of Wednesday:

The first race was for the three-minute class, best three in

five; purse \$300. In the pools and on the ground Lady Washington was a prime favorite, selling at two to one against Don Carlos, and finally two to one against the field. The first heat was started at half-past two, all four going out well together, with Lady Washington in the lead; Don Carlos, Hunter and Hattie Johnson in the order named. Lady Washington won the heat easily in 2:36½; Don Carlos a good second, Hunter third, and Hattie Johnson a bad fourth.

The second heat was neither as interesting nor as exciting as the first. Lady Washington won this heat in 2:39, followed closely by Don Carlos; Hattie Johnson third, Hunter fourth. For a time it looked as though Rose's Don Carlos was going to win the heat, as at the three-quarter pole the sorrel colt was at the heels of the pretty bay mare. She, however, made the string a couple of lengths ahead of Don Carlos.

The third heat was decidedly the most exciting of the day. The bell called back the horses twice on a false start, caused by Hattie Johnson's breaking, but they got off well in a bunch on the third trial, with Hunter leading, Lady Washington, Don Carlos and Hattie Johnson following. Before the quarter stretch had been passed the favorite took the head of the procession, with Hunter coming up behind her, Don Carlos and Hattie Johnson in the rear. After the half-mile had been made, however, Don Carlos shot past Hunter and made for Lady Washington, but the little bay would have none of it, and came in under the wire in beautiful style in 2:37½, with Don Carlos a short length behind, Hunter third, Hattie Johnson last. Don Carlos won second money and Hunter the \$30 awarded to the third horse.

SUMMARY.

LOS ANGELES, CAL., Oct. 17th, 1882.—Trotting, for the three minute class.
E. L. Mayberry's br m Lady Washington.....1 1 1
L. J. Rose's Don Carlos.....2 2 2
L. J. Felton's br g Hunter.....3 4 3
L. H. Titus' br m Hattie Johnson.....4 3 4
Time—2:36½, 2:39, 2:37½.

The second race was running, dash of half a mile, open for all two-year-olds. Five entries had been booked, but on the call only three starters put in an appearance. These were: Dottie Dimple, Ballona Girl and Aunt Betsy. Aunt Betsy sold high first choice, the pools going twenty to eight for her against the field. From the jump it was plain to see that neither of her competitors could touch her, and she came in under a tight pull in 48½ several lengths in the lead. The race was a beautiful one, as both Dottie Dimple and Ballona did their best to catch the fleet bay filly, but could not do it.

SUMMARY.

Same day—Running, half-mile dash for all two-year-olds.
J. W. Adams' br f Aunt Betsy.....1
Hill & Gries' blk f Dottie Dimple.....2
A. Machador's br f Ballona Girl.....3
Time—48½.

BICYCLING.

LADIES' COSTUME.—Lady tricyclists should look as nearly as possible as though no alteration had been made in their ordinary dress; but for health and comfort's sake the stereotyped underclothing must be radically altered. The linen usually worn next the skin is fatal to health, slight perspiration making it so damp as to strike cold to the chest, back, and in fact every part of the body in contact with it. Male tricyclists and bicyclists have long found out that flannel must be worn next the skin at all seasons. Let the linen, then, be altogether banished from the tricyclist's wardrobe, the chemise being replaced by a soft, smooth flannel vest, and the nether limbs encased in flannel, cut exactly like a man's riding breeches, without any superfluous fullness to crease up. In really hot weather, for brisk riding, nothing else is required save the orthodox skirt, as described by "Dot," which can be weighted round the edge, as ladies' riding habits are, to secure immunity from the wind howling the kiting about the ankles; but when the weather is cooler, or only gentle riding is being indulged in, the divided skirt can be added, under the outer skirt, and an extra flannel or wool vest if desired. The wool "jerseys" which were so fashionable are very handy things to carry in the luggage bag on a long ride, in case the weather, becoming cooler towards evening should make an extra garment desirable; and when a mid-day stoppage is to be made a change of dry flannel in the bag will also be appreciated.—*Tricyclist*.

The *Cyclist* editor, who has been riding a tricycle for several months past in admiration of its comforts and capacities, and in the *Cyclist* has devoted more space to the eulogizing of the three-wheeler than of the bicycle, recently, just for a change, took out his forsaken 54-inch tandem, and now writes ecstatically of the pleasure and exhilaration derived from the higher speed obtained and advantages utilized, and many minor gains of biking over triking, and expresses the hope that he shall long continue faithful to his first love.

Will Rose writes from Central City, Neb., 25 September: "You may tell the boys of the wheel that I have reached this point on my journey from Danville, Ill., to San Francisco, Cal., and am in good health and spirits. Have found considerable sand in this part of the state, and lots of sand bars. I start from here to-day on across Nebraska. Expect to reach Cheyenne City, Wyoming, by next Saturday night. It is getting thinly populated in this part of the country, and lonesome work for one wheelman."

With the advent of pleasant weather again enthusiastic riders are making preparations for country tours. This calculation will be somewhat interfered with, however, by the action of the country road makers who have taken advantage of the time to give many of the roads a new coating of gravel, which will render them unridable for at least a month.

Quite a number of the riders of the Oakland and San Francisco clubs have taken to amateur photography and may often be seen out with all the paraphernalia of the wandering artist perpetuating in tangible form many of the beautiful views to be met with on a day's run.

Roads and weather permitting, the Oakland Bicycle Club will take a run to San Leandro and vicinity on the 22d.

A gentleman from Sebastopol, Sonoma county, has captured a great curiosity in the shape of a quadruple fish with four heads and four tails, the body being grown together after the Siamese twin style. The fish is about seven inches long and four inches square, and belongs to the perch family. It is a voracious feeder.

It is calculated that about one hundred and fifty pounds of rabbits and quail are shipped daily from Santa Ana to Los Angeles, which is the largest game shipping port of the southern counties.

POULTRY.

Table Poultry.

The chicken question, says the *Home Farm*, presents an anomalous condition in this country. Wherever we go, north or south or anywhere, we find farmers, merchants, mechanics and sometimes even sailors breeding poultry, contending at fairs, advertising through the papers and raising a general hue and cry in behalf their pets, and on account of nothing on earth but the feathers. One would think from all the fuss that those people were breeding ostriches instead of chickens; that feathers were of more value in the market than flesh; that the American people preferred to wear feathers on their bodies rather than put flesh in their bodies. Nothing finds favor with these chicken fanciers except the so-called blooded or thoroughbred fowls that are simply bred to the feather. The size of the Brahma is sacrificed to the correctness of the tail and hackle markings. The Dorking has lost his breast in the struggle to preserve the flesh color of the legs and the uniformity of the feather markings. How far this craze has gone in England we are not informed, but we know some of the best table fowls known to the trade were originated there.

In France not only are breeds of fine table fowls originated, but according to all reports they are still bred with an eye singly to table qualities; and not only this, but methods of feeding to the end of quick maturity, economy of flesh production and perfection of flesh quality are closely practiced and experimented with. The French seem to understand this question as a practical one, and go at it in a way to make fowls not only a pleasure to breed, but a profit to handle. Chicken food that is wasted by the ton in this country, as dead horses, stale bread, etc., is carefully husbanded and turned to the finest kind of chicken flesh in France. Our people are so fearfully squeamish about such things, that, while they can stand and see the hen eat worms and carrion at her own sweet will and chop her head off the next hour to put her in the pot, they will not hear of such a thing as feeding her carrion as a business. The lady who eats the oyster raw from the shell is horrified at the Italian who does the same with the snail.

It is a wonder to many people why Americans can succeed so well with fancy fowls, and yet meet with repeated and unvarying failure when they attempt to raise fowls for market. In one they succeed, with the other there seems to be no profit. It looks as though the American character was built upon too large a scale to make a profit with fowls unless he can get from \$3 to \$10 apiece for his cocks and hens. No one seems to be able to reduce this thing to a purely business basis. It has been our pleasure to examine the equipments of many farms where it was intended to raise poultry on a grand scale, and, generally, from the elaborate and costly fixtures, one would think the purpose was to raise children rather than chickens. It is very doubtful if a large establishment can ever be made a success from the start. Just as large oaks from little acorns grow, a large establishment must grow out of a small beginning that has developed a capacity in the owner for conducting a large business. We hope some day to see this, but not until the craze about color markings has somewhat subsided.

Value of Pure Bred Fowls.

The editor of the *Poultry Monthly* says:

Our experience compels us to say there is no stock as productive as our thoroughbred; because they have been bred in accordance with a system, and with the object in view of producing qualities of great excellence. It matters not what branch of the poultry trade you begin with, whether you breed the fancy varieties for sale or exhibition, the heavier kind for the food market, or the medium size for their eggs alone.

Under the very best management, our pure bred invariably give better satisfaction and prove more remunerative than fowls not bred to any degree of excellence. But it is with this as with all kinds of stock, or engaging in enterprise or occupation, the interest and pleasure that is awakened by the first step in the right direction goes a great way to gain in much shorter time the experience necessary to success, which only could be gained through years of arduous labor and attention, if the wrong course were pursued in the beginning.

Poultry keeping can be made an auxiliary to other pursuits without infringing upon the time of the keeper, and will bring a quick and handsome return for the food and care given them. It costs no more to feed and keep a flock of improved fowls than it does the common sorts. It is a waste of time and money to breed from poor stock, and it is the poorest economy to buy poor trash, though represented to be as good as the best. Those who have turned their attention to breeding and keeping up the character and excellence of their fowl stock have satisfied themselves of the importance of keeping good birds, and know the higher the quality the better the results, and that they never will be, in our generation at least, a drug in the poultry market.

Poultry breeders do not seem to appreciate the great value of bones for their fowls, and but a limited few ever make use of them for this purpose. No matter whether the birds are confined or not, they are sure to be benefited by a moderate quantity of bones, though those which are kept in close confinement need them most. Nearly every family of any size have refuse bones enough from the kitchen to afford the poultry quite a treat from time to time, and when this is not the case, or when the supply runs short, enough can be procured each week from the nearest butcher at a very small price, many butchers being glad to give them away to get rid of them. These can be crushed by using a large stone and a heavy hammer, though there is now a very good and cheap mill made for the purpose—costing but \$5 without legs and \$7 with legs—which pays for itself several times over during the season, where large flocks of fowls are kept, as it not only grinds and crushes bones, but also oyster shells, corn, etc. The bones crush best when dry, and should be reduced to about the size of a small pea. They are put in small troughs or boxes, under cover, where the fowls can eat what they want and to suit their pleasure.—*Poultryman*.

Answers to Correspondents.

Subscriber, San Francisco.—1. Lady Amanda beat Electra on two occasions. At Sacramento Sept. 25th, 1875, in a dash of a mile for all ages and at the Bay District course, San Francisco, Oct. 23d, 1875, in the Coleman handicap, mile heats.

2. Joe Hooker never had a career on the turf to describe. His temper was spoiled when he was a two-year-old and he never started in a race but once, the California Spirit of the Times Stake for three-year-olds at Sacramento Sept. 15th, 1875. In that race he was second in the first heat and distanced in the second. He was not trained afterward.

HERD AND SWINE.

Sanborn's Experience in Feeding.

The published details of the experiments of J. W. Sanborn, Superintendent of the College Farm at Hanover, N. H., now of the Agricultural College at Columbia, Missouri, contain interesting results, some of which we give our readers in condensed form on the present occasion.

The experiments in feeding calves present some facts which may be of some value to meat raisers. Two calves were taken, four and a half weeks old, both together weighing 253 pounds, and were fed twenty quarts of skimmed milk daily late in November. They gained in eighteen days thirty-nine pounds. Over eight quarts of milk were required for one pound in growth. For the next fourteen days a pound of mixed meal was added to the milk each day, and they gained sixty-three pounds, at a cost of 2.2 cents per pound. For the next fourteen days they had two pounds of meal and 4 pounds of hay added to the milk each day, and they gained fifty-nine pounds at a cost of 3 cents a pound. For the next fourteen days they had nearly the same feed, and gained seventy-one pounds at a cost 2.7 cents a pound. During the next fourteen days they gained sixty pounds on the same food, with some addition of hay, at a cost of 3.5 cents. Fourteen days later they had gained sixty-three pounds, with added meal and hay, at a cost per pound of 3.9 cents. The lesson taught by these results was that the older the meat, the more costly; but through the whole, although in winter, there was an actual profit, rating the meal at 1.4 cents a pound, the milk at four mills, and the hay \$1.0 per ton. This was a single limited experience, but it shows the importance to farmers of knowing at what age of animals it is most profitable to feed or dispose of them. We observe in the details of the above experiment that there was a slight increase in the amount of food given when the weight of animals had largely increased.

Other experiments were made, with those averaging 425 pounds each, to determine the probable amount of food animals would consume. They were found to require 3½ per cent. of their live weight daily in hay, the small amount of grain being estimated in hay. Ten pounds of hay were required for one pound of growth. Additional trials were made with two year steers, weighing from 1,000 to 1,100 pounds. An average of eight experiments, extending from 28 to 90 days, gave a consumption of 2.16 per cent. of their live weight daily, with an average gain of 0.85 of a pound. The important fact was determined that the older and larger the animal grows, the more food it requires to make a pound of growth.

Some valuable experiments were also made with roots as food. For growing cattle, carrots brought nothing, but they proved very much better for milk and butter than swedes or mangolds. The latter was found worse than useless for milk cows, as compared with other food, while for growing animals they brought one dollar and seventy-five cents a ton, rating hay at ten dollars a ton. Prof. Sanborn alludes to the old analytic methods of determining the value of foods, and these applied to carrots would show 1.35 of albuminoids. By the present method it is cut down to only 0.26. This fact bears rather hard on the infallibility of abstract scientific teaching.

Extended experiments were made with potatoes. The general conclusions reached indicated the great superiority of the products in quantity from large whole potatoes as seed. The average yield per acre for four seasons was, for large whole potatoes, 255 bushels per acre; for small whole potatoes, 193 bushels; from one eye to a hill, 85 bushels; two eyes to a hill, 124 bushels; three eyes, 154 bushels. The "seed ends" gave 182 bushels; stem ends, 152 bushels. The ground was evidently well adapted to potatoes, as the products show; but one essential part is not stated, namely, the dry or moist condition of the soil, or early or late planting. In the experiments which we have made with large and small seed, the difference in the size of the potatoes yielded was imperceptible, and it was only by weighing that a slight difference was found in favor of the large seed. But the soil was deep, moist and mellow. When planted late, and in a dry soil, the small potatoes scarcely grew at all. The large potatoes weighed from a fourth to half a pound; the small ones not half an ounce.

The results of the feeding of early and late cut hay to steers indicated the superior quality of that cut ten days after bloom to earlier cutting. In 1879 timothy was cut at three different periods—before, during and after bloom—the later cut proving more abundant in growth and more efficacious as food for both steers and milch cows. In 1880 extended trials were made in feeding hay cut at two different periods. The early was cut two or three days before bloom; the late three weeks afterwards, or when the seeds were formed but not ripe—a difference of twenty-three days between. Cows fed upon the early hay ate about six per cent. more of it, and gave about six per cent. more of milk. But those fed on the late hay gained in weight for the last two weeks twenty-seven pounds. There was a slight falling off in the milk of the late hay, but it gave the richest cream, and the animals ate less and gained in weight. These experiments on the whole do not appear to sustain the common opinion that hay cut very early is decidedly better than if cut while the seed is forming. There is another strong reason afforded by Prof. Sanborn's experiments against cutting very early, or when one-fourth of the heads were in bloom. Ten days later-cut hay weighed one-fifth more per acre in one experiment, and about one-fourth more in another experiment. In another instance, hay cut eight days before blooming weighed only two-thirds as much per acre as when cut while the seeds were formed, but yet small. These results, which were nearly the same at each repetition of the experiment, show a greater difference than those reported by Prof. Jordan, cited on page 583 of the current volume; but this difference would be increased by the weighing of the hay in Prof. Sanborn's experiment being deferred till the following spring, when all would be thoroughly dried.

Experiments of the character above mentioned must of course be repeated many times, to remove the chances for various temporary influences; but so far as these abundant trials made by Prof. S. go, they are a valuable contribution to well-defined agricultural knowledge, for which he should receive the thanks of the farming community.

Mrs. M. R. Pleasants offers as a special premium a pair of Angora kids. Value \$50. To any lady in the State who makes the best exhibit of 20 pounds of extracted and 10 pounds of comb honey at the agricultural fair in Los Angeles.

The Sierra Bonita ranch in Graham county, Arizona, comprises 900 square miles. It is stocked with 8,000 head of cattle and 500 horses.

Analysis of green rye shows it to be nearly equal to clover for fodder, and better than grass in blossom.

Notable Sale of Jerseys.

The oft-made prediction that the fancy for Jersey cattle will speedily decline seems further off than ever with each sale of animals of good pedigree. On the 4th instant Mr. T. S. Cooper, of Coopersburg, Pa., disposed of a grand lot of his imported cattle. The sale was held at the American Horse Exchange, New York, and Mr. Easton, the manager, who officiated as the auctioneer, succeeded in realizing for the owner the highest average ever obtained for so large a number of lots. Seventy-five head were brought to the hammer, and the total of \$46,685 was reached, an average of \$622 each. The highest price paid was \$5,100 for the famous Coomassie bull, "Sir George," three years old, which is also the highest figure ever reached for a Jersey in this or any other country, and Colonel Henry S. Russell, of Milton, Mass., may well feel gratified in possessing so noble an animal. Cicero, two years old, another bull of the Coomassie strain, was the admiration of all present and could he have shown heifers as old as Sir George's he would no doubt have also gone above \$5,000. He was purchased by Mr. W. H. Wilkinson, of Holyoke, Mass., for \$3,100. The highest priced female was Mabel 2d, six years, also of the Coomassie strain, and Colonel Russell was again the fortunate purchaser at \$2,000; her two year daughter went to Mr. W. K. Vanderbilt for \$1,200 and her five weeks heifer calf realized \$625. Mabel 5th, seven months old, a sister to Mabel 2d, by Sir George, was also secured by Colonel Russell for \$1,350. As will be seen by the list below the cattle were well scattered over the different States.

Elmer Holmes, 4 years; C. A. Morgan, Worcester, Mass.	8300
John of Linden, 2 years; F. W. Tanner, West Stockbridge, Mass.	450
Mrs. Porter, 4 years; W. K. Vanderbilt, New York	600

Cicero's Aristocrat, 8 days; W. K. Vanderbilt	600
Total	\$46,685

Wool and Mutton Farming.

It is to be very much regretted that notwithstanding the pretty general diffusion of good rams throughout the country, we see the short-sighted policy adopted by many sheep owners of using either ram lambs or inferior old ones, because thereby they are enabled to save a few dollars. Although the price for wool is at present low, mutton is bringing a good figure, and holders of inferior bred sheep are obtaining more money from their sheep than they ever thought of getting, and hence they are satisfied; but we wonder if such people ever contrast their prices with those which other people get for well-bred, well-cared-for animals. The system of keeping inferior animals where good ones could be equally well kept, and of course with a better profit, is very reprehensible, especially so when we remember the many facilities for getting good ewes and rams. To possess a fairly good flock of ewes, and a ram of good dimensions and good wool, and of no chance breeding, is to have the first thing needed, but this in itself will not be sufficient, if the necessary amount of forethought, energy and intelligence is not forthcoming, and it is often owing to the want of these latter qualifications that so many failures in sheep farming take place.

On farms that are not strictly sheep farms, but where cattle are kept, we think it a profitable venture to run some sheep; that is, if the requisite time and attention can be given to them; but in such cases we are of opinion that the sheep ought not to be folded with cattle, but should be made to follow the heavier stock, as they are moved from field to field. We are aware that many good agriculturalists are opposed to the mixture system of feeding sheep and cattle, but we believe that practical experience in the matter has long since proved that it is beneficial to the land, as well as profitable to the owner. We have often seen fields in dry summer time so parched, that although they were intended for cattle, no cattle could live on them, while sheep would not only have found subsistence but would have fattened on it; this we hold was a loss to the farmer. In like manner, many a farm has fields attached to it on which, during the autumn months, cattle could not be kept, but on which sheep could have ample subsistence and thrive well. There are other uses also

to be claimed for running sheep on the farm with cattle; they clear off all the grass left by the heavier stock, and this, as well as by their droppings, produces a close, even growth for them when they are again put on the pasture.

Sheep are also very useful in clearing pastures of many of the weed pests that sometimes infest them; in fact, some of the most pernicious of these are greedily eaten by them when in a young state—the repeated eating down of these weeds ultimately destroys them and thoroughly rids the pastures of their presence. With prices as they now stand, and as they are likely to continue, holders of sheep need not hesitate to use artificial food in their feeding. In using rich food for the feeding of sheep, folding on the poor pastures, if convenient, ought to be selected, as the enriching power of sheep manure when thus fed is very considerable. It is in fact well known to sheep farmers that lands worn out and of little value have been permanently benefited by the folding and grazing of sheep on them when fed with oil cake or other rich foods; and in calculating farm profits, the farmer should always take into account the improvements his lands have received, owing to this class of feeding. This is a point which most of our stock owners seldom take into consideration when casting up their profits, but if looked into it must be seen that it is a matter that should never be lost sight of. There cannot be a doubt that sheep farming, either in breeding, feeding or fattening, is paying and sure to pay; but by a much more extended and better system of selecting at least well-bred rams the addition to the sheep profit of this country might be increased by at least one-fourth.—*Rural World*.

The Dorset Sheep.

This is a horned sheep, indigenous to a small district in the South of England, and has been long bred there, chiefly from its habit of yearning lambs so early that they can be marketed from Christmas to the middle of January. As there are no others to compete with them at this season, they bring an extravagant price, which, although they are quite small in size at the time, pays their breeders a fair profit.

Like most other southern sheep in England, during some years past, their breeders have been improving them in form and increasing their size. In the case of the Dorsets, this has been done mainly by careful selections, with now and then a single cross of the Down rams on their ewes, and then going back again to Dorset rams, on this half-breed produce. The sheep are naturally quite hardy, and it is said they are not made less so by this cross; nor has their fecundity been diminished, they still continuing to bring twins in most instances. Those yearning early in October sometimes breed again in April; but this double production annually is not generally approved of, as it weakens the ewes, and they cannot bring forth so hardy and thrifty an offspring after this.—*National Live-Stock Journal, Chicago*.

EFFECT OF ODORS ON MILK.—Upon this question Professor Arnold, in the work "American Dairying," says: The London Milk Journal cites instances where milk that has stood a short time in the presence of persons sick with typhoid fever, or been handled by parties before fully recovering from the small-pox, has spread these diseases as effectually as if the persons themselves had been present. Scarletina, measles and other contagious diseases have been spread in the same way. The peculiar smell of a cellar is indelibly impressed upon all the butter made from milk standing in it. A few puffs from a pipe or a cigar will scent all the milk in the room, and a smoking lamp will soap do the same. A pail of milk standing ten minutes where it will take the scent of a strong-smelling stable, or any other offensive odor, will imbibe a taint that will never leave it. A marker of gilt-edged butter objects to cooling warm milk in the room where his milk stands for the cream to rise, because he says the odor escaping from the new milk while cooling is taken in by the other milk and retained to the injury of his butter. This may seem like descending to little things, but it must be remembered that it is the sum of such little things that determines whether the products of the dairy are to be sold at cost or below, or as a high-priced luxury. If milk is to be converted into an article of the latter class, it must be handled and kept in clean and sweet vessels, and must stand in pure fresh air, such as would be desirable and healthy for people to breathe.

HISTORY OF ALFALFA.—Alfalfa—or, more properly, lucerne—has a history enveloped in the mists of antiquity. It was known as a valuable fodder plant in ancient Media, 500 years before the Christian era. From Media it found its way to Greece, thence to the Roman Empire. Prof. McBryde tells us that lucerne was among the cultivated leguminous plants in the days of Cato, Virgil, and Varro; while Columella, with other Roman writers on husbandry, gave full directions for its cultivation, it being then held valuable not only as a forage plant, but as a rotation crop for wheat and other cereals. From Rome it passed to France and Spain, when it received the name it is now generally known by in North America, where for centuries it grew wild on the plains of Buenos Ayres, and was supposed to be a plant of native growth. In Mexico it was the staple crop of the country at the time of the conquest. It was introduced into California from Chili, where it passed under the name of Chili Clover, and the seed is still imported from that country to supply the needs of the farmers of the Pacific Slope.

TEXAS FEVER.—The first sign of anything wrong in a cow is the failing in milk, a refusal to feed, standing apart from other cattle in the field; the faeces becomes hard and dry, emaciation follows, the animal passes bloody urine, and in a few days death ensues. By post mortem we find enlarged spleen and liver, with cysts and abscesses frequently, and the liver having a peculiar yellow or brownish appearance. In a number of cattle that we examined we found the same appearance generally. The flesh takes on a black, yellowish appearance, caused by an excess of the coloring matter of the gall, and in every case becoming putrid in a short time as the result of congestion. This is Texas fever.

WEIGHT OF LIVE CATTLE.—Measure in inches the girth around the breast just behind the shoulder blade, and the length of the back from the tail to the shoulder blade. Multiply girth by length and divide by 114. If the girth is less than three feet, multiply the quotient by 11; if between three and five, by 16; between five and seven, by 23; between seven and nine, by 31. If the animal is lean, deduct one-twentieth from the result; or take girth and length in feet, multiply square of girth by length, and multiply the product by 3.36. Live weight multiplied by 1.06 gives net weight—nearly.—*New York Tribune*.

Iowa has nearly 1,000,000 cows, valued at \$27 per head, or a total of \$27,000,000.

Cattle are dying from disease in parts of San Benito county.

Judging Sheep—Points of Excellence.

The Indiana State Wool Growers' Association has devoted much time to the preparation of a scale of points of excellence for the assistance of the breeders of the different classes of sheep, as well as for the judges of sheep at the fairs. In bringing the matter before the association, the committee having it in charge said:

In presenting this knowledge to the Wool Growers' Association of the State of Indiana, your committee has been to a great deal of trouble and bother in summing up what we consider to be the greatest benefit to the Association.

The scale of points to be taken into consideration in the breeding of all the different breeds of sheep, is the blood of the sire and the dam. This must be ascertained before we commence to breed our sheep up to a standard, or otherwise we had better not try to breed to any given point, for without pure blood being infused into our flocks, it would be useless to make the trial.

Scale of 100 points for Cotswold sheep:

Blood—Thoroughbred, purely bred from one or more importations of Cotswold sheep of some reputable breeder from England. Seven points.

Head—Not too fine; moderately small and broad between the eyes and nostrils, but without a short, thick appearance, and in young animals, covered on crown with long lustrous wool. Seven points.

Face—Either white or slightly mixed with grey, or white dappled with brown. Four points.

Nostrils—Wide and expanded, nose dark. One point.

Eyes—Prominent but mild looking. Two points.

Ears—Broad, long, moderately thin and covered with short wool. Four points.

Collar—Full from breast, and shoulders tapering gradually all the way to where the head and neck joins. The neck of rams should be short, thick and strong, indicating constitutional vigor. The neck of ewes should be fine and graceful, and free from coarse and loose skin. (Collar five points with ewe.) Six points.

Shoulders—Broad and full, and at the same time join so gracefully to the collar forward, and the chin backward, as not to leave the least hollow in either place. Seven points.

Fore Legs—The mutton on the arm or fore thigh should come quite to the knee—leg upright with heavy bone, being clear from superfluous skin with wool to fetlocks, and may be mixed with grey. Four points.

Breast—Broad and well formed, keeping the legs wide apart. Girth on chest full and deep. Eight points.

Fore Flank—Quite full, not showing hollow behind the shoulder. (Four points with ewe.) Five points.

Back and Loin—Broad, flat and straight, from which the ribs must spring with a fine, circular arch, and scrotum of rams well covered with wool. Ten points.

Belly—Straight on underline. (Five points with ewe.) Three points.

Quarters—Long and full with mutton quite down to the hock. Eight points.

Hock—Should neither stand in or out. Two points.

Twist—Or junction inside the thighs should be deep, wide, and full; which with a broad breast, will keep the legs open and upright. Four points.

Fleece—The whole body should be covered with long, lustrous wool. Eighteen points.

One hundred points of excellence for Merino sheep:

Blood—Thoroughbred—i. e., purely bred from one or more of the direct importations of Merino sheep from Spain, prior to the year 1812, without admixture of any other blood. One point.

Constitution—Indicated by form of body; deep, large breast cavity, broad back, heavy quarters, with muscular development forming capacious abdomen. Skin thick, but soft, of fine texture, and pink color; expansive nostril, brilliant eyes, healthful countenance, and good size, age considered. Fifteen points.

Size—In fair condition, with fleece of twelve months' growth; full grown rams should weigh not less than 150 pounds, and ewes not less than 110 pounds. Seven points.

General appearance—Good carriage, bold style, elastic movement, showing in particular parts, as well as general outline, symmetry of form. Three points.

Body—Throughout, heavy bones, well proportioned in length, smooth joints, ribs starting horizontally from backbone and well rounded to the breastbone, which should be wide, strong and prominent in front; strong backbone, straight and well proportioned as to length. Heavy, muscular quarters, deep through and squarely formed behind and before, with shoulders well set on, neither projecting sharply above the backbone, nor standing so wide and flat as to incur liability of slip shoulder. Folds on the ram should be larger than on the ewes. Large and pendulous folds from the chin or jaws succeeding each other down the neck to the brisket, ending with a large fold or "apron," and extending up the sides of the neck, but lighter if at all extending over top of neck, also behind the fore-leg or shoulder, one on front of hind leg, hanging well down across the flank, also on rear of hind legs or quarters, extending upward toward the tail, with one or two on and around the tail, giving the animal a square appearance on the hind quarters, and straight down as may be from end of tail to hock joints and hind feet. Eighteen points.

Head—Wide between the ears, and between the eyes and across the nose; short from top of head to tip of nose, face straight; eyes clear and prominent; ears thick, medium size, and, together with face, nose and lips, white and covered with soft fur or downy wool. Ewes should have no appearance of horns; while upon rams the horns should be clear in color, symmetrically curved, without tendency to press upon the sides of the head or to extreme expansion. Six points.

Neck—Medium length, good bone and muscular development; and especially with the ram, heavier toward the shoulders, well set high up, and rising from that point to the back of the head. Five points.

Legs and feet—Legs medium or short in length, straight and set well apart forward and back, heavy bone, smooth joints, with large muscular development of the forearm; thick, heavy thighs, wide down to hock joints, and from knee joints downward covered with short wool, or the soft furry covering peculiar to the ears and face; hoofs well shaped and of clear color. Five points.

Covering—Tendency to hair and bare upon any part of the sheep is to be avoided. Evenness of fleece in length, quality, density, luster, crimp, trueness, strength and elasticity, covering the entire body, belly and legs to the knees; head well covered forward, squarely to a line in front of the eyes; well filled between the eyes and ears of horns, and well upon the cheeks; muzzle clear, with small opening up to and around the eyes. Scrotum of rams covered with wool free from tendency to hair. Fifteen points.

Quality—Medium, but such as are known in our markets as fine delaine and fine clothing wool, distinctly better in quality, luster, crimp, and elasticity than the wools of same

length grown upon the common grade sheep. Five points.

Density—Shown by the compactness of the fleece throughout, which should open free but close, showing very little of the skin at any point, even at the extremities. Ten points.

Length—At one year's growth not less than two and one-half inches, and as near as may be uniform in length to the extremities of the fleece. Five points.

Oil—Evenly distributed; soft and flowing freely from skin to surface, medium in quality, and of a light color. Five points.

One hundred points of excellency for the Down sheep:

Blood—Purely bred from one or more of direct importation from Great Britain. Ten points.

Constitution—Constitution and quality indicated by the form of body; deep and large in breast and through the heart, back, straight and well covered with lean meat or muscle; wide and full in the thigh, deep in flank, but soft and of a saffron color; prominent, brilliant eyes and healthful countenance. Twenty-five points.

Size—In fair condition when fully matured, rams should weigh not less than one hundred pounds, and ewes not less than one hundred and seventy-five pounds. Ten points.

General appearance—General appearance and character, good carriage; head well up, elastic movement, showing great symmetry of form and uniformity of character throughout. Ten points.

Body—Well proportioned, small bones, great scale and length, well finished hind quarters, thick back and loins, standing with legs well placed outside, breast wide and prominent in front, brisket wide and extending well forward. Ten points.

Head—Head short and broad; wide between the ears and between the eyes; short from top of head to tip of nose, ears short, of medium size and covered with downy wool; head should be well covered with wool to a point even with eyes, without any appearance of horns, color dark brown in some families and fawn color in others without speck or spot; light muzzle not objectionable. Ten points.

Neck—Short and heavy, especially towards shoulders. Five points.

Legs and feet—Broad and short and well set apart, color same as head and woolled to the hoof, which must be well shaped. Five points.

Covering—Body, belly, head, and legs well covered with fleece of even length and quality. Scrotum of rams well covered. Ten points.

Quality of wool—Medium such as is known in our markets as "medium delaine" and "half-combed wool," strong, fine, lustrous fiber, without tendency to mat or felt together, and at one year's growth not less than three and one-half inches in length. Five points.

How Breeds are Formed.

An inquirer writing to the *Breeders' Gazette*, says: I would like to know how to get a thoroughbred, or in other words, a distinct breed, and that paper after some preliminary remarks replies to him as follows:

If a common mare be bred to a strictly thoroughbred horse, the produce is half blood. By continuing this process, each time breeding the produce to a thoroughbred, until you reach five crosses, under the American rule, the produce would be entitled to a registry as a thoroughbred, and would be entitled to compete for premiums offered for thoroughbred horses. But in England a horse is not regarded as a thoroughbred, and is not accorded a place in the stud book, unless his lineage can be traced in unbroken succession, and without admixture, to Oriental blood.

With cattle in the United States the usage is not so uniform. No amount of crossing with pure blood will entitle an animal to entry in the Jersey Herd Registry. It must be a purely-bred animal, imported direct from the Isle of Jersey, under certain restriction, or descended, on both sides, from imported and recorded sire and dam, without any admixture whatever of alien or unrecorded blood, or it is not recognized as a thoroughbred Jersey. With Shorthorns the regulations are somewhat different in the two herd books. The American Herd Book is conducted under the rule adopted by the American Association of Shorthorn Breeders at Indianapolis several years ago, which is as follows:

"Resolved, That the ancestry of the animals should be traced on both sides to imported animals (Shorthorns) or to those heretofore recorded in the American Herd Book, with pedigrees not false or spurious, before they can be entitled to registry."

This rule was amended a few years later by the same association, by the adoption of a vague and obscurely worded resolution, which, being interpreted, means, if it means anything, about as follows: If the animals that were not eligible under the above rule have, by accident or oversight, been once recorded in the American Herd Book, no matter how far short they may have come of filling the required standard, the descendants of animals wrongfully recorded may be admitted, provided five crosses of recorded or recordable blood can be shown in the case of females, and six such crosses for bulls. Subsequently, however, this association rescinded all of its rules, leaving the whole matter in the hands of the publishers of the herd books; and the publishers of the American Herd Book have announced that they will be governed in the future by the rule as amended above.

Under this rule as amended, our correspondent may commence with a thoroughbred bull and a common cow, and he may use nothing but thoroughbred bulls on the produce for twenty generations, and it would still not be entitled to an entry in an American Shorthorn Herd book unless the common cow with which he commences has, by some accident, been accorded a place in the record; but as this Herd Book, established many years prior to the adoption of the Indianapolis rule, contains many animals that would not have been entitled to registry under this rule, the effect of the foregoing regulation is to authorize the recording of the descendants of such animals, without regard to the eligibility of their ancestors.

The rule adopted by the Shorthorn Record is still more rigorous. Nothing is admitted to this record that cannot trace, in unbroken succession, without admixture, to imported sire and dam.

The English Shorthorn Herd Book, which is controlled by an association of Shorthorn breeders, is conducted upon a different basis. Cows showing four crosses of approved Shorthorn blood, and bulls with five such crosses, are admitted to registry and are classed as thoroughbred Shorthorns. The Canadian Shorthorn Herd Book has been conducted under the same rule as the English, but recently a more strict construction has been adopted.

We think our correspondent will find the foregoing a full answer to his question. It will be seen that the simple fact that an animal is registered does not make it a thoroughbred; but it is perhaps safe to assume that, if an animal is entered in a given register, the editor has investigated the alleged pedigree, and that it is eligible under the rule adopted for his government; and, in proportion as the editor is known

to be careful, accurate and strict in the enforcement of this rule, is the recorded pedigree to be relied upon as coming up to the required standard. But it should be borne in mind that the stud books and the herd books are used only as convenient places for recording pedigrees, and the breeder must look to the pedigree itself, and trace it through all of its collateral lines before he can decide as to its value.

Shall we Ring the Hogs?

Experience teaches that the ringing of hogs when properly done, and done at the right time, is an advisable measure. The assertion sometimes made that hogs if habitually allowed to run at large will not injure meadows or pastures by rooting when turned upon them cannot be relied on. They may, for awhile, behave themselves very well, and roam a pasture for weeks, scarcely turning a sod. Seeing this, the owner is satisfied in his own mind that rings may be dispensed with, when soon after, having ceased to watch them, the rascals from some unaccountable reason begin rooting and in a short time will have done more damage, times over, than it would have cost to ring them. Such experience as this leads to the conclusion that the safest way is to use the rings whenever hogs are allowed to range where their rooting would be an injury.

The continuous use of rings the year round or their use on swine of all ages and sizes is not advisable. In the spring of the year they are generally the most needed. If hogs that were treated to rings in the spring are still on hand in the fall, it is usually best to remove the rings, particularly if the hogs are turned on the mast or are expected to follow cattle in feed lots or stalk fields.

It sometimes happens that a valuable brood sow acquires such bad habits as lifting gates or breaking fences. A couple of rings in the nose of such an animal will put her on good behavior the most effectually of anything ever tried. So also a sow that is vicious or cross to other hogs; a good ring in her nose will prove to be a wonderful tamer. A stock boar, if inclined to be unruly, should be treated the same way.

Of the different kinds of patent hog rings before the public, it may be said that they are all good enough, some, perhaps, being more easily applied and lasting longer than others. Of those not patented a horse-shoe nail or a piece of common No. 12 wire makes a very good and cheap ring, and one readily used with the help of a double-edged awl or common punch for making the holes in the rim of the snout and a pair of small pinchers for closing the rings after being inserted.

Sure Death to Lice.

Take a bar of common soap, place in a pan containing a little water, then heat until melted down, then add carbolic acid crystals (carbolic acid crystals can be had of any druggist in one-pound bottles at seventy-five cents each), at least one ounce of acid to each pound of soap used; there is no danger if used stronger. To reduce the crystals to a fluid state remove the cork from the bottle, place in water and heat the water, when it may be easily poured out and mixed with soap. When cool, a strong soap suds made with this soap will be sure death to all insects that live on domestic animals. It will cure mange, barn itch, and all cutaneous diseases, and make a cheap and effective sheep dip. When cattle are hide bound, or the hair does not appear healthy, a wash of the suds will prove a benefit, as it cleanses and heals in cases of sores. It is a good and sure disinfectant, safe and effectual, and will be found useful for a great variety of purposes.—*Pennsylvania Farmer*.

Milking a heifer for the first time requires patience for they will almost invariably kick. In such a case, put a broad strap around their body just in front of the udder, and buckle it up moderately tight, and as soon as she gets quiet (for she may dance around a little at first), take your pail, sit down and go to milking, for she is as helpless as a kitten. Do not attempt to use a rope instead of a strap, for it will not answer. This is a much better method than tying the legs, etc., as it does not hurt the animal in the least. A few applications of the strap, with plenty of patience and kindness, will cure the most obstinate case.

Alfalfa has proven to the Colorado ranchman that more sheep can be kept on a given area of land than was ever dreamed of by the most enthusiastic ranchman of the plains.

Ezra Fleming, of Wyoming, sheared 60,000 pounds of wool from 5,000 sheep last spring. An average of 12 pounds is pretty good for a flock of 5,000 head.

There are, in the state of Ohio, over 800 flocks of thoroughbred Merino sheep.

The total valuation of Colorado cattle is \$14,450,000.

Olive Culture.

Ellwood Cooper of Santa Barbara, the leading olive grower of California, says he has trees eight years old that have produced two thousand gallons of olives to the acre. This would be equivalent to 250 gallons of oil to the acre, and oil finds a ready market at \$5 a gallon. The yield of one acre would thus be \$1,250, which for a hundred-acre ranch would be a pretty fair income. But these figures are not represented to apply to any except the very choicest trees and an uncommonly good year. But even computing the profits of olive culture at as low a figure as one-tenth, a twenty-acre ranch would support a family very comfortably after six or seven years of waiting. One of the great advantages of olive culture is the fact that irrigation is not needed. In a climate where there is a scarcity of rain, as in California, this is a matter of much importance. The olive tree also grows very old. There are trees in Asia Minor that are known to be over 1,200 years old, and are still in full bearing.—*Ventura Signal*.

The Sweepstakes Lie.

Arizona can boast of a good many talented liars, but judging from the following, from a Colorado exchange, the centennial State can justly lay claim to the boss: "Bill Nuckells, a prospector, fell down a prospect shaft forty feet deep, right into a nest of black snakes. Most men would have died of fright, but Nuckells was not that sort of a man. He tied several snakes together and started them up the side of the shaft, tying on a fresh snake as fast as the rest went up. Pretty soon the head of the snakes got over the edge and started down hill. Nuckells kept tying on fresh reptiles until he had used up a couple of hundred—every snake that was in the shaft. By this time the crowd of snakes was strong enough to pull him out of the shaft, and he soon reached Mad's ranch, safe and sound."—*Tombstone Epitaph*.

THE Breeder and Sportsman.

PUBLISHED WEEKLY BY THE
BREEDER AND SPORTSMAN PUBLISHING CO.
THE TURF AND SPORTING AUTHORITY OF THE
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET
P. O. Box 1338.

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

ADVERTISING RATES.—Displayed \$1.50 per inch each insertion or proportionate part. Reading Notices, set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, October 21, 1882.

"YOURS IN WRATH."

Early Saturday afternoon we received a postal card from our old friend, Judge S——, calling attention to the biggest kind of a blunder made in the sireship of Haddington. It was a blunder for which there may be explanation but without excuse. It cannot be laid on typesetters, proof reader or anyone save the editor, and all squirming and wriggling will be of no avail in removing the stigma. The offense was in giving Kingston as the sire of Haddington when King of Trumps stands credited with the paternity, and that without question or cavil.

Had we been misled by the Judge's chirography, an apology might be offered, as it would require a Philadelphia lawyer, or the decipherer of the hieroglyphics on the obelisk, to determine which of the two names was meant.

Not in this instance, however, as the postal had King of Trumps printed upon it so neatly that it is evident the Judge is aware of his regular handwriting being somewhat obscure, and has practiced lettering until he can take rank among the accomplished knights of the pen in forming letters that cannot mislead. There was no mistaking the curt valedictory, which we have transferred to the head of this article, if even it was in Italian characters, and we are not sure that an action would not lie for a breach of the postal laws regarding the sending of cards through the mail. There is little question that a jury would think the provocation sufficient and on mature consideration in place of calling the Judge to account, manfully acknowledge the error, and promise to be more circumspect in the future. Some way we got Hercules and Haddington decidedly mixed, and it is something congratulatory that we did not get the Bay Middleton cross in as well as the Kingston. The truth is that the notice of the first mares was written at home after the morning visit to the barn when we found Anteco's jaws all swollen, and the space which should have been immediately behind them filled, so as to give him the look of a chipmunk, with his chops full of corn. In ten days the Stanford was to be trotted and the black devil had again got him in his clutches.

We wrote of the great doings at San Jose, all the time busily thinking of the Stanford, and our chances in it, tinged with the deepest kind of ultramarine. Fortunately a trotting cross was not interpolated, as in that case in place of a postal we should have expected two hundred and sixty pounds of "wrath" lying in wait for us at the foot of the stairs, and though possessing a fair share of the editorial courage, we should certainly have shown more "foot than game." "A guilty conscience," the old adage says, "makes cowards of us all," and though there had been an Electioneer strain smuggled in through the sire, an Almont in the dam, and a whole gallery of celebrated ancestors of trotting proclivities figuring in the genealogical table, we never would have delayed to explain to the irate Judge the honor we had done him. Nevertheless, we did inadvertently give Night Hawk a distinguished sire, while the swollen neck was a haunting torment, and the expectant dollars were being transformed into leather medals. It was bad enough to surrender the cool hundred in the Occident Cup without a struggle, and now to see three times as much squandered, to say nothing of the great expectations, bringing on a sort of forlorn hope at the best, vanishing like a dream of finding no end of money and awaking in a futile search for a pocket in the nightshirt to put it in. But yet there may be a crumb of comfort to us, and, perhaps, a trifle of information to others, caught in the same fix, by recounting the present standing of the case and the means taken

to remedy the trouble. That was Friday morning when the discovery was made and that night it was thoroughly rubbed with a mixture of sweet oil and turpentine. The next morning there was a visible decrease and this, Sunday evening, it has got so nearly to its proper shape that he has been "pointed" for work to-morrow. Should he return a favorable answer to the questions asked, "cool out" all right and not cough during or after the exercise, the oil and turpentine shall have due praise. By the way, one of the most celebrated of the English trainers of half a century ago considered turpentine and cream, mixed in equal parts, the very best thing for throat ailments, and also used it for injuries to the legs. It may prove very valuable to contract the swellings that have been one of the peculiarities of pinkeye, and also be of service in checking the attending cough.

THE COURSING SEASON.

Once more the lovers of the leash may rejoice that the hours of idleness have passed and the busy time of the coursing season is at hand. Again the note of preparation is sounded through the kennels in the land and busy trainers are day by day engaged in the pleasant task of conditioning the long tails. Men and dogs alike look forward eagerly to the day when on the vast plains of the San Joaquin the fleet animals will be loosed to try conclusions with each other and the flying jack rabbit. Talk of the excitement and sport of any other kind of hunting! Why, it is nonsense to compare any sport in the field with the pleasure of coursing. How eagerly one watches for the expected game and how critically one surveys the motions of the active slipper who with a pair of dogs wildly tugging at the slips is compelled to keep his wits about him and see that they hold the game in view until she is straight ahead and both are going even. How the blood tingles through one's veins when a favorite dog flies from slips like bolt from bow and by superior speed opens a gap in the run up, takes the first turn and insures itself a victory unless some untoward accident occurs. How the mercurial spirits, raised to the highest pitch of excitement by a favorite's speed, fall when an awkward turn throws him out and gives a big advantage to his closer working opponent. And then how they rise again when after getting straightened out the favorite's speed again tells and he shows in the lead. A "go bye," a "go bye," is shouted from all parts of the field until the warning voices of the stewards giving orders for quiet bring the shouters down to earth again from the boundless realms of pleasure into which success and the bracing open air had taken them.

A kill at last cleverly made is the signal for one and all to sink back in their seats except the two owners who are riding furiously over the plain to pick up their dogs before the starting up of another hare shall send them off again, for this abundance and wide scattering of the game is the one drawback that coursing has in this State. Then how anxiously all wait until the verdict of the judge lets loose the tongue of criticism, for your true courser never attempts to give a decision of a run until the judge is heard from. Pleasantly enough the losers take their defeat and gleefully the winners herald their success, bets are quickly paid, the next pair are put in slips and all is made ready to repeat the stirring scene. Search the wide world over and one will fail to find any sport so free, fair, manly and untrammelled by any taint of cruelty as our California coursing. Unlike England and Australia, the hares are not beaten out of plantations nor let out of preserves. They are given all the advantages. They are on their own domain consecrated to them by its utter uselessness for any other purpose, for where we course in California a dozen of sheep could not find sustenance on a hundred acres. Every inch of the land they know, for every day they traverse it in search of food or to avoid their enemies, the rattlesnakes and the coyotes and the big squirrel hawks. They are fleet as the wind and staunch as a thoroughbred horse and can laugh to scorn the puny efforts of a brace of freshly imported English greyhounds whose wind and bottom are not the best.

Our native dogs have more endurance than their English ancestors with perhaps a trifle less speed, but we have seen a hare run a pair of them to a standstill after a four-mile chase at a pace that made it impossible for the best horse in the State to keep the judge in sight. Twenty or forty miles they can run without sighting a fence or meeting any natural obstacle before them except the glacial mound over which they bound at a pace that puts a horse to shame and makes the judge tremble for his own and his horse's life. It is no child's play following a course. We have been there, and in our own person, impressed upon us by falls from treacherous squirrel holes, can attest the spice of danger there lies in the sport for those who take a horse and go to the front.

We have seen as good riders as ever bestrode a horse pitched twenty feet over their steeds' heads, when the poor animals, going at full speed, were brought to a sud-

den halt by plunging both fore feet in a squirrel hole. We have seen an eager dog on hare intent, meet a similar fate and go whirling head over heels like a street gamin turning a wheel. For those who love a life of ease a buggy makes a good substitute for a horse.

We want to see this noble sport become the sport of this State, as it is the greatest English winter sport. We want to see kennels and coursing clubs throughout the length and breadth of the land, and above all, we hope that as in the past the sport will always be kept pure and clean and free from reproach. We go to press before the entries for the Pacific Coast Club match which close to-night are made, but next Wednesday morning we will be one of the first to leave the El Capitan Hotel, and our readers may rely upon it that our columns will contain all that is worth knowing about the first fall match of the season of 1882.

THE STANFORD STAKE.

To-day on the Bay District course this stake of 1882 will be decided provided the day and track are in accordance with the conditions. We were led into error last week by only referring to the original advertisement, and overlooked the addenda made by the managers previous to the second payment. In order that our readers may understand the exact position of the Stanford Stake we republish the conditions governing it from the outset. There were twenty-one nominations:

PACIFIC BREEDERS' ASSOCIATION—THE STANFORD STAKES.—A sweepstakes for trotting colts and fillies, foals of 1879, \$300 each, \$100 payable on the first of January, 1881, at which time the stake will close, \$100 on the first day of January, 1882, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeit of previous payments. The race to be heats of a mile, best 3 in 5, in harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales, and all other sources of emolument, will constitute the gross amount to be divided in the foregoing proportions, or, in lieu of these, the Association will add a sum not less than \$1,000. Five or more subscribers to fill. The race to be trotted in 1882, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1882, or sooner. Race to be governed by the Pacific Breeders' Association controlled by the duly elected officers, and subjected to its rules. Nominations to be made to Jos. Cairn Simpson, "California Spirit of the Times," on or before the first day of January, 1881. The colts must be named, the names and pedigree, as far as known, given.

Second advertisement.

STANFORD STAKES, 1882.—THE STANFORD STAKES FOR THE foals of 1879, which closed the first of January, 1881, with twenty-one nominations, and in which \$100 is to be paid on or before the first of January, 1882, has been fixed for decision on the third Saturday in October—good day and track—to come off on the Bay District Course, San Francisco, if the day and track are not good, on the Saturday following that date when the track and day are good, excepting the first Saturday in November, when the Embury Stakes are to be trotted.

Those having nominations must send the second installment of \$100 to N. T. Smith, Treasurer, corner of Fourth and Townsend streets, San Francisco, on or before the first of January, 1882, or the previous payments will be forfeited. JAS. McM. SHAFTER, President; A. P. WHITNEY, Vice-President; N. T. SMITH, Treasurer; JOS. CAIRN SIMPSON, Secretary pro tem.

Executive Committee—Leland Stanford, Jno. B. Haggin, L. J. Rose, A. P. Whitney, E. H. Miller, Jr., H. W. Seale, N. T. Smith, P. A. Finigan, John Boggs, William Corbitt, J. McM. Shafter.

TWO-YEAR-OLD TROTTING AT WALLA WALLA.

Although the "Oregonian" corroborates the intelligence sent us by T. B. Merry that Metropolitan beat Adelaide in 2:45, 2:36½, we think there must be some mistake in the figures. Mr. Haggin informs us that the colt was foaled in May, 1881, so that he is only a yearling, and the probable solution is that the time of the last heat should be 2:56½. That would imply that he had been named in a race for two-years-olds or under, and should that prove to be the case it is one of the greatest performances on record. The account copied from the "Oregonian" was also written by Mr. Merry and the presumption is he has been misled by the telegram being at fault. He is also mistaken in the amount of work Metropolitan has had, as before the sale to Mr. Russell, little had been done with him. The price paid, \$500, was certainly very low for a colt of his breeding and the reason he was disposed of for so small an amount was that the yearling by Poscora Hayward from A. Rose was more highly thought of. It frequently happens that the most acute judges err in choosing between youngsters, and whichever way this turns out it is sure that this son of Echo and Black Swan is a rare jewel. We shall await the confirmation of the report with some anxiety, for should it prove that the figures are correct (there cannot be a mistake about the age) it will take the first place in the yearling record.

ANNUAL MEETING P. C. B. H. A.

The annual meeting of the P. C. Blood Horse Association will take place on Nov. 7th, and inasmuch as that is election day it may be that it will be necessary to adjourn to a later date. There should be a meeting of the Trustees to fix on the track to hold the fall meeting and other business that is pressing, and probably a quorum could be got the first of the coming week. Three weeks from to-day the race meeting will commence, and there is scant time to make the preparations. It may be that the president will notify us in time for the call to appear in this number of the paper.

HONESTY FOR AUSTRALIA.

On the Steamer City of New York which sails from this port, bound for Australia, to-morrow, this very promising trotting stallion will be a passenger.

This will not only make a prominent entry in the \$2,500 purse given by the Victorian Trotting Club, but will be a valuable addition to the breeding farms of that country. We scarcely know of a stallion that will be of more service, his breeding being of the best kind, and his form will certainly please, as the Australians are capital judges of equine proportions. His size is a great point in his favor, and his action is very fine. Then he is one of the most honest trotters ever seen on the track, and will keep "putting in his heats" as long as the race lasts. This quality could scarcely be lacking from his breeding, as he has any amount of stout strains in his genealogical tree. In direct descent from Rysdyk's Hambletonian on the side of the sire, two crosses of Abdallah Hiatoga, and then Glencoe, Harkforward, American Eclipse, etc. to give finish and backing to the whole. The Victorian Club are well repaid for the outlay of advertising in the "Breeder and Sportsman" if the only return were the entry of Honesty, and, consequently, his importation. But this is likely to be only the forerunner of other animals of great promise, and by another year there will be several to follow. California breeders realize the importance of sending the best animals, and though, of course, there may be speculators engage on the track for the only purpose of making immediate profit from their ventures, our neighbors in the middle of the Pacific are to acute to be easily imposed upon. The breeder has an enduring stake, and the effecting one sale is only a small thing in comparison with the future outlook. That there will be mutual advantage in the interchange of the stock of the country is assured. California can supply every want of the colonies, so far as furnishing procreative animals for the trotting stud, and in return this state will be greatly benefited by the introduction of some of the best racing blood of the Antipodes.

We sincerely trust that Honesty will make a pleasant voyage. Having been instrumental in sending him there is an anxiety that he should do well. We are well satisfied that he is the right kind of a horse to make a favorable impression on the Australians, and with a fair share of good luck he will make his mark.

Mr. Harry Whiting will accompany Honesty and look after him during the voyage and in the preparation for the race.

P. C. B. H. A.

By a communication from the President we are requested to give notice that there will be a meeting of the Board of Trustees of the Pacific Coast Blood Horse Association at the office of the "Breeder and Sportsman" next Monday, the 23d inst. at 2 o'clock p. m. A full attendance is desired as business of importance will come before the meeting.

EDITORIAL NOTES.

High Prices for Jerseys.—We reproduce from an eastern authority an account of a recent sale of Jersey cattle in New York at which seventy-five head, fifteen being calves, were disposed of at an average price of \$625 per head. The Jersey boom seems to continue with increased volume. At the sale above mentioned the highest price reached was \$5,100 for the bull Sir George, and this is said to be the highest figure ever paid for either bull or cow in this or any other country. Sir George was one-eighth Coomassie, and apropos to this fact Mr. Henry Pierce of this city has in his Yerba Buena herd two heifers one-eighth bred and one one-fourth in this fashionable and highly prized strain. Mr. Pierce is now on a visit to his old home in East Baldwin, Maine, where the home farm is stocked with Jerseys of the Coomassie, Scituate, Farmers' Glory, Pansey and Rex strains, the herd being valued at \$75,000. Mr. Pierce proposes to send out some Coomassies, Scituates and Farmers' Glories to strengthen the Yerba Buena herd with fresh and fashionable blood.

Embryo Stake.—Those who have not already declared out of the Embryo Stake for the year 1882, should remember that their last chance to pay the forfeit of \$25 will expire on the 25th inst. All unpaid declarations having been made in due time must be paid on or before that date or they will become responsible for \$100, the full amount of the stake. And all forfeits occurring on that date must then be paid or the subscriber will also be responsible for the full amount of the stake, \$100 for each nomination. Notice should be sent to Capt. B. E. Harris, 1609 Washington Street, San Francisco, and payment made by the time specified.

H. R. Covey—In Memoriam.

Harris R. Covey is no more. A brave and generous heart lies silent in death. This announcement will send a sorrowing pang through the bosom of many a warm and trusting friend. Few were so widely and favorably known. Born, to use his own favorite phrase "in the

Western part of York State," a farmer's son, he inherited and innate love for the horse. Among the early emigrants to California he settled in Sacramento and through his strong will, active brain and great energy, at once became one of the leading citizens, in that, even at that early date, important town. Connecting himself with the old California Stage Company, a monstrous corporation well known to old Californians he amassed a rapid fortune. In 1853 he visited his old home. Upon his return he found the Stage Company affairs in an unsatisfactory condition and a settlement reduced his ample fortune to a pittance. Undaunted he engaged in the Livery business with his old personal friend Geo. H. Thomas, now of Walla Walla W. T. In this connection he became one of the best known men in Northern California. Some years later he removed to San Francisco, associating himself with the late Richard Gough and afterward became proprietor of the noted Fashion Stable on Sutter street, the firm being Porter & Covey.

H. R. Covey was no ordinary man. Of great organizing power, his fertile brain and strong will greatly impressed every organization and business enterprise with which he became connected. A charter member of the California State Agricultural Society, he was for years one of its leading spirits. He was a prominent member of the Bay View Park Association. In conjunction with the late John M. Duncan and other prominent citizens he organized the old Bay District Agricultural Association, and in his brain originated the plan which gave to San Francisco, the magnificent Racing Park, known as the Bay District Fair Grounds. In all these enterprises, he assumed a commanding position, and his clear views and practical ideas were generally accepted without question.

But it was at the famous Palo Alto stock farm that he acquired an almost national reputation. Gov. Stanford's great sagacity coupled with an intimate knowledge of and high personal regard for the man, led him to select him as the proper person to assist him in carrying out his great project; a most happy choice! He brought to the position a ripe experience which was invaluable to the master mind. The most perfect harmony existed between them and the result has astonished the world. To him was entrusted the delicate and important task of making the Eastern purchases of stock, and how well he succeeded the famous reputation of California's young trotters will attest. All his energies were devoted to his task and his great hope was to be able to produce an animal "native to the soil" that would "lower the record."

To the writer he was greatly endeared, a close business connection extending through several years, and a warm personal friendship, existing with scarcely a ripple, for a quarter of a century gave a glimpse into the inner life of the man. With the brain and strength of a giant and the heart of an ox, he was gentle and yielding as a child. With no regard for self, his friends and family occupied his entire thoughts. Few were so ready to give, none more willing to serve a friend. His devotion to his life time friend and patron Leland Stanford was most touching. He died literally at his post, with the harness on, serving him whose friendship he valued above life. Of devoted friends he had a legion. Some have preceded him into the dark valley, others are now sincere and humble mourners over his lifeless clay. He has gone! In the very sight of the magnificent enterprise which will serve as his monument, he will lie quietly until summoned by the great Redeemer at the final awakening.

"Good friend! Brave heart! Hail and farewell."

C. M. C.

THE PADDOCK.

Kentucky Mules in Egypt.

The N. Y. Times, speaking of the purchase and shipment of mules from the United States to the British army in Egypt, makes the following proposition as to the manner of their use:

The British General is an intelligent and well-read man, and he would never dream of employing Kentucky mules in connection with batteries. The experiment was tried during our civil war and with the most disastrous results. In the rare cases where a battery drawn by mules lasted long enough to reach a position assigned to it on the battlefield it never proved to be of any service. The mules, the moment they were detached from the gun, invariably began an assault on the entire battery. Time after time the spirits of the Confederates were raised by seeing what they imagined to be the explosion of a magazine in the Federal lines. They saw the air filled with guns, broken wheels and artillerymen, and it was not until they noticed the absence of smoke and noise that they could be persuaded that the phenomenon was the result of mules. Experience taught us that sixteen mules could kick a four-gun battery, including artillerymen and ammunition, into small fragments in six minutes by the watch, and after seven or eight batteries had been thus destroyed an order was issued forbidding the use of mules in the artillery service. The fact seems to be that the Kentucky mule has a peculiar hatred of guns. It was a Kentucky mule that, while being led through a siege battery at Petersburg, kicked a 300-pound Parrott gun into the shape of a stovepipe elbow with a single kick, and the two mules that kicked through the twelve-inch armor of the *Amiskenawaugeoisamonusue's* turret, while that famous monitor was lying at the Williamsburg wharf, were Kentucky mules inspired by hatred of the two sixteen-inch turret guns which, as the Captain of the monitor sadly remembers, they finally kicked overboard. To suppose that Sir Garnet is ignorant of these facts is nonsense and he would have been little else than a madman had he intended to place his artillery at the mercy of Kentucky mules. His object in importing them and timing their arrival so that they should land in Egypt ten days after the cessation of hostilities was therefore something very different from what the public had imagined it to be.

The landing of the mules at Alexandria will unquestionably strike terror to the Egyptians. The former animals have brooded over the wrongs they have endured during their confinement on shipboard, and they will land in a more than usually gloomy and vindictive frame of mind. The Arab donkey boys will crowd around them, regarding them as a new style of donkey, and the mules will improve the occasion. The four thousand donkey boys will sail simultaneously through the air, and the mules, whose appetite will have merely been whetted by the trifling exercise of kicking ten donkey boys each, will roam through the city ready to take a hand—or rather a heel—whenever an opportunity of kicking an Egyptian presents itself.

Rheumatism.

When a horse falls lame at uncertain and irregular intervals, and suddenly recovers and as suddenly falls lame again, it indicates that the cause is rheumatism. Rheumatism is a form of inflammation arising from a disordered and usually acid state of the blood, and attacks the fibrous structures, the muscles and tendons of the body. It is frequently constitutional and hereditary, and shifts from place to place without warning and very suddenly, and it may as rapidly disappear by warmth, the heat of the sun, or a change of weather, rainy, warm weather being favorable. Indigestion will cause it to appear, or a cold, or even exposure to a slight change of temperature.

Distemper is an indefinite term used by horsemen generally for all diseases of a catarrhal nature. The equine family when suffering from any disease of the respiratory organs, from a severe cold to an attack of the lungs, is said to have the distemper. All horses are liable to have common catarrh, influenza, strangles, bronchitis, pneumonia, pleurisy, etc., and the symptoms which accompany each of these diseases require very different treatment. Hence, to classify all of these maladies under one head is not only wrong but liable to lead to serious errors in treatment. That form of horse distemper known as "strangles" is of very common occurrence, especially among young horses, the treatment of which, (unless it should become complicated) is very simple. This disease usually commences with the common appearance of mild catarrh or as popularly expressed of slight colds. The horse is somewhat dull, has often cough, some soreness of throat, a slight disinclination for food, but still more for water. The under part of the throat (in the intermaxillary space) swells, it is hot and tender, sometimes the swelling extends so as to include the whole space between the lower jaws, on the second or third day a discharge takes place from the nose of a muco-purulent character, in more severe cases a mucus secretion mixed with saliva flows from the mouth in large quantities. Treatment: place the animal in a well-ventilated box stall, and apply a blister over the tumor, between the jaws, over which a poultice of flax-seed and bran may be constantly kept; when the tumor is sufficiently matured it should be freely lanced. It is a very good idea to steam the nose once or twice a day by allowing the patient to inhale the vapor from hot water and bran.—*Farmers' Review.*

The Marysville Appeal says that an epidemic is reducing the number of horses and mules in that section. The disease is characterized by a cough and fever. Its manifestations are confined to the head. There is a discharge from the nose, and the disease in some other respects seems to be of the nature of glanders. Every case of it is said to have proved fatal. It has existed in that section for some months. J. Tomb has lost several animals from its attacks, and on Wednesday Mr. Nash, at the request of the owner, shot two of Justus Greely's horses suffering from the disease.

A Peculiarly Complicated Case.

[Millersburg (Pa.) Herald.]

It is not often that we are called upon to chronicle a case so persistent in its nature and inimical in its influence as the following one, communicated under the signature of Mr. Bonsall himself, the interested party, and detailing an experience which, though painful and harassing in its nature and continuity, has had, so it appears, a most desirable and happy outcome. We give it in Mr. Bonsall's own words:

"LIVERPOOL, Pa., Feb. 28, 1882.

"This is to certify that I, J. E. Bonsall, postmaster at Liverpool, Perry county, Pa., do voluntarily tender the subjoined statement: I was attacked with inflammatory rheumatism and suffered with it twenty-five weeks; the greater part of the time I was not able to move a limb, and had to be lifted around like a child. I was attended by two of the best physicians that could be had in this section at that time, who attended me twice a day as long as there was any hope for me, but finally gave me up, declaring that it was impossible for me to get well. From the enforced long rest I partially lost the use of my right arm, which became stiff at the elbow joint. After the physicians ceased attending me, and my friends commenced to use some domestic remedies, I began to recover slowly, and in about two months more was able to walk supported by a cane. I finally recovered my health pretty well but was subject to rheumatism whenever there would be a change in the weather, or when I would get my feet the least damp. I began to engage in light employment, taught school and then engaged in clerking in a mercantile business. I was here subject to frequent attacks of the disease which would last for a day or two, when I would be around again. In the spring of 1865 I went away to superintend a mercantile enterprise and I got along very well until the summer of 1866, when I overhauled myself working in a damp cellar, and was attacked immediately with rheumatism and fever. The doctor worked nearly all night with me, the first night I was sick, to keep it from going to my heart. For three weeks I was very ill; I then commenced to recover slowly until I was able to walk around with a cane. Then came a relapse and for two weeks longer I was very sick; however, I finally recovered so that I could attend to business part of the time, but was hardly ever free from the terrible disease. I was completely discouraged; I spent hundreds of dollars, trying every new doctor and new medicine that I could hear of; I gradually grew worse, so that I was incapacitated for any business. I finally concluded to come back to my native home, but I found no relief. I tried everything without receiving any good. I then got the appointment of Postmaster of this place. The winter of 1879 and 1880 I was so used up with rheumatism that I could scarcely walk from my house to my office and back again, and had to take morphia powders to get any rest at all. About that time I saw the magical medicine, St. Jacobs Oil, advertised in a Western paper, and read the wonderful cures that had been effected by its use. I purchased one-half dozen bottles and used it freely, rubbing it in thoroughly by the warm stove, and then wrapped the painful parts in flannel cloths saturated with it. I was nearly blistered but I kept at it until it made a cure. It is now over two years and I have never felt anything of rheumatism since. It is almost miraculous the effect it has had on me. Change of weather, damp or cold does not affect me a particle. I am perfectly free from the terrible disease, after being afflicted with it for thirty-four years.

"The above is a true statement of my case and not in the least exaggerated; I was really worse than I have stated above. Respectfully,

"J. E. BONSALE, P. M.

J. Russ Kinyon of Fort Jones and A. D. (Dick) Richards of Yreka have been recommended to the Governor for appointment as directors of the Mt. Shasta Agricultural District Association. These are both excellent selections and their appointment will undoubtedly follow without delay.

THE GUN.

Rail Shooting.

While the recent invasion of the watery element is accredited with doing an unaccountable amount of damage to the storm of the last few days, on the principle that "it is an ill wind that blows nobody good," was an unexpected boon to the shooting fraternity of this vicinity. It was heralded, as is usual on occasions of violent atmospheric changes at this season, by a flight of aquatic birds as unprecedented in quantity in late years as was the violence and persistency of the storm. Along the coast vast battalions of golden plover, generated by their usual leaders, the short bill curlew, were observed to pass on the afternoon of Wednesday of last week. At almost every propitious halting place the army gave out large detachments, and those that cared to brave the down-pour on Thursday and Friday reaped, in addition to a thorough soaking, a golden, feathery harvest. Even the inland meadows and pastures remote from the seashore, on which there has been a dearth of shootable birds this season, were for a day or two supplied with an abundance of game, and had the storm abated before the lowlands were submerged, the visitors, no doubt, would have tarried until their ranks were sadly thinned by the discharges of our ever watchful sportsmen. It, however, turned out for once there was such a thing as "a drop too much," and the birds, unable to find a haven of rest, again collected and braved the storm for a less watery climate. But during their short sojourn the bags of curlew, plover, yellow legs and even of teal were sufficiently large to remind the oldest inhabitants of the glory of just such past encounters of many years ago.

But notwithstanding this exodus followed so closely on the heels of the advent, the flood which now rests upon the marsh land assures good sport for the next six weeks to come. Until it recedes, its surface will be covered with the early varieties of wild fowl, and when the waters go out they will leave the meadows a tempting paradise for the English snipe on their return from their love bowers at the North. There will be no excuse for the woodcock not to resort unbidden to the freshened covers where waits such a dainty bill of fare; hence there is something more substantial than shadows on which to reckon a good season of sport ahead. It will be several weeks, however, before we can expect to see the upland bottoms in a proper condition to receive game, and in the meanwhile those who are never satisfied unless shooting at something, must fill up the gap with excursions in quest of that most delightful sport, rail shooting.

This sport, which comes at a season sandwiched between the summer and autumn campaigns of the sportsman, is a great favorite with many who live adjacent to the proper grounds. It is pursued in a manner so unlike any other variety of shooting, that its novelty has gained a large following; besides, it is a sport that requires but a fragment of a day, and in its pursuit but little exertion. Of all the different kinds of shooting in the sportsman's calendar rail shooting as carried on on the Hackensack, near by, and the Delaware, but three hours away, is the most luxurious. No special dress is required by its disciples, as the shooter stands in a clean boat, which is propelled through the reeds at high tide by a "pole man" or "pusher," and, barring the chances of taking a header overboard, the rail can be keeled over out of a "swallow tail" as readily as out of the most orthodox shooting jacket. In this sport both old and young can participate on an equal footing, while the fat man can teeter at the bow without becoming unpleasantly moist, and the thin one will not run the risk of disappearing in the mud as if hit by a spile driver. There is no walking to do, and those accustomed to watch the performance of the bareback riders soon acquit themselves of the necessary knack of balancing and remaining upright in the boat. Added to all this, as the best tides occur in the afternoon, there is no necessity for the sportsman to sit up all night to get an early start in the morning, and last, but not least, dogs are not required for the sport, so that the shooting man without one, temporarily ceases to be a bore and a hunchback to his friends.

From the immemorial rail shooting has been synonymous with fine sport, just as rail and reed birds on toast are indicative of good living; and as the native birds of the upland grow more scarce so is the attention of the shooting fraternity directed to migratory visitants.

In this immediate vicinity, no bird is better known than the little rail. Although scarce on Long Island, the broad and extensive marshes which lie adjacent to the Hackensack and Passaic, and more especially the low meadow lands traversed by the estuaries of the last named river, are usually abundantly supplied at this season of the year with several varieties of the skulking water fowl. They are commonly known as the sora, Virginia and king rail, distinct from their brother, the clapper rail or mud hen, which makes his abode only on salt marshes. The king rail is but seldom met with, but the first two named birds are found in the early autumn by those in quest of English snipe, and as the rail emit a watery game scent they are frequently trailed and pointed by the dogs of the sportsmen; indeed some carriers of the gun go afield expressly to shoot these delicious little birds, and large bags are oftentimes made when the water covers the meadows about half knee deep. But this method of pursuit is extremely laborious, nor are the bags by any means as large as made by "boating" for them.

It was not long since that the vicinity of the quaint old town of Hackensack, N. J., enjoyed the reputation of being a first-class rail ground, but the shooting there of past years has been chiefly confined to the barrooms, where the pushers congregated to watch for their lawful prey. At Milford, Conn., on Long Island Sound and about the mouth of the Housatonic there are always good days during the season, but the paradise for rail shooters in these times is along the Delaware river, on the tidewater of the James, and on the eastern branch of the Potomac. As the last named places are too remote, the sportsmen of this city and Philadelphia center on the first named river. There for miles—in fact, from Trenton to the Delaware capes—the reedy shores attract great numbers of rail as well as rice and reed birds. There these birds resort to feed on the seeds of the several aquatic plants, of which they are immoderately fond. These seeds, which appear to be the *zizania panicula effusa* of Linnaeus and the *zizania clavulosa* of Willdenow, grow up from the soft, muddy shores of the tidewater, which are alternately dry and covered with four or five feet of water. They grow to a height of ten feet, and so close together that except at or near high water a boat can with difficulty make its way through them.

The plan adopted in this section of the country is to select a day when strong easterly winds prevail, which back up the waters of Delaware bay and cause high tides, for the success of good sport depends entirely on the height of the water. As the afternoon flood tides are known to rise several inches higher than those which occur in the morning, they are generally selected. At the approach of high water,

the sportsman gets into the gunning boat and is rowed to the grounds by his "pusher." On entering the reeds he takes his stand just forward of the center of the boat; the pusher then proceeds to propel the skiff through the tops of the reeds by means of a long pole, by which he also steers his course. The rail, which take refuge as the tide advances in the matted reeds and floating drift stuff, take wing as the boat comes plowing through their skulking places. Their flight is generally slow, and with their legs dangling down, they therefore afford an easy object of aim. No sooner do they rise than the pusher calls "Mark." It is then that the gunner commences his work, and until the falling of the tide obliges the boat to leave the marsh, he shoots at each rise, while the pusher marks the birds that fall and gathers them as he travels on his way. The proficiency with which many of the Delaware pushers mark down the dead birds and retrieve them is absolutely wonderful. Frequently there are as many as a dozen birds lying about the boat, but although there is a general sameness in the reeds they seldom lose a "killed" rail. At the most the sport does not last longer than three hours, but in that time the marsh is traversed by hundreds of boats, many of whom on a good tide "boat" over a hundred birds. As high as two hundred and eighty-eight were shot by a well-known Philadelphia in a single tide one day last season; but no great bags have been made previous to the storm this year. Indeed, the shooting as yet has been unusually light, and the boats have not averaged over twenty birds. Although the sport is generally prolific of large results it is attended with danger, as often the boats congregate at some favorite spot, and their close proximity, hidden as they are from each other by the high cut-tails and wild oats, is apt to wind up in the shooting of some of their occupants. Of the two, the gun and the pusher, the latter stands in the most danger, as his raised position on the stern board of the boat exposes him far more than the gunner who stands on the keel boards. The smallest sizes of shot are used, however, and it is said the pushers get used to the peppering, just as the proverbial eel does to skinning. This is borne out by an incident which occurred last week. A well-known lawyer of Philadelphia was tempting his luck on the marshes below that city, when he saw what he took for a rail tangled in the reeds. On firing at the object point blank he was startled by seeing a gigantic negro leap into the air and with a yell shriek out: "Shot again." He did not wait for results, but returned to Chester forthwith, but on the way over his pusher quietly remarked that he "guessed there was nothing the matter wid de gun dis time," a remark the limb of the law is rather apt to give vent to after a series of easy misses.—N. Y. Herald.

The English Poacher.

There is no parish in England without its poacher, and in some two, three, or more may be found. I do not speak of occasional transgressors of the game laws, as idle fellows out on Sundays or holidays, who spend them in the capture of game partly for the pot, but as much by way of pastime.

These are poachers too, punishable and punished all the same; but they are not accounted in the category of the regular, or as he is often styled, "professional," poacher. True, he does not style himself so, only by his deeds having earned the designation; instead, he generally pretends to have some trade or other industry; and ostensibly practices it during the day. When night comes on, down go his trade tools, and in their place arming himself with nets, wire-snare, gins and gun, he is off to the game preserves. But there is also the poacher *par saug*, who disdains all such subterfuge, regardless of reputation as of law, who for his livelihood depends solely on the sale of the game he may capture. Not such a poor dependence is it, either, considering that hares sell for a dollar each, pheasants the same, partridges a dollar and a half the brace, and woodcocks two dollars the couple.

True, these are the retail prices; but the licensed game-dealer himself—he must be licensed—has to give figures close up to them, whether he purchases from the owners of preserves or otherwise. He is not supposed to negotiate with the poacher at all, though he often undoubtedly does, and as the traffic is illegal, with as much danger to the buyer as to the seller, the reduction in price is not so great as might be supposed. In any case, the poacher receives a fair remuneration; and the more when his dealings are direct with the consumer, as they generally are. He can almost always dispose of hare or pheasant, sub rosa, to the semi-gentility residing in villas, and the shopkeepers of the towns; besides there is never wanting in any neighborhood a publican who makes surreptitious game-dealing a specialty, and is ready to act as his "fence" and receiver. It will thus be seen that he has no difficulty in finding a market for his commodities; and, supposing him to take only a single hare or pheasant in the night, greater are his gains than those of the poor laborer who toils all day for a scant two-shilling wage. From a night's poaching, however, there will frequently accrue many heads of game; hence the temptation to follow it as a profession.

In the pursuit of his unlawful calling, the regular poacher displays remarkable skill, having an intimate acquaintance with all the ways of the game birds and animals, and the modes of capturing them. He will find the tree on which pheasants roost at night by the accumulation of their droppings underneath; the bare he catches in wire snares set in the breaks or "grats" of hedges, where "puss" is in the habit of passing through; while the partridge he takes in the stubble, by means of long nets; a confederate or two assist him to extend them. Sometimes a whole covey will be captured at a single draw. Passing through a district of country where game is zealously preserved, one often sees a stubble-field with branches of hawthorn sticking up here and there over it; the object being to obstruct high-netting by poachers. True, these might pluck the thorns up and clear them out of the way; but in doing so the birds would be flushed and cleared off soon. In most neighborhoods the rabbit is the poacher's best source of supply and emolument, its capture paying him better than even that of the nobler sort of game. And of late, more than ever, the price of rabbits having risen in a remarkable degree. But a few years ago, the indigenous wild species could have been purchased in any part of England for sixpence or twelve cents; now it is three times as much. This is partly due to the increased scale of prices for butcher's meat, the use of rabbit's flesh being found an economy. But there is also a greater appreciation of it in modern days as a delicacy, many people esteeming it so, and when properly cooked it is. Of course the poacher does not get eightpence for a rabbit; but he has no difficulty in obtaining tenpence or a shilling. He had needs, however, be cautious in his dealings with this as with other game; they are equally under protection of the game statutes as property. A recent act has somewhat relaxed the law relating to them, as also to hares, giving tenant farmers a limited leave to kill them on their own land. Agricultural depression, with the outcry raised at the damage done to crops by the "ground game," as these are called, led to the passing of this act, which, however, has no beneficial bearing on the poor

man, against whom game and sport are alike tabooed. As to the poacher, it affects him for the worse, making every farmer a zealous watcher and aid to the gamekeeper; still poaching is not put down, but goes on as ever.

A gang of three or four poachers, working together, will capture two or three score rabbits in a night's excursion. They take them in various ways; one of which is by wire snares, set as for hares in the hedge-breaks or on the beaten "ruus," when the rabbits are abroad feeding; then the poacher's dog, trained to do his part, chases the animal into them. Sometimes the snares are left set over day, to be revisited on the following night; but this is rather risky, leaving traces that may be discovered and utilized by the keeper and his watchers. When the warren itself is attacked, the poacher goes about his work in a different way, calling the ferret to his aid. The mode of procedure is to fix nets over the mouths of the burrows, then send the ferrets in, when the rabbits bolting out are crushed and get their necks instantly broken by a wrench from the poacher's wrist. There is no poacher without a pair or more of these tame and trained weasles, his most efficient assistants; and for a reason—imparted to me in confidence by one of the fraternity—the white, pink-eyed variety is preferred to the brown or "fitchet ferret," the former from its color being easier seen in the darkness and so better for poaching, mostly done by night. In addition to his ferrets, the poacher keeps a dog, and sometimes two, in which case one will be a half-breed grayhound or lurch for "coursing" hares, when the opportunity offers at early morn or in a moonlight night. He carries a gun, too, though not always; and even when thus armed uses it sparingly, dreading betrayal by its report. The gun itself is peculiar and known as a "poacher's gun," being short-barrelled and easily taken to pieces for deposit in the inside pockets of his coat. These are ample, in fact the whole skirt is a pocket round and round, capable of containing quite a hamper full of hares and pheasants.

In the personal appearance of the out-and-out poacher there is an idiosyncrasy, both as to dress and general bearing. His garb is very much like that of a gamekeeper, only not so neat and new, and would better compare with a suit the gamekeeper had cast off. The coat is of a brown but faded velvet, with four outside flap pockets besides the great inner one; vest of the same material; knickerbockers and gaiters of fustian or corduroy; and stout, heavy-soled half-boots, hobnailed and laced. A soft felt hat worn slouchingly, with a necktie loosely knotted, usually a red cotton kerchief, and you have the English poacher in the costume he most commonly affects. Not less characteristic is the expression of his features, which, though they may be naturally sinister, still have a cast about them telling of prison experience. No wonder they should; for rare is the poacher who has not spent a portion of his life inside the walls of a jail or being locked up repeatedly for spells longer or shorter. An outlaw by his own seeking and bringing about, he is often deserving of outlawry in its worst form—a very wretch and ruffian. But it would be untruthful to say that all poachers are so, or even the majority of them. Many show traits of character more commendable than condemnable; among these a proud independence of spirit, which possibly has much to do in making them what they are. For it can not be denied that in the mind of the English poor man there is an instinctive idea of resistance to laws seeming oppressive—no more can it be questioned his too often having reason for it. One good quality the poacher possesses in a high degree—courage; and the very fact of his being a poacher is good proof of it. But there is other and better evidence, though bad for him, produced at almost every Petty Sessions, and certainly at every Assizes; often proof of too much courage, getting him sentenced to penal servitude for life, if not actually sent to the scaffold. "Affrays," as they are termed, between parties of poachers and game-keepers are of frequent occurrence; hence encounters, with firearms used on both sides, as in a battle, often resulting in fatal wounds or death itself upon the spot. When bent upon such desperate resistance the poachers generally go disguised and with masked or blackened faces, though not always.

The penalty for poaching varies with the nature of the offense; the season of the year, the hours of the day or night, even religion affecting it. As, for instance, taking game on a Sunday or Christmas Day subjects the taker to a fine of £5, and for killing game birds during the close season the fine is £1 per head of those killed. These penalties, however, are not special to poachers, the owners of the game being liable to them. The laws that more affect the poacher come under the head of "Trespass," and he is termed a "trespasser in pursuit of game." When caught so trespassing in the day (which is defined as "from the beginning of the last hour before sunrise and concluding with the expiration of the first hour after sunset") the penalty is £5 and costs. If the trespass be by night it is punished not by fine but imprisonment, and the term is accumulative; for a first offense three months, with sureties required at its expiration; for a second, six months, with double the amount in money securities not to offend again; and in case of a third or further trespass it is treated as "misdemeanor." And if the trespasser refuse to give his name to those who have the right to demand it of him, offer resistance to them, or use violence, the punishment assumes a still more serious phase, especially if he be a known poacher; and above all, where there are several acting together and armed.

As may be supposed, gamekeepers and policemen are empowered to make summary arrest of those they may suspect of being poachers, and were this power confined to its legitimate purpose there would be no great harm in it. Unfortunately, however, it is not thus restricted, but too often stretched and abused, especially by the policeman. Exulting in the possession of this almost irresponsible authority, he also glories in making a display of it; the consequence being that many a poor laborer, returning wearied from his day's work, with no more thought of game-stealing than the man in the moon, is brought up by hail as of a highwayman to "stand and deliver."—Captain Mayne Reid, in the N. Y. Tribune.

A gentleman living at Cloverdale went over the district burned over by the recent fire that raged in the woods west of Cloverdale for several days, and informed us that he ran across the charred bodies of four deer in one place, two in another and six in another, that must have been surrounded by the flames and finding no way out perished. He says the flames traveled with lightning rapidity, leaping gorges, jumping gaps and barren places and, where the wild oats were thickest, running like a horse. He thinks a large number of animals, wild and otherwise, must have perished.—Lakeport Bee-Democrat.

THEORY OF THE GROUSE DISEASE.—A sportsman in Scotland advances as a reason for the grouse disease on the moors the fact that countless pellets of lead are scattered broadcast over the grounds during the shooting season, and that many of these are unwarily picked up by these birds, causing inflammation and often death.

SIR WALTER SCOTT AS A SPORTSMAN.—It is well known that Sir Walter Scott was passionately fond of shooting, fishing and the chase—a propensity which gained for him, among certain admirers, the sobriquet of the "sportsman-bard." The former housekeeper of the great novelist and poet is now living in the Empire State, at the advanced age of 89 years. Referring to Scott's love of field sports in a recent interview, the aged domestic said: "We often used to wonder when Sir Walter found time to write his books. He was off with his dogs at noon and never came back till night. George Thompson often hunted with him. Sir Walter had six dogs, and we always saw them at night, before he came in sight, frisking together. He had two lough staghounds, a pointer and three Scotch terriers. We found, after we had been a long time with Sir Walter, that he rose early in the morning and worked hard at his books before anybody was stirring.—*Turf, Field and Farm.*

BIG GAME.—A favorite sport in Brazil and the West Indies consists in hunting humming-birds. The natives arm themselves with blow-guns made of reeds, perhaps only fourteen or fifteen inches long, and take pellets of cotton wool; with these they aim and so stun the little creatures that they fall an easy prey to their pursuers, and the beautiful plumage is uninjured. Travelers in countries where the humming-bird abounds form themselves into parties for this sport, and use common table salt as shot. Penetrating the skin, and yet not spoiling the plumage, such a charge kills the bird, and great numbers are secured in this manner.

THE GUN CLUBS OF BROOKLYN.—It may be said that Brooklyn is not only a city of churches but a city of sportsmen, as indicated by the fact that there are some fifteen gun clubs, with a membership ranging from twenty-five to two hundred each. That Brooklyn should take rank as one of the first, if not the foremost city in the land, as regards sportsmen's clubs, is not surprising when we reflect that the most eminent clergymen—Henry Ward Beecher and T. De Witt Talmage—warmly advocate the sports of the field.

GOAT-SUCKERS.—The other day, Hubert Naughton Jr., of this city, shot a bird which was new to all who examined it. It had very fine, silky feathers; had wings somewhat like a small chicken hawk; head rather owl-like in appearance, but it did not have the talons of a carnivorous bird. For the size of the bird, its mouth was extremely large, and was surrounded with feelers or bristles like those on a cat's nose. A careful examination of the best authorities at hand satisfied us that it was what is known in Europe as a goat-sucker, from the popular belief that it sucks the cow's and goat's milk, infecting the animals with a deadly disease.—*Petaluma Argus.*

A NEW CLUB.—A sportsman's club is being organized in Kern County and will unite and co-operate with the California State Sportsman's Association in protecting game and fish and in the prosecution of all violators of the game laws. The members are all gentlemen of the highest standing who begin to realize the importance of preserving the game of California. The name of the club has not been decided upon yet. We wish the sportsmen success with their new club.

The *Greenville Bulletin* says: On a ride around the valley last week we were surprised at the quantity of game in the shape of quail, grouse and squirrels. Just before starting, Will Murray came in with five dozen quail he had shot in about two hours in the timber near town. Both birds and squirrels are now quite fat, having been running in the grain all summer and fall. The quail can be heard on the road all the way around, but they are most plentiful on the north side near the Boyden and Banta ranches, where they are continually heard. The grouse are not as plentiful as the quail, and keep higher up in the mountains. There are very few ducks in the valley. Gray squirrels are numerous; when near the Blood ranch we saw a large hawk flying with something in his talons and on crying out he dropped it and it proved to be a very large squirrel which he had just captured.

There is a flutter among scientific men over the arrival in New York of the body of a male gorilla. The specimen was forwarded by Professor Cope and has had a trip of something like 8,000 miles. The animal was at one time the terror of a certain African locality 400 miles from the Gaboon. He was chased to a settlement called Kangwe on the Ogova River and there killed by a bullet in the left eye. Some missionaries residing there saw by the gorilla's appearance that he was an old fellow of no mean pretensions and being confident that such a large animal would be prized by American scientists they bartered some beads for his carcass and shipped it to Philadelphia. The animal is over five feet eight inches high. His arms are four feet six inches long and he is supposed to be twenty-five or thirty years old.—*N. Y. World.*

Some Los Angeles county boys were deer hunting in the mountains, and while stealing their way along a narrow ravine, were suddenly startled by hearing a loud cracking in the brush on the bank of the ravine. They beheld an immense bear emerge from the bushes directly in front of them, dropped their rifles in astonishment and turned to run, but bruin was too quick for them. With a ferocious growl he sprang after them and struck the hindmost urchin a blow which relieved him of most of his clothing, but he escaped without further injury.

As usual during the past week the Teal Shooting Club have had good shooting at their ponds on the Chamberlain tract; many fine bags have been made by the members. The reason of their success while others have failed is that their ponds are all shallow and baited and are frequented by ducks that feed in shallow water mostly.

Good quail shooting is said to be had in the neighborhood of Niles. As soon as this fact becomes generally known outside of the sportsman's clubs, there will be more hunters than birds, and, like the Indian's winter stores, "they will last pretty quick."

Many persons went quail hunting in the vicinity of Millbrae last Sunday. The birds were wilder and more scarce than ever, and when the hunters returned, their game bags ran from fifteen to zero. Isn't it about time to give Millbrae a rest?

Deer are reported thick in the neighborhood of Sierra Madre Valley, Los Angeles, coming down into the fields in broad daylight and eating pumpkins.

In the vicinity of Watsonville ducks are becoming plentiful on the lakes and sloughs, also snipe are appearing in goodly numbers.

A party of careless hunters near Galt last week shot and killed a fine yearling colt of John Blair's.

Game Protection.

Nevada county ought to abound in game of all kinds above any region known. In the close season the Sportsmen's Club look out that the game law is not violated, and in the open season when the rains come no one goes hunting. The law protects the game for part of the year and the laziness of our sporting gentlemen does the same protecting the balance of the time. It is said that there has not been, this season, a single quail in the Grass Valley market.

The good rifle shots of Grass Valley are also protectors of the deer tribe. These good shots all have excellent guns of the latest and most approved make and patent. They have the very best ammunition in the world and they spare no pains to fit themselves out for a successful hunt. Their guns are globe sighted or telescopic sighted and are greased with watchmaker's oil, and all the modern improvements have our good rifle shots. They go to the forests, but bring home no deer.

There is a tow-headed youth down in the lower part of Grass Valley township who hunts deer. This youth is powerful awkward. He grew up so rapidly that he is water-jointed. He cannot help being awkward. He has an old rifle that his grandfather brought from Missouri in the early days. This old gun has an octagonal barrel, and the stock runs out to the end of the barrel. An old wire has reinforced the handle part of the stock. The lock is partly held in place by a twine string. The gun, it is said, did duty at the battle of New Orleans, and she has, since that battle, been changed from a flint and steel to a percussion. That is all the modern improvements the tow-headed youth's gun has ever had. The youth moulds his own bullets, measures his powder in the palm of his hand, greases the "patching" around his bullet with tallow held in a hole in the stock of his gun, and yet with all that he kills deer. This tow-headed youth, with his awkwardness, watery joints and primitive gun, brings venison to market.

It will soon be time to quit killing deer. That Supervisor's law which extended the open season in Nevada county is not a law at all, but is an illegal enactment. The mating season for deer is almost here and they should not be slaughtered.—*Grass Valley Tidings.*

THE BIGGEST YET.—R. H. Lee, the surveyor, Tom Shaw and Major Collins, while at Sawtooth last week, heard that good sport could be had at the slaughter-pen any night, in killing bear. They therefore provided themselves with Winchester rifles and struck out one evening, and were smoking cigars and considering the advisability of climbing upon the scaffolding, when a cracking of underbrush startled them. They got ready to fire all together at the word "three." A bear approached, and when a few yards off all fired at once and the bear, rising upon his hind legs, fell over and rolled into the creek. The hold huntsmen approached and poured a second volley into Mr. Bear, when they saw it was surely dead. An examination proved that the first volley had been fatal, as two bullets struck upon its forehead and the other entered one of its eyes. Fifteen men with a sled took the bear to town, where it was weighed, and it tipped the beam at 1,400 pounds. It was of the bald-faced species, and one of the largest yet killed. Its paws were sixteen inches long, and its jaws resembled a Blake ore-crusher's. This is the largest bear killed this season.—*Wood River (Idaho) Times.*

JUDICIAL DEER STORY.—Judge Pressley relates an incident that happened to a friend of his while hunting near the head of Santa Rosa creek. It was some thing in this way: His friend shot at a deer, and at the crack of the gun the animal fell, as if dead in its tracks. The hunter ran up to it to cut its throat, and while in the act of doing so, the deer jumped up, and then a tussle began, and it was some time before he succeeded in killing it. Upon investigation to find where the bullet struck, the place could not be found; and when about to "give it up" as a mysterious shot, he discovered that the ball had hit the deer on the tip end of one of the horns, the blow of which had stunned and knocked it down. And thus venison was obtained without the ball ever touching the flesh. This is a pretty good "deer story," but as we have heard others far more "mysterious" than this, and as it came from his honor, Judge Pressley, we have no cause to doubt its truthfulness.—*Santa Barbara Republican.*

A GOOD SHOT.—An expert took a trip out to Deer Creek, yesterday, to secure some ore for assaying from the bottom of a 35-foot shaft which Sam Connor was having sunk on the ledge. Laying down his gun and lunch, he swung down the windlass rope to the first platform, and then descended again to the bottom. While picking for ore-samples the light was obscured from above, and looking up he saw a monstrous stag eating his lunch at the collar of the shaft. It was but the impulse of a second, and he drew his revolver and fired. The stag reared and plunged and landed across the shaft where it lodged just long enough to permit the miner to scramble up on set of timbers under the platform—and not an instant too soon, as the stag came end over end to the bottom, and is lying there yet. The hero of this adventure threatens vengeance if his name is stated, as he fears that the Police Gazette will illustrate him.—*Wood River Times.*

A young man of rather a German accent and appearance strolled into one of the gun stores last Monday morning and remarked to the proprietor: "Mr. L., I vos von tam fool; Saturday I makes mine mind up to gatches some fishes on de next tay. Sunday, I goes to Lagunitas mit all my vishing tackle, but ven I got there I finds dot I left mine vish hooks at home, hy Chove! I stays there all tay und svaes mit all my might, because I couldn't porrow some hooks or go home dill six o'clock. By tam!"

Game still continues to be scarce in the markets. Sprig are the most plentiful. Half a dozen canvasbacks were brought in on last Monday and they sold quickly at one dollar a pair. There are a great many quail in the market that look as if they had been shot with a trap instead of a gun, as there are no shot marks on them.

Mr. Berwick of San Francisco and Mr. Burns of San Mateo were on a joint hunt at the latter place. The result of the day's hunt was thirty-five quail. They found the birds quite plentiful but rather wild and the sport very lively as quick shooting was required in order to get any game.

Messrs. Precht and Hart were down near Belmont last Sunday and returned with the best filled bags of the day. Most of the game were rail and curlew. There was quite a large number of sportsmen down there but the game was rather scarce.

All those who contemplate going deer hunting this year should hurry up as the close season begins on the first of November.

GAME BECOMING DOCILE.—The last storm was so severe that the elk and deer were all driven from the mountains to the foothills and gulches, and men working at various mines along Wood River state that scarcely any morning passes that from a dozen to a hundred deer are not counted upon the hillsides. They add that they are becoming very docile.—*Wood River (Idaho) Times.*

DEER.—Wm. Wilbourn has killed some half a dozen deer within the past two weeks. Last week he killed a buck which dressed 175 pounds. The animal had a magnificent pair of horns which Mr. W. intends to mount as a hat rack.—*Downieville Messenger.*

Mr. A. S. Jordan killed a large male deer two miles from Summerville, on the Turnback creek. Mr. Jordan was quail hunting with a very small gun and using No. 5 shot. After shooting the deer through the kidneys, he ran about 300 yards and lay down, and submitted to having his throat cut. Four other large deer have been seen in that vicinity, and it is said to be better hunting thereabouts than much higher up in the hills.—*Mokelumne Independent.*

The warm weather of late has kept the ducks out of the ponds. The windless, warm days are apt to induce the birds to stay out in the great wide ways where they are undisturbed by hunters. When the winds and rains come they will begin to fly more. They go in great flocks in the middle of the wide rivers now, or the bays, and it is hard work to get at them. In another month the season will be on in earnest and we will hear of big bags. So long as the present warm weather continues duck hunting at the "blinds" will be poor.

In Marin County, Mr. G. W. W. Roche killed a large buck, so he says, that weighed one hundred and fifty pound, but from the quality of the meat that he furnished a sporting friend, there is a grave suspicion that it was a spotted fawn.

The duck shooting at Sherman Island still continues to be very poor. Bouldin Island, where there is usually such good shooting, is not any better.

F. Masky and T. Pierson were near Belmont last Sunday and bagged two dozen quail between them.

In different localities a few English snipe have been killed but as a rule they are very scarce.

Bear and cougars are killing calves, hogs and sheep in upper Placer county.

THE RIFLE.

The Shooting Tournament.

Two rifle teams will be down from Nevada to participate in the fall tournament of the California Rifle Association, one from Carson, the other from Virginia City. They will arrive on Monday by a special excursion train and will take part in all the matches that they can, but they would like best to take home with them the Pacific Slope and the Andrews trophies, as the California riflemen would have to cross the mountains in order to win them back again.

Company C, First Regiment, will enter three teams to compete for the several prizes. The team selected to shoot for the Andrews trophy, distance 300 and 500 yards, is composed of Messrs. T. T. Kelly, R. G. Perkins, H. T. Sime, J. E. Kein, F. Cummings and E. N. Snook. Company C also enters teams of six and ten men for matches 6 and 7 at 200 yards.

Company D, Second Artillery Regiment, will enter teams for the Andrews trophy and match No. 6.

Company E, First Regiment, will also enter teams for the Andrews trophy and match No. 6.

The men of the First Regiment selected to shoot for the Centennial trophy are: T. T. Kelly, H. T. Sime, L. G. Perkins, Thomas Carson, Mr. Leeman, T. Murphy, F. Cummings, Mr. Fredricks, J. E. Kein and Louis Barre.

The Second Regiment have not selected their teams but as they always send out first class marksmen there is no fear but what they will come in for their share of the prizes.

Company F First Regiment, will enter teams for the short range matches.

Many other teams will be entered in the different matches which we will mention later.

It is understood that the Carson and Virginia pistol teams who were to take part in this shooting have come to the conclusion that it is almost too far to go for a little sport. We hear that Captain Short's men are making some fine scores. The Citizens team is not behindhand this time. Captain Douglas' two teams are practicing and will take their places among the best marksmen.

Sharpshooters are taking a livelier interest in shooting matches than they ever have before and this tournament promises to be the largest ever held on this coast.

Ball-Breaking at Bellville, Nev.

A large and enthusiastic crowd gathered at Bellville on Sunday morning last to witness the second glass-hall shooting match. There was a fair representation from this place and the sport opened at 12 o'clock with eleven entries, each of whom paid \$5 for the privilege of exhibiting his marksmanship, and the chance of winning either the first or second prize, the pool money being so divided. Aside from the prize money there was much coin displayed, not a shot being made except some one wanted to bet something on the shooter breaking or missing the ball. At times the vicinity of the shooter's position partook of a scene in the stock exchange at the hour of a lively session. Those Belleville boys are a plucky lot, and enjoy betting at any kind of a game. J. M. Bell distinguished himself at this match, missing but one of the fifteen balls, and would probably have got that had not the trap thrown in so that it was between him and the sun. He, of course, took first money and Billy Craddock second, as will be seen by the appended score:

C. R. Edwards.....	0 0 0 0 0 1 1 0 0 0 0 0 0 0	2
F. D. Gilbert.....	1 0 0 1 1 1 0 1 1 1 1 0 1 0	10
J. M. Bell.....	1 1 1 1 1 1 0 1 1 1 1 1 1 1	14
W. Craddock.....	0 1 1 1 1 1 1 1 1 0 0 1 1 1	12
E. B. Cushman.....	0 0 0 0 0 0 0 0 1 1 1 0 0 1	4
F. Smith.....	0 0 0 0 0 1 0 0 0 0 0 0 1 0	2
J. Moore.....	1 1 1 1 0 0 0 1 1 1 1 1 0 1	11
E. Taylor.....	0 1 0 0 1 1 0 1 1 0 1 0 0 0	11
J. L. McCleary.....	0 0 0 0 0 0 0 0 0 0 0 1 1 0	2
J. F. Johnson.....	1 0 0 0 1 0 0 0 1 1 0 1 1	6
L. Smith.....	1 1 0 0 1 0 1 1 1 0 1 1 1 1	11

The day was a beautiful one for the sport, and caused an eagerness for more of the sort. This will be allowed all who can and wish to shoot to-morrow. No one who has ever shot at balls can take part in to-morrow's match, and the fun in

anticipation will be immense. There are eighteen entries already, which number will probably swell to twenty or more, as several parties here are discussing the idea of attending.—*Candelaria (Nev.) True Fissure.*

AT SHELL MOUND.—Last Sunday at Shell Mound three members of the San Francisco Fusileers met in a friendly shooting match. The rifles used were the military Springfield; distance 200 yards. The following are the results.

Fred Kuhls.....	3 4 5 4 5 4 4 4 4 41	82
Louis Haake.....	4 3 5 4 3 4 4 4 4 39	81
H. J. Mangel.....	3 3 5 5 4 4 5 4 5 42	83
	4 4 4 4 4 4 4 5 4 41	
	4 4 5 1 4 4 4 5 4 42	

Previous to the shooting there had been some dispute as to which of the three was the best marksman but the scores above settle the question.

GOOD SHOOTING.—Riflemen mustered in force at Walnut Range, Mass., Oct. 4, when the surroundings were all favorable and excellent marksmanship was shown, as witness the following score for the long-range competition, each contestant firing fifteen shots at each of the three ranges—800, 900, and 1,000 yards: W. Gerrish, 72, 72, 70—214; W. H. Jackson, 75, 71, 68—214; F. W. Simpson, 72, 68, 67—207; F. J. Rabbeth, 70, 63, 68—201; D. Webster, 73, 64, 63—200.

The *Turf, Field and Farm* says: When the report of the English rifleman's recent victory at Creedmoor reached the other side of the Atlantic, an arrogant Briton rose to the occasion with the remark that England was first in everything. "Why, if we declared war against the blasted Americans, we'd whip them out of their boots," said he. "What, again?" coolly queried a Yankee who had been listening to the harangue.

ATHLETICS.

Sprint Running in the North Country.

Pendleton, Oregon, had an event of great interest to the local sports on the 7th inst., which is described by the *East Oregonian*:

Saturday afternoon last was a lively day in Pendleton. People were in town with plenty of money from all parts of the county. The hour for the foot race arrived and the principal actors were in readiness when time was called. The first race was between Geo. W. Bishop of Pendleton and J. W. Barber of Birch Creek, for \$500 a side. The race was won by Bishop easily; time 11½ seconds; distance, 100 yards. The second race was between J. W. Barber and a supposed sheep herder by the name of Rivers, for \$250 a side. This race was easily won by Rivers in 11 seconds. It is very plain now to the backers of Barber that Rivers is a professional and can beat any man in the State. He was brought up here with the intention to win a "big pile" by running against the winner. His backers believing Barber would win the first race, made the race between Barber and Rivers, but as Bishop won the race it placed things in such a light that the "pile" was not quite as big as was expected. The most friendly feeling prevailed between all parties and not a disturbance arose of any kind. Bishop's friends were wild and congratulated their hero fervently. An immense amount was up on this race and it is supposed that at least \$4,000 changed hands on the first race and about \$1,000 on the second. Barber acknowledged his defeat with a good grace and made many friends by his quiet, gentlemanly ways. To the victor belongs the spoils, Mr. Bishop receiving about \$300 for his share of the victory.

Last Sunday, on the O. A. C. grounds, Masterson, without making any apparent effort, cleared 20 ft. 2½ inches in a running wide jump. The measurement was the actual jump from toe to heel, without regard to the scratch start, and of course is not to be compared to a jump made in a *bona fide* contest governed by the rule for such events. Very few athletes are capable of clearing that distance under the most favorable circumstances, and with the best of preparation. Masterson jumped offhand, very carelessly, three times, clearing 19 feet the first effort and landing almost in an upright position, 19 ft 7 inches the second time, and 20 feet 2½ inches at the third attempt. The footing on the grounds is bad for jumping, being very loose and sandy and the run to the take off a very perceptible up grade. Masterson has been slightly overworked and stale for the last two months.

Since his race with Haley he has stopped training, gained five pounds in weight, and also regained the vim and energy necessary for jumping or a sprint race. Haley's best jump from toe to heel is exactly the same distance, and neither one ever had any special practice or training for a running wide jump. Haley's reputation as a sprinter is so well known that he need not fear newspaper criticisms. The O. A. C. athletes are anxious to see Masterson enrolled as one of their members, and if any two rival athletes would like to compete against Haley and Masterson they can be accommodated in five events viz: 100, 150 and 220 yards running high and standing wide jumps. Only the best need apply.

Masterson has indirectly challenged Haley for another 100 yard dash for a \$20 gold medal, the match to be decided at O. A. C. meeting next Thanksgiving day. Haley refuses to run for a medal that he might have to pay for himself. He says that if his Club will hang up the trophy he will run. The last race between the two men was for an Olympic Club medal, and Haley represented his Club in a style that will not soon be forgotten by any one that saw the race, and did the best 100 yard performance that has ever been seen on the Pacific Coast. If Masterson's Club is not satisfied with the result and wants another try at Haley, it is their turn to hang up the medal.

In the weight putting, at the last O. A. C. Games, Wm. D. O'Kane entered a protest against Donohue, alleging that he was a professional. The committee reserved their decision and allowed Donohue to compete. Since that time the Committee has sent him a written notice of the protest which he has failed to answer. They therefore sustain the protest, and will award the gold medal to Slater.

University games postponed to Nov. 4th.

A. L. Balmer, a well-known member of the Caledonian Club of this city, is Noremac's trainer for the coming six-day contest in New York.

THE KENNEL.

The Coursing Match.

To-night, at 539 California street, the Pacific Coast Coursing Club will meet to accept entries and hold the drawing for their coursing match which will take place at Merced on Wednesday and Thursday next. Any person who takes an interest in the sport will be welcomed at the drawing and it behooves all who have dogs to run and are members of the club to be on hand to elect men to fill the important positions of judges, slipper and field stewards. A large list of entries is looked for—at least thirty-two in the "old dog stake" and sixteen in the "puppy stake." It costs only \$5 for a ticket in the club's special car for Merced and as the weather is fine and the sport promises to be excellent, the club's hospitality will likely be tested to its fullest capacity.

The Pointer in a New Light.

The pointer is a far manlier dog than the setter and I conceive that to be a high compliment to the pointer, having become convinced that the only admirable qualities modern dogs possess are those which they have learned from contact with man. It is the popular disbelief of this phase in dog character that necessitates a thorough education of the masses on the dog question. Congress might do much worse than appoint a committee of able naturalists to look into the matter, prepare a report and distribute pamphlets containing complete and well considered information on all the points of canine character. As a race we get our erroneous conception of the character of dogs in our earliest childhood. Around the wall of the very room in which I was born—and mature research has convinced me that ninety per cent. of all white children are born under similar conditions—were hung engravings representing the better and manlier side of dog character. There was Landseer's celebrated picture of an alleged Newfoundland, which by the way was a mongrel, performing his great act of rescuing a little child from a wreck. On the opposite side of the room hung the companion picture representing the same mongrel lying at ease and decorated with a medal setting forth that the brute in question was "a distinguished member of the Royal Humane Society." Another of my earliest recollections is of a picture of a noble looking St. Bernard spaniel carrying food and wine to a snow bound traveler in the Alps. And still another was the picture of an enormous Danish boarhound engaged in deadly combat with a wolf. A little child sleeping in a cradle near by was intended to give the impression that the civilized wolf was defending his master's child from the attack of the uncivilized wolf. But the artist had been a trifle too true to nature and the look on the hound's face showed plainly that he had only raised his head, so to speak, because the intruder had shown signs of carrying off a tender morsel of meat he had designs on for his own dinner. So long as the hound was well fed the child might be safe, but forget to feed him for a couple of days and the chances are that he would take a notion to sample baby meat.

These later reflections on the character of that boarhound are very different from my early impressions. Reared in an atmosphere of love and respect for dogs and their many virtues and taught that the highest type of man could well afford to pattern by the meanest type of dog, there is little wonder that like a majority of people I grew up with a firm belief that a dog was the noblest and purest of all animals, man not excepted. The influence of the pictures and early teachings quieted all doubts which arose and it was not until I had owned and trained a few dozen dogs of all kinds that I dared to become a heretic and a doubter of dog belief. So highly is an escape from the thralldom of dog superstition to be valued that one can never too highly value the labors of the pioneers and apostles of the new belief or heresy that a good man is the superior of a good dog and a bad man the equal of the best dog that ever lived. It is no easy task to shake off the old creed and adopt the new. So many of the old artists and writers were enthusiastic preachers of the old creed, that the amount of evidence in its favor is enormous. A great poet and author sung the praises of Gelert, the faithful hound. Lawrence Sterne painted beautiful word pictures having for a subject "The Dog's Fidelity." Landseer's pictures prove him a priest of the old creed. His follower Audsley, an artist of rare ability, took up his master's theme. And even so keen and correct an observer as Charles Dickens fell into the common error or was afraid to shake off the old yoke when he portrayed his wonderful picture of Bill Syke's bull pup. It is due to the modern American humorists to say that their writings have done much to pave the way for a universal escape from the old bondage. The yellow dog of Mark Twain was probably the first animal held up to ridicule and it is not hard to believe that the lack of dog belief is broken as soon as folks generally gain strength enough to put aside so much of the old superstition as will enable them to laugh at any member of the species. The next dog held up to public contempt was the inevitable pantaloons-bosom-sampling yard-dog of Bob Burdette and the Chicago *Tribune* novelist. With that breaker up of quiet flirtations before their eyes, the young men of America are gradually beginning to look upon the dog in his true light. They laugh at the sorrows of Gwendolin Mahafferty and Reginald De Courcy O'Brien but take care to make a good dog of their best girl's old man's yard-protector before they start out for a front gate flirtation, by a careful administration of phosphorus or strychnine. This is a cheering advance in the new belief, but I would rather see the creed grow from the enlightenment of the masses than from such ignoble feelings as scorn or hate for personal wrongs and bosom-bereft pants.

New ideas are generally promulgated in America by means of societies and it would be no bad plan to organize a "society for the presentation of dog character in its true light." The society could meet and hear papers and issue campaign documents. As a frontispiece for its works it could use to good advantage a drawing of the horrible scene enacted by a couple of dogs who recently were caught devouring the body of their dead mistress. All of this is a digression from the subject of pointers in the concrete but pertinent, in that pointers being dogs partake largely of those characteristics common to all dogs. The pointer is not a pure breed of dog, nor was one ever met any more pure in heart or temper than

in blood. He is a cross between the fox-hound and the spaniel, preserving all the mean qualities of both breeds. To the cunning of the spaniel he adds the ferocity and blood-thirsty nature of the hound. He knows more about game and its habits than any dog that lives and has the keenest scent of any dog that hunts mutely, Arnold Burgess to the contrary notwithstanding. He is not such a miserable, fawning, hypocritical wretch as the setter but makes up for the lack of those qualities by the possession of an amount of devilry hard to gauge. He never forgives a blow and frequently has pluck enough to avenge an insult, which is more than can be said of the setter. He is a hard dog to break of chasing hares and sheep, but his incomparable power of scent on a hot, dry day makes up for this weakness. The meanest kind of pointer is the Russian dog, and the poorest the double-nosed pointer. The fellow's principal vice is his slyness and sullen disposition. "He is sly, devilish sly," and nothing delights him so much as playing tricks on his master. He is a natural Arab among dogs. A spiteful, cunning, larcenous, law-breaking, irritating brute with no redeeming qualities except his occasional display of courage and his exquisite sense of smell.

Listen to what General Hutchinson says on this subject in his invaluable work on dog breaking: "I once possessed a pointer who behaved admirably while under my eye, but who, if he could cunningly contrive to get on the other side of rising ground, would invariably, instead of pointing, make a rush at any game he came across, determined, as my Irish friend used to say, 'to take his diversion,' and it was most curious to remark how immediately his pace would slacken, and how promptly he would resume a cautious carriage the moment he perceived I again had the power of observing him. His proceedings displayed so much sagacity that though I was extremely vexed, I could hardly find it in my heart to punish him as he deserved."

This is from a man whose knowledge of dogs is unequalled and who believed in the law of kindness and a good whip as the best rules for training all kinds of dogs.

The Spanish pointer is a heavier dog than the common pointer and possesses a proportionately greater amount of meanness and ill nature. It was a dog of this breed which when offended by being called to heel while other dogs were "quartering" a field, took a novel revenge on his master. The instant he was released he rushed ahead and scared every bird in the field out of range, determined that if he could not hunt himself no other dogs should. Doubtless he was a leueal descendant of the original "dog in the manger," who, I really believe, was the ancestor of all living dogs and succeeded in transmitting his special vice to all his offspring. Your pointer seldom unakes friends with any man or any other dog. He is a natural bully and will fight (a smaller dog) at the drop of a hat or sooner. On that account he is generally awarded about the same amount and kind of homage among dogs as is the prize fighter or bully among men. His face is a good indication of his cruel nature. Broad between the eyes, heavy jaws, cunning eyes, and pug-nosed nose are the most marked features. It makes me disgusted to see such an animal put up as a type for men to pattern by. Why, he has only got one sense that amounts to anything, the sense of smell. He only knows his master by his smell and by his scent alone gauges his estimate of nearly everything. Cut or injure his olfactory nerves and he could not pick his best friend out of a crowd of three. The smell of his master is associated with a whip and feeding time. It is true he can be taught to obey nearly every kind of signal but he has to be taught first to obey by means of coercion or bribes. He will hunt game he is not allowed to eat because he loves the smell of a bird. Refuse to allow him to nose the birds when killed and it is ten to one he will bolt home in disgust at pursuing a work that affords him no pleasure. He does not hunt to oblige or please his master, for he will do as much for a stranger and equally well, provided he is watched. Let him out of your sight and the brute will obey his natural instinct and rush in to get a smell at every bird that comes under range of his powerful scent, but a lifetime of bribes and abuse will scarce suffice to make him give up his natural preference for fur and stick to feather. All the good qualities in his nature he has gained by the careful teaching of man and that he can perform seemingly wonderful feats is but little in praise of the dog for, a hawk, a hunting leopard, a monkey, a flea or a sparrow are equally susceptible to careful instruction. The greyhound comes next in the scale of canine badness and is a far manlier dog than either setter or pointer.

EDWIN.

Fox-Hunting out of Season.

A lover of the chase in a recent communication to one of the leading daily journals takes occasion to make the following suggestions in regard to midsummer fox-hunting. His remarks are practical, and we commend them to the attention of our readers:

I have read with pleasure the article in to-day's issue regarding the popular pastime of fox-hunting. There is no doubt it is a pleasure that should be encouraged in this country; but there certainly should not be any hunting out of the hunting season. It is, to my mind, the most injurious thing to legitimate hunting to continue it as they have for several seasons at Newport. Who on earth ever heard of hunting in August, especially under such snus as we have, excelled for heat scarcely anywhere on earth? Fancy the discomfort and cruelty to man and beast. How it was possible for Frank Griswold, Elliott Zabriskie, the Sandford boys, young Pierre Lorillard and other sensible young men to encourage this sport out of season I cannot for the life of me imagine. No wonder the farmers growled and objected to hunting before the oats or corn were gathered. There is no hunting country in the wide, wide world that would have tolerated such wanton wickedness for a day. August weather—just think of it! weather that tries the souls of men and the hearts of horses—to call upon them for this sort of work! Fie! fie! out upon such trifling as this! By all means go on with hunting. That our country is all over ill adapted to it, being nearly all post and rail or too small patches of land with stone walls, is true. Still, we must put up with what we have and make the best of it, for our horses, with the little experimental hunting done in the States, have shown an amount of adaptability to the work that would appear almost incredible to the fox-hunting expert of the Old World. Under normal conditions by all means, then, let hunting be encouraged. It is, by all odds, the father of sports—far ahead of any health-giving pleasure ever devised; but for the sake of the noble art of cross country work give up the circus performances and brass band—the midsummer hunting season at Newport.

THOROUGHRED.

THE MOODS DOG SWINDLER.—The notorious dog swindler of Moodus, Conn., who has defrauded so many sportsmen through his tempting advertisements in various journals, under the names of Pollard, Chester, Fowler, Hammond, etc., has at last come to grief, and is in jail at Middletown, Conn.

CURIOUS ACCIDENT.—An English contemporary records the following remarkable accident in the hunting field, as having occurred to Mr. T. Dawson, huntsman of the West Kent fox-hounds: The pack were out cub-hunting on the estate of Mr. George Wood, at West Court, Southfleet, when Dawson's horse suddenly disappeared from under him, having fallen into a draw-well some five-and-twenty feet deep. Fortunately his rider saved himself by hanging on to the boughs of a tree. The first whip, Will Percy, was lowered into the pit, and found the horse on his back, with the saddle smashed to pieces, and the animal was very savage at first and bit at Percy. It took a little more than two hours to get the horse up, when it was found he was not in the least hurt, though of course very stiff. A couple of fox-hounds and a fox-terrier also fell with the horse, the former being uninjured, but the terrier, having broken his leg, was destroyed. There are, it seems, two more similar pits in this wood, and they should without delay be railed around, as being covered up with underwood, it is impossible to see where they are, and next time any one falls into them the result may prove more disastrous.

* There will be a coursing match, free for all dogs in the State, at Corcoran's ranch on the Mokelumne Hill road, tomorrow, 22d.

ROWING.

English Amateurism.

The London *Field* expresses delight at the unpleasant results of the race on the Thames, between the Hillsdale and Thames crews. The *Field* explains in a decidedly plain manner why the visits of American amateur oarsmen to England are not desired. The *Field* is an exponent of the ideas of the classes of Englishmen whose pride it is to keep the escutcheon of amateurism pure and undefiled by contact with base plebeians whose prowess would be likely to paralyze aristocratic muscle. This eminently critical and respectable English journal trusts that in the "ill-advised match" between the Hillsdale and Thames crews it "has seen the last of the visits to England of these pseudo amateurs from across the Atlantic." The *Field* shows how utterly impossible it is to reconcile the fastidious authorities of English amateurism to the competition of representatives of the aquatic ability of American tradesmen and mechanics. Did any hope exist that the standard of American amateurism might be raised the *Field* could regard with some degree of complacency the prospect of another international match, but unfortunately for the *Field's* peace of mind the degradation of American amateurism is hopeless. Our fastidious English contemporary thus bewails the mournful disrespectability of American ideas which tolerate the competition of ordinary mechanics with lordly and blue-blooded bank clerks and fifteen-dollar book-keepers in insurance offices:

We have little room to be sanguine that the American rowing world will ever be induced to raise its definition of amateur status to one more approximate to our own standard, and for this reason, that the classes in society from which in England amateurs chiefly spring do not in America take kindly to rowing as a pastime; they look down on it, and, unless at their universities, the young men of good family would as soon be seen by their parents in a casino as in the ranks of a rowing club. And it is equally unfortunate that the universities in America are themselves socially so mixed in class that many a man who by calling and mode of life should be an artisan and hence belong to the professional class obtains a seat in a college crew. Even in dealing, therefore, with crews from American universities we must carefully divest ourselves of the notion that membership of a college is synonymous with amateur status, according to our English requirements. We have from the first deprecated the late match in every shape, still more the tacit recognition, as a corollary, by the English club, of the claims of the Hillsdale crew to be amateurs, and equally the deduction, by a large portion of the press and the public, that the match was an international one in the sense of the Thames crew being accredited representatives of British amateur oarsmanship. Nevertheless, if this match, and the *expose* which it has produced of the character and characteristics of so-called American amateurs, should have the effect of inducing English authorities in future to abstain from accepting American credentials on *ex parte* statements; and if, also, the "National Association of Amateur Oarsmen," U. S. A., will kindly keep to the resolution of which we published a copy in our issue of last week, and insist on being recognized *ex-officio*, or not at all, in England, we shall gladly admit that for once out of evil cometh good.

American oarsmen ought to feel deeply grateful to the *Field* for its candid statement of the reasons which made the visit of American amateurs to England about as welcome as the small-pox. In plain words the *Field's* long article means that if American oarsmen go to England as professed professionals they will be cheerfully welcomed and carefully committed to the company of a social fellowship of the publicans around Putney or the jolly young watermen of Blackfriars who have to hire some one to sign their names to articles of agreements when they make a match. But if American amateurs cross the Atlantic expecting social recognition from the aristocratic bank clerks who maintain the dignity of their high standing as members of the London Rowing Club on \$100 a year, then the American amateurs greatly miscalculate the English sentiment towards them and should be speedily brought to a sense of their inferiority and disreputability as interlopers, and "cads."

THE CHAMPIONSHIP.—The Pioneer crew began to train regularly this week for the Thanksgiving Day race for the BREEDER AND SPORTSMAN'S cup, the possession of which will carry with it the championship of the Pacific Coast. The competing oarsmen are all satisfied with the arrangements made by the three interested clubs, with regard to length and location of the course. As some doubts exist of the correctness of the Long Bridge three-mile course it will be accurately surveyed before Thanksgiving Day so as to make the time record of some value. It would be as well when a survey is being made to test the accuracy of the alleged two

miles usually rowed. Dan Leahy has made some wonderful trials over the two-mile course and has frequently expressed the belief that it was short, but the scullers who have been falling outside the 15 minute mark in their trial think differently. It is not yet definitely settled who shall represent the Pioneer Club in the Thanksgiving Day race. Mike Long the veteran oarsman has been rowing in the bow of the Pioneer boat during the past week but it is not certain that he will consent to take part in the contest. Both the Ariel and the Golden Gate Clubs have finally decided on their crews. The Golden Gate crew is a very strong one but it seems to us that the Ariel four might easily be strengthened. The four men who will row own the boat, however, and think that their financial interest is paramount to that of the club. The wisdom of their opinion will be shown on Thanksgiving Day.

THE PIONEER CLUB.—The annual meeting of the Pioneer Rowing Club was held last Sunday. The reports of the Secretary, Trustees and Treasurer showed that the condition of the Club's affairs was most satisfactory. Officers were elected as follows: President, T. E. Flynn; Vice-President, L. C. White; Treasurer, John Sullivan; Captain, P. J. Brennan; Lieutenant, Henry Price; Trustees, T. H. Murphy, R. C. Lyne, J. P. Brennan. During the year the Pioneer Club has built an addition to the boat-house and added to its stock of boats. It has now a flourishing membership and more boats than any other club on the Coast.

HOSMER'S VICTORY.—At the Lake Massabesie regatta, at Manchester, N. H., October 2, George H. Hosmer, George W. Lee, James Riley, Daniel Driscoll, P. McInerney and J. Carey competed for the professional single scull pull over a 2½ mile with a turn course. Hosmer won, Lee second, McInerney third; time, 18:07. The four-oared race was won by the West End crew. Courtney gave an exhibition pull and beat the time made in the single scull race.

THE TIME TOO FAST.—Hurlan is evidently of the same opinion as Ross, Kennedy and thousands of others regarding the three-mile time of George W. Lee and Charles Courtney. In Boston recently he was asked if he could row faster than the above-named scullers are said to have done at Richfield Springs. He said that although he didn't think he could row so fast he could defeat them on that or any other course.

GEO. GAISEL has posted \$100 with W. B. Curtis to bind a challenge issued by William Elliott for another three-mile race, on Greenwood Lake, Saratoga Lake, the Passaic river at Newark, or any fair course except Flushing Bay.

YACHTING.

Launching a Cutter.

From the New York *Spirit of the Times* we take the following:

Mr. James Stillman's fine cutter *Wenonah* was successfully launched on the 21st inst. from the yard of Henry Piegras, her builder, at Pottery Beach, Brooklyn, E. D. The weather was most unpropitious, it having been the first day of the equinoctial storm, and a chill northeast wind and dull leaden sky made the occasion rather a gloomy one. Scarce any publicity had been given to the event, and the attendance was small. Mr. M. Roosevelt Schuyler attended on behalf of Mr. Stillman, and performed the christening ceremony. The only others of any note that were present were Mr. John Harvey, the designer of the yacht, Commodore C. S. Lee, of the Seawanhaka Yacht Club, and Mr. J. Frederick Tams, of the same club. Mr. Stillman, it is said, has been deterred, by sickness in his family, from making an intended cruise in the *Wenonah* this fall, and, therefore, has not hastened her completion in any way, and as a result of this he will probably have a more perfect vessel.

The completion of this vessel and the *Bedouin* should put an end to all controversy as to superiority of type. We have now these two cutters, in addition to the *Oriva*, *Maggie* and *Muriel*, besides a score or so vessels of the cutter type in Eastern waters. And the cutters may now be left to improve themselves if they can. An ounce of experience is worth a pound of theory, and if these vessels are superior to the beamy centerboard sloop, the American yachtsmen will quickly find it out, and they will replace the centerboard.

We have never thought that they were superior, and don't think so now, but we don't pretend to be the embodiment of all the yachting wisdom of the world, and it may be that we are mistaken. One very serious objection to them is their great cost. For what the *Wenonah* cost three centerboard sloops of the same length could be built, and the cost, therefore, is a serious objection to the cutter. But it is not a fatal one, and we have plenty of rich men who can stand the cost without inconvenience. Moreover, it is not absolutely essential that the cutter shall be as expensively built as the *Wenonah*, *Bedouin*, or *Oriva* have been, and the same model may be had at far less cost. A more serious objection is the at present apparent necessity of English canvas, and an English skipper and crew. But this necessity is more apparent than real, and if this type of boat shall become common, the Yankee skipper will soon learn how to handle them quite as well as the imported captain can. The great draught of water is another objection, closing, as it does, to them many harbors; but then it may be urged that, with this type of boat, there is not the same necessity of making a harbor as in the case of the centerboard, and if Long Island Sound be barred to them they can have ample room out on the ocean. So, then, we are disposed to give them a fair show, and, so far as this particular boat is concerned, we wish her every success.

The cutter looked very handsome as she rested on the ways previous to the launch. Her topmast was on end, and her spars, except the main boom, were in place. From her main truck floated an American ensign, this being the only attempt at ornamentation. From each hawse-pipe a stout rope led with slack enough to allow for the yacht to clear her ways; turns being then taken around two heavy timbers anchored in the ground, at which were stationed two of the most trusty of her crew to see that her way was checked ere she reached the bulkhead forming the outer line of the basin in front of the shipyard. Owing to her peculiar shape, the yacht had to be hung in chains for her whole length, no part of her bottom being flat enough to rest directly on the ways. The work of wedging up began at 3:15 and consisted merely of tightening the chains. Ten minutes sufficed for this, and then beginning aft, one after the other the blocks, on which her keel had rested since it was laid, were knocked out with a heavy battering ram, and the keel rested in the bight of the chains, the ends of which were fast to the standard affixed to her bilges, the lower ends of which rested on the well-greased

ways. At 3:45 the woodlocks, which bound the sliding to the fixed ways, were knocked out, and the yacht was free to go. She did not, however, start, and for the moment it was feared that the great heat of the previous day had melted the grease, and that the boat would stick on the ways. Half a dozen blows of a ram, however, on the end of the ways started them, and away the cutter went down the incline, taking the water beautifully and floating clear of the ways; she shot across the basin, the head lines checking her way just before she reached the outer bulkhead.

The *Wenonah* belongs to the New York Eastern, Seawanhaka, Larchmont, and St. Augustine Yacht Clubs. Her owner, who formerly owned the schooner *Wanderer*, and later the cutter *Muriel*, the sloop *Regina* and steam yacht *Lurline*, is one of the most prominent yachtsmen in this country. Not being able to obtain an American register for a cutter built in England, he has, in order to test the comparative merits of the two types of boats—British and American—as fairly as possible, had the *Wenonah* built from plans of Messrs. Harvey and Pryor, of London, and her sails made by Laphorne, the most approved of British sailmakers. She has been rigged, and will be sailed by Captain Harlow and a picked British crew, brought here from England for this purpose. Except, therefore, that she has been built here, the *Wenonah* is to all intents and purposes a British yacht. Her dimensions are: Length over all, 72 ft.; on water line, 60 ft.; extreme beam, 14 ft.; depth of hold, 10 ft. 6 in.; draught of water, 10 ft. 6 in. She is ballasted entirely with lead, twenty-four tons of it being cast in one piece, on her keel, and about as much more is on the inside, moulded to fit her frames. Her spars are much more taut than is customary in British yachts, the yachting weather here being much lighter than in the channels. Her mast is 66 ft. 6 in. extreme length. From deck to mast-head it is 55 ft.; the topmast is 40 ft.; boom, 58 ft.; gaff, 38 ft.; bowsprit, out-board, 28 ft. The latter is round and fitted to house or reef. Her cost will be, when complete, about \$30,000.

CLOSING DAY.—The following sailing orders have been issued by Commodore Harrison of the San Francisco Yacht Club for Closing Day:

Yachts will assemble off the Club House at Saucelito, and anchor as most convenient, previous to 1 o'clock p. m. on Saturday, October 25th, 1882.

At 2 p. m., the fleet will "dress ship."

At 5:06 p. m., the "preparatory gun" will fire, and five minutes later, the "starting gun," when the fleet will get under way, and proceed to Mare Island, anchoring on the Vallejo shore, and well north of the ferry landing.

On Sunday, October 29th, at 12 o'clock, noon, the "preparatory gun" will fire, and five minutes later the "starting gun," when the fleet will get under way, but not cross the line of the Georgia Street wharf until the flag-ship hauls down her ensign and fires another gun, which will be when the yachts are well together, and then will "try rate of sailing" to San Francisco, passing to the west of Blossom Rock buoy.

Yachts will observe the gun for "colors" at 8 a. m. Yachts shall set up canvas before the "preparatory gun" and shall not hoist head-sails, or back ground until after the firing of the "starting gun."

An interesting race will come off to-day over the S. F. Y. C. course between the *Chispa* and *Whitewing*. It is a Corinthian race and a test of the skill of Messrs. I. Gutte and John D. Spreckels. The latter will sail the *Whitewing*; the former the *Chispa*. No light sails will be used. Only four men are allowed aboard. The judges are Capt. Cummings, Fulton Berry and Charley Yale. Each of the two gentlemen who are to sail the yachts thinks he is the most skillful helmsman, and this test is to decide the mooted point. The *Chispa* is acknowledged the faster yacht, but Mr. Spreckels has had more experience in sailing than his opponent.

The San Francisco Yacht Club will "close the season" on October 28 in the usual manner by a dance at the club-house at Saucelito and a moonlight sail to Vallejo. There will be dancing from 3 to 6 p. m., and guests will return at 6:15 p. m. The yachts will leave for their cruise before the guests depart, so the start can be seen. This is the last yachting event of the season of 1882. It has not been a very brilliant one from any point of view.

Dr. Merritt has laid the *Casco* up for the winter at her old berth alongside the Webster St. bridge in Oakland harbor. She has a canvas awning over her fore and aft. Her sides have been covered with old carpets and canvas so she shall not dry out. Her spars have been oiled. The *Casco* has done little outside cruising this season.

The *Lolita* has had a redwood house built over her cabin which will remain while she is up in the marshes. It serves the purpose of enlarging her accommodations very materially. In fact it makes a two-story yacht of her.

The Canadian sloop yacht *Atlanta*, which raced for the America's Cup as the champion of the Bay of Quinte Yacht Club, has been seized by the United States Marshal for an unpaid ship-chandler's bill.

Captain Munfrey's skipper is on the beach in Oakland Creek alongside Farmer's boat-shop, being overhauled. She is to have an eight-foot gaff instead of the little short one she has been carrying.

The *Emerald* got becalmed on Saturday evening and had to stay out all night with a good-sized party aboard.

The *Flirt* has been laid up in Oakland Creek for the winter. She is alongside the old St. George boat house.

The yawl *Ariel* has been put on the beach to find a leak. She wanted cleaning too.

The new owners of the *Nellie* seem to be enjoying their purchase.

The *Aggie* has been on the dry dock and been cleaned.

The *Violet* is laid up in Oakland Creek for the winter.

The *Lively* is laid up in Oakland Creek.

The *Chispa* was on the ways last week.

Now is the time for up-river cruising.

Dutch Oven's winnings from her first race up to and concluding the Thirty-fourth Triennial Stakes at Newmarket on September 27 amount to £16,900 10s.

CRICKET.

Cricket at East Portland.

Moral—When the wicket man turneth away from his wicketness he shall save his bacon. And don't you forget it.—*Dr. Watts.*

P. S.—Not with the old eleven of malice and wickedness, but with the eleven that are bred up to sincerity and truth.—*From a Georgian Chant.*

The cricket-playing tars from the vessels in port met on the East Portland Cricket grounds on Saturday afternoon, as arranged, but after waiting for their opponents till half-past three, and only one member of the club turning up, they resolved to have a friendly match among themselves, Mr. Warren and Captain Mearns kindly consenting to act as umpires.

The weather was everything that could be desired, just sufficient rain falling to lay the dust.

The result of the match was as follows:

CAPT. POWLES' SIDE.	
Fenton, run out b. Murray.....	10
Emory bowled Reid.....	5
Gipps, run out b. Reid.....	7
Chevera, not out.....	15
Pennig, caught out b. Murray.....	6
Bennett, bowled Reid.....	4
Mack, bowled Murray.....	3
West, caught Bennett, bowled Reid.....	2
Capt. Powles, caught Hale, b. Reid.....	9
Wickets.....	61
Extras.....	0
Wides.....	0

CAPT. MILNE'S SIDE.	
Cook, run out.....	12
Hale, caught West, bowled Emory.....	2
Hutchinson, caught Penny, b. Fenton.....	3
Murray, run out.....	20
Kennedy, b. Emory.....	14
Watt, b. Fenton.....	4
Nelson, b. Fenton.....	4
Reid, b. Emory.....	3
Capt. Milne, stumped Fenton, b. Emory.....	26
Beckett, not out.....	6
Wickets.....	103
Byes.....	8
Total.....	111

As the tars will shortly be leaving port they wish before sailing to tender their sincere thanks, through the *Oregonian*, to the president and members of the P. C. C. for their kindness in giving them the use of their grounds and cricket gear, which has afforded them so much pleasure during their stay in Portland, and they wish that every success may attend them in their future career.—*Oregonian.*

Australian Cricketers in New York.

The Australian cricketers now in the East seem to have nothing but walk-overs this season. The following review of the games played last week is from the *World*:

The Australian cricketers first visited New York in October, 1878, and in the first week of that month played against an eighteen of St. George, Staten Island and Manhattan clubs. In that match the Australian eleven—which included Messrs. Spofforth, Boole, Garrett, Murdoch, Horan, Blackham and Bannerman of the present visiting team—found some trouble in defeating the New York eighteen by a score of 70 and 92 (162) to 63 and 98 (161), the Australians having five wickets to fall when they exceeded the local team's score. Yesterday the world's champion team of cricketers—for that is what this present Australian team is—played against an eighteen of the St. George, Staten Island, Manhattan, Newark and other clubs on the same field at Hoboken, and this time the visitors without any special effort disposed of this eighteen for twenty-five runs off the bat. In fact the Australians, who are noted for their field skill, made rather an inferior exhibition in their support of the bowling, catch after catch being missed in a manner rather surprising to the spectators. But this contrast between the batting of the two eighteens of 1878 and 1882 was rendered more striking by the fact that the weak batting was followed by still worse fielding. In fact it was made painfully evident that since the last visit of the Australians cricket has degenerated sadly here. There was but one redeeming feature of yesterday's cricket on the part of the eighteen, and that was some remarkably effective bowling, notably in the case of Lane and McColl. In 1878 the eighteen's fielding and howling was the best ever shown by a local team in an international match. This time, while the bowling was up to the mark, the fielding, as a whole, was simply wretched. Had the eighteen's bowling been well backed up in the field the Australians would not have scored 70 runs. As it was, they ran up only 110 for the loss of nine wickets—quite a small score for such an eleven. Of this number Murdoch contributed an unearned score of fifty, he giving two easy chances for catches after scoring a dozen. Giffen added thirty-six, all of which, save the last run, were well earned by good all-round hitting, combined with a steady defense. All the others failed to contribute even average figures. The wicket was a bowler's wicket and it exactly suited Spofforth, who took ten wickets for twelve runs. Lane, on the other side, took five wickets for twenty-three runs, a fine record against the bats opposed to him. McColl took two wickets for three runs and proved himself a damaging bowler to the visitors after the fifth wicket fell. Bannister was terribly punished with a score of thirty-seven runs off twenty-four balls. Blackham and Spofforth are the two Australian not-outs and they will resume their positions at the wickets to-day, and the chances are that the eighteen will have to go in to get nearly a hundred runs to escape a defeat in one inning, and unless a surprising improvement is shown in their play this is something they are not likely to do. The attendance was larger than expected, and the number of veteran cricketers present was noteworthy. The champion oarsman of the world, Hanlan, was a guest of the Australians at the club-house Monday. The score of Monday's play is as follows:

NEW YORK.	
Wilson, c. Giffen, b. Boyle.....	2
Bannister, b. Spofforth.....	1
Brooks, b. Spofforth.....	0
Lane, b. Spofforth.....	4

FALL OF WICKETS.
Australian—5, 6, 23, 32, 106, 106, 107, 110, 110, 110.
Umpires—Messrs. Allworth and Midwinter. Time of game—Four hours and twenty minutes.

Second Day.

The cricket match between the New York eighteen and the Australians was continued yesterday at Hoboken and was won by the champions with seven wickets to spare. The day was all that could be asked, both for players and spectators, and those present enjoyed a very pleasant afternoon's outing. When the stumps were drawn on Monday Blackham and Spofforth were the "not outs." The latter was disposed of yesterday for 2, having been handsomely bowled by Lane, which left Blackham to carry his bat out for 6, with a total of 116 runs for the inning. The "eighteen" then began their second inning, and as Spofforth and Boyle were not put on to bowl it was quickly seen that the Australian captain had decided to give the eighteen a chance, and it was fair, all-round cricket until lunch was called, after which the play was made much sharper, the crack bowlers going in again, but the eighteen continued to do well and it was not until they had scored 102 runs that they were all disposed of, which, with the 27 scored in the first inning, made a grand total of 129 against the Australians' 116 in their first inning, which compelled them again to go to the bat. They found the bowling so good, however, that three wickets fell for 11, the feature of the playing being the handsome throwing out of Spofforth by Cleverly. The few remaining necessary runs were, however, quickly scored, leaving the total of the game as follows:

AUSTRALIANS.

Second Inning—6, 23, 45, 56, 70, 72, 74, 75, 75, 86, 86, 87, 87, 96, 96, 102—102.
Grand Total, 129.
Umpires—Messrs. Allworth and Midwinter.

FISH.

Habits of Black Bass.

Seth Green, in a note to the New York *Herald* regarding the efforts to stock English waters with American black bass, gives the following items of interest on fish culture:

I notice in your issue of October 3 an article entitled "Black Bass in England," and making the announcement that Mr. W. T. Silk, of Burghy Park, Stamford, is now in this country for the purpose of procuring another supply of black bass for English waters. I observe in the article that Mr. Silk is to obtain for transportation the small black bass three and four inches long, and I would suggest that he take the large or mature black bass, from three-quarters of a pound up, instead of the smaller ones. One pair of mature black bass would produce at least 2,000 or 3,000 young the first year, undoubtedly a greater quantity than will be transported.

The black bass, unlike the salmon family, protect their young until they are old enough to take care of themselves.

If 200 mature black bass could be deposited in English waters suitable for them, fifty each in four different bodies of water, their increase would stock all Great Britain in a few years. The great food for black bass is the fresh water lobster or crawfish, and if the English waters do not contain them I would advise transporting a large quantity. The success in stocking all waters is as much dependent upon the food supply as on the depositing of the fish themselves.

Black Bass in English Waters.

We have before alluded to the success attending the efforts of English anglers and fish culturists in the introduction of black bass on the other side of the Atlantic, and the growing appreciation of its game qualities abroad. Englishmen are proverbially fond of all manly field sports, and many of them make occasional visits to America for the purpose of enjoying a greater variety of shooting and fishing than can

be obtained elsewhere. The game qualities of the black bass attracted the attention and admiration of certain anglers from Britain, and the glowing reports given to the fraternity in Merrie England through the *Field* and the *Fishing Gazette* awakened a general desire to know more of the fish. In 1873 a lot, consisting of about 150 black bass from the upper Delaware, were placed in Whitewater Lake, a preserve owned by the Marquis of Exeter, and the year after nearly a thousand of the same species were transferred to the lake, where they thrived and grew to maturity. The success of this experiment was such that W. T. Silk, one of the most practical fish culturists of England, who superintended the transplanting of the first and second lots, has recently returned for a larger supply, to be taken from Greenwood Lake and the Delaware. Mr. Silk proposes to secure about 2,000 of the small-mouthed variety, and these will be distributed in different parts of England, a portion being intended for the Norfolk Acclimatization Society, and others for the Westminster Aquarium, the public reservoir at Wakefield, in Yorkshire, and also for the preserves of the Duke of Manchester, and Mr. R. B. Marston, editor of the *English Fishing Gazette*. Many well-known lovers of the angle throughout Great Britain are enthusiastic over the acquisition of such a game fish as the black bass, which is now recognized as second only to the trout by those best qualified to judge.—*Turf, Field and Farm.*

Smelt in Fresh Water.

The delicate texture and delicious flavor of the smelt give it rank with the most delectable of the sea fishes. People whose homes are near the coast where it abounds, appreciate it as a luxury; and if it would bear transportation as well as the oyster, the demand for it, at great distances in the interior, would be much above the present sources of supply.

Were it generally known that this fish is adapted to fresh water, and may be successfully planted in most of our large, clear lakes, there would be a great call for it for stocking purposes. A few smelt put in Lake Champlain several years ago have led to their permanent establishment in that water; and those who have eaten them pronounce them fully equal in quality to those of salt water growth. In 1880, some furnished by Mr. Blackford were put into Otsego Lake, which seemed one of the best adapted to test them. Circumstances not favorable to a successful plant may have prevented success in this case, as none of the product have been seen in the lake. But the experiment is worth repeating.—*From the Forthcoming Report of the New York Fish Commission.*

How AN ALLIGATOR DINES.—An alligator's throat is an animated sewer. Everything which lodges in its mouth goes down. He is a lazy dog, and instead of hunting for something to eat he lets his victims hunt for him. That is, he lies with his great mouth open, apparently dead, like the possum. Soon a bug crawls into it, then a fly, then several gnats and a colony of mosquitoes. The alligator doesn't close his mouth yet. He is waiting for a whole drove of things. He does his eating by wholesale. A little later a lizard will cool himself under the shade of his upper jaw. Then a few frogs will hop up to catch the mosquitoes. Then more mosquitoes and gnats will light on the frogs. Finally a whole village of insects and reptiles settle down for an afternoon picnic. Then all at once there is an earthquake. The big jaw falls, the alligator blinks one eye, gulps down the whole menagerie, and opens his great front door again for more.

STOCKING OHIO WATERS WITH EELS.—During the past season Sandusky Bay and the rivers at Port Clinton, Huron and Vermillion have been liberally stocked with eels by the Fish Commissioners.

The U. S. Fish Commission for several years past has been sending eggs of the California salmon (*S. ginnat*) to Germany, Holland and France. From some cause or other these attempts to plant our salmon in European waters have met with more or less failure, owing principally to the agents sent in charge being unable to secure the necessary accommodation for the eggs on shipboard, the parts of the vessel assigned to them being generally too warm, the supply of ice limited, etc.

The Clackamas river is one of the great natural spawning grounds of the Chinook salmon (*salmo ginnat*). Probably no tributary of the Columbia has abounded so profusely with salmon in past years as this river. A high natural fall on the the Willamette at Oregon City, just above the mouth of the Clackamas, forces all the salmon of the Willamette up the Clackamas, and vast hordes of them have consequently been in the habit of crowding into that river to spawn.

The fishing around the bay last Sunday was exceptionally good. At Saucelito the catches were large and well assorted; often a tomcod and smelt or smelt and rockcod were pulled in at the same time on the one line. A great many persons were fishing along the Saucelito shore and they all returned satisfied.

In transporting the eggs of salmon and trout it is of the utmost importance that the crates of eggs should not be allowed to have too high a temperature. This is destruction to salmon eggs in transit no matter how they are packed.

The Antioch *Ledger* states that a salmon caught near that place recently was found to be branded "U. S. F. Co." The brand had evidently been put there by some member of the United States Fish Commission.

The Truckee *Republican* says this season of the year is the pleasantest time to visit the various lakes in that vicinity. The weather is delightful and game is plentiful and fishing fair.

Salmon have put in an appearance in Eel river, and the fishermen are now all ready for the season's work.

Salmon in the Shasta river are abundant.

Cost of Big Guns.

The enormous power of modern great guns is well indicated in the statement that the largest on board of the vessels of the British fleet now in Alexandria harbor is capable of throwing a projectile weighing 1,700 lbs. at a velocity of over a mile in four seconds—equal to a weight of 27,213 tons of metal, falling a distance of one foot on an object. It takes 370 pounds of powder to fire this shot at this velocity, so anyone versed in the prices of steel and saltpeter can calculate the cost of every shot that these guns will throw. It will be found that every report will cost not very far from \$1,000.

In Ohio a dog is property. In Georgia he is a proprietor. To come down to round figures, seven bob-tailed curs in Georgia are worth more than all the sheep in the State put together.—*Atlanta Constitution.*

Market Report.

FLOUR—We quote: Best City Extra, \$5 37½@55 50; Superfine, \$4 50@54 75; Interior Extra, \$4 75@55 25; Interior Superfine \$3 75@54 75 bbl.

Wheat—Exporters are busy securing cargoes for chartered vessels. The Liverpool is on the improve. Recent sales of No. 2 October, \$1 61, do November, \$1 62½, 1 62½ and 1 63.

BARLEY—The market for feed is firm. No. 1 Feed, October, \$1 31½, do November, \$1 33@1 33½; December, \$1 33½; No. 2 November, \$1 29. Brewing is fairly steady at \$1 35@1 37½ p ctt. for No. 1 grade.

OATS—Choice qualities somewhat scarce. The range of feed is at \$1 50@1 65 p ctt.

RYE—Quotable at \$1 90@2 12½ for No. 1, and \$1 65 @2 15 per ctt for No 2 grade.

FEED—Ground Barley, \$2½@3 1 p ton; Cracked Corn, \$38 4 p ton. Shorts sellers are asking \$20 50@21 4 p ton. Oikake meal the oil wks sell to the trade at \$32 50 p ton, less the usual discount. Middlings, \$28@29 4 p ton for lots at the mill.

HAY—Alfalfa, \$13 50@14; Wheat \$15@16; Wild Oat, \$15@16; Mixed, \$12@14 p ton.

STRAW—Quotable at 70c p bale.

BEANS—Bayos \$4@4 25; Butter, \$3 35@3 50 for small and \$3 60@3 75 for large; Lima, \$4 50@4 60; Pea, \$3 75@4; Pink, \$3@3 25; Red, \$3@3 25; small White, \$3 75@4; large White, \$2 50@3 50 p ctt.

BUTTER—We quote jobbing lots: Fancy, 42½@45; choice, 38@40c; fair to good, 30@35c; inferior lots from country stores, 25@28c; Irkin, 20@31c for good to choice, and 25@27½c for ordinary; pickled roll, 28@32½c; Eastern, 20@25c p lb.

EGGS—California choice, 42c; Interior, 37½@40c; Utah, 27½@35c; Western, 30c p doz.

CHEESE—California, 12½@13½c for choice; 10@12 for fair to good; do, factory, in boxes, \$15@16; Eastern, 16@17c; Western, 8@12½c per lb.

POULTRY—Live Turkeys, gobblers, 15@17c; do Hens, 14@15c; Roosters, \$5 50@56 for old and \$5@57 for young; Hens \$6@57; Broilers, \$4@55, according to size; Ducks, \$5@57 50 p dozen; Geese, \$1@1 25 p pair; Goslings, \$1 75@2 25 p pair.

GAME—All consignments in order sell readily: Quail, \$1@1 25 p dozen; Mallard Ducks, \$4@55; Sprigs, \$2 25@3; Teal, \$1 50@2; Widgeon, \$1 50@1 75; Hare \$2@2 25; Rabbits, \$1 25@1 75; Venison, 6@9c p lb.

WOOL—We quote spring: Humboldt and Mendocino, 25@26c p lb; Sonoma, 22@24c; San Joaquin free 17@18c; San Joaquin defective, 14@17c; Southern Coast, burry and seedy, 15@17c; Eastern Oregon choice, 25@24c; Eastern Oregon fair, 20@22c; Eastern Oregon poor, 18@19c; Valley Oregon, fine, 25@27c; Valley Oregon, coarse, 23@24c. We quote fall: San Joaquin and coast, 10@12c; San Joaquin and coast Lamb, good, 12@14; Northern fall, free, 15@17c; Northern fall, defective, 11@15; Northern fall, Lamb, 16@17½; Free Mountain, 13@16c.

HIDES AND SKINS—Dry hides, usual selection, 13½@20c p lb; culls one-third less, and Mexican Hides 1c p lb less. Dry Kip, 18c; Dry Calf, 21@22c; Salted Steers, over 55lbs, 11c p lb; Steers and Cows, medium, 10c; light do, 9c; Salted Kip, 15 to 30 lbs, 11c; Salted Calf, 14@15c p lb; Dairy Calf 75@85c each; Sheep Skins, 25@30c for Shearlings; 30@50c for short, 60@81 for medium, and \$1@1 50 a piece for long wool and wool skins. Butchertown Green Skins bring higher prices.

TALLOW—Quotable at 7c@9½c p lb for rendered and 11½@12c for retined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 7½@8c; medium grade, 6½@7c; inferior, 5½@6c p lb.

VEAL—Large Calves, 7½@8½c; small ones, 8@9½c p lb.

MUTTON—Wethers are quotable at 4½@5c and Ewes at 4@4½c p lb, according to quality.

LAMB—Quotable at 6@6½c p lb.

PORK—Live Hogs, 6½@7½c for hard and 6½@6½c for soft; dressed do, 10½@10½c p lb for hard grain hogs.

TURF AND TRACK.

The Cook Stock Farm Stallions.

DANVILLE, Oct. 24, 1882.

EDITOR BREEDER AND SPORTSMAN: I have received some half a dozen letters in the last month, asking me what stallions we intended to keep on the farm and if we could serve mares. I will answer through your valuable paper and give the breeding of them, but as for whether they will be kept on the farm for service or sold, I cannot now answer, since Mr. Cook's death, but will let you know later.

Cook's Hambletonian, bay colt, foaled in 1881, by Egbert; first dam by Woodford Mambrino; second dam by Alexander's Abdallah; third dam by Robert Bruce, he by Clinton, a son of Sir Archy; fourth dam by Muckle John; fifth dam by Trumpator; sixth dam by Stramboni. Egbert by Rysdyk's Hambletonian; first dam by Messenger Duroc, son of Rysdyk's Hambletonian; second dam by Holbert colt, (a pacer) son of Rysdyk's Hambletonian; third dam by the Utterhorse, a son of Hoyt's Comet; fourth dam, sister to the dam of Messenger Duroc, by Roe Abdallah Chief. Woodford Mambrino by Mambrino Chief, with record of 2:21½, and the sire of Convoy (2:22); Mambrino Dudley (2:22), Abbotsford (2:21½); Princeps, the sire of Trinket, record 2:14; Alexander's Abdallah the sire of Goldsmith Maid (2:14); Roselind (2:21); the sire of the dam of Princeps the sire of Trinket (2:14); the sire of Almont the sire of Piedmont (2:17); Early Rose (2:18); Aldine (2:19); Messenger Duroc the sire of Prospero (2:20); Elaine (2:20); Dame Trout (2:22); Charles Champlin (2:21½).

Your readers can see that this colt represents some of the best on the turf, and with so many crosses to imported Messenger, imported Diomed, Abdallah and Rysdyk's Hambletonian, he cannot fail to become a great sire of trotters.

Steinway, bay horse two white heels, by Strathmore. First dam Abbess, record 2:34, and the dam of Solo, five-year-old record 2:28, by Albion, the sire of Vanity Fair, record 2:24; second dam by Hathaway's Halcorn a pacer, he by Halcorn, he by Virginian, son of Sir Archy; third dam by Crowell, he by Bertrand, a son of Sir Archy; fourth dam by Marshal Ney, he by imported Emancipation; fifth dam by Bertrand, son of Sir Archy. Strathmore, by Rysdyk's Hambletonian. First dam Lady Waltermire, which was a fast mare in her day. The late Hiram Woodruff drove her to wagon a trial in 2:28. Her dam by North American, he by Sir Walter, dam a pacing mare. Sir Walter by Hickory, son of imported Diomed. Second dam by Harris Hambletonian, he by Bishop's Hambletonian, a son of imported Messenger.

Strathmore is the sire of Santa Claus, record 2:17½; Chestnut Hill (2:22); Alice Stoner (five-year-old fifth heat 2:24); Steinway, two-year-old record third heat 2:31½, last half 1:10½; three-year-old record 2:25½, fourth heat, last half 1:10. This is the fastest for a stallion at that age two and three years old. Solo, full sister to Steinway, five-year-old record 2:28, and private trial 2:22. Monitor, four-year-old record fifth heat 2:29. North American, the sire of White Hall, he the sire of Rhode Island, he the sire of Gov. Sprague the sire of Kate Sprague, with record 2:18.

Clois, brown colt, foaled 1882, tan flanks, no white, by Sultan, the sire of Sweetheart, three-year-old record 2:23½; Eva, two-year-old record 2:26, and others that can beat 2:30. First dam by Thorndale the sire of Edward Thorne, record 2:16; Daisy Dale (2:19); May Thorne (2:26). Second dam by Rysdyk's Hambletonian. Third dam by Mambrino Paymaster. Thorndale, record 2:22, by Alexander's Abdallah, the sire Goldsmith Maid (2:14). First dam Dolly, the dam of Director, record 2:23½, and onward, record 2:25, by Mambrino Chief the sire of Lady Thorn, record 2:18½. This colt ought to be a great sire of trotters and he is already a trotter for a youngster. Your readers can see that he is nicely bred and represents some of the best trotting strains on the turf.

Pax, bay colt, star, off hind pastern white, foaled 1882, by Steinway, record, three-year-old, 2:25½. First dam Pricless, sister to Driver, record 2:19, by Volunteer the sire of St. Julian (2:11½), Allia (2:19), Gloster (2:17½). Second dam by Silver-tail, he by American Star. Third dam by Aron's Gray Messenger, he by Imported Messenger. This is a fine and game looking colt and is already a trotter for a youngster. He cannot fail to be a great sire of trotters and one that can go

the route, as he has so many speedy crosses and so much hot blood in his veins.

Cresco, bay colt, hind ankles white, by Strathmore, the sire of Santa Claus (2:27½), Chestnut Hill (2:22½), Steinway (2:25½) Alice Stoner, (2:24) Monitor (2:29). First dam Alla, (trial three years old 2:27), by Almont the sire of Piedmont (2:17½). Early Rose (2:18), Aldine (2:29), and the two last in double harness 2:16½; second dam by Mambrino Prince, record 2:29, he by Mambrino Chief the sire of Lady Thorn (2:18½); third dam by Cripple, a son of Medoc; fourth dam by American Eclipse.

Almont by Alexander's Abdallah, sire of Goldsmith Maid (2:14). First dam, Sally Anderson, by Mambrino Chief; second dam, Old Kate, by Pilot Jr.; third dam a thoroughbred.

Mambrino Prince, by Mambrino Chief. First dam, Sally Woodford, Wedgwood's dam, record 2:19, by Woodford; second dam by Hunt's Commodore. This colt ought to make a trotter and a sire of trotters.

Crisis, chestnut colt, foaled 1882, white face, two white fore legs, by Alexander, son of California Patchen. Alexander the sire of Tommy Dodd (2:24), Alex Button, (four-year-old record 2:56), Reliance (2:22), and others below 2:30. First dam by imported Mango, second dam by imported Sovereign, third dam by imported Albion, fourth dam by Whisker. This colt will make a great out-cross with Hambletonian, Mambrino Chief, Pilot Jr. or Clay blood and will be reserved as a stallion for that purpose.

Belnor, bay, star, black points, by Strathmore, a son of Rysdyk's Hambletonian. First dam Coster, record 2:26; second dam Calypso, by Mambrino Chief; third dam by Senator, a thoroughbred; fourth dam by Woodpecker, the sire of the renowned Gray Eagle.

Coster, by Caliban, record 2:34. First dam by Davy Crockett, a pacer. Caliban by Mambrino Pilot, saddle record 2:27½, and the sire of Harris (2:17½), Mambrino Gift (2:20), by Cassis M. Clay Jr. This colt your readers can see has a combination of all the best trotting blood, one cross Hambletonian, one White Hall, two Mambrino Chief, one Pilot, one of the Clay, and two crosses of thoroughbred. This colt has a half brother on the farm now by Steinway, foaled this year. Yours, SAM'L GAMBLE, Superintendent Dan'l Cook Stock Farm.

A Turf Recollection.

The following from the Chicago Breeders' Gazette will recall to old turfmen a tragic incident which created a marked sensation at the time of its occurrence:

Not many days ago there died, on a farm near this city, a horse with whose earlier days was connected the most tragic incident in the history of the trotting turf. This horse was Cooley; and to the older generation of those who are interested in turf sports the name will be a familiar one, while there are but few of the younger generation, especially in Chicago and vicinity, who have not often heard it mentioned.

Sixteen years ago the twenty-second of last month, the old Chicago Driving Park, situated at the corner of State and Thirty-second streets, in this city, was the scene of a race which ended in a bloody tragedy, and which for ten years afterwards made trotting in Chicago almost disreputable. The contending horses in that race were Cooley, at that time capable of beating anything in the West, and Gen. Butler, a celebrated Eastern trotter. It was announced as a match for \$5,000 a side, and as both horses had made a national reputation by their performances, there were at least 7,000 people at the track on the day of the race. Cooley, as before stated, was a Chicago horse, being owned by Hiram Hastings of this city, while Gen. Butler was the property of Charles Revere, a well-known butcher of New York city. Gen. Butler was brought to Chicago by Wm. McKeever, a young man well-known in turf circles, although not a professional driver, his owner not accompanying the horse. Sam Crooks, then as now a driver, with headquarters in this city, had driven Butler in several of his races, and was selected by McKeever to pilot the horse in his great contest with Cooley. Bill Riley, a driver who had recently come from Detroit to Chicago, was behind Cooley. The story of the race is soon told. Cooley won the first two heats in slow time, and then the backers of Gen. Butler demanded that a new driver be put behind him. The change was made, McKeever winning the third and fourth heats with Gen. Butler in much faster time than the preceding ones had been trotted in. When the horses came out for the fifth and deciding heat it was nearly dark, the only light being from the moon, which had just risen. Just before the start was made, McKeever went into the bar and called for a drink of brandy, saying to Billy Boyle, who was in charge of the place, that he would pay for it as soon as the heat was over. He had his coat buttoned tightly around his throat, his gloves on, and whip in hand; in fact he was ready to step into the sulky. These are the last words McKeever

is known to have spoken. He mounted the sulky, and after a few scorings, was sent away for the final journey of the race, and of his life.

Along side the backstretch of the track was a wooden building, used for the exhibition of machinery during the fair which had just been held. When the horses disappeared behind this structure in the fifth heat they were on nearly even terms, Butler having the pole and being a trifle ahead. The next thing that the crowd saw was Butler coming down the home stretch at a fearful rate of speed. It was so dark that not even the gait of the horse could be plainly distinguished, and as he went flying under the wire the watch of the timing judge was stopped at 2:10½. There was a white blanket strapped to the seat of Butler's sulky, and as the black horse dashed past the stand it was flapping in the darkness, drawing some into the belief that McKeever had lost his coat during the heat and was driving in his shirt sleeves. It was soon seen, however, that there was no one in the sulky, and suspicions of foul play were at once aroused, as Riley, the driver of Cooley, had been heard to utter threats while the scoring for the heat was in progress. In a short time Butler came thundering down the home stretch again, all efforts to stop him being unavailing. In the meantime Cooley had reached the wire, Riley saying that McKeever had fallen out on the back stretch and been hurt. When Butler had completed three circuits of the track he ran to the gate leading to the stables, and was stopped by his rubber, Mike Ward (who died two years ago last winter in New York) and John Crocker, afterward well known as the driver of Grey Salem.

The crowd rushed around to the place where the killing occurred, and there, just north of the half-mile pole, poor McKeever was found lying on his back unconscious, his skull having been split from the right temple to a point near the base of the brain. The cause of his injury was soon made clear. A piece of the guard-board that formed a portion of the inside fence of the track was lying near him, and on one end of it were clots of blood and hair. It was evident that the board had been held out by some murderous rascal who was determined that Butler should lose the race, even if a human life was sacrificed to attain that end. McKeever was alive; although unconscious, when picked up, but died the following day. The question of who killed him was never solved. The judges of the race declared all bets off, and expelled Riley, the driver of Cooley, from all tracks in the United States. There was no National Association at that time, but the action of the Chicago track was honored by all others. Riley was locked up on the evening of the race, on suspicion of knowing more than he told about the murder; but the coroner's jury could find no evidence on which to hold him. A couple of brothers named Hickey were also arrested; but nothing was done with them. Of the persons who were actively interested in the race, and those whose names have been mentioned in this article, many are still alive. Riley, Cooley's driver, was, at last accounts, in Detroit, being in the employ of the Hon. Wm. H. Duncan, of that city. Sam Crook, who drove Butler the first two heats of the race, is still a resident of Chicago, but seldom appears in the sulky. Revere, the owner of Butler, died some three years ago in New York. The Hickey boys are dead; and Billy Boyle, the last man to whom McKeever spoke, is the proprietor of a restaurant in this city.

Cooley trotted but few races after the one in which McKeever met his death; but his fastest record, 2:26, was obtained at Ottawa, Ill., Nov. 2, 1866. After that season he did little or no trotting; and for fifteen years has lived a life of idleness on the Hastings farm, near Riverside, where he died the other day from old age—nearly twenty-eight years old. Gen. Butler, who was foaled two years before Cooley is still alive, and doing service as a road horse in New York. He will soon have reached his 30th birthday; and with his death, which cannot be far distant, will end the history of the race that set the country agog in 1866.

The Lambert stock seems destined to become as popular in Vermont as that of his famous grandsire Black Hawk was in his palmy days. At the recent State fair at Montpelier, Vt., Ben Franklin was awarded the gold medal for four best colts, some of which we learn were sold at high figures. Ben Franklin is a chestnut horse, standing about 15½ hands high, foaled in 1873, bred and owned by Mr. H. T. Cutts, Orwell, Vt., and got by Daniel Lambert. His dam, Black Kate, was a daughter of Addison, he by Vermont Black Hawk, from which it will be seen that he possesses a double strain of Black Hawk blood. He has a record of 2:29, made at Providence, R. I., Sept. 24, 1877, but can trot much faster. His full brother Addison Lambert, foaled in 1872, has a record of 2:27. The breeding of the above horses is very similar to that of Jubilee Lambert, now owned in Kentucky, whose record is 2:25. The latter is a son of Daniel Lambert, and his dam like that of Ben Franklin, is also a granddaughter of old Black Hawk.

A Bilious Opponent.

The following communication, upon a subject that has been heretofore treated at some length in these columns, has been sent us by a correspondent who takes an active interest in turf matters generally and the State Agricultural Society particularly. Many of the statements are, to say the least, strange, and indicate a dyspeptic and fault-finding condition which claims for the writer some considerations of sympathy for his mental ill-health. We feel sure that under any other circumstances he would not be so reckless with the facts. And even in that view we are prone to think that he has not revised his letter and that it is an illustration of how a well-intending writer may, in his anxiety to use strong language, say a great deal more than he means.

SACRAMENTO, Oct. 16, 1882.

TO THE EDITOR OF THE BREEDER AND SPORTSMAN, Dear Sir: Your article "What Others Think" on one man power in the judges' stand, leads me to enter my protest against the adoption of any such "rule." First, it has been tried in this State and inside of a month the gambling fraternity run and trotted every race in the circuit. Secondly, when the gamblers were not interested the parties that named the judge were, and run him (the judge) in their interest, or to get even with some person or horseman they did not like. Now, sir, we have the largest assemblage of horsemen (both runners and trotters) in the State, and we get along well with them. Why? Because the riders and drivers know that if there is anything wrong and any of them are caught they will surely be punished. And if the presidents of agricultural societies would have horses and riders do what is right and fair, they must enforce the rules and not cater to any driver, as no man wants to keep his horses in the stables doing nothing when money is to be won by trotting or running for it. You say you have a man in your mind that is wealthy and could not be bought; now, sir, there are many ways a gentleman may be influenced besides by giving money. I have known friendship to overstep the "rules" and to warp the judgment of good men in the judges' stand. For my part, I want three judges to judge a race, and those selected by the President of the Society. Then you have only one man to blame for a bad decision or for the selection of incompetent judges. How long is it since the Blood Horse Association got free of one man power? It has taken the combined efforts of nearly all the breeders to get clear of it, and then the State Society had to alter weights, and are in receipt of many communications to give more heat races, as the public are tired of dashes; they don't give a farmer an opportunity to judge of the staying qualities of the horse in case he wishes to breed to, or purchase. Respectfully, TURK.

The Los Angeles Fair.

EDITOR BREEDER AND SPORTSMAN: The Los Angeles fair has been a very successful one and the attendance reminded one of the days gone by when everybody attended the fair and races. This infuses new life in the public and it may be taken as a certainty that the future is full of promises for the Sixth District Association. Already new improvements are discussed in the ornamenting and improving the grounds. One of the most urgent of these is the improvement of the track, for as it is it is unsafe and slow for trotters. It requires plowing and covering with soil which will give better footing to the trotter. It is now very sandy, almost sand, which is heavy everywhere, and all cut up into ruts and chuck holes, making it very slow and unsafe. This can be easily seen by you from the race between Del Sur and Belle Echo; the speed of both are known to you and both were probably in the best condition of any time this year, yet 2:28 was the fastest mile trotted. It was the race of the meeting, for it was a contest and uncertain until the last heat was trotted, and it created much excitement and large sums were bet on the result. The handsome daughter of Echo was a strong favorite, for even when the heats were even, it was thought that Del Sur would quit, but in this they were deceived, for the black son of The Moor trotted as game a race as ever was trotted by a horse, winning the second, fourth and fifth, the summary of the time being 2:30, 2:28, 2:30, 2:29, 2:29. The trouble with Del Sur has been that he never had a fair chance, for as a two-year-old he began stud service and by the 1st of July his training would begin to trot in August, and generally being a little over-matched. This has kept him on a continued strain, this year he has had more work and it is now late in the season, giving him time to get hardened. Then, too, he has more age, being six years old, and I prophesy that there will be no more talk about his quitting. We had some remarkable performances and we will continue to have, for there is no superior climate, no more fertile soil to produce nutritious grasses nor grain, or purer water in the world.

Don Carlos, a two-year-old by Del Sur out of a Moor mare, was the contestant in the 3 minute and 2.45 classes, with four entries of aged horses. He took his chances with them, scored with them and drove out Lady Washington twice in 2:36, and one of these a last heat on this slow track, being second in all the six heats and never over a length behind at the finish in any of the heats. This was a wonderful performance for a two-year-old and Los Angeles may claim that this was the first time a two-year-old ever trotted with aged horses and yet, too, being the contesting horse. It, too, is a card for those who believe in inbreeding, for his dam as well as his sire are by The Moor, good thoroughbred. This colt is as sound to-day as when he was foaled and not a blemish or pimple can be found on him. He was up with Rose's stable at Oakland and no doubt you may remember him—a sorrel colt, four white feet and blaze and a perfect type of the thoroughbred in conformation.

We had, too, another sensation in a two-year-old filly by Hardwood, out of Peggy Ringold who ran a half mile, 100 lbs up, with very great ease in 48. She is a bay filly of good size and good form and much substance. If nothing happens to her she will add luster to Los Angeles county. That this county has been the nursery of some of the fastest native horses has always been true and this was shown, too, in the 50 mile race which was won by Machados with horses all of his own breeding and largely California native stock, and it was entirely owing to the superiority of the horses that he won, for the American contestant was much the quickest in his mounts and best rider. It was a race of intense interest and excitement for it was a contest from the word go. The American would, as a rule, come in 20 feet behind, yet would get mounted and 20 yards away, but the Californian would pass him before a quarter was run. In the 48th mile the

American had the lead by, say, 100 yards and it looked almost a sure thing for him, but in making his mount for the 49th mile, the attendant pulled the blanket from the horse's head before he got a hold of the pommel of the saddle. The horse being only half-broke and wild tore away and knocked the rider over. Before he could be caught and mounted the Californian was 200 yards away and although he gained some in his 50th mount, yet the gap was too long for him to overcome.

This is, I believe, the best race at the distance by about ten minutes ever run, it having been run in 1 hour and 52 minutes. LOS ANGELES.

Ringling Reminiscences.

In the fall the unsuccessful horseman's fancy lightly turns to thoughts of securing a dilapidated trotter with a fast record, and by trotting him at three-minute races at county fairs gaining for himself the wherewithal to purchase oats during the winter months. But, although the evil of "ringing" is still a serious one to the trotting turf, there exists at present but little chance for the promoters of such iniquity to obtain any great amount of money by their machinations. But in the days gone by the condition of affairs was different, and many are the interesting stories told of how horses with records low in the twenties were carried about the country for purposes of fraud. One of the best of these is in relation to the notorious Small Hopes, now the property of Mr. Vanderbilt, that in the fall of 1875 made the famous campaign of outlawry which resulted in the expulsion from National Association tracks of the horse, and all who were connected with the affair. Charley Perkins, a resident of Rochester, N. Y., and a well-known sporting character, was general manager of the expedition, the other parties interested in the scheme being Deyo, a Michigan horseman, who owned Small Hopes, and Billy McGuigan, the driver. After a successful career in the West, where Small Hopes trotted as Lothair, Lapland, etc., a jump was made to a town in Massachusetts, for the purpose of giving the horse a rest. While there the entries for a fall meeting to be held at Boston were about to close, and on the night when it was necessary to make the nomination Perkins and McGuigan were seated in the reading-room of the hotel where they were stopping. McGuigan secured pen and paper, and was ready to write out the entry.

"What classes shall we put him in?" he asked Perkins.

"The 3:00 and 2:40," was the reply.

"All right. What shall we call him this time?"

Perkins hesitated a for moment but could think of nothing suitable. Finally McGuigan's eye was attracted by the heading, in big black letters, of a newspaper article which lay on the table. "The Westbrook Tragedy," read McGuigan aloud, "what's that?"

"That's it," said Perkins, "call him Westbrook," and so the entry of Westbrook was duly forwarded.

"When the day of the race arrived," said McGuigan, telling the story not long ago to a party of acquaintances, "the little horse could go like a shot. The 3:00 class was the first called, and there were nine starters. Perkins and I had canvassed the situation, and concluded to lay Small Hopes up the first heat in order to make the betting good. So when the word was given I took him in hand and finished last, a grey mare winning the heat in 2:29, and being evidently the best one in the lot. As Small Hopes could trot in about 2:16 we felt easy, and bought every pool on our horse. When a start for the second heat was made I gave Small Hopes his head, and the little fellow went around the first time like a ghost. Just before reaching the quarter pole I noticed that two other horses were alongside of me, and so when we struck into the back stretch I eluded to my horse, and as he at once struck a 2:20 gait I concluded that the other pair would soon be far in the rear. I went to the half-mile pole at a fearful clip, and soon after passing that point happened to look around over my right shoulder; there were the other two horses lying on my wheel as unconcerned as if we were only out for a jog. I was considerably surprised, but supposed that in some accountable manner Small Hopes must have lost his speed, as otherwise I could not imagine how the others had kept so close to me. I drove along, and soon saw that my horse could beat them although he had to keep hustling to do it. Down the home stretch we came neck-and-neck, but just at the finish I let loose of Small Hopes a little, and he won the heat by a nose.

"Pretty soon the time was announced—2:21, and then the secret was out. There were two other ringers besides Small Hopes in the race, and each man had laid up his horse in the first heat to get good betting. We got it, but it didn't do us any good, for the judges declared race, pools, and everything else off, and we considered ourselves lucky to get out of the town alive."

A Sermon Against the Race-Horse.

A fault-finding preacher at Port Hope, talking on a subject he knows nothing about, has been saying hard things about the, to him, monstrous iniquity of racing horses. But, strange to say, the same gentleman can imagine no harm in aquatic contests. It is to him quite natural that people should like to see boat races, and we therefore respectfully ask of this reverend censor why the people do like to witness such sport? The answer is plain to the ordinary worldly mind, but perhaps to spiritual elay the meaning is not so clear. The attraction about boat-racing, as of any other sport, is a desire to see a struggle for supremacy, a hard-fought persistent effort by one man to prove his superiority over his opponents, and he who proves himself the best performer is for the time being the idol of the populace. It is the crucial test of competition that has made apparent the victors' superiority, just as it is the racecourse that proves the superior speed and staying qualities of one horse over another. If the sports of the turf in England had not for a century been the favorite pastime of kings, nobles, and people, the perfect thoroughbred of to-day would have been an unknown animal. The American trotter is also an outgrowth of the racecourse. It not only offered large money prizes to spur the energy and skill of breeders but it popularized trotting with the people, bred a taste in the minds of wealthy men for speedy roadsters and thus opened up a mine of untold wealth to those who breed such stock. The old story "blood will tell" is true as gospel; even among the preachers who keep horses very man of them to our knowledge prefer to own one that has some "go" in him and lots of them are by no means backward on the road in accepting a challenge for a brush. Millions of dollars are now invested in the breeding of running and trotting horses, and the prizes of the turf are not only valued by owners of stock for their pecuniary worth, but as the one unfailing agency that stamps the value of their possessions. A two-year-old colt in his paddock may not show himself possessed of any wonderful points but let him run a mile in 1:41 and he is worth thousands where before hundreds would have ganged his figure. The great turf performer is the popular sire, and to-day in Canada the reason that we have a better class of horses

than we had twenty years ago is owing to the fact that such race horses as Jack the Barber, Sir Archibald, Ruric, Extra, King Tom, Helmbold, Thunder, Judge Curtis and others of the same stamp were brought here. A race-meeting under popular management is just as orderly a gathering as a camp meeting, and so long as the Anglo-Saxon race people this continent it will be just as popular a resort, even though all the preachers in the country were to thunder forth their denunciations. Clericals in England of much greater importance than the Port Hope Rev. have bred and raced horses, and we doubt not were just as highly regarded as though they had rolled their eyes skywards and piled on the agony about the villainies of the quarter stretch.—*Canadian Sportsman*.

Winthrop Morrill.

In the death of Winthrop Morrill, Maine loses a grand old horse, one of the most successful of all the Morgan family, and in fact the only real Morgan in this State. I claim him to have more of the original Morgan blood than any other stallion now living. Thinking that a review of his past history would be of interest to the readers of your paper, I give a few facts in connection with his career.

Winthrop Morrill was foaled in Barre, Vt., in 1855, and was the property of Rodney Bradford of that place. He was sired by young Morrill, by old Morrill. His dam was sired by the Hackins horse, a son of Royal Morgan, called also Morgan Rattler. His next dam by Morgan Eagle and his next by Bulrush Morgan. He had two crosses of Messenger blood and one of Duroc. The one line to the Vance horse, through Old Morrill and the dam of Morgan Eagle, being by Callender, son of American Eclipse, and the result of this breeding in Winthrop Morrill produced a trotting sire of remarkable success. Winthrop Morrill was a dark bay horse, with black points, with a star in his forehead; off hind ankle white, about 15½ hands high and weighed 1050 lbs. His head was clean and intelligent; neck long and blood-like and carried in splendid style; shoulders sloping and strong, chest deep, back strong and beautiful in contour from withers to haunches, barrel round and well ribbed back; tail large, firmly set on and well carried; limbs good and well muscled, hind pastern straight, upper bone of forearm let down low at the knee, cannon bone short, feet blue, tough and excellent, ears tapering and lively, eyes bright and very prominent.

He was placed in training when from three to four years old, and developed wonderful speed at trotting, striding from 20 to 22 feet, with a great deal of hock and knee action, very open-gaited behind and very true forward. Too severe work while young caused him to shift from a trot to a pace. Repeated attempts to break him of the habit failed, as toe-weights and heavy shoes were unheard of at that time. After getting this habit of pacing he was traded to Ashur Savage, then of Waterville. After trying to break him of pacing, without success, Mr. Savage traded him to Ira Doolittle of Waterville; this was in the spring of 1862. After keeping him a few days, he traded him to Amos Garland of Skowhegan, and he, in turn, to a Mr. Kendall of the same place and he traded him to Mr. Weymouth of Sangerville, Me., and after a few days he disposed of him to Joseph Skillings of Ripley, costing Mr. Skillings \$60. I purchased him in company with Samuel Skillings and brought him to Winthrop in October, 1862, paying the small price of \$100. While in my possession he paced a carefully measured mile on Lake Maranocook, without any tiring in 2:33; the last quarter in 32 seconds, at the rate of a mile in 2:8, two men to a sleigh, and was not up to his speed until the first half mile was passed, on account of shelly ice. I have no doubt that on a good snow track he could have paced easily in 2:20. He was used for general farm work, plowing and harrowing a great deal during the spring of 1863. Working him seemed to square him out and he began trotting with the same shoes that he wore pacing, (I have one now in my possession that weighs three-fourths of a pound,) and trotted quarters in 35 and 37 seconds, to a wagon. I sold him to the late Charles G. Jackson in June, 1863, for \$600. He was used by him exclusively in the stud. He was sold to the late T. B. Williams of Boston in the fall of '72, for the sum of \$8,500. After the death of Mr. Williams he was purchased by John F. Mills of Boston and sent to my stable in the spring of 1878. After keeping him three years in the stud, I sold a half interest for Mr. Mills to B. F. Fairbanks of Winthrop. Mr. Mills still owning one-half interest, and at the time of his death he was owned by Mills and Fairbanks.

He was first named by Mr. Jackson, Morrill Eclipse. After one season his name was changed to Winthrop Boy, and finally, again, changed to Winthrop Morrill. While living, Mr. Jackson was much attached to him, and just before his death requested that the old horse should be harnessed into the hearse and draw him to his last resting place, a desire which was literally fulfilled.

As a sire of trotters he ranked with the best. In 1877 he stood five on the list, as but four, living or dead, had more in the 2:30 lists. He has eight in the 2:30 list, besides several that could beat 2:30, kept for family use, prominent among whom are Honest Harry (record 2:22½; a quarter in 30 seconds, and fifty heats belows 2:30). Ben Morrill (2:27 and a four-year old record of half a mile in 1:13, mile 2:32½). The fastest four-year old record of any Maine colt.) Ed Getchell, (2:27; Glen Gary, (2:27; Sam Curtis, (2:28; the seventh heat in a race; Fleetwood, (2:29; J. G. Morrill, (2:29, and a three-year old record of 2:50, which has never been beaten in Maine; Baby Boy, (2:30; Sweet Briar, (2:32½; sold with mate to Senator Jones of Nevada for \$15,000; Charlie Morrill, (2:33, could beat 2:30; Modoc, (2:33½; Bell Morrill, (2:34; Yellow Dog, (2:35; Watch Maker, (2:35; Purity, (2:37; and many other fast ones, including W. Morrill, (2:37½; Lady Morrill, Little Fraud, Young Winthrop Morrill, Rowe Horse, Lady Mansfield, Knox Morrill. He was also sire of dam of Dr. Franklin, (record, 2:31,) and many others. His career in the stud, all other things considered, has been wonderful. He rests under a beautiful maple tree in a field on a nice ridge of land on my farm, two miles from Winthrop village. His name and age will be cut on the maple tree at the head of his grave, and the grounds will be well cared for. GEORGE C. GOODALE.

Mr. Pierre Lorillard has sold to parties in England the three-year-old colt Gerald, by Saxon, dam Girl of the Period, for \$2,500. Gerald was sent across the water last year but has not run successfully, being afflicted with so bad a temper that his speed is thereby rendered useless.

Ned Stokes, proprietor of the "handsomest bar-room in the world," has never been seen drinking there. The prices are so high he has to go outside.

Betting at Race Meetings.

The very marked falling off in the attendance at Jerome Park during the late fall meeting of the American Jockey Club is plainly suggestive of the fact that if the betting element is eliminated from the race tracks our first-class racing associations must go to the wall. There is no use in disguising the truth. Sooner or later it must have made itself apparent to all lovers of turf sports, for the meeting in question proved that those who were loudest in their denunciation of betting on the course were notably conspicuous for their absence. So far as the *morale* is concerned, therefore, the inquisitorial action of the police authorities, instead of having a tendency to attract large numbers of these straight-laced moralists, with one exception there was scarcely a corporal's guard in attendance on any day of the meeting. There is something more in this spasmodic crusade against betting than at first glance appears upon the surface. Taking for granted the fact that it will ultimately lead to the total suppression of racing, it inevitably follows that it will also lead to the extinction of one of the largest and most profitable industries in the country—the breeding and rearing of thoroughbred horses. Without tracing this industry, involving millions of dollars, must naturally die out. Admitting all the uses to which the thoroughbred horse can be applied, without racing, the demand would be insufficient to make the business longer profitable. Thousands have been spent by breeders for particular selections of the thoroughbred horse in order to build up and preserve the purity of their bloodstock. Science has been brought to bear to perfect the animal in his conformation, with a view to unite grace with speed, courage with endurance. All this has been achieved, and the result is a marvelous type of commingled beauty, strength and usefulness. In war the thoroughbred is sought for to equip the cavalry service. For the private carriage and for the saddle he is equally in demand as a cross with other varieties in producing a desired type. The trotter and roadster are nothing without a liberal infusion of his blood. The farmer has found his native stock greatly improved by the admixture with the thoroughbred; and not a single instance is recorded where this strain of blood has been crossed with any other that it has not built up and improved it. Now, we would like to inquire of those who are opposed to racing, on principle, whether they have ever inquired how this perfected state of the noblest animal on the face of the earth is produced? If they are uninformed it is time they should know. The thoroughbred, the most perfect type of the horse, is created by selections of the most perfect specimens of animals, tracing, in a direct line, to Eastern origin, breeding them to the best families of similar strains, and in training them from infancy to endure the ordeal necessary to fit them for the turf, thus uniting speed with stamina and endurance. Without racing the training process will be dispensed with, and rapid deterioration of the thoroughbred will surely follow. But it will not do to anticipate any such lamentable finale. Public sentiment has not yet reached that fancied status which is to consign the "sport of kings" to an ignominious end. Nor will the average public be content to see pass away a pastime which has proved a never-ending, never-tiring source of pleasure.

For over two centuries horse racing has lived and thrived, despite occasional fanatical crusades waged against it. As we have before had occasion to remark, there are times when irregularities and abuses find their way upon the turf; but whenever they have been made apparent on the course controlled by respectable associations they have been summarily rooted out. Bookmaking in connection with horse-racing has never been considered an evil. The better class of *habitués* simply desire to have it hidden from the public eye and kept away from the rising youth of our populous cities. If men desire to back their opinions in a quiet way, they should be allowed to do so, unawed by any police regulations. The racing associations are for the most part corporations, owning or leasing the land upon which their courses and their club-houses and stands are built. As corporate institutions, therefore, they should be allowed the exercise of certain rights. Under their auspices visitors, in speculating on a turf event, do not infringe the statute pertaining to gambling any more than members of the stock board in speculating in stocks. Speculation in some shape underlies every department of human life; even the church is not free from it. It all resolves itself into the doctrine of chances—risking a certain amount to attain a prospective advance. Let betting, therefore, with certain restrictions and under the auspices of the clubs, be legalized by legislative enactment. This will ultimately do away with pool-selling in the cities and other methods of surreptitiously evading the existing statute.—*Turf, Field and Farm*.

High Priced Boots.

The editor of the *London Sporting and Dramatic News*, which paper may be considered as the leading one of its class in England, is evidently not a person gifted with the retentive powers of memory which are an essential attribute of the successful American journalist, and, like many another Englishman, he is sadly at sea when discussing matters relative to American customs. Not long ago he had a chat with Mr. Chas. Bathgate, who has been managing Mr. J. R. Keene's stable of American race-horses in England, and the conversation turned upon the American trotter, and, according to the London editor, some very extraordinary statements regarding the style in which that useful animal is equipped for his races were made. "Toe weights," he says, "differing in weight, are only one of many things to be considered. The trotters are often shod with a shoe of a different weight on each foot, and some of them wear boots—not of the sort familiar to us, but casings of leather extending from the fetlock joint right up the animal's body! The manufacture of such boots as these, which strengthen without impeding the horse, is, of course, a fine art, and sometimes a man pays as much as £100 for a carefully-made pair. All this is somewhat strange to English notions, but in the face of results attained it must be admitted that those who have the management of American trotters know what they are about."

One hundred pounds, or five hundred dollars, for a carefully-made pair of boots "extending from the fetlock joint right up the animal's body," would be deemed a rather exorbitant price, even by the most ardent advocate of those useful appliances, and as a matter of fact a man might buy every known kind and variety of boot used on a trotting horse without expending one-fifth of the sum mentioned by the London editor as "sometimes paid for a carefully-made pair."

Gen. Abe Buford of Kentucky, whose joining of the church not long ago was made the subject of so much newspaper comment, has not entirely lost his love for the turf. He acted as one of the judges during the recent running meeting at Louisville.

The prices paid for yearlings in England this season are very high. A yearling by Hampton, out of Loch Garry, for 1,850 guineas. A yearling by Strathconan brought 1,100 guineas, while one by Rosicrutian fetched 800 guineas.

Gate Money at Newmarket.

The Newmarket stewards appear to have become suddenly aware that cabs and carriages are used as movable stands, and that they have for long been a source of loss to the Newmarket revenue. Over and above the opportunity which it gives for betting, the ring at Newmarket offers no attractions to the racegoer—it is hardly likely to be said that it offers the attraction of selectness—and so gentlemen who engage a vehicle for the day feel themselves much better off in it than they would feel in any of the enclosures, and have until now saved their money into the bargain. So far as betting goes, one of the party can take a ticket and execute whatever commissions are entrusted to him, or the pass-out checks can be exchanged, and each one have a turn inside as agreement permits or occasion requires. Speaking in all sincerity, I don't know that there is any reason why the Jockey Club should be abused all over again for levying a toll of one sovereign per week—in addition to the already existent top-of-the-town impost—upon all cabs and carriages that pass on to the heath. Once started on the money making road, it is only natural that those who control the races at Newmarket shall pursue it thoroughly. In no other direction have we found men starting in the gate-money business ready or willing to give up any of its minor advantages. The appetite for gate money, as is well known, grows by what it feeds on. All we have now to do is to wonder whether any fresh design can be engineered by the Jockey Club with a view to gathering in still further profits, short of the one long and final step which will cause a charge to be made to foot passengers before they are permitted to venture upon the classic heath, salute the ditch, back the winners or the losers, and do any of the other things which are so essential to the existence of all true and noble sportsmen. That this departure can be postponed for many years after the way in which the Jockey Club has shown itself inclined towards gate-money in every other possible and probable way, I for one do not believe. Nor, unpleasant as the aspect of gate-money always was and always must be if brought into immediate contact with the dogma that racing is conducted for sport's sake and for sport's sake only, and that all who have anything to do with the pulling of its wires would die rather than make a penny by doing so, there will not be much reason to regret the alteration. When it comes, the old precept must be swept away with what is left of the old practice—which, goodness knows, is little enough now—and race-arranging being then a thorough-going commercial pursuit, will have to be conducted on a thorough-going commercial principle.—*Pendragon in the Referee*.

Mike Murphy, the well-known trainer, died at Lousville Hospital, Sept. 19. Murphy was a native of Nova Scotia, and was for some time in the stable of the late Major Bacon. Subsequently he began riding steeplechasers, and achieved considerable reputation through Duffy, Labela, Milesian, and Trouble. He trained for Mr. Bannatyne, Mr. Thompson and others. In 1880 he trained for Barnes & West, and upon the purchase of Gabriel by Applegate Bros. went with Gabriel into their service. As a steeplechase rider, Mike had no superior in his time, and as a trainer, he was quite successful. Like the English jockey, Bill Scott, his estimate of a horse was quite correct, and generally made up at a glance. He had, indeed, that peculiar gift of forming a correct and sweeping opinion of a horse at first sight, which is accorded to few men in the profession. We have known him for many years, and often enjoyed his reminiscences of the turf, which were useful to us in compiling the series of "Between the Flags," written by us some two years ago. His memory was wonderful, and his stories of men and horses delivered with humor, that showed him as possessing a keen appreciation of the funny side of human nature. He was generous to a fault, and there is scarcely one of his acquaintances but has a story to tell of "poor Mike," illustrative of his better qualities. The immediate cause of his death was dropsy.—*New York Spirit of the Times*.

Vanderbilt Beaten.

The great fight between Wm. H. Vanderbilt and Frank Work grows stronger every day. When a man worth \$200,000,000 and another worth \$30,000,000 see fit to engage in a furious quarrel it is the province of citizens worth less than those vast amounts to stand respectfully by and view the war. However, the citizens, no matter how lowly they may be, cannot be restrained from taking an interest in the war of these financial leviathans. They do take an interest, and such a boiling one that the before-mentioned quarrel is actually and undeniably the talk of the city. It is all about horses. Mr. Work owns what he and many other turfites believe to be the fastest team that ever trotted on mother earth. His team, Dick Swiveller and Edward, trotted a mile in 2:16½ to a road wagon a few months ago, and the people of New York howled with delight. New York is now a great racing center, and no city in America has more enthusiastic turfmen. Well, Mr. Vanderbilt always believed he possessed the fastest team on earth in Small Hopes and Lady Mack, but he changed his mind when Mr. Work passed him with ease. Then Mr. Vanderbilt procured the team that he averred emphatically would make the complacent owner of Swiveller and Edward eat his dust. This team was Leander and Lysander; but alas! the great two-hundred-millionaire was again lost in a cloud of dust. He took William H., a particularly fast and even trotter, from his stable and harnessed him up with the peerless mare, Maud S. "Now," said Mr. V., "bring forth Mr. Work and his alleged fast team." Mr. Work came out and was seen plainly by Mr. Vanderbilt, who followed him about and had an excellent view from the rear throughout. This last defeat was a severe blow to the great railroad magnate. He became despondent of ever beating the astounding time of Mr. Work's team, 2:16½, and did less driving than before for some weeks, when he suddenly began to talk in the most mysterious and portentous manner of a team of his. No details could be wrung out of him by his friends, and he smiled with an air of superiority on the public. Then came the news over the wires from Hartford, Conn., that Mr. Vanderbilt's new team, Aldine and Early Rose, had done a mile without a break in 2:16½—a quarter of a second better than Frank Work's best time. Nobody believed it until a number of eye-witnesses testified to its accuracy, and then there was a great cry for a race between the two crack teams. Nothing was easier, said Mr. Vanderbilt and Mr. Work, and they went at it at once and got things so thoroughly complicated in two days that the muddle now looks as though it would never be righted. Each gentleman sent the other elaborate and intricate challenges two or three times a day, and each insisted that his own particular challenge should be answered first. They are at it yet, sending challenges and accusing each other of every crime, while the public howls for a race.—*New York Letter*.

Mr. R. H. Nason, of Concord, is about to construct a private race track.

Answers to Correspondents.

SALEM, Or., October 7, 1885.

EDITOR BREEDER AND SPORTSMAN: Will you please answer through the columns of your valuable paper: 1st. What is the breeding of the colt that won the District Trotting Purse trotted at Stockton on September 20th and 21st? In your paper you state that he is by Inauguration. As we have a stallion here of the same name, I wish to know if he is by him. He came from Stockton, Cal., in February, 1880, and was by Alexander. 2nd. What is the age of the colt? Is he a stallion? 3rd. What is his best time to harness? By answering you will greatly oblige a subscriber. C. W. J.

Answer.—1. Bay Gelding by Inauguration, (he by Alexander) dam by Morgan Rattler. Owned by L. U. Shippee, Stockton.

2. Six years old, broken this year. Record, 2:40½. Can trot in 2:35.

The identity of the stallion now in Oregon our correspondent must settle for himself, as we have no positive information, although we have no doubt it is the same horse. A prominent horseman of the San Joaquin has this to say of him:

Inauguration, by Alexander, was a brown stallion about fifteen and a half hands, and very even in his make-up. He stood one season and made a light business. What colts did come have proved as saleable as any stallion that ever had a chance here. They all averaged sixteen hands, kind, good color, good bone, even, well gaited and natural trotters.

Many of our people remark that Inauguration proved he was a paying stock horse, and he never should have been allowed to leave here. He is one of a few stallions that out-breeds himself for size, color and bone.

SACRAMENTO, October 23, 1882.

EDITOR BREEDER AND SPORTSMAN: Please answer the following questions and oblige an old subscriber to decide a wager. A bets that the horse named Abe Edginton (grey horse) has a record as good as 2:20; B bets that he has no such fast record. Please decide in your next, and what time did he make in Stockton, if any. Please give his best record. J. P. E.

Answer.—B wins. Abe Edginton's best record is 2:23½, made at San Jose, October 1st, 1878. He did not win a heat at Stockton and consequently did not make any record there. He started in a race that was won by Graves in straight heats, Doty being ranked second and Edginton third.

PENRYN, Oct. 22.

EDITOR BREEDER AND SPORTSMAN. Please give me the names of some breeders of the Duroc and Jersey Red hogs, and oblige E. G. N.

Answer.—Address "The Laurellas Ranch," Monterey, Cal.

MICHIGAN BAR, Oct 19, '82.

EDITOR BREEDER AND SPORTSMAN—Please explain through the columns of your paper the meaning of a "selling race"—that is the rules and laws governing that class of races.

SUBSCRIBER.

Answer.—A selling race is one where the horses are entered to be sold for a certain sum named in the entry. The system is perhaps best illustrated by the following published conditions taken from the advertisement of the forthcoming fall meeting of the Pacific Coast Blood Horse Association:

Selling Purse, \$200; a mile and a quarter; for all ages; entrance free; \$50 to second horse; the winner to be sold at auction; horses entered for \$1,500 to carry regular weight; if for \$1,000, five pounds allowed; if for \$750, ten pounds; if for \$500, seventeen pounds, and if for \$300, twenty-one pounds. Any one can claim the winner, and the excess realized beyond the amount at which the horse is entered to be divided between the association and the owner of the second horse.

The rules bearing on the subject are as follows:

Rule 63—When it is made a condition of any race that the winner shall be sold for any given sum, the owner of the second horse being first entitled, etc., no other person than one who ran a horse in the race shall be entitled to claim. The claim must be made to the judges or clerk of the course within a quarter of an hour after the race. The horse claimed shall not be delivered unless the amount is paid by ten o'clock at night on the day of the race, otherwise the party claiming shall not be entitled to demand the horse at any future period; but nevertheless, the owner of the horse may insist upon the claimant taking and paying for the horse claimed.

Rule 64—When it is a condition of a selling race that the winner shall be put up at auction after the race the half of any surplus which may thereby be obtained over and above the price for which the horse was entered to be sold, shall be paid to the owner of the second horse, and this shall not invalidate the privilege of the second horse as to the prior claim of any beaten horse, under rule 65.

Rule 65—Any horse running for a selling race is liable to be claimed by the owner of any other horse in the race for the price for which he is entered to be sold and the amount of the stake; the owner of the second horse to be first entitled to the claim, and the others in the order in which their horses are placed, and the winner to have the last claim.

Rule 66—No person can claim more than one horse in the same race, and if two or more persons equally entitled wish to claim, they shall draw lots for the priority.

Rule 67—Any person who refuses to deliver or fails to pay for a horse purchased or claimed in a selling race shall be ruled off the course.

MAGDALENE.—D. C. Horton of Tulare has purchased of D. Visscher of Stockton the two-year-old bay filly Magdalene, the price paid being \$1,500. Magdalene was broken last January and was put into training in June, speeding her first mile in 2:57. In the purse for two-year-olds at the Stockton fair this fall she won at a jog in 2:43. Three colts started against her but all were more or less enervated by the pink-eye and she was not called upon to make an effort in the race. Magdalene was sired by Peerless, he by Green's Winthrop. The pedigree of her dam was never traced. The filly will be continued in training and if no accident befalls her will make her mark.

Racing Reminiscences.

It was well along in the fall of 1852 when I reached Lexington, Ky., and saw for the first time a race "run for blood." Five horses started, the favorite being Mr. John Clay's bay colt, Star Davis, by Glencoe, out of Margaret Woods, by Priam. He was a good bay about 15 hands 3 inches high, and the heaviest horse for his height that I ever saw. The race was mile heats 3 in 5, and the Star won in three straight heats. He was always the last horse off and the last horse at the half mile pole by about twenty yards. Around the turn he would move up so as to get within about two lengths of the head of the stretch, when his rider, Ned Tompson, would shake the bit through his mouth and he would come away from his horses with ease. He bugged in all three heats below 1:46, and could have run any one of them in 1:43 had he been sent for it. In the same stable with Star Davis was a beautiful chestnut filly, likewise a three-year-old, that has since become famous through a grandson, I allude to Madeleine, grand dam of Iroquois, the only American horse that ever won the English Derby. She won a two mile stake for colts and fillies at the same meeting with most ridiculous ease, and two years later, after I had started for California, she was sold to some men up in Michigan. There she remained in obscurity for years, until after Planet had gained a fame that was as wide as the continent; and then people wanted Boston mares to breed to Revenue. After months of diligent search Col. S. D. Bruce, then a comparatively poor man, but now enjoying a princely income as publisher of the "Turf, Field and Farm," purchased her for a small figure and brought her back to "the dark and bloody ground." There she produced the bay filly Income, by Revenue, since the dam of Income, that ran a mile in 1:44 with 140 pounds up; and Maggie B. B., the dam of the noted Derby horse, Iroquois. Trade Dollar always reminds me of Madeleine, save that the daughter of Boston and Magnolia had a lower and prettier way of going and did not shuffle so in her gait. These two colts of Clay's were foaled just about thirty years too soon, in my belief. Were they now on the turf in their three-year-old form, they would win a princely fortune every time they started. A purse of \$500 was a big thing in those days, while now every steepie chase run at Long Branch, Baltimore or Saratoga, is worth many times that sum. Star Davis would have filled the place of Lake Blackburn, and Madeleine would have stood in Thora's shoes, winning all the longer events; and Clay, instead of retiring from the turf in disgust and devoting himself to religious observances, would have been far ahead of the Lorillards and the Dwyers. He was unquestionably the best amateur trainer in America, and bothered the professionals sorely on several occasions. One time he had a chestnut colt called Princeton, that the "touts" were watching very closely, and a gray horse called Blue Ruin, that had never run better than a bang-up second. Clay knew that the notorious Charley Reilly was watching his horses, so he got some mosquito bar stuff and encased Princeton in it till he looked like a gray horse in the darkness. He then got a sorrel colt off his ranch and put up Princeton's rider on the green 'un. He sent them two miles at their best gait while the real Princeton lay asleep in his stable, for it was three o'clock in the morning. Charley Reilly went down to Louisville and reported to his crowd of blackleg employers that Princeton could not go a bit, and Blue Ruin could beat him anywhere after they had gone a mile. Clay wrote to his friends to bet all they could that Princeton won the two mile post stake. He then engaged Gilpatrick to ride the race. Their calculations came near coming to grief, for in the second mile of the second heat Gil broke a stirrup strap, but hung on like grim death and got over the line ahead of Die Chapperton. Gilpatrick is still living though he has not ridden in many years, his last mount of note being on Lodi against Norfolk at San Francisco. Another noted jockey of that era, now dead, was the notorious Jack Ford. He was a consummate rascal but evaded punishment by often doing things not provided for in the racing rules. Among these was his celebrated ruse to tire out his adversaries in a four mile race, run at Smithland, at the mouth of the Cumberland river, nearly forty years ago. Ford was riding Denmark, by Hedgeford, out of Betsy Harrison, by Aratus. The other entries were Jerry Lancaster, ridden by John Dunn, who died in California, and Mary Waller, ridden by Steve Welch, who rode Gray Eagle in the great race with Wagner. The race was four miles and repeat, and Mary Waller had won the first heat, Denmark dropping well within his distance. In the second heat Jerry Lancaster took the lead going into the second mile, hotly pursued by Denmark. In this position they run through the third mile, and on the fourth Denmark was at Jerry's throttle going up the hack stretch, John Dunn looked around at Ford, who said:

"Well, I'll keep you a-going that clip, next mile I'll beat you."

"Next mile!" cried Dunn, "why, this is the fourth mile."

"Not much," said the old rascal Ford, "it's only the third."

So after they passed the stand they ran another mile and Lancaster was completely pumped out.

Major Shrover was very angry at John Dunn for having run a mile that, like Rip Van Winkle's dream, "didn't count," and Dunn tried to throw the blame on Ford. Shrover appealed to the judges, who decided that Dunn was not there to take anybody's else word—he should have known for himself. The consequence was that Ford won the third heat on Denmark, beating Jerry Lancaster and distancing Mary Waller, and in the fourth heat, making sixteen miles in all, Denmark galloped home a winner of the race. It is from this old brown horse, Denmark, that the famous stock of saddle horses, for which Central Kentucky is so noted, is descended. Ford wanted to go to England with Richard Ten Broeck, when that gentleman took over Leconte, Prior and Priores, but he did not go. Three years later Mr. Ten Broeck sent over Starke, Op-

timist, Umpire and Satellite, and Ford went with them. Jack said he wanted to see one Derby and then die. He saw one, too, won by Thormanby, with Dundee on three legs at his throat late, and the American colt, Umpire, by Leconte, out of Alice Carneal, beaten away off yonder. Ford's money was all on Dundee, and he stood to win about \$1,400 with \$1 50 had Dundee won. Several days before the Derby was won there had been a very late session of Parliament and several members went over from London to the downs in a drag to see the flyers take their morning exercise. They were all of the lardy-dah sort, and on reaching the heath they saw Starke and Umpire taking a slow center Fordam was on the colt and Jack Ford on the old horse. Now the American seat—standing in the stirrups, virtually, looks odd to the average Britisher, and one of the haw-haws asked a stable boy who stood near:

"Aw, Bob, what 'orse is that big red chestnut?"

"That's Starke, sir, favorite for the Goodwood."

"Aw, and I say," 'cos that a top of 'im?"

"That's Ford, sir, a celebrated American jockey."

"Aw, the beggar—you know—he cawn't ride in a cart with the sideboards hup; you know," said my lord with ineffable disgust. But nevertheless Starke won the Goodwood Stakes of 1859 and the cup of the following year, and was finally sold to go to Russia for the imperial stud. There was another horse that should never have been allowed to leave America, nor his half brother Leconte. These horses were invaluable to the breeding interests of America and worth comparatively nothing in Europe. There was no horse in America as fit for the Lexington mares as Starke. His great size and blood-like appearance made him look like a king among horses. Gilpatrick was the neatest dressed rider of all the era and used to have all his suits made by Arnoux of New York. He was a good rider in an era that boasted of fields of three or four horses; but in the great mob of twelve or fourteen that are running now, he would scarcely rise into the second rank, and with such rustlers as Evans, Hayward, Barbee or Snauer, he would be indisputably overmatched. The best rider I saw while I was back East in 1862 was a boy named Billy Burgoyne, whose left arm was paralyzed so he could not whip severely with it; and he used to get a terrible lot of speed out of a tired horse without punishing him to death. Another great rider of that era was a slave negro belonging to Col. D. F. Kenner of Louisiana. Abe looked more like a monkey than any human being I ever saw, not even excepting McIntosh of the Callender minstrels. But how he could ride, and what a sight it was to see him on top of grand old Panie, the last of the Glencoes, coming down the homestretch of the Metairie with five thousand hats swinging in the air and two thousand tiny gloved hands applauding the prime of Louisiana. After the war, the old darkey went to the north and rode Idlewild in the four mile race won by Kentucky at the inauguration of Jerome Park. I shall never forget his ear-to-ear grin when he won, or his pathetic stutter when he lost. He rode Eagle in the race for the Jersey Derby won by Norfolk, when the favorite Kentucky came in fourth. Abe looked at Norfolk as he dismounted and told Col. Philo Bush:

"Fore de Lord, kernel, a ghost c-c-couldn't get a h-head of dat white-legged colt."

Tom Patterson of Alabama, was the greatest of all the old-time trainers, and the first man to work his horses naked. Prior to that time, it was the fashion to keep horses blanketed all the while, whether at exercise or in the stable. "Old Pat" got the idea that it made horses delicate and therefore abandoned it, except in severely cold weather. One day somebody asked him why he didn't wear more blankets on his horses.

"Bekase I think if the Lord had wanted blankets on a hoss, he'd a put 'em thar hisself. Ef a hoss wasn't designed to do no better nor that, he'd a long hair, like a bluffer, don't you understand?"

Pat had an awful race once at Mobile with his old mare Charnier (the grand dam of the Duchess of Norfolk), against the flying terror, Wade Hampton. Wade won the first heat through mud ankle deep, and the old mare came within a couple of feet of getting the flag in her face. "Old Pat" went up into the judges' stand and begged of Judge Neil Robinson to be allowed to withdraw his mare, but Judge Robinson refused in a firm but courteous manner. "Forty to five on Wade," was the cry all over the stretch.

"Bring in your horses," cried the judges.

"Please, judges, kaint I draw my mar," pleaded Patterson, "she kaint win one end of this yer race."

"Is your mare lame? If so, you can withdraw her," replied Judge Robinson.

"No, she ain't lame, but I don't see no good of running her to death for nuthin'" said Pat.

"You should have thought of that before," replied Judge Robinson.

"Old Pat" went down stairs, sorrowfully enough and saddled his mare. As they turned loose, a shower of rain came down as if it had been shaken out of a sheet, and after running a mile, Hampton showed signs of temper. Finally he came down to a walk and could not be urged out of it. Honest old Charnier went along and won the race, distancing Wade by over half a mile. It was very much like getting struck by lightning, at least Patterson thought so. Another famous trainer of those days was James Benson Pryor of Natchez, commonly called Ben for short. He had a dairy near that city and supplied most of the citizens with milk, save in the winter and spring months, when his son ran the business and he went to New Orleans to train Mr. Ten Broeck's horses. He trained Lexington in every race he ran under that famous name, though it must be told that the most notable of all American horses ran two races under the name of "Darby," while owned by Dr. Warfield of Lexington. The doctor was the handsomest and most courtly of men, and it was his son's wife who wrote the finest of all American novels. "The Household of Bonverie." Well, when Ten Broeck went to England on his second voyage he took old man Pryor over to train Starke for the Goodwood cup. He also trained Umpire for the Derby and as the colt had won

all his two-year-old stakes, he became a hot favorite for the blue ribbon of the English turf. But as the training season progressed it was plainly to be seen that the road was too long (a mile and a half), for the son of Alice. And old man Pryor would groan: "Oh, Mr. Ten Broeck ef we only had old Rex heah in place of Umpire, it would be jist like stealin' this yer race."

The old man thought Dundee could win the race sure, but he broke down in the mighty struggle and Thormanby carried off the glittering prize. Next year Pryor came back to Mississippi and the civil war broke him up completely. The troops killed off his cows and burnt up his buildings, and he was forced to go north for a livelihood in his old age. He is living near Holmdel, N. J., on a little farm, and rides over occasionally to the Long Branch races. For an illiterate man, he was a wonder of sagacity and honor, and in a career of forty odd years on the turf, his name was never coupled with one disreputable transaction. The last horse of any note that he trained was St. Martin, the property of James A. Grinstead, of Kentucky. A tough customer was a horse called London that Pryor trained for Mr. Ten Broeck, while in England. He could kick higher and faster, than any horse in the United Kingdom. One day while old Ben was saddling him for a race, along came a son of the Emerald Isle, with a new plug hat on. London lashed out with both heels and knocked the Patlander's caubien into a total wreck. The Irishman ran up to Mr. Ten Broeck, saying: "Plaze, boss, is that your horse?"

"Yes, my name is Ten Broeck."

"I don't care if your name is Eleven Brooks, I want my hat," said Paddy.

"I don't know anything about your hat," replied the Kentuckian.

"Sure, yer horse kicked it off me head entirely."

"Suppose he did. You ought to know enough not to go near him. That's London."

"Faix, I don't care a damn if his name was Dooblin, Ye'll be after payin' me for me hat."

Mr. Ten Broeck gave him five crowns, and that settled it. Gilpatrick used to tell the story with great gusto.

"Won in a walk," is a favorite English way of saying that a horse won so easily as to afford no idea of a struggle. Some years ago a Washington County horse named Hiram Abiff, was taken over to Victoria and sold to one of the tribe of Jonboos. The next fall they had races at Beacon hill, and the only starters in the mile dash was Hiram Abiff and a bald-faced bay horse from Nanaimo called Snailing Tom. The coal mines being shut down all the Nanaimo miners were at the races and betting money like water. The race was run from end to end," as the late John Harper would have expressed it, and after the most vigorous whipping, spurring and rolling, the bay horse won by about three feet through sheer gameness. Some fellows who had been up the stretch ran down after the crowd had closed in behind the horse and asked his chum:

"Bawb, who won t' race?"

"Dang it, mon, auld Tom won in a walk," retorted the tyke proudly.—[T. B. M., in Portland "Oregonian."

Running and Trotting at Los Angeles.

Oct. 18.—Purse, \$500. Trotting, 2:30 class.
N. A. Covarrubias names b g Charley D. 3 1 2 1 1

Time—2:30, 2:28, 2:30, 2:29, 2:29.

Same day—Purse, \$250. Running free for all district horses, dash of three-quarters of a mile.
N. A. Covarrubias names blk g Otto K. 1
Hill & Gries names b f Belle G. 2
Time—1:18.

Same day—Purse, \$350. Running free for all, dash of two and a quarter miles.
Hill & Gries names b s Wildtiller. 1
F. Estudillo names b s Klipspringer. 2
Cyrus Lyons names b s Mestiza. 3
Time—4:19.

A new journal is to be established in San Francisco devoted to the interests of stock-breeding and out-door sports. Of course the breeding of horses, and especially race horses, both trotting and running, will receive most attention, but valuable information will be given on the breeding of all kinds of stock. A paper of this kind could be made of great value to all farmers and stockmen, and if the proposed journal shall prove to be ably managed, it will be very likely to gain a liberal support among them. The first number of the paper will be issued on the first of next month, and will contain sixteen pages of reading matter. It will be called the BREEDER AND SPORTSMAN. The paper will be issued weekly and will cost five dollars per year.—Greenview Bulletin, June 21st.

FISH.

Stocking Notes.

Brook trout, put into mild, still water are thrown away. Black bass, placed in a pond with mud or grass bottom will not thrive. They must have rock or gravel, where crayfish, their favorite food, abound. Oswego bass, in the water first stated, will increase, multiply, and make glad the heart of the fisherman. Salmon trout will not remain in running streams, no matter how pure the water, and the lordly salmon himself is so particular about the temperature of the water he inhabits that human investigation has hardly yet been able to tell just what it should be. We can judge best by leaving him to choose for himself.

Of all fish that have come under the observation of the Commission, none have done as well, according to the cost, as the black bass—usually styled, in contradistinction to others of this general family, the "small-mouthed bass." This fish does its own batching and attends to its own nursery duties. Of vigorous, yet clean appetite, he grows apace, and where the location suits him, takes a lease for life, with a contingent interest for his posterity. A good black bass lake or stream will hear more fishing to the acre than any other fish water. The Oswego bass and the perch pike are also cheaply procured, readily kept, and are profitable for both food and sport.

Discoveries made lately touching the breeding habits of striped bass, Spanish mackerel, and other choice sea fish, point to the facility with which these may be artificially reared. It has been established by sufficient trial that the striped bass, when deposited of proper age, will thrive in fresh water. We have record of one put into a pond in Connecticut, that was taken out a few years subsequently, weighing twelve pounds. A number of good specimens have been found, also, in Lake Ontario, where a small plant was made a few years ago by this Commission.

When it is considered that these fish grow rapidly and to a great size, and their gamey qualities are such as to call for the angler's best skill, and that as a table fish, few, of either salt or fresh water habit, excel them, the policy of extending their production must be universally admitted.—*Report of the N. Y. Fish Commission.*

Bay Fishing.

Last Sunday a larger number of persons went out fishing on the bay than have been out for a long time; not only on the wharves and along the sea wall but every boat that could be hired was out and filled with anglers. From Sausalito south to Point Diablo, there were about sixty boats strung along, most of which contained amateur fishermen. From Fort Point along by the Anita rocks to Raccoon straits were about one hundred and fifty more boats. Although the day was pleasant, fishing was as a rule quite poor. The average catch was five pounds, though many caught much more.

From the boats rockcod, blue rockfish and sea trout were the principal fish caught, while at the wharves tomcod hit the best. The best fishing ground heard of was the waters near Arch and Bird rocks, in which vicinity boats were lying all day. At the wharves the best strings of fish caught were those of three boys who pulled in 305 tomcod between the hours of 9 and 3 o'clock.

Fishing at the railroad wharves, Oakland, was very good, most of the catches being tomcod and a few sole.

On Saturday last ex-School Director Van Schaick and party were out fishing near Angel Island and Raccoon straits. They made a catch of 185 fine rockcod.

The Hard-Head or black salmon is really an exceedingly large trout and reaches a weight from fourteen to eighteen pounds. It inhabits the mouths of large rivers, such as the Columbia, Skeena, Fraser, and is occasionally found in Puget Sound. It appears to spawn in spring somewhat earlier than the salmon, and occurs upon the coast at the same time as the latter. In some regions it is liked as a food-fish, but in the Columbia the flesh is very white and it is considered valueless. The body is less deep than that of the salmon and the tail much heavier.

The unknown food fish discovered a few weeks ago by Capt. Collius while searching for tile fish proves to be a close relation of a Norway haddock. It is found in great abundance in the waters of the Madeiras. The fact that it has emigrated to American waters will be a stimulus to the fish commission to gather specimens for cultivation here under the improved processes which have been attended with such remarkable success.

Last Sunday Messrs. Wm. Lockart, Frank Denuing and W. T. Bogart were out at Point Diablo on a fishing expedition. They had unusually good luck, catching all they could carry home. Cabersonnas, or bullheads as they are sometimes called, sea trout and black rockcod comprised the catch; the weight ran from one and a half to three pounds each. Good fishing can always be had in this vicinity.

The surf-smelt, which is not found south of Monterey bay, is very abundant in Puget sound, where it spawns in the surf in the spring. It reaches nearly a foot in length and is held in high esteem as a pan fish. In the markets of San Francisco it is tolerably common but seldom exceeds eight inches in length.

The Oregon trout or *Salmo Clarki* is very abundant in all the lakes and rivers north of Mount Shasta but is not found south of that locality. It is abundant in the salt water of Puget Sound, where it is taken in seines in great numbers. It reaches a weight of two or three pounds and is reckoned an excellent food-fish.

From the investigations of naturalists it would appear that the trout lives to a green old age. An instance is given of a trout domesticated in an English well, having attained the age of nearly forty years, though its weight never exceeded two pounds.

South of the Ventura river there are no streams on our coast which run freely into the sea, as the rivulets terminate in lagoons separated from the ocean by sand bars. In fact, this is a characteristic of most of the small rivers of this coast.

The salmon fisheries of the Pacific Coast have increased more than twenty-fold within ten years, and last year's product was nearly 1,000,000 cases, worth \$5,000,000.

A Texas paper describes an 8,000 acre ranch in that state entirely devoted to the breeding of ponies for children. The breeding stock consists of seven Shetland stallions and forty-five mares, all thoroughbred, and two hundred small spotted pony mares. These little ponies range over the prairies like sheep, and are described as very gentle.

BICYCLING.

The Bicycle in Carson.

On any warm, pleasant afternoon the bicyclists of Carson gather in force on the Capitol square, and as soon as they begin their interesting and astonishing feats with the winged wheel, a crowd of spectators almost immediately collects. The riders in this city are Hume Yerington and Ernest Hall. Mr. Yerington is considered as the leading exponent of the science in Carson, and is looked upon by the rest (Mr. Hall) with a sort of reverence. The latter is a pupil of the former. Yerington makes a strong and rapid rider, his immense limb reach giving him a decided advantage over his short legged pupil. The latter makes up in nerve, however, what he lacks in science and covers technical deficiencies with dash and daring. Yesterday afternoon at 2 o'clock Mr. Yerington rolled into the Capitol square by way of the northwest postern gate, and at precisely a few minutes later Mr. Hall enters the other diagonal corner. The intervening Capitol building was all that prevented their seeing each other.

From a bicycling standpoint "a meet" is a term intended to designate a collection of bicycles at one place, and is a short way of speaking of a tournament. Two bicycles in one place might, we think, come within the meaning of the term. The meet took place in front of the Capitol steps; Yerington's bicycle threw its hind wheel under the fore quarters of Hall's and then by a dexterous movement caught the big wheel under the lee and getting the grapevine lock the two wrestled a spell, and then like a flash Hall sent his left wheel into Yerington's stomach and executed a double twist with his outer rim. This settled the round and Yerington's machine went down, but skillfully managed to take the other with it. An expert bicyclist may sometimes be thrown but he can always manage to bring down his adversary with him. By this time fifty Washoe Indians and over a hundred whites had gathered to see the sport. The referee declared the meet a draw and both men saved their bacon.

After the machines had been separated Yerington mounted and took a run about the walks and executed some of his daring and original feats. The flip is a figure of his own invention and commends itself to amateur riders as easy of accomplishment and sufficiently showy to be depended upon to win the applause of a crowd. Riding down toward the corner of the walk he caught the curb stone at the turn and shooting over the fore wheel landed on his hands, while the bicycle, turning a graceful handspring, went clean over the man, the small wheel describing the segment of the Arctic circle in the air. The expert endeavored to come up on the side and climb over on to the machine again, but was not rapid enough to catch the small wheel. The little wheel seemed to have the start somehow, and won the heat. The figure as far as executed by Yerington was novel and instructive and well received by the spectators.

The flying leap was next introduced by Hall. Coming down the walk at a 4:02 pace he made straight for a post inscribed: "Keep off the grass!" and so splendid was his aim that he knocked it down at the first attempt. This swerved him to the left and, flushed with success he shot to the fence, hitting an iron post with singular accuracy directly in the center. He then left the bicycle temporarily and came over the fence into the crowd and knocked a Piute Indian senseless. He thinks if he had secured a better start he might have scored two Indians. The feat was loudly applauded.

The *carte de fo gras* is an offspring of the flying leap, only in a more modified form. The object is to swing the hind wheel around a post so that the body will be thrown forward and the rider, dexterously catching his feet on the handles, grabs up handfuls of gravel in front. It is considered had form for the feet to slip off the handles or get back on the pedals.

The lock is a pretty figure if well executed. Two riders ride together like knights in a tourney, and as they are just abreast each man swerves his hind wheel to the right and the two lock together. Then the machines spin round like a top, and if the clothes of the riders are of different colors a beautiful variegated effect is produced and the spectators can keep right along distinguishing the man they are betting on. The one that falls nearest the center scores a point.

The exchange is a neat *coup d'état* invented by Mr. Hall. Two riders meet at a speed of twenty-five miles an hour, and when the wheels clash each man turns a somersault in the air and comes down on the other man's bicycle. If the machines themselves combine in the somersaults and make a sort of fusion business out of it it is called the "double exchange." After this act the machines are sent to the nearest watchmaker for rest and repairs. Next week the Bicycle Club will give an exhibition of some new and startling combinations.—*Carson Appeal.*

TRICYCLES AND MOUNTED POLICEMEN.—Several gentlemen who were summoned on Saturday for furious riding on a tricycle have discovered, at the cost of 42s., that that vehicle cannot outrun the constable—or rather outtricycle the mounted policeman. Whether the one who has had sixteen years of experience of bicycles and tricycles can ever have seriously believed that a mounted constable cannot gallop eight miles an hour it seems useless to discuss. But it must have been a sight suggestive of John Gilpin or Dick Turpin to have seen this fugitive tricyclist hotly pursued for a quarter of an hour by a mounted policeman. Another's excuse was that having performed sixty miles he was incapable of fourteen miles an hour. The inhabitants of Kensington seem to have laid down a playground for all the cyclists of London in this long stretch of wood reaching to Hammersmith. It seems rather hard that they should have vehicles that go fourteen miles an hour careering up and down it as at present; so far as speed goes they might as well have railway trains, for some scarcely exceed that pace.—*Pall Mall Gazette, Sept. 25.*

A Massachusetts bicyclist, taking his machine with him on an excursion to Prince Edward's Island, was obliged to deposit sixty dollars as a guarantee that the machine would not be left upon the island. This was refunded upon his leaving for home, but when he arrived in Boston he was obliged to pay the usual import duty of thirty-five per cent before the revenue officers would give him the machine, although it had once paid its duty when originally imported.

The new American monthly magazine, *The Wheelman*, makes its first appearance in October. It is by far the most pretentious publication which has yet appeared in connection with bicycling, and has some of the best writers upon the subject as regular contributors. The design of the cover is attractive and the typographical work is excellent.

The president of a Kentucky turnpike has announced in a published advertisement that he will "prosecute as public nuisances" all parties riding on bicycles on his turnpike, because they "endanger the lives of those traveling in vehicles on said road." And the bicyclers are laughing at him and his threats.

Quite a number of Eastern clubs have shown an ambition to undertake long rides, with a view to completing as many miles in one day as possible. The Boston Club led off with 102 miles and were followed by the Massachusetts Club with 118 miles, and lastly the Aeolus Club, of Worcester, with 136 miles. Single riders have exceeded this in many instances. The riding time has, thus far, in this country been confined usually to the hours of daylight. In England, however, twenty-four hour trips have been made and a distance of 212 miles covered.

It was the intention of some members of the local clubs to make a long tour to the southward with an aim to the rolling up of a good record of miles for one day's travel, if the weather should permit it this month, but the roads are not in the best condition and it has been decided to postpone the run until it can be accomplished with more comfort and there is a likelihood of making a better record.

It is said that a medal will be given to the bicyclist who succeeds in beating the Pacific Coast record for one mile, at the Thanksgiving Day meeting of the Olympic Club. Weather permitting, and track in good condition, we think we can name one and perhaps two who can do it.

The Sacramento Club has obtained the privilege of the Pavillion for winter riding, which to those who know Sacramento in the rainy season, would seem to be the only chance the riders of that city would have for their favorite exercise.

In a recent twenty-four hours trial of the "Facile" safety machines upon the London and Bath roads, England, twenty-six riders started. The runners completed 214½ miles in the twenty-four hours.

"How shall I pronounce," asked an "anxious inquirer?"
"The word bicycle, of which I'm an admirer."
"Well," said the editor, "I'll swear by St. Michael
The way to pronounce it is simply bicycle."

LATEST OF ALL SORTS.

The New York Walking Match.

At 2 p. m. on the 23d the score in the six-days walking-match at New York stood: Hughes, 110; Hazael, 106; Rowell, 99; Hart, 96; Noremac, 91; Herty, 90; Panchot, 99; Vint, 79.

At 11 p. m. the score stood: Hughes, 148; Rowell, 135; Hazael, 135; Hart, 131; Noremac, 123; Panchot, 120; Herty, 116; Fitzgerald, 114; Vint, 95.

At 1 the next morning it was: Hughes, 150; Hart, 139; Hazael, 137; Rowell, 135; Noremac, 126; Fitzgerald, 122; Panchot, 120; Herty, 120; Vint, 101.

The showing at 10 p. m. on the 24th was: Hughes, 244; miles, Rowell, 239; Hazael, 235; Hart, 228; Fitzgerald, 222; Noremac, 221; Herty, 213; Panchot, 200; Vint, 179.

At 1 a. m. on the 25th Hughes had made 252 miles, Hazael 244, Rowell 240, Hart 232, Fitzgerald 226, Noremac 224, Herty 210, Panchot 200, Vint 190.

Hazael forged ahead after this and at 1 a. m. Thursday morning, 26th, he was in the lead, the score standing: Hazael 343, Hughes 342, Rowell 341, Fitzgerald 334, Noremac 330, Hart 325, Herty 309, Vint 285. At this date Panchot had withdrawn, with a score of 250.

By 3 o'clock p. m. Fitzgerald had attained the lead and Hazael was again behind Hughes. The score stood: Fitzgerald, 400 miles; Hughes, 393; Hazael, 393; Noremac, 391; Rowell, 377; Hart, 372; Herty, 363; Vint, 336.

At 5:23 p. m. Rowell retired to his tent, and all sorts of rumors concerning his condition were in circulation. A 7 o'clock it was generally known that he had given up the race, and at 8 o'clock the ex-champion quitted the race with a score of 384 miles and three laps. Rowell's stop was due to the irregular action of his heart. He was found after withdrawal, lying on his cot with his feet propped up. He was anxious to continue the race, expressing confidence in his ability to win, but his trainers and backers, recognizing the seriousness of the case, refused to allow him to do so.

At 1 a. m. yesterday (Friday) the score stood: Fitzgerald, 431; Noremac, 422; Hughes, 420; Hart, 408; Herty, 402; Vint, 374. Hazael retired when his score was 414 miles and one lap. His knees had given out. Noremac was the favorite in the betting at that time.

The third annual district firemen's tournament for Santa Clara, Santa Cruz, Monterey and San Benito counties took place at Hollister last Tuesday. The races were for volunteer hose and hook and ladder companies. Teams were entered from each of the counties. The Eagles of San Juan won the hook and ladder first prize, running three hundred yards, putting up a thirty-five foot ladder perpendicularly in the street with a man to ascend to the top in fifty-four seconds. The Pioneers of Hollister won the second prize. The Eureka of Hollister won the first prize for juvenile hook and ladder companies. The first prize for hose companies was won by the Pajaros of Watsonville, who ran four hundred yards, connected with the hydrant at the three hundred yard post, broke the coupling and got on water in 1:16½, also winning the Watsonville diamond belt. The second prize was a tie between the Pilots of Santa Cruz and the Hopes of Santa Clara. The third prize was won by the Alerts of Santa Cruz in 1:30. The fourth prize, a handsome stopwatch, was presented to C. W. Waldron, President of the State Firemen's Association. The next tournament will take place at Gilroy, May 2, 1883.

King Kalakaua of the Sandwich Islands, is the owner of a bay stallion, three years old, by Almont, out of Violet, by Rysdyk's Hambletonian; second dam Sallie Feagles (dam of Peacemaker) by Smith's Clay. He was selected by the King in person one year ago, and will be shipped from Fairlawn, where he now is, in December next. He is 16 hands, has plenty of bone and substance, and is very finely gaited. His breeding and his size will make him valuable for stock purposes in the Sandwich Islands.

Last evening the captains of the several teams that take part in to-day's shooting tournament at Shell Mound, met at the armory of Company C., on Post street, to decide on what targets their respective teams should use, beside the many preliminaries always attending such occasions.

THE BREEDER AND SPORTSMAN made its appearance Saturday last, and presents a healthy appearance. Its editorial ability is of the best, while typographically speaking it is unique. Its various departments are well arranged, and the journal is destined to win popular favor among all classes. *Galt Gazette, July 15.*

HERD AND SWINE.

Angus and Galloway—The Difference.

A correspondent of that paper writes the *Breeders' Gazette* that he has repeatedly read in its columns that there is a difference between the Angus and Galloway polled cattle of Scotland, and asks for enlightenment on the subject at the hands of that journal, whereupon it proceeds to say, that, "in the first place, both breeds are alike in being hornless, and in being usually alike in color, and from their general make-up we should suppose them to have been, at no very remote time, one and the same breed. But as bred for several years past the Angus are finer-boned, finer-haired animals, and apparently earlier in maturing than their long-haired, coarser, and we really think harder cousins, the Galloways. The Galloways are almost as shaggy coated as the West Highlanders; the bone of the tail is thick and strong, as are all of their bones—in short, hardiness and good 'wrestling' qualities are written all over their general make-up, and we doubt, after all, whether there is any breed of cattle, save the native Texan, that can compare with them in adaptation to the conditions of life that prevail on our western plains. Whether the finer-boned, earlier maturing Angus or Aberdeen polled cattle are, all things considered, to be preferred over the Galloways for our great cattle ranches, remains to be tested. So far as tried both are well liked, but we do not consider the question of superiority as by any means yet settled."

Vast Winter Range.

The stockmen of Eastern and Southern Oregon are now making preparations to abandon the summer ranges and drive their stock to the Oregon desert, in Grant and Wasco counties, a vast territory of grazing land, erroneously called a desert, upon which snow seldom falls to any considerable depth, and where cattle and sheep find an abundance of feed from November until May. The very rigorous weather and deep snows in the region of the summer ranges of that country render it impossible to winter stock upon them, no matter how judicious the preparation made, without very serious loss. A subterranean river has been discovered some distance out in the plains of this desert, at a point where the surface concealing it has been broken through. It is a distance of but a few feet to the water from the surface and it is thought that the discovery will result in great good for the stock raisers, as, for instance, during an unusually dry winter much of their stock can be saved, when, without access to other sources of water supply, many cattle perish from thirst. This, however, seldom occurs, as the dew on the grass and herbage in the morning is generally ample for watering purposes.—*North Pacific Rural Spirit.*

Artichokes for Stock.

Some weeks ago the *Gazette* started a paragraph about the value of artichokes as food for stock, including cattle. It has brought out the following from Charles E. Allen, Manhattan, Kan., as to culture, habits, yield and destruction of these valuable roots: "Plow the ground very early in the spring; cut the tubers to one eye in each piece; plant three and a half by one and a half feet apart, and cultivate the same as early potatoes; the richer the ground the better. They will yield from 600 to 1,000 bushels per acre in rich soil with good cultivation. The tops can be gathered and cured same as corn fodder. Stock will eat them as readily as hay or corn fodder. Should you wish to clean your ground of them let them grow twelve or fourteen inches in the spring, then turn your stock on them; they are as easily destroyed as potatoes. After the tubers grow, if the tops are eaten off, it will kill them. Cattle, horses, hogs, sheep and all stock eat them greedily. The 'Jerusalem' is the best kind; on rich soil the stalks will grow from six to twelve feet high, branching out with from twenty to fifty blossoms."

Where Jersey Cows Come From.

Jersey Island, the place from where we obtain the favorite Jersey cow, is a small spot of land. If squared, it is six and three-quarters miles each way. Yet this little island has a population of 600,000 human beings, and has over 12,000 cattle, and had that amount for the last twenty years, for the census of 1861 gives Jersey Island 12,037. And they export annually on the average 2,000 head. Roughly speaking, they manage to support one head of kine to every acre, while in England there is only one head to every ten acres; therefore, in proportion to its size Jersey exports as many cattle every year as England contains. If England should export cattle at the same rate, her whole stock would be swept away in a single year. A good Jersey cow will yield half her own weight in butter a year—she rarely exceeds eight hundred pounds, and her average weight at home is about seven hundred pounds. What little spot on earth can make a better showing?

CHEESE-MAKING IN WASHOE.—The *Reno Gazette* says: Theodore Winters owns the grounds at Ophir, twenty miles south of Reno, where the old ruins stand that once were the mill and reduction works, the first cost of which was over \$1,000,000. Mr. Winters will cover the old walls with roofs and make a vast cheese factory of them. He is now milking seventy cows on his ranch, one mile away, and the number will be increased to 100. In addition 150 cows will be kept on the Ophir ranch. He is now making butter, which sells readily at Virginia City, but butter-making will cease and all the milk will be hauled to Ophir as soon as the vats are ready for cheese-making. If any of his neighbors have milk to spare the dairy will buy it or make cheese on shares. Three buildings will be covered in to store cheese and contain vats heated by steam, where all the milk will stand until it thickens.

LINCOLN SHEEP.—These are the heaviest sheep in existence. A sheep of this breed at forty months old has weighed 96½ pounds a quarter, a two-year-old 91 pounds a quarter, and a yearling 71 pounds. The wool is long and lustrous, measuring nine inches or more, the fleeces usually weighing from 6 to 10 pounds, and there is one instance where a fleece weighed 26½ pounds. These sheep require heavy feeding of grass, hay and roots; hence in England they are chiefly found in rich alluvial districts. It is yet questionable whether these sheep will pay in this country or not.

All loose hairs and dirt removed from the bodies of animals by brushing, as well as old bedding, should be collected in a heap and burned. The presence of vermin on live stock can never be successfully combated by simply applying a certain remedy to the bodies of the animals, and not, at the same time, attending to the general cleanliness of these, as well as of their surroundings.

Silos and Ensilage.

Last June the Commissioners of Agriculture addressed a letter to upwards of 100 farmers and dairymen in different sections of the country, asking the results of their experience and observation in the matter of silos and ensilage. The following is a summary showing the general drift of practice and opinion on the several points enumerated in the schedule of questions, of those who have responded to the inquiries of the department. It is intended here to give a comprehensive view of the whole subject in the combined light of the statements which appear separately in the appendix.

Location of silo.—A few have been built at a distance from the stables, but generally the silos are located with reference to convenience in feeding, in, under, or adjacent to the feeding-rooms. Local considerations will determine whether the silo should be below the surface, or above, or partly below and partly above. This is not essential. Where the stables are in the basement of a bank barn, the bottom of the silo may be on the same level, or a few feet below, and the top even with the upper floor. This arrangement combines the greatest facilities for filling, weighing, and feeding.

Form of silo.—With rare exceptions the silos described show a rectangular, horizontal section; a few have the "corners cut off," and one is octagonal. (The cylindrical form, of which there is no instance in the accompanying statements, seems to have obvious advantages. If under ground, a cylindrical wall is self-supporting against outside pressure, and may be much lighter than would be safe in any other form. If of wood and above ground, the walls may be stayed with iron bands. In any case, for a given capacity, the cylindrical form requires the least possible amount of wall.) A given weight of ensilage in a deep silo requires less extraneous pressure, and exposes less surface to the air, than it would in a shallow silo. For these reasons depth is important. If too deep there is danger of expressing juice from the ensilage at the bottom. Where the ensilage is cut down in a vertical section for feeding, a narrow silo has the advantage of exposing little surface to the air.

Capacity of silo.—The silos reported vary in capacity from 364 to 19,200 cubic feet. If entirely full of compressed ensilage the smallest would hold 9.1 and the largest 480 tons, estimating fifty pounds to the cubic foot. Practically, the capacity of a silo is less to the extent that the ensilage settles under pressure. This should not exceed one-fourth, though in shallow silos, or those filled rapidly and with little treading, it is likely to be much more. A temporary curb is sometimes added to the silo proper, so that the latter may be full when the settling ceases.

Walls of silo.—For walls underground, stone, brick and concrete are used. The choice in any case may safely depend on the cost. In firm soils that do not become saturated with water, walls are not essential to the preservation of ensilage. Above ground, two thicknesses of inch boards, with sheathing paper between (the latter said by some to be unnecessary) seem to be sufficient, if supported against lateral pressure from the ensilage.

Cover.—A layer of straw or hay will serve in some measure to exclude air, but is not necessary. Generally boards or planks are placed directly on the ensilage. The cover is sometimes made in sections two feet or more wide; oftener each plank is separate. The cover is generally put on transversely, having in view the uncovering of a part of the silo while the weight remains on the rest. Rough boards, with no attempt at matching, have been used successfully. A little space should be allowed between the walls and cover, that there may be no interference as the settling progresses.

Weight.—Any heavy material may be used. The amount required depends on various conditions. It will be noticed that practices and opinions differ widely. The object is always to make the ensilage compact, and thereby leave little room for air, on which depend fermentation and decay. In a deep silo the greater part is sufficiently compressed by a few feet of ensilage at the top, so that there is small percentage of waste, even when no weight is applied above the ensilage. Screws are used by some instead of weights. The objection to them is that they are not self-acting, like gravity.

Cost.—The cost of silos, per ton of capacity, varies from \$4 to \$5, for walls of heavy masonry and superstructures of elaborate finish, and fifty cents or less for the simplest wooden silos. Earth silos, without wall, can be excavated with plow and scraper, when other work is not pressing, at a trifling cost.

Crops for ensilage.—Corn takes the lead of ensilage crops. Rye is grown by many in connection with corn—the same ground producing a crop of each in a season. Oats, sorghum, Hungarian grass, field peas, clover, in fact, almost every crop used for soiling has been stored in silos and taken out in condition. There are indications that some materials have their value enhanced by the fermentation of the silo, while in others there is loss. The relative values for ensilage, of the different soiling crops, can only be determined through careful tests, often repeated, by practical men. All thoughtful farmers would be glad to get more value from the bulky fodder of their corn crops than is found in any of the common methods. There are accounts of plucking the ears when the kernels were well glazed, and putting the fodder into the silo. The value of such ensilage, and the loss, if any, to the grain are not sufficiently ascertained to warrant positive statements.

Planting and cultivation.—Thorough preparation before planting is essential. Corn, sorghum, and similar crops should be planted in rows. The quantity of seed corn varies from eight quarts to a bushel and a half for an acre. A smoothing harrow does the work of cultivating perfectly, and with little expense, while the corn is small.

When crops are at their best for ensilage.—The common practice is to put crops into the silo when their full growth has been reached, and before ripening begins. Manifestly, one rule will not answer all purposes. The stock to be fed and the object in feeding must be considered in determining when the crop should be cut. On this point must depend much of the value of the ensilage.

Yield of ensilage crops.—Corn produces more fodder per acre than any other crop mentioned. The average for corn is not far from twenty tons—which speaks well for land and culture. The largest yield from a single acre was fifty-eight tons; the average of a large area on the farm was only twelve and a half tons.

Kind of corn best for ensilage.—The largest is generally preferred; hence seed grown in a warmer climate is in demand. It is conceded by many that the fodder of sweet corn is worth more, pound for pound, than that of larger kinds, for soiling. Some hold that the same superiority is retained in the ensilage, while others think that the advantage after fermentation is on the other side. The sweet varieties do not yield large crops.

Preparing fodder for the silo.—The mowing machine is sometimes used for cutting corn in the field—often the work is done by hand. Various cutters, having carriers attached for elevated silos, are in use and are generally driven by

horses, steam or water power. Fine cutting—a half inch or less—is in favor. It packs closer, and for this reason is likely to keep better than coarse ensilage. Fodder of any kind may be put in whole, and, if as closely compressed as cut fodder, will keep as well, if not better; but it requires much greater pressure.

Filling the silo.—During the process of filling the ensilage should be kept level and well trodden. A horse may be used very effectively for the latter. Some attach much importance to rapid filling, while others make it more a matter of convenience. With the packing equally thorough rapid filling is probably best. The cost, from field to silo, is variously reported, from thirty-five cents—and in a single instance ten or twelve cents—for labor alone, to \$2 and upwards per ton; though the higher amounts include the entire cost of the crop, not the harvesting alone. There is a general expectation that experience will bring a considerable reduction in the cost of filling. It is probable that, with a more general adoption of ensilage, the best machinery will be provided by men who will make a business of filling silos. This could hardly fail to lessen the cost and bring the benefits of the system within the reach of many who otherwise would not begin. The ensilage should remain under pressure at least until cool, and be uncovered after that when wanted.

Condition of ensilage when opened.—In nearly all cases the loss by decay was very slight, and confined to the top and sides where there was more or less exposure to the air. Generally the ensilage has kept perfectly for several months, showing no deterioration while any remained in the silo, excepting where exposed for a considerable time. It is better to uncover a whole silo or compartment of a silo, at once, and thus expose a new surface each day, than to cut down sections.

Value of ensilage for milch cows.—Ensilage has been fed to milch cows more generally than to any other class of stock, and no unfavorable results are reported. There can be little doubt that its greatest value will always be found in this connection. Several feeders consider it equal in value to one-third of its weight of the best hay, and some rate it higher. There is a marked increase in quantity and improvement in quality of milk and butter after changing from dry feed to ensilage, corresponding with the effects of a similar change to fresh pasture. A few seeming exceptions are noted, which will probably find explanations in defects easily remedied, rather than in such as are inherent.

Value for other stock.—Ensilage has been fed to all classes of farm stock, including swine and poultry, with results almost uniformly favorable. Exceptions are noted in the statements of Messrs. Coe Brothers and C. B. Henderson, where it appears that horses were injuriously affected. It should be borne in mind in this connection that ensilage is simply forage preserved in a silo, and may vary as much in quality as hay. The ensilage that is best for a milch cow may be injurious to a horse, and that on which a horse would thrive might render a poor return to the milk pail. Cows giving milk are fed fifty to sixty pounds with some dry fodder and grain.

Method of feeding.—Experiments are made in feeding ensilage exclusively, and results have varied with the quality of ensilage and the stock fed. It is certain that ensilage of corn cut while in blossom, or earlier, is not alone sufficient for milch cows. It is best to feed hay once a day, and some grain or other rich food, unless the latter is supplied in the ensilage, as it is when corn has reached or passed the roasting-ear stage before cutting. Ensilage, as it is commonly understood, is a substitute for hay and coarse fodder generally, and does not take the place of grain. The condition of stock fed on ensilage, both as to health and gain in weight, has been uniformly favorable.

As to the profitability of ensilage.—There is hardly a doubt expressed on this point—certainly not a dissenting opinion.

Remarks.—The general use of ensilage must depend largely on its cheapness. Costly silos and expensive machinery must always be an insurmountable obstacle to a majority of farmers. For this reason, experience tending to show that it is essential to the preservation of fodder in silos, is of the first importance. Especial attention is invited to the earth silo mentioned in the statement of Francis Morris, Esq., of Oakland Manor, Md. Mr. Morris is a pioneer in ensilage in America, his first silos having been built and filled in 1876. These were in the basement of his barn, walls of masonry. The next year he made a trench in sloping ground so that a cart could be backed in at the lower end for conveying ensilage to the feeding room. The sides are sloping, and the average depth does not exceed six feet. The cost is simply the cost of digging a ditch of similar dimensions. This trench was filled in 1877 and regularly since, and has kept its contents perfectly. Mr. Morris has several silos of the same kind in different places for convenience in filling. He uses a large cutter driven by a steam engine, and packs in the silo by treading with horses. The filling is carried several feet above the surface of the ground, and rounded up at the center, the excavated earth serving to confine the ensilage. The covering is first roofing-felt, and then earth for weight. Mr. Morris has put in whole fodder and it has kept perfectly. He cuts it fine, mainly for convenience in handling and feeding. Whole fodder should be laid across, rather than lengthwise in the trench, so that it can be taken out easily. In order that the extent of Mr. Morris's operations may be understood, it is proper to add that his estate of Oakland Manor comprises about 1,700 acres. His wheat crop this year, 1882, was 5,000 bushels, and his corn is expected to reach the same figures. The meadows yield upwards of 200 tons annually. The stock consists of fifty horses and mules, 100 cattle, 500 sheep, and fifty hogs. And as the whole is managed on business principles, Mr. Morris very justly esteems his earth silos of primary importance.—*Boston Cultivator.*

The cattle belonging to Mr. Goodwin, of Watsonville, pastured on Mr. John Bennett's ranch, in the Comstock district, are affected with a peculiar but fatal disease. It is something like the bloody murrain. The cattle are first attacked with severe trembling and in a few minutes they are dead. An investigation developed the fact that the flesh beneath the skin, around the neck, breast and shoulders and stomach, has the appearance of being beaten by a club, and the blood was clogged and mushy. Quite a number have already died. The cattle in Priest valley are also dying from a disease which causes them to bleed at the nose. There appears to be no indications foretelling the sickness, but the blood runs from the nose, causing the death of the animal.—*Hollister Democrat.*

The French Minister of Agriculture has placed at M. Pasteur's disposal a further sum of \$10,000 to enable him to continue his investigations into the nature, cause and prevention of contagious diseases among animals.

We are informed that the firm of Riley & Harden, cattle dealers residing in this county, have cleared so far this year over \$70,000 in their business. Last year they cleared over \$50,000.—*Petaluma Courier.*

Good and Bad Milkers.

A few poor cows are quite apt, in one way or another, to work into a dairy, and by their diminutive yield barely pay for their keeping, and perhaps not even that, but cause an actual loss. A dairyman of our acquaintance, having forty cows, found by measuring the milk that he had five in his herd that did not give milk enough in the whole season to pay for their keeping by twenty-five dollars apiece. He had five others that paid their keeping and twenty-five dollars a head more. The profit and loss on these cows just balanced each other; he kept the ten cows a year for nothing, losing the whole of his time and labor in caring for them and their milk, besides the depreciation of stock and the interest on the cost, which was not taken into the reckoning. When I was collecting cows for the first dairy I set up, an aged and observing dairyman said to me: "Look out for good cows; there is a great deal of money made in this country by dairying, but it is all made from the good cows." The difference between a good cow and a poor one is not generally appreciated. Offener than otherwise the price at which cows are bought and sold is made to accord with the amount of milk they will give. But this is not a sound way of estimating their value. Beef cattle may be estimated by the pounds of beef they will make. A bullock that will make 500 pounds of beef may be worth half as much as one that will make 1,000 pounds; but the cow that produces only 100 pounds of butter a year is not worth half as much as one that will make 200 pounds in the same time. As it will take the former cow two years to make as much butter as the latter will in one, she will cost the owner a year's keeping more than the other cow will to get the same amount. The butter from the poor cow costs double what it does from the good one, and is produced at a ruinous rate to the farmer. Such a cow will not pay the cost of keeping, and is only fit for the shambles. She ought certainly never to occupy a place in the dairy. But the loss sustained by a small yield of milk is not all occasioned by a bad selection of cows. Many cows which otherwise might be classed as profitable milkers are made unprofitable by the treatment they receive at the hands of the dairyman. Careless milking, harsh treatment, worrying, and exposure to severe storms and to extremes of heat and cold, abate the flow of milk and occasion much needless loss. Twenty-five per cent. variation in the annual product is easily made by kindness and severity. Comfort and a satisfied quietude are very efficient in promoting a liberal flow of milk. Full feeding is equally important, as the want of it is, perhaps, the most prolific cause of abatement in the returns of the dairy. In a large percentage of dairies the yield of milk is annually made to dwindle down to the limit of profitable production, and sometimes below it, from the deficiency and irregularity in the food supply. Very few dairy-men give their cows as much as they need to eat, except for a short time in the season. In the spring and early summer, when the ground is moist and warm, a vigorous growth of grass is produced, and a flush of food supplies the cows for a time with all they can appropriate, and crowded bags and flowing pails attest their full supply. But presently, in the long, hot and dry days of August, the ground becomes parched, and the grass stops growing and dries up. If the cows can fill themselves during the day they are commonly allowed to run without any additional food. As grass fails in quantity and quality, and more labor is required to get it, less is consumed, and the milk diminishes.—*Irish Farmer*.

QUALITY RATHER THAN QUANTITY.—An over production of any given article of trade or commerce usually causes a reduction in price. Hence those who count their wealth by the quantity standard are not infrequently sadly disappointed when at the final reckoning of the profits for the season they find them much less than they had expected. It is well therefore that all who would keep on the safe side for success should bear in mind that although the demand for quantity may be more than supplied, that for quality is seldom if ever fully met. As a rule the better grades of manufactured articles, as well as live stock, always meet with a ready sale. To produce the best animals for the purpose they are designed, should be the aim of every true breeder. He who succeeds in this will scarcely fail of a two-fold reward—the satisfaction of seeing improved stock about him, and of receiving good prices for what he may have to sell.—*Swine Breeders' Manual*.

Johnny Love, residing near this place, owns twenty-one sheep, from which about 200 pounds of wool was sheared not long since, or an average of nearly ten pounds per head. The fleece of one of the wethers weighed fifteen pounds. These sheep are part Merino; but the secret of this handsome yield is the good treatment they received.—*Jacksonville, Oregon, Times*.

A fine sample of clover, which had been in ensilage for hay, was exhibited on the New York Produce Exchange the other day. When taken out the clover was found to be in good and wholesome condition. The trial took place at Winterton, N. Y. Mr. H. H. Brown of that place is the gentleman who has made the successful experiment.

One of the curious industries of New York City is gathering the stale bread from hotels and restaurants, and grinding it up into food for poultry and pigs. The Astor House sells its stale bread for \$800 annually. The contractor has \$100,000 invested in the business, and keeps nine teams at work.

A leading dealer in dairy products in New York informs the *Dairyman* that the introduction of oleomargarine has increased the sale of good butter. It has also increased the quantity of good butter by driving the inferior qualities out of the markets.

New York has 1,437,855 milch cows, or upwards of eleven per cent. of the total number in the whole country, 12,443,593. Illinois has 865,913 cows, Iowa 854,187, Pennsylvania 854,156 and Ohio 767,043.

Ohio produces upwards of 25,000,000 pounds of wool, or nearly one-sixth of the whole product of the United States. California follows next with 16,738,036 pounds, and Michigan third 11,858,497 pounds.

A small, early maturing hog is much more valuable than a large one, as no more food will be required to raise two quick growing ones than will for a large but slow all-fat hog.

A cow on the ranch of E. A. Sawyer, at San Felipe, gave birth this week to triplets. The three little calves are all of good size and all healthy, hearty and frisky.

Never feed decayed roots of any kind to cows giving milk. One decayed turnip fed to one cow will affect the milk of fifty cows if mixed together.

At the Kansas City cattle sale on the 12th instant, sixty-one head of polled Angus and Galloway cattle were sold. The sale aggregated \$26,720.

Creameries.

After a fair, patient trial of both methods, our creamery men are generally well satisfied that the best results are obtained when the milk is delivered at the creamery. Butter thus made commands a higher price in the market.

Our creamery men pay their patrons on the fifteenth of every month for the milk furnished the previous month.

The price paid for milk is and must be variable. Our creameries are now paying sixty cents per hundred weight. In the winter season they have paid as high as \$1.25.

The foreman of a creamery here gets \$40 per month, and ordinary laborers \$1 per day.

Ice is not needed for the milk if you have cold well water, but in order to keep your butter in a No. 1 condition while getting ready for shipping, you need ice for a refrigerator to keep your butter in.

For an ordinary sized creamery a good horse-power is sufficient and better, (all things being considered) than an engine although many of the creameries have the engine.

While you cannot be sure that your patrons will supply you with milk or cream regularly through all kinds of weather you can be sure that they will work for their own interests, and our farmers find that it pays better to take their milk to the creamery and bring home sour milk and buttermilk for their hogs than to attempt to make it up at home. I have never heard any word of complaint on that score. Our creamery men here in Monticello make about 2,000 pounds of butter every day, part of it being from creameries outside of Monticello that they contract.

They ship an immense amount of butter to Europe, being put up in two-pound cans, soldered airtight. I have sometimes thought that the creamery business might be overdone, but there is always a demand for a good first-class article, and creamery butter cannot be bought here to-day for less than twenty-five cents per pound. The farmers of our vicinity are making money rapidly from the sale of milk, and the creamery men seem to be getting rich also. For setting the milk deep tin pails are now used, 8½ inches in diameter by 24 inches deep.—*J. R. Stillman, Monticello, Iowa*.

A dairyman should study the peculiarities of each cow. Some cows will appropriate all the extra food they can digest to the secretion of milk, and even deplete their own systems to keep up the flow of milk. Such cows should be especially well provided for—their generosity should be reciprocated. These are the cows that pay for feeding. They pay back the principal with a large percentage of interest on all the extra food given them. They are only good cows that will pay for extra feeding—in fact, they are only good cows that will pay for feeding at all. And a dairyman may rest assured that a cow that will not respond to liberal feeding by an equal increase of milk is not worth keeping, and instead of adding to his income, runs him in debt every year.

The cheapest and one of the best means of ridding stock of lice consists in the free application of ordinary wood ashes, frequent brushing, removal of old and dirty bedding, occasional application of boiling hot water to the wood work of stalls, sheds and sties or limestone washing of the same.

Those who have fed their surplus fruit to hogs say that their stock are in excellent and healthy condition. Fruit makes fine sweet pork.

Mr. Edward Atkinson of Brooklyn is keeping three cows on what he raises from one-half an acre of land. The system of ensilage does it.

POULTRY.

Fowls, Capons and Turkeys.

In selecting fowls to be fattened for the market, choose only those with a yellow flesh; and the larger breeds will be found most profitable. The Brahmas and Cochins are very large fowls, and with good feeding become plump and bring high prices, either in the early fall or winter. The Plymouth Rock, thoroughly fattened, is one of the best for boiling and broiling. White flesh fowls are in less demand and never command the price which is paid for the others. Hence the Black Spanish, White Dorking and other breeds of that sort are of less value for the table. Several of the French breeds look well when dressed, especially the Hondas, which are delicately fleshed and have a form well adapted to fat, which they take on rapidly. Many of the farmers in Maine, New Hampshire and Vermont still cling to the old-fashioned breed of "dunghill" fowls. These are, as a rule, all white-meated, and when they reach the market sell at comparatively small prices. It does not pay to raise this kind of stock, for it costs as much to keep such fowls as it does any others. Those who desire to realize the highest profits from poultry raising should dispose of the dunghills and substitute some of the large breeds.

It should be borne in mind that size is not the only thing necessary for the realization of good prices. Large framed chickens often run to bone, and are without fat or meat. A large, plump chicken is what is wanted, but size should never be sacrificed to plumpness.

As with almost all other articles of food, efforts more or less successful are made to substitute or sell for capons fowls which are not. Extra large fat chickens, known as "slips," are often sent in to be sold under the name of capons. The dealers, however, readily distinguish them, and, unless with their connivance, which cannot usually be obtained, the fraud fails. Genuine capons are very fine, brilliant plumage, and when sent to the market have only the feathers plucked from the body—wing, tail, leg and neck feathers being left on. At the time when capons begin to arrive all other kinds of fowl are sold at a low price, and the capons bring ten cents per pound more. Those who have succeeded in raising them here find the business a profitable one, and it is very likely that if the business were carefully conducted it might be made quite profitable on a large scale.

In France, in the markets, capons are a favorite article of food, and are of large size and great weight. They may be nearly always purchased and fetch much better prices than common fowls, their flesh remaining tender up to the age of two years, whereas a fowl of that age is only eatable boiled, steamed or else cooked in some similar way. In France they manage their poultry very much better than is done in the United States. Peasants and farmers alike contrive to make a handsome profit out of poultry and there are very few agriculturists among them who do not keep some feathered fowls. They, however, do not farm as we do, and this is one of the great mistakes we make—that poultry farming to be a profitable business must be conducted on a large scale. In France there are very few, if any, really large poultry farms, but yet poultry keeping is a general industry. Care, even on the largest farms, is bestowed on the young birds, and a general supervision is extended over both young and old stock. The peasants, of course, keep only a few fowls, but then they all keep poultry, and all look forward to their chickens and eggs

bringing a little grist to the mill; and the result to the country at large is that it is famed for its poultry produce, and supplies other countries out of its abundance.

Fowls should, of course, be killed in the most merciful way, and our dealers believe it can be best done by cutting the jugular vein in the neck. This is not only an expeditious method of causing death, but the fowl bleeds freely and leaves the flesh perfectly white. As soon as death ensues, pluck at once while the bird is warm, as the process can then be accomplished much more rapidly than if the bird is allowed to hang until cold. Never scald a fowl if it can be helped, for wet-picked poultry is not wanted in this market and only sells for low prices. As soon as the fowl is plucked take off the head at the throat, strip the blood out of the neck, peel back the skin a little, remove a portion of the neck-bone, then, just before packing, draw the skin over the end and tie and trim neatly.

Even after the best methods of selecting, fattening and killing poultry have been practiced, there will still be a poor result unless the fowls are properly packed for the market, appearance here counting very largely on the price to be obtained. In the first place all kinds of poultry must be entirely cold before being packed. All the animal heat must be driven out, yet the meat should not be frozen, for if this is not done it will almost surely spoil. Then it should be sorted carefully into No. 1 and No. 2 lots, all old stock being put in the latter. Boxes make the best packages, and these must be perfectly dry and clean. Line the boxes with brown paper and never use straw, nor wrap each fowl separately. Pack as closely as possible, backs upwards, legs straight out, and see that the boxes are full, so that when the covers are nailed on there can be no possibility of the contents shifting about. Boxes should contain from 100 to 200 pounds, larger ones being inconvenient to handle and more liable to get injured.

The business of selling poultry is largely done by commission merchants, who, as a rule, in this city have a high reputation. After the producer has selected his merchant or firm with whom he desires to deal, and has prepared and packed his stock for shipment as nicely as he can, let him make his contract for transportation as cheaply as may be and mark the packages plainly, giving the street and number, or stall in market. It would also be well to mark on the cover of the box the grade of the contents, as well as the gross weight and correct tare. Then send full advices and invoices by mail, immediately after the goods are shipped, and all confusion and trouble will be avoided.—*American Cultivator*.

Poultry Hints.

Feed the young fowl stock generously for two months before marketing. A full feed in the morning, of boiled potatoes or other vegetables mashed up with bran and shorts, and all the corn they will eat at night, will, if they have a free range, be sufficient. During the last two weeks before marketing mix the boiled vegetables with corn meal instead of the bran and shorts.

Look out for the old fowls when they are moulting. I don't mean that you are to dose and mess the fowls with a little of this and a good deal of that to enable them to "pass through this critical period with safety." I don't believe in any nonsense of that kind. Moulting is a natural process, and all that good healthy fowls need is plenty of good food. Feed cooked vegetables, wheat, bran and shorts, oats, corn, wheat or wheat screening, and an occasional meal of sunflower seeds with lots of milk to drink and your fowls will come through all right. Moulting fowls that cannot pull through on this bill of fare had better die and have done with it. When the fowls are moulting separate the cocks from the hens.

The wise poultry raiser will at some convenient time before wet weather comes lay in a supply of fine dry road dust for use in the fowl house the coming winter. Likewise he will see that the poultry house is cleaned up and whitewashed, and if repairs are needed to make the building comfortable, he will attend to that in due season.

Don't attempt to keep over more fowls than you have room for. It is folly to attempt to winter 50 fowls in the space that 20 should occupy; bear that in mind when you cull your fowls for market.

"Little things?" Yes, but it is these little things well looked after that change the balance from the debit to the credit side of the poultry account.—*Writer in Prairie Farmer*.

H. T. Sandford sold 42½ dozen eggs from a flock of about 40 hens, from Sept. 4th to Oct. 10th, realizing \$13 55 from the sales. The food for the fowls did not cost over \$3 50 during that time; is there no profit in poultry raising?—*Healdsburg Flag*.

The destruction of trees and shrubs and consequent bare, bleak, dry, unproductive and unhealthy present condition of the islands and districts of Greece and the regions around, once famous for their charms of shade, verdure, fertility and populousness, is charged to the browsing of goats. The new government of Cyprus is considering how these animals can best be reduced or confined. Goats were introduced into another English island—Saint Helena—within a century, and the trees and shrubbery suddenly and rapidly died off so soon as they began to be numerous. The same obstacle in a different and less degree is a rock of stumbling in our attempts at forestry. A chief item of expense in many situations is that of fencing in the ground planted, until the trees attain a size unattainable by cattle. For best results, close planting and entire exclusion of animals are preferable. On most farms pasture is at times an utmost necessity. Every rod of ground that will yield any at all must be utilized. If there is no grass the foliage and even the stems of trees must serve.

Hence, with the best of intentions for conservation, some unlucky day or pinching season occurs, when the hitherto well nursed plantation is browsed, broken and greatly injured, if not ruined.

RIFLE LOTTERY.—A correspondent of the *American Field* says: Having been an attendant at Creedmoor during the late fall meeting, and participated in some of the matches, I desire to call your attention, and that of riflemen at large, to the novel method the New York Rifle Association have of deciding the first prizes in their rifle matches. If a number of marksmen tie for first place, the association (not in the presence of the shooters) "draw lots" for the prizes. This is hardly a proper test of skill with the rifle. If it is a lottery they are conducting, why not give all a chance for the first prize? I will mention another matter which will interest riflemen. The five-hundred-yards continuous match was laid out for the New York militia. They were allowed to make fifty-two in ten shots; but western guardsmen were allowed but fifty points for the same number of bull's-eyes. This might be termed a sort of "skinning the outsiders," as no respectable rifle club will allow any shooter more than five points for a bull's-eye.

San Francisco, Saturday, October 28, 1882.

CLOSE OF THE YACHTING SEASON.

The yachting season of 1882 will be formally closed to-day by the San Francisco Yacht Club, which gives a dance at its club house and afterwards takes its last cruise to Vallejo. Already some of the yachts have gone into winter quarters, where they will remain until the breezes begin again in the spring. It is not to be inferred from this that all yachting is given up for some month's for some of the yachts are kept in commission all winter. In fact there are those who prefer the winter sailing. But winter sailing takes time. The winds are light and it sometimes takes as long to go five miles in the winter as it does to go fifty in the summer when the trade winds are blowing. For those who have time the winter sailing has many charms.

This season has not been a very successful one from any point of view. The fleet has not increased at all; in fact it has decreased, as some have gone into trade that were yachts, and only one or two new ones have been built. Then as to races there have been no startling events. The San Francisco Yacht Club omitted its annual regatta this year through lack of enthusiasm of its members. Enough racing yachts could not be got together. The Pacific Club got up a race which was a very pretty spectacle but owing to an unfortunate misunderstanding the results were not satisfactory. The Mosquito regatta arranged by the S. F. Y. C. went off very well but even that did not, in numbers, come up to the event of the year previous. The cruises in squadron have not been successful this season and have not been numerous.

Though individual owners seem to have a good time there seem to be a painful lack of harmony which is keeping the sport of yachting behind its proper position. It is to be hoped this will be remedied before another season, or club influences will wane still further and we shall have a lot of free lances.

During the off months, the yachtsmen go somewhat into the literature of yachting. They now have time to go into discussions and take up such things as they will not attend to during the busy part of the season. Time allowance, measurement, rigging, construction, etc., will come in for a share of attention. The S. F. Y. C. some years ago inaugurated a series of lectures on nautical subjects and they appeared to be very successful. These could be again commenced. There is no better way to get at the opinions of the members than to get up lectures and discussions during the winter months.

From now on the yachts must be kept in snug quarters as the gales may come at any time and the ordinary anchorages are not safe enough since they are not sheltered from the southeast winds. The reason most of the yachts are laid up in winter is not, as many suppose, because of the gales but because there is no wind that can be counted on as a surety and what there is is usually very light, unless there is a gale. The trip through San Pablo Bay which is sometimes a rough one in summer is now as smooth a one as a general thing as could be experienced. But it may take two days to get down from Vallejo. The club houses of the clubs remain open all winter and the yachtsmen can congregate there more or less on Sundays and "fight their battles o'er again."

The "Breeder and Sportsman" has done its share in encouraging the sport during the season and will give more or less of interest during the winter. Our yachting column always contains what fresh matter there is going and served up in a practical way that we are sure our yachting readers appreciate.

We hear that Harry Babcock of the Cordelia club shot fifty-six birds the other day at the preserve of the club.

METROPOLITAN'S PERFORMANCE.

Efforts to get full light on the colt trot at Walla Walla where the yearling Metropolitan was reported to have scored a mile in 2:36½ have not been entirely successful. A letter of inquiry addressed to T. B. Merry elicited the following response, which, while it adds no facts to the case, does confirm the first report that the colt trotted a remarkable race and showed himself to be a great prize for his owner. "All I know about the colt race is that on the 5th inst., at Walla Walla, in a purse given for two-year-olds, the colt sold by Mr. Haggin to Charles Russel was started by consent of the parties owning the other two entries. Dr. Mack's filly Adelaide by Alwood had been given what you might really call work for about six weeks. She is an open gaited mare, fully 15:2½ high, and moves very much like Ned Parker's old mare California Damsel. In my belief nothing yet foaled in this part of the world is her equal. She can beat any three-year-old in the Willamette valley with as little exertion as Metropolitan beat her. I was busy at home and could not go up to attend the Walla Walla fair. Levi Knott, who went up on business, wired me the result of the colt trot that night and I knew nothing of the Echo colt being a yearling until after Mr. Knott's return to this city. He came into my office in his rough off hand way, and I began to question him in regard to the trot. I tell it about in his own words: "Why," said he, "that colt can't begin to run as fast as he can trot. He cut away from that mare like she had been anchored with a ton of ballast, and she is the best thing ever foaled around here. He went patterin' along like a p'inter dog and I didn't realize what he was doin' till he was past the half mile stake at better than a 40 clip. She took the whip like an old stager, an' while she could never get by him she made him trot the last half the fastest. He went loafin' along as if he hadn't any business of his own in the world. He didn't appear to be trottin' a bit."

From this homely but lucid description we feel sure that there was an error in the time report. Metropolitan beyond a doubt trotted leisurely in the race and it is hardly possible that a yearling could jog in 2:36½ without showing some evidence of phenomenal speed before the race. A mile in 2:56½, accepting that as the corrected time, is a great performance for a yearling with so short a season of training and the importance of the feat is augmented by the fact that it was done without severe effort or any attempt at a full display of his powers.

THE STANFORD STAKE.

There has been quite an excitement about the Stanford Stake. The largest colt stake ever trotted for, and consequently, more enthusiasm. The twenty-one nominations originally made were a token of a good race, and though this dwindled to three starters there was still a stubborn contest between two of the colts. Inasmuch as we were disappointed in obtaining the cut of the winner we will have to defer the history until next week. Adair won handsomely, Clay getting the second heat. In the next issue will be a portrait of the winner and a full description of the race.

EDITORIAL NOTES.

Game Preserves.—The organization of shooting clubs and the securing of game preserves goes on all over the coast and there is a prospect that the threatened decimation of game will be checked. We give place elsewhere to a communication in defense of pot hunters. From our correspondent's standpoint this much anathematized class are engaged only in a fight for bread. A simple effort for existence is certainly no crime moral or legal if not made by questionable methods and the pot hunter as pictured by "Agricola" might look the rest of the world in the face with good grace, but such is not the pot hunter of reality. It is not the reasonable killing for market that is making barren our game ranges but the merciless slaughter, the "after me the deluge" style of market hunting. The night shooting, swivel guns, traps, nets and kindred contrivances that not only destroy game in quantities but drive away the survivors from their accustomed haunts and keep them away until they become acclimated in some more retired and inaccessible locality where they are not troubled by the enemy. This style of hunting has gone on without interruption for years in California and the effect on the game supply has not only been marked but threatens its total annihilation. The preserve is the only system that will call a halt in this destructive business. Let individuals or associations secure control of the favorable localities and by a well enforced code of regulations restrict the killing of game to reasonable limits. People who have been accustomed to unrestricted license will say that the preserve is aristocratic and un-American, but it is not true for all that. It is a reasonable, sensible and judicious method of protecting and increasing the game that is fast disappearing from land and water, and is in fact an absolute necessity. Legislatures make laws for the protection of game but they are ineffectual for the purpose because of the difficulty in finding officers who will enforce or even assist in enforcing

them. The rights that attach to private ownership cannot be ignored by courts or constables and it is only by putting the plains and marshes in that category that the objects aimed at by game laws can be attained.

A Complete List of the members of the Blood Horse Association will be given in these columns next week. Correspondents who have made requests for such publication will please observe.

Handicap Weights.

In the handicaps to be run during the fall meeting of the Blood Horse Association, the following weights have been fixed by the official handicapper, C. M. Chase:

1½ MILES, SATURDAY, NOV. 11.

Name of Horse.	Age.	Entitled weight.	Weight to be carried.
Maria F.	3	106	106
Haddington.	5	118	108
Forrest King.	3	109	105
Nathan Coombs.	aged	118	100
Ella Doane.	5	115	108
Birdcatcher.	3	109	97
Atalanta.	3	106	106
Frank Rhoades.	4	118	108
Fred Collier.	4	115	118
Joe Howard.	aged	115	120
Bolis.	5	115	110

TWO-YEAR-OLDS—ONE MILE. WEDNESDAY, NOV. 15.

May B.	2	107	107
Camilla Urso filly.	2	107	100
Lou Spencer.	2	107	102
Clara W.	2	107	100

1½ MILES, SATURDAY, NOV. 18.

Garfield.	3	109	100
Maria F.	3	106	106
Forrest King.	3	109	100
Inauguration.	3	109	100
Birdcatcher.	3	109	95
Hattie B.	3	106	95
Atalanta.	3	106	100
Lizzie P.	3	106	95
Jocko.	3	109	100

Seth Green on Carp Ponds.

ROCHESTER, N. Y., Oct. 10, 1882.

There are many artesian wells scattered all over the Western country, and most of them are many miles from any lakes or streams or fish markets. It is my opinion that nearly every flowing well would furnish enough surplus water to supply a pond which will keep a family in fish. A very small stream will furnish enough water for some kinds. I would recommend carp as being the fish most likely to be a success, as they require less care than any other kind. I do not consider them the very best fish there is, because of late years I have been used to eating the best kinds our country affords. But I remember when my mother cooked the suckers and shiners I caught with a pin-hook, they were the best fish there was. It would undoubtedly be the same with families raised on carp.

My opinion has often been asked how a carp pond should be constructed for family use. The pond can be made in any shape to suit the locality, but I would prefer egg shape, if the locality was just as suitable for it. The pond would breed flies of a great many kinds, one of the kinds being mosquitoes. The larva of all flies is the best food for young fish. I have bred them by the bushel, but some of the mosquitoes would be apt to take wing before the pond got well stocked with young fish, and to protect the family in a measure I would advise building the pond to the leeward of the house in the prevailing wind of the locality. If, for instance, the prevailing wind was from the west, the pond should be built to the east, northeast or southeast of the house. I would prefer the pond to the northeast, because if placed directly to the east the house would make a lee under which the mosquitoes could easily reach it. The mosquitoes can beat any sailing craft before the wind, but on the wind they are nowhere in the race, as they have no keel. The whole human family should be thankful to the Creator for not putting a keel on them, and if their bowsprit had not been quite so sharp, they might not receive so many handkerchief salutes from the verandas of the Long Island hotels, but would be just as useful and ornamental.

The pond can be built with plow and scraper. It should have a deep place in the center, and be shallow on the edges. If you have square sides the young fish will have no protection from the old ones. When scraping is commenced, carry the dirt as far back as you intend making the lower outside of your embankment, and keep scraping until the pond is four to six feet deep in the center. If the locality is such that the ice freezes very thick the ponds should be made deeper and holes kept open through the ice during the winter to keep the fish from suffocating. If the embankment is raised three feet and pounded down and sodded or sown to grass, the water could be raised so that but three feet in the center would have to be excavated in order to have a pond six feet deep. The whole pond should be sown with some kind of grass or water plant, with the exception of about fifty or seventy-five feet square in the center. The grass and water-plants make the spawning grounds, breed, food and protect the young. The pond should not contain any other kind of fish, and if the grass gets too thick it can be raked out.

SETH GREEN.

We are glad to announce that the Royce Bros., near Columbus, Wis., have been very successful in breeding trotting colts from a cross of trotting stallions upon thoroughbred mares. In fact, no one but the Royces has attempted this practice to any extent, saving Ex-Governor Stanford in California. The Royces have something like fifty colts from which they hope to make the test. Their stallions are Autar, by Almont, out of a mare by Brown Chief, son of Mambrino Chief; Executor by Administrator, son of Hambletonian, out of Valley Rose by Peck's Idol, son of Mambrino Chief; Tuckahoe by Mambrino Patchen, son of Mambrino Chief, dam by Carlisle's Tuckahoe, etc. All these stallions are over 16 hands high, all of them strong and boucy horses, and all three of them have fine trotting action. The mares have been chosen from among thoroughbred families known to possess good trotting action and plenty of bone. Hence we shall look for good results from these experiments. The Royces have, besides these thoroughbred mares, a large lot of Mambrino Chief, Hambletonian, Morgan and other well-bred mares, the colts from which number fully 100. All of their horses are large, size being one of the objects aimed at. *Dunton's Spirit.*

The army rifle shooting contest at Leavenworth, Kas., Oct. 25th and 26th, resulted in a victory for the Division of the Atlantic over the Division of the Pacific by twelve points, with the Division of the Missouri away behind.

YACHTING.

Ocean Yachting.

Ocean yachting with San Francisco yachtsmen has never been much followed. In the first place the Pacific is so big it takes a long time to get anywhere, then our bar is very rough, and worst of all there are few harbors on the coast. The coast line is rugged and rocky, with bars at the mouths of rivers, and fogs prevail for many months. The Casco, owned by Dr. Merritt, has been on some very long voyages, but none of the other yachts have gone further than Monterey or Santa Cruz. As for ocean racing we found out long since there was "nothing in it." With a rough bar at the outset it is discouraging for even the largest boats to start. Not that the yachts are not fit for it, for some of them are. But there is little sport bucking around in a heavy sea fit only for pilot boat work. To show that almost the same feeling exists East we quote the following from last week's New York Spirit:

There has been quite a persistent effort, since the return of the vessels of the New York Yacht Club from their cruise to the eastward, on the part of some few of the club members, to get up an ocean race for either the Brenton's Reef or the Cape May Challenge Cups, but so far as can be learned, this has met with but slight encouragement from the yacht-owners, and it is hardly probable that either of these races will be sailed. The fact is, yacht-owners don't care to go to sea, and the more experience they have of ocean yachting, the less they like it. It is not that there is the least distrust of their vessels, for there are few of them but what could safely cross the ocean if such a trip were required of them, but there is neither pleasure nor sport in ocean yachting in any month, and certainly but little can be expected in the month of October. The previous races for these cups have proved nothing as regards the sailing qualities of the boats which started, and have been determined largely by luck.

The race, for instance, between the Dreadnaught and Palmer, some years ago, for the Cape May Cup, was won by the Dreadnaught, although the Palmer was the fastest boat. That between the Atlanta and Idler on a subsequent occasion was won by the Atlanta purely by a "fluke." The Idler beat the Atlanta seven minutes in the beat from Bay Ridge to the Sandy Hook Lightship, and then, after the start, the Idler got becalmed close in shore, and the Atlanta, a mile or so further off, kept a light air and fanned ahead, and got a lead of four or five miles to the lightship on the Five Fathom Bank, turning it just as a fresh southwest wind sprang up, and with a northerly tide just making. By the time that the Idler reached the mark, the Atlanta was hull down on her way to New York.

We remember the races of the Idler, Deadnaught, Vesta and Rambler; of the Resolute, Vesta, and another, of the Dauntless and Resolute, etc., all around this Cape May mark, although not all for the challenge cup, but in every instance, except, perhaps, that of the Dauntless and Resolute, the boat which won did not do so on her merit, but her success was largely due to luck.

And as with the Cape May races so with those around the Brenton's reef lightship, the most notable of which were between the Madeleine and Rambler, before the Rambler was lengthened. Both of these were won by the Rambler, but there can be no doubt but that the Madeleine was the fastest yacht. If these cups are to be sailed for, the races ought not to be fixed later than September 15, and the latter part of August would be a still better time.

It would be a good thing, we think, to fix a day for each at the beginning of every season, just as the date is fixed for the annual cruise or for the June regatta, then the owners could arrange beforehand, and we think each match would fill. The nonsense talked and written about the desirability of ocean yachting, is, in every instance, from men who know nothing about it. Certainly no sailor would advocate it; but a couple of such races might, we think, be sailed each year, if for no other purpose than to show how infinitely superior the sound is for pleasure sailing to the ocean. Next season then, at the meeting when the date is fixed for the annual regatta, let the dates be fixed for these cup races.

Of course, after they shall have been won, the yachts winning them will hold them until challenged, and as they are the seeds, so to speak, out of which grow other cups, their acquisition is not to be despised. Formerly they were of the nature of elephants, and the winner had to hold his yacht ready to race at all times, with the cheerful chance of losing, but no counter chance of winning. All this, however, has been altered, and now the challenger must deposit with the Regatta Committee a certain sum of money, which, in the event of his not winning the race, is invested in a cup which becomes the bona fide property of the challenged. The owner, therefore, of a smart schooner may extensively ornament his sideboard by reason of successfully holding one of these cups.

The model yachts have not been heard of much lately. At one time there was quite an enthusiastic crowd of model sailors and many handsome little craft were built. Now that one of the Oakland creek boathouses has come into the possession of one of the model yacht men, and the boats can be kept there, it is a pity that the sport is not resumed. If we recollect aright there were forty-one models in the second race which took place in Oakland creek. If some one were to start up the amusement again others would follow.

The yacht built for the Spreckels brothers by Capt. Turner was launched on Wednesday last from the yard on Channel street. The yacht is not finished yet and none of her rigging has yet been put in place. Capt. Cummings, the most skillful rigger in the country and who knows more about fancy work on rigging, etc., than any one around these parts, has charge of the gear. He is superintending the work in the loft. When this yacht is finished her sailor work will excel that of any in our waters.

This has not been a very brilliant yachting season when we take into consideration the fact that there are two clubs here and a good many yachts. It wants a good strong pull all together to keep things lively, and this year there has been a good deal of pulling the wrong way. Until all the petty differences are overcome the yachting fraternity need not expect any great revival of the sport.

It is not any longer safe to leave yachts in Mission bay or other unprotected places, as a southeaster may come at any time. Unless there is some one aboard to look out for things there is danger of accident. Even with good ground tackle it is not all right, for some one else may not have good tackle and drag them foul.

The sharpie Daisy is lying alongside of the Casco but is not used much.

The Golden Gate Yacht Club accompanied by their lady and gentlemen friends will hold their last sail this season on Sunday next, October 29th. The yacht Lillie, sailed by Wm. Schwerin, will carry the party to the Sausalito Club House, where the usual lunch will be served.

The race which came off last Saturday was not finished, owing to the lack of wind. The Whitewing and Chispa tried to go over the course, but at half past four they had only got as far as the ferry slip on the way to the fort and there had to give it up. It is not probable that any more races will take place this season.

There will be a trip to Vallejo by the San Francisco to-day after the dance at the club-house at Sausalito. Many of the yachts are laid up so there is not expected to be a large attendance on the cruise. The dances of the club are good, however, and there is always a first-class crowd present.

Commodore Macdonough has laid up the Aggie for the season in the Brooklyn basin at the upper end of Oakland Creek. She will probably be kept there all winter as the winds are now so light that it is hardly worth while to keep so large a yacht in commission.

The calm weather has played havoc with the yachting in this bay of late. Yachts have been caught out late and some of them have had to stay out all night.

The Mist has been laid up for the season in Oakland Creek. She has been covered all up with canvas and some other stuff to keep her from drying up in the sun.

The Elia is going up with the fleet to-day. Mr. Berry is one of our most enthusiastic yachtsmen, and keeps his little craft moving as much as possible.

The Spreckels yacht will probably be used some this winter and will be all in good trim by the opening of the season.

Some of the Eastern yacht clubs have social gatherings in the winter. The South Boston is one of these.

The Startled Fawn has been hauled out of water for the season on the ways over on the Potrero.

The Violet is lying below bridges in Oakland creek. She has not been used much this season.

The Emerald has been on the ways this week being cleaned for the Vallejo cruise.

The little Ariel has been leaking badly but it has now been stopped.

ROWING.

The Boston Herald says of the regatta at Lake Massabesic, N. H., October 3: The main race was between George W. Lee, of Newark, George H. Hosmer, of Boston, and James H. Riley, of Saratoga. The Saratogian was not rated very highly in the pools, but his more favored competitors were aware that he had good days and bad ones, and that he was just as liable to appear at the floats strong, fast and with good staying power, as he was any other way, and hence looked upon him with respect and distrust. "Jim," said Lee, just before the race was called, while Hosmer, Lee and Riley were resting under a wide-spreading tree near the lake, "George and I will put in \$25 each, and you put in \$25 more, and go and beat Driscoll. You can do it to-day." Whether Riley was suspicious of the offer, or thought he was a good enough man to be a winner, it was impossible to divine, but he rejected the offer, and in the race paid more attention to Lee and Hosmer than he did to Driscoll. Indeed, they paid the greatest attention to him, for, on the way to the upper stake, he gave them both a capital race, and rowed as well as he has at any time this season. Lee and Hosmer made a desperate and successful effort to get a lead on him, and when they had done so they flanked him in such a way that he was badly pocketed, and could only get out of his predicament at their own sweet wills. He made a game race, however, and was well up with them when the stakes were reached.

Hosmer turned first, Lee closely following him, and Riley third. The race was then over. Indeed, the only race witnessed was in the early part of the race, when Hosmer and Lee strove to get Riley in the pocket. Lee made no further effort to get to the front. Near the finish he put on a spurt, as also did Hosmer, and the crowd cheered lustily, but, as the result was controlled by the money in the pool box, and the race had been arranged for Lee to lose, in the interest of honesty between those who were dishonest, it became necessary to carry out the agreement. Riley made a grand struggle at the finish, and gained rapidly on the leaders, and it was thought by many that he finished first, but he completed the course outside the line of floats, and was disqualified. Driscoll who came in fourth, made the same mistake, and was also disqualified, the third prize going to "Big Pat." First and second moneys, whatever they may be, were awarded respectively to Hosmer and Lee. The time was not officially taken, but was reported to be about 18:3. Of course there was a wrangle following the announcement; hard things were said and severe reflections made, but "the decision of the referee was final and without appeal."

FLOCKING TO CALIFORNIA.—John A. Kennedy, who is matched to row Haulau next summer, will probably winter in California and train on San Francisco Bay so as to be ready for the opening of the boating season in the spring. F. Davis, brother of M. A. Davis, the noted Portland oarsman, is now in the city and last Sunday watched the practice of the three crews that are to take part in the race for the BREEDER AND SPORTSMAN cup. Mr. Davis was amazed by the climate of California at this season of the year with its warm days that can only be equaled by the early September weather of the East. Mr. Davis thinks that Kennedy will be here soon. It is likely that in a few weeks Jack Lorgan, the famous English sculler who beat Laycock and Pearce on the Thames last summer, will arrive from Australia with Fearn, the champion English swimmer. Lorgan will stay in California while awaiting the opening of the boating season in the East, where he intends to try conclusions with Hosmer, Riley, and if successful with the second class men to fly at higher game. Fleming, the California champion, will have an opportunity to test his speed and endurance with Fearn when that celebrity shall have arrived.

THE CHALLENGE CUP.—The Pioneer Club has at last decided on its crew for the race on Thanksgiving Day for the BREEDER AND SPORTSMAN'S cup. John Sullivan will be stroke, R. C. Lyne will pull No. 3, or R. Crowley will pull No. 2 and

Mike Long, the veteran bowman of the Pioneer Club, will occupy the first seat. The crew is a strong one and pulls in much better form than any other crew that has been got together by the Pioneer Club. Whether they have the necessary pace is a question that can only be decided on Thanksgiving Day. The Ariel four consisting of Corcoran, stroke, the Branch brothers in the waist and Leander Stevenson at the bow oar are practicing regularly, but they do not appear to make the headway necessary to carry off the trophy. Last week a scratch four in an old wooden boat took three lengths from them over the mile and beat them out, but whether the racing four were extended all the way is not certain. If they were they will have to mend their pace a great deal to get the cup. The Golden Gate four show form and are regarded by the Long Bridge men as sure winners. They had a brush last Sunday with the Pioneer crew but to a close observer it looked as if each crew was waiting for the other.

Hanlan's New Boat.

A number of prominent oarsmen met yesterday morning in the shop of "Bill" Olliver, at Harlem, to witness the laying of the keel of a new shell boat for the champion rower of the world, Edward Hanlan. On Sunday last Hanlan, while rowing on the Harlem, asked if there was any builder that understood the fitting of Clasper's patent "fin," a device for the steadying of the boat in windy weather. The person whom he asked replied: "Oh, yes; Bill Olliver used to be Clasper's right-hand man." Hanlan forthwith made the acquaintance of Olliver, to whom he stated just what he wanted, adding: "You can take your own time about the building of her. I won't need her before the spring." The boat ordered by Hanlan will be of Spanish cedar, thirty-one feet six inches long, eleven inches wide, and will weigh when finished twenty-eight pounds, rowlocks included. She will be fitted with three water-tight compartments, the bulkheads being at either end of the cockpit, so that in case the boat should ship a sea the water would remain in the cockpit, the strongest part of the boat, as well as being the most convenient place in the boat for weight-carrying. The patent "fin" is an arrangement similar to the centerboard of a sailing vessel. It is of steel, one thirty-second of an inch in thickness, twelve inches in length and three inches deep. It is placed about four feet from the stern-post in a water-tight brass well and is fitted with notches and can be lowered and raised at will, according to the state of the weather. This boat, when finished, will be the first ever built in America fitted with the "fin."

Hanlan said to a World reporter that he had seen the watermen on the Thames and Tyne use the contrivance with good effect, and first used it himself in his race with Trickett, when he rowed for the Sportsman Challenge Cup. He was so well pleased with it that he bought a half dozen of the fins. He had found the fin much more efficacious than the "windsail," which is an American patent, and that a rower using the fin had no one-hand rowing. The fin, if down, of course militates against the rounding of a stake-boat in a race rowed with a turn, but this difficulty could be in a great measure obviated by raising the fin one or two notches, while that part of it which was down, though small, indeed, would be of more service than the windsail. In a race rowed before the wind its use could be dispensed with, and though made of steel, the weight was not more than that of the wooden windsail.

Elliot, the ex-champion of England, who was defeated by Hanlan for the Sportsman Challenge Trophy for the first time on June 16, 1879, and rowed the course from "Mansion House to Scotswood Bridge" in 21:01, the fastest time on record, was present and told the World reporter that he was in fine condition for his race on Monday with James Riley, and was confident of winning. He also said that he had made another match with George Gaisel, whom he recently defeated, the race to be for \$1,000, to take place on the Passaic River, Newark, on Monday, the 23d inst., the distance to be three miles—one and one-half miles with a turn. He was so confident of winning both of these races that he had forwarded to the "Old Country" a challenge to row any man in England for the championship and from £100 to £500 a side. He would in all probability return to England immediately after his race with Gaisel, provided nothing of importance occurred to detain him in this country.—World, October 15.

PROPOSED SCULLERS' RACE.—A sweepstake race on Thanksgiving Day over the Long Bridge two-mile course is proposed. Pat Brannan has signified his readiness to enter and hopes to meet Denis Griffin who has been loud in his newspaper declarations of a desire to row. Mr. Griffin does not come to the center and cover Mr. Brannan's deposit for a race for large stakes but he may have no objection to the sweepstake arrangement where a fair purse can be won by a small outlay. The proposition is to make the entrance fee \$20 and let the winner take the purse. The Pioneer Club will give three entries including Pat Brannan, who desires to show that he can lower Griffin's colors. He means business and the Golden Gate sculler can hardly afford to let an opportunity for a race pass.

The Harvard scratch races, discontinued for some years, were revived this fall and some exciting sport was seen on the Charles river in front of the Harvard boat-houses. Three races were announced for Senior eights, Freshmen eights and single working boats, but the second event on the programme was given up. The course was a short one, beginning at the Western avenue bridge and finishing at Stickney's lumber wharf above the boat-house. There were four entries for the Senior eights. Just before reaching the finish No. 2 and No. 3 crews fouled badly and by direction of the judges all but No. 4 were directed to row over the course again. In the second trial Capt. Burch's crew dropped out at the boat house and Capt. Hammond's crew won by three-quarters of a length in 53s. The time in the first trial for the two leading boats was 58s. For single-scull working boats there were three starters, who took positions as follows: T. R. Agassiz, J. Lawrence and Penrose. The first named won in 1:35. Penrose was second.

If you are a farmer be a good one. Farm well. Have a good orchard, good garden, good stock, and an intelligent family. Be intelligent yourself, and thus secure the respect of all who know you.

For Sale.—The target used by the American rifle team. It is slightly injured by exposure to the weather, but otherwise it is as good as new.—Chicago Tribune.

It will not be long now before the birds will begin to come in plentifully and we shall soon begin to record big bags from all quarters.

THE GUN.

He Thought They were Geese.

For some little time the farmers along the various lines of railroad in this State have noticed a strange and unaccountable mortality among their sheep. Every month or so they would find from six to a dozen ewes or bucks wrapped in the cold embrace of death and without any apparent cause. Long the shepherds wondered and long the farmers murmured. Men were discharged and replaced by others whose character was so good that it could withstand the most suspicious appearances. Dogs who labored under the slightest suspicion of being sheep biters were instantly suspended from duty and by the neck; a double lookout was kept for snakes and cayotes but all was in vain, and day by day the wail of the sheep men was heard in the land as they sorrowed for mutton that had flown and lambs that would gambol no more. Rewards were offered for any clue to the nature of the disease and the Academy of Sciences and the different agricultural societies were requested to lend their brains to the task of solving the riddle. They all failed ignominiously. Now we do not for one instant pretend to possess more sense than the aggregate of all those learned men, but we rather flatter ourselves that we tumbled to the racket, so to speak, just as soon as we heard of a little incident last week. One of the clerks in charge of the railroad pay car is a rubiginous, albeit a pleasant youth of athletic proclivities and sporting aspirations. On the running path and on the diamond field for ball he has shone like a brilliant meteor.

As an oarsman he has pulled races without fear (of a ducking) or reproach (of having beaten a smaller man than himself.) As a boxer he was thought to be the only local champion worthy to pit against the heroic Sullivan, the great Bostonian bruiser. Elated with all these athletic triumphs he recently purchased a gun and commenced to "banger." As the car in which he traveled on his various errands would be whirled along the great San Joaquin plains, he would leave his fellow clerks to watch inside while he would group himself upon the platform and bang away at every animate thing that came within 100 yards of the track.

A few days since his fellow clerks noticed him firing point blank into a flock of sheep. One of them went out and asked him what he meant by such improper conduct.

"Why, there is no harm in that," said the shooter, "any man can shoot wild geese in this part of the State."

"Great God, man, you don't mean to say you mistook them for geese? why, they are sheep."

Upon receipt of the startling intelligence the shooter, who is nearsighted, procured a glass and looked long and earnestly at the startled flock, while the boys waited around anxious to hear what he would say. At last he laid the glass down and quietly remarked: "Well, they are sheep but all I can say is that I have been shooting sheep like that for geese for the past three months."

He has put his gun away and vows he will never shoot again, but it is more than a waiter's life is worth to ask him at the table whether he prefers wild geese or mutton.

Domesticating the Ruffed Grouse.

It has been a matter of general belief that the ruffed grouse, more familiarly, though erroneously, known as partridge, could not be domesticated. Several instances that have been made public during the last few years in regard to tame birds of this species seem to disprove this theory. One of our exchanges, the *Catskill Examiner*, thus describes an occurrence of this kind:

"We believe that the partridge can be domesticated. An attempt was made some years ago on Long Island, which was partially successful. In severe winters at the West, during heavy snow falls, they have been known to approach granaries and barns, and to feed in common with poultry. We had, several years past, a somewhat singular experience with a single specimen of this shy bird, which may be worth relating, as it is a strong proof of the possibility of their domestication. One evening we found a full grown partridge under some currant bushes. It was a strong, fine bird, and did not seem afraid, although after the habit of its kind, it was quite watchful. We easily captured it by hand and caged it, but its efforts to release itself were so severe that we resolved to give it its liberty. Strange to say, it seemed grateful, and allowed quiet handling. We had several broods of young chickens, and at feeding time it regularly appeared among them for its portion of food. At night it made its home on a low grape trellis, and on occasions of any one passing beneath it would make a slight noise and would permit a touch of the hand. A bit of red color in a dress or in any other shape always seemed to excite it, and it would chase the children up and down the garden walk as long as the offensive color was displayed. As cold weather approached the bird sought warmer shelter, and found a roosting place in the chicken house very near the fowls. He had remained with us nearly the entire summer and suddenly disappeared, the probability being that he was stolen."—*Turf, Field and Farm*.

DEATH OF CON ZINGG.—Con Zingg, the well-known gunsmith, and fancy rifle-marksman, died Thursday morning, after many months' illness from pulmonary troubles. For the last few years he has devoted much of his time to the shooting-gallery business, having had galleries at Sacramento, Stockton, Santa Cruz, Salinas, and at other points. He recently reopened a gallery in this city, in the Hensley House Block, in charge of Billy King, who has been his head man for many years. Mr. Zingg was a kindhearted gentleman, well liked by a host of friends. He was a most skillful and ingenious worker in iron or brass, having made a remarkable contrivance known as "The Soldier's Dream," with moving images, etc., as an attraction for his galleries. It is a masterpiece of mechanical skill. He was on the streets only a few days ago, and held out bravely and patiently till the last. —*San Jose Mercury*.

HUNTING IN MARYLAND.—In ye olden days, before the "little unpleasantness," the vales of Maryland used to echo to the deep baying of the hounds and the cheery music of the huntsman's horn; but of late years the noble pastime has been little patronized. It is therefore pleasant to read that the old fire has been rekindled, and the reawakened enthusiasm is likely once again to make popular a day with the hounds in Maryland. Several packs of good dogs are now owned there, and the farmers are taking quite an interest in the sport.

There are plenty of ducks near Alvarado but they are wild and fly high.

Wild Fowl Shooting.

Bring out the trusty beech-loader and let us hear the click of the lock once again. "They shall be sweet music to our ears," as Charles XII said at Pultowa, as the screaming shot and shrapnell were flying over his head. For the next five months we shall hear the scream of the wild fowl on the crisp, wintry air as they wing their southward flight back from the vast fens of Alaska and the lonely glens of Onineca. Listen to the clang of the strong-winged phalanx above us.

Hawuk, ee-hawuk! and for'ard
From the frozen land to the nor'ard
They fly in their goodly come,
What lazy goose can lag,
What struggling gander flag,
As they come from the frozen zone?
And so they tear the cleaving air
With pennons fierce and strong;
O'er clouds they leap thro' the vasty deep,
The vaulted dome along.

No other land has such wild fowl shooting as Oregon. She boasts of the fine ducks of the southern waters, canvas-back and pin-tail particularly, and all those of the New England shores, except the great black duck, which is as black as a mallard and fully equal to it in flavor. The mallard breeds with us and so does the toothsome little teal, and therefore it is right that these varieties should be protected by law; but it is a grave doubt whether there ever was a canvas-back or pin-tail hatched in the State of Oregon. And certain beyond the shadow of doubt is it that the widgeon is an Arctic bird in its incubation and the rearing of its young. In the bright summer days when the parent mallard is croaking in the slushy fens of the Swinomish or the broad lagoons of the Pen d'Oreille, then the widgeon is nestling her infant brood in the wilds of Alaska where the white man's gun is never heard. Hence legislation in favor of these birds is needless, as a means of increasing their numbers.

Down in California the widgeon is about as abundant as all the other varieties of the duck tribe put together. The flesh has a sedgy taste, as compared with that of the mallard, and is vastly inferior to the pin-tail and canvas-back. Wherever mallards are worth one dollar per pair you should be able to get pin-tails for \$1.25, canvas-backs for \$1.50, and widgeons for seventy-five cents. That is about the way our markets run, and you will be surprised to learn that in New York the canvas-back is never sold for less than \$2 a pair and from that to \$3. The Baltimoreans claim that they have the best oysters in the world, which we are willing to concede. They also boast of the best canvas-backs in America, which we deny. The Oregon bird is just as delicate in flavor, and uniformly fatter. The wild celery of the Potomac is the boast of the Baltimore epicures, but we have seen nothing yet to make us "go back" on the wapato or water-artichoke of Oregon.

Daniel Webster and Henry Clay, both noted for their *haut gout*, used to quarrel like grizzlies over the relative merits of the canvas-back and pin-tail ducks. Mr. Clay espousing the cause of the brick-topped gentleman while Mr. Webster was equally enthusiastic in his advocacy of the duck with the long pennants flying from his quarter as he scudded through the chill and cheerless winter air. And as they were the best of friends it was always a mooted point between them. But they were very much edified once by a practical joke played upon a congressman named Ben Turrell, from one of the western New York districts, by Gilbert Davidson, of Albany, a business partner of Erastus Corning. Davidson had dined at a club in Washington at the time that the discussion on the duck question was at its very height between the two great Whig leaders. Among the guests at the club was Ben Turrell and he made the duck case the subject of conversation during dinner. Gil Davidson conceived the idea of a practical joke at the expense of the rural congressman. He arranged for a great dinner party on the following evening, and had invited the "mighty man of Marshfield" on the strength of an old personal acquaintance. He was not acquainted with Mr. Clay but knew Arnold Harris, who introduced him to the "Great Commoner." There were twelve covers laid, with raw oysters and Chablis to open the feast, followed by that genuine southern dish of terrapin and hominy. Then came the roast ducks—a pair of pin-tails and a pair of canvas backs. Mr. Webster had been posted and just as the first cork popped he was asked which kind of a duck he preferred.

"Pin-tail, Mr. Davidson, by all means," was his reply.

Gilbert then turned to Mr. Clay and asked what he would be helped to.

"Canvas-back, my dear sir," answered the sage of Ashland.

When it came Turrell's turn he also took canvas-back and said he never ate pin-tail.

"Can you tell the difference?" asked Davidson.

"Tell the difference," with a sneer of contempt, "of course I can tell it. A blind man could tell it easily."

It was then agreed that Mr. Turrell should be blindfolded and a piece from each duck placed upon his plate. While the bandage was being arranged, Mr. Davidson adroitly cut off a piece of canvas-back and slipped it over on the dish with the pin-tails. This done, the handkerchief was removed from Mr. Turrell's eyes and he was handed a plate containing two slices of roast duck. He cut off a bit of one, and chewed it with a complacent smile. "Ah, my dear little canvas-back, you're the jockey for me."

Mr. Davidson began to look serious, but Turrell took up a bit of the other slice and barely nibbled at it, saying:

"That confounded pin-tail. I would as soon eat sole-leather."

A roar of laughter greeted this remark and Ben Turrell looked askance at the company. He was reassured by Mr. Webster, who said, in his quiet way: "Mr. Turrell, both of those slices were cut from the same duck and for the sake of northern pride I regret to say that duck was a canvas-back."

A volley of laughter arose at this and Turrell got very red in the face. He never forgave Gil Davidson till his dying hour.

Canvas-backs should be roasted over a quick fire and never stuffed, like mallards or pin-tails, except in one way. If you can procure fresh mushrooms, not the canned trash for sale in our stores, then you will have something fit to stuff canvas-backs. Take two parts of mushrooms and salt them an hour before using them; then add one part each of stale bread and mashed potatoes. Mix them well together and cook the ducks ten minutes longer than you would if they were not stuffed. For canvas-backs there is but one gravy, composed of whatever fat comes from the birds while cooking, to which add a tumbler of port wine, a teaspoonful of salt and a saltspoonful each of cayenne and mustard. This is the recipe of Col. Jack Gambill, one of the greatest gourmands on the Pacific Coast, and the prince of jovial companions. Many's the good hunt we have had together in the tall redwoods of Mendocino, and many's the good dinner old Jack has cooked for me at the camp-fire, seasoned with that best of all condiments—a good appetite. What nights we have slept together in the woods, with such genial companions as Ned Cohea, Ward and Ira Eaton, Tom Battelle, Gen.

Jack Addison, Dr. Aylette and Jim Riddle. Old Jack marched along with his big ten-gauge gun, looking like Agamemnon born anew to conquer another Troy. Of all that party old Jack and I are the only ones alive. He is 72 years old and, for all that, the most erect figure and flashing presence that walks the streets of San Francisco. He has often promised me to come up and spend a week at the Swinomish flats, which lie between Puget Sound and Bellingham bay, but not a sign have I seen of Jack.

But speaking of duck shooting, I do hope to see the time when a sporting car will form a part of the trains out of Portland, for there is wildfowl shooting all along the Northern Pacific line, after you pass Wallula. As for the lower Columbia, the cheapest way is for a dozen companionable fellows to charter some little boat like the Toledo or Manzanillo and go down to the Willamette slough or on those sloughs back of Martin's island. The sport of shooting them is all that now enters into the consideration, for game is so cheap in our city markets that it will be found cheaper to buy mallards and canvas-backs than to shoot them. Some of the lands about Portland have assumed high values during the past two years, just because of duck ponds filled with wapato on those lands. Last year a new experiment was made by George L. Curry of this city, in planting the wocns which grows in the southern Oregon lakes and is said to be the mallard's favorite food. The mallard is not a fish-eating duck under any circumstances, though he is notorious for devouring young frogs during the spring months. The widgeon is a grass-eating duck and his crawl will show contents similar to those of the gray goose in seven cases out of ten. During the cold days when the ponds and sloughs along the Columbia are frozen over, the canvas-back takes himself to Shoal-water bay or Tillamook harbor, where he lives on young oysters; but whenever he feels the weather moderating, he will plume his wings for an inland flight and seek his favorite feeding-grounds in the Columbia bottoms where grows the succulent wapato.

No such devastation by wild geese prevails in Oregon as in California, and why I cannot well see. The geese have to fly across Oregon in autumn, and how they fail to visit her wheat fields and pull up the growing grain like they do in our sister state, utterly passes my comprehension. They gather in vast flocks in the counties of Butte and Colusa so that the farmers hire a patrol to shoot them and furnish ammunition and board to the hunters. From October to the last of February any good shot can earn sixty dollars per month in slaughtering geese on those large ranches. Strange to say, this great butchery of geese, so systematically practiced from year to year, does not seem to diminish their numbers. The only way I can account for the lack of like occurrences here is that the geese fly across here at night, for the most part. Now a big flock of honkers, if going before the wind, will easily travel fifty miles per hour; and three hours of steady flight would take them up into the "coast fork" country, where there are but few cultivated farms. There they can alight for rest and food, and then resume flight next day. It is calculated that two days' flight will bring them into the head of the Sacramento valley, where they go as they do on the Swinomish flats, snarrying hither and thither and alighting wherever they see no gunners. The flight of the mallard and canvas-back is very rapid and that of the teal swifter than either. Audubon computes it at nine miles per hour. All geese and ducks fly in a triangle, except the pin-tails, which fly in a sort of semi-circle. In all their triangular flights, the ducks and geese are led by a male bird who immediately towers aloft at the first sign of danger and the others follow him. Wild geese in Colusa sell at three bits a piece for "honkers" and two bits for white ones and brant. Two years ago a farmer of our acquaintance, who had put in 1300 acres of grain near Princeton, furnished ammunition and board to two brothers to kill geese, with the understanding that they were not to leave the grounds during daylight or while there was a goose in sight. These two young fellows were therefore obliged to hire a neighbor's lad to haul their game to Princeton and Colusa, and peddle the birds out of the wagon. At the end of the season they had something to show for it, as they plucked all the geese shot late in the day, cut out the breasts which they pickled and smoked, and melted the fat off the rest of the carcass. Their assets footed up as follows:

Game peddled.....	\$342 50
Feathers sold, 180 lbs, at 30 cts.....	54 00
Six barrels of smoked breasts.....	162 00
Forty pounds goose grease, at 25 cts.....	10 00

\$568 50

There never was any way by which those men would have made as good wages at hard labor on a ranch; but shooting geese day after day, in fair weather and foul, ceases to be sport. It is like eating broiled quail for breakfast every morning for a month. Nobody has ever begun to shoot geese in Oregon on a scale large enough to warrant the smoking of geese breasts, but they are for sale at several of our principal family groceries after January and, for a change, they are very toothsome. But in some parts of Lane and Linn counties, from January to April, the farmers are greatly annoyed by mallards and widgeons, which destroy the young grain. In England the use of fyke nets has been carried on for sixty odd years, especially in the fens of Lincolnshire, where thousands of these ducks are caught annually and shipped to the markets of London and Liverpool. The nets are never set in the day time, and the silly ducks never see them. Just at sundown they are placed in the little narrow sloughs and the fowler goes home for the night. Before daylight he is out with lantern in hand to empty his nets in which he finds many of his birds strangled to death. Before it is good daylight his nets are washed and hung up to dry, and he is picking his birds for market. Nets similar to these can be procured in New York at \$60 each, and I know of no better investment for a farmer who does not shoot. Speaking from the standpoint of a man who loves a good hard day's hunt as well as any man between the two oceans, I should not like to see nets introduced into Oregon; but if farmers want to be cheaply rid of wild fowl in their grain, that is the way to go about it. It means business. But my idea is that the best fun is to choose up sides, as they do at Albany, and have a grand battue at the ducks and geese, the losing side to pay for a champagne supper. This generally gives a good day's sport at a trifling cost and winds up in a social reunion where mirth and jollity prevail, till the clock hands, clasped together, warn you that it is time for sweet repose. One thing I hope will be kept in sight. That is, that no true sportsman will damage the property of any man upon whose grounds he may shoot; and every careful sportsman will look, before firing, to see that he does not hit some farmer's cattle or horses. Mr. Duper, of Wasco, has introduced a bill to amend the Trespass Act, and it provides very severe penalties. But an acquaintance of five years with the gentleman leads me to believe that he never would have originated such a proposition had not his fences been broken down and his live stock injured by a lot of conscienceless tramps whose motto is "devil take the hindmost." Every good man feels inter-

ested in seeing such fellows severely punished and especially when they make no effort to repair the damage they have done. But I must close for I hear the Larline's whistle and in two hours I shall be standing before the decoys. Dine with me on widgeon to-morrow at 5 p. m.—T. B. Merry in the Oregonian.

Gilroy Rod and Gun Club.

Through the kindness of Mr. Henry Miller of the firm of Miller & Lux, the Gilroy Club has leased, at a nominal rent, the "Soap Lake" and its surrounding sloughs, with permission to put up a boat house and necessary buildings for the convenience of the club. Soap Lake, as it is named, was in early days a great resort for native Californians to obtain an alkali for making soap. It is much frequented by ducks and geese, also snipe, and a few years ago they might be counted by the millions, but market hunters and promiscuous night shooting—that deadly practice of driving off game—have almost ruined the lake for hunting purposes. It is the intention of the club to protect and preserve the game in the lake, and while they have no idea of denying to any honorable sportsman a day's enjoyment in hunting, they are determined to put a stop to wholesale pot hunting and night shooting. They also intend to stock the lake with carp and catfish, for which the water is fortunately adapted.

Mr. Miller, who, as well as his untiring energy in business, inherits the love of sport natural to his countrymen, offers to assist the enterprise in a pecuniary as well as personal sense. He speaks feelingly of the time when he first entered upon his ranch, how he could ride on the hills and see deer running round and flocks of quail in all directions, where now it is a blank as far as game is concerned. He intends to restock the ranch, import Bob Whites from the East and make it what it used to be, a sportsman's paradise.

A Plea for the "Pot Hunters."

LOS GATOS, Oct. 23, 1882.

EDITOR BREEDER AND SPORTSMAN: I frequently observe sneering allusions to "pot hunters" in the newspapers, and I have observed that the BREEDER AND SPORTSMAN is no exception. I would like to ask a few questions of these superior beings, the lordly professional sportsmen, who look down with so much contempt upon those who use the gun to win the daily bread for themselves, their wives and their little ones: Is it any disgrace to hunt deer or quail or other game with the object of making an honest living instead of merely as an idle pastime? Is it a disgrace here in America to be obliged to labor for one's bread? Are the game laws of this country made exclusively for the benefit of an aristocracy of "professionals" who occasionally leave the counters and desks of dingy San Francisco offices to enjoy a day's sport in the hills, or are they, as I had supposed, passed principally with the object of preserving and fostering an important source of food supply?

I observed the other day, in the "Rowing" column of the BREEDER AND SPORTSMAN, an able article on the treatment received by the Hillsdales in England, wherein some English writer was quoted as having sneered at American alleged amateurs because, instead of being made up of professional men, they were composed in part of artisans and mechanics, whom English gentlemen could not afford to associate with as equals. I was pleased to see the position taken that the mechanic in America was just as good as the lawyer or the bank clerk, if not better. Will not the same idea as properly apply in the "Gun" department of your paper as in the "Rowing" department, or are we to have one code of heraldry for rowers and another for gunners?

For my own part I fail to see the justice of game laws passed by the State if they are passed exclusively for the benefit of professional sports. If the "pot hunter" is without the pale of the law, or if, obeying the law, he is to be looked down upon as something akin to a sneak thief, and regarded with contempt by a class who ape the manners of the aristocracy of the old world, I fail to see the justice of either such law or such practice. During the close season the farmer morning after morning looks with rueful face at his desolated melon-patches and girdled fruit-trees, destroyed by deer against which he cannot fence and which he is not allowed to shoot. His ripening grapes are devoured by the acre by quail. Yet he submits, and we hear no protests against the law, because he regards it as one of those instances where one class must suffer for the general good, and while the crops for which he has toiled are ruined he considers that it is for the preservation of one of the important food resources of the country. If he is here in error, and if the principal object of the law is to afford a pastime for the clerks and barkeepers of the cities, while "pot hunting" is to be frowned down, I think the patience of the farmers is expended in the wrong direction. AGRICOLA.

W. Golcher, Jerry Browell Jr., Al. Higgins and Dr. Kane braved last Sunday's heat and went to the quail grounds near Mission San Jose. Mr. Golcher bagged eight quail which was all that was killed that day. As the San Jose farmers are now taking the precaution to pen up their poultry from Saturday evening to Monday morning—to prevent accidents—so the hunters returned without anything to show for the trip.

At Alvarado near where the beet sugar refinery is situated is a favorite feeding ground for English snipe; these birds seem to be quite fond of picking over the refuse from the refinery. Mr. Putzman and Mr. Hoffling were down last Sunday and bagged forty-five snipe.

Messrs. Haskell and Adams were on the Brooklyn marshes last Sunday forenoon and had good luck, taking into consideration how many hunters there were shooting on these marshes. Twenty-two birds were bagged between the two.

There are a great many ducks in the marshes near Melrose but they only stay during the night, and on the report of the first gun in the morning they take wing in a body and fly out into the bay where they remain till nightfall.

F. Butler and W. Richards were at the Cordelia Club's preserve last Sunday and say they bagged 100 ducks. These gentlemen are pretty good shots or else the birds came in livelier than usual.

It is now the fashion in France for the ladies to go out shooting with their husbands and brothers. France takes the lead when it comes to starting new fashions, or reviving old ones.

The early appearance of wild fowl in the vicinity of New Orleans presages an equally premature winter according to the theory of "weather-wise" gunners in that region.

The Shooting Season.

So far this year this season has been a failure, as far as hunting is concerned, though not too far has the season advanced yet but that it may be interesting before the close. Just before the opening most encouraging reports came from all parts of the country—quail on the hills and in the valleys, ducks plentiful in the marshes and innumerable deer in the mountains. As far as deer hunting is concerned, many have been killed and it is well that there were no more of the beautiful animals slaughtered. On the first day of the season a perfect tornado of flying lead burst upon the unsuspecting game. For a day or two large bags were secured; then the quail gathered together their thinned ranks and flew to the brush and woodlands, since when but few large bags have been made.

With the water fowl it has been nearly the same; only those birds that raise their young in the marshes have been killed. There have been but few flocks of migratory birds in yet and every stray incoming flock has been looked upon by the hunter as the forerunner of large numbers to follow. The season in the far north has been exceptionally mild and the feeding grounds are still good. Anxiously are our sportsmen waiting for heavy frosts and chilly winds to freeze the lakes and rivers of the north and drive the feathered wanderers to our warmer and pleasanter clime. Well can be applied the words of Bryant:

Vainly the fowler's eye
Hath marked thy distant flight to do thee wrong,
As darkly seen against the crimson sky
Thy figure floats along.

to the individual with gun and dog who has lain in his hunting boat or behind the "blind" so long, in vain, watching the western sky for a flock of canvasbacks or honkers on which to show his ability as a hunter. From all indications there will be a change in the weather soon and the waiting of ambitious sports will be of short duration.

Nothing makes an old hand madder than to find himself on the marsh near some green hand who begins whacking away right and left before it is light enough to see to shoot properly in the morning. Some men think that when they hear the rustle of wings near their blinds it is incumbent on them to shoot on general principles. It is not only a waste of powder and shot but a positive damage. The ducks are much more frightened at the flashes of the guns than they are at the sound of the discharge. When therefore careless men blaze away too early the ducks are frightened off the marshes into the bays. No one should ever fire before the dawn is sufficiently advanced to prevent the fire of the guns from being plainly seen. Most old hunters understand this but many new men have not had it explained to them.

Mr. Precht was up last Sunday near Nevato and had some good shooting. All kinds of game are plentiful. In a few hours he bagged seventeen English snipe, nineteen quail and twenty-one ducks; most of the latter were sprig and they were fat and in fine order. There are a great many deer in the hills but they are hunted most mercilessly by a party of Frenchmen from San Francisco, who repair to the hills every Sunday with their hounds and chase, as we understand, everything that starts up. One market hunter has killed over forty bucks this season in this vicinity.

A warm discussion is going on in the New York papers as to the alleged cruelty of fox-hunting. One of the writers tells the story that the late Thomas Ashton Smith, an Englishman, on being reproached by a clergyman for being so cruel as to hunt foxes, made answer: "My friend, the men like it, the ladies like it, the dogs like it" and the horses like it, and who the devil ever heard a fox say he didn't like it? So why should we stop it?"

During the past week the markets have been better supplied with game of all kinds than they have been before this year. Nearly all the ducks come from the San Joaquin and Sacramento rivers, and they are mostly small birds, teal, widgeon and sprig. When the street hawkers begin their cry of "Wild game!" as they have already, the boys can begin to put on their rubber boots and start for the marshes.

There are quite a number of deer in the hills back of Congress Springs. One individual—a market hunter, by the way—who sports the soubriquet of "Buckskin Joe" killed as high as eight deer in one week a short time ago. This was a fair week's work for him and the question naturally arises: "Does he kill bucks only?"

Mr. Jas. B. Brown and party have been over near Monticello and have had good luck in deer hunting. They have been out a week or ten days and have killed seven deer. Mr. W. J. Shrieve who has the gun store on Montgomery street was the recipient of one-half a buck, the nicest piece of venison he has ever tasted.

At the Alameda County Sportsman's Club's preserves at Mallard Station there has, of late, been some very good shooting; hunters are bagging from twelve to twenty ducks a day. The club has recently formed a new constitution and code of by-laws.

Messrs. Misner, Hammell and Fine saw a California lion while hunting near Novato one day last week. Novato is a fine hunting resort, as all kinds of game are plentiful in that neighborhood.

In a two days' shoot last week, near Petaluma, Messrs. John Andrews and H. A. Foster of Petaluma killed twelve dozen quail and forty-three hare—and it wasn't a very good day either.

At Los Gatos there are but few quail, though at the opening of the season they were quite numerous. The market hunters made it so lively for them that those that are left are very wild.

The Cloverdale *Reveille* says that F. W. Merritt and Wm. Larrison killed twenty-five deer this season while going to and from their work near the Geyser toll road.

A deer milk white in color was recently sent from Maine to one of the dealers in quincy market, Boston. It is said to be the first albino ever seen in that city.

Dick Brooks and Chas. Dall were at Sherman Island last Sunday and bagged sixty duck between them.

Mr. John Pollock was up at Union Island last Sunday and killed twenty-one ducks and one honker.

Mr. F. Bender was down at Alvarado last Sunday and came home with twenty-four ducks.

A few flocks of geese have been seen in the marshes in the vicinity of Petaluma.

The Teal Shooting Club at its hunting preserve on the Suisun marshes killed in one month 1,007 birds—this from Sept. 15 to Oct. 15. At this rate the shooting has not been at all bad for it is yet early in the season and the best shooting has not commenced. The grounds of this club are amongst the best in the State. We recently gave a description of the preserve and the outfit of the club.

Sprig, teal and widgeon are plentiful for this time in the season up in the marshes, but the canvas backs have not begun to show up yet. All the shooters are waiting for the favorite "cans." Without a few "cans" a day's sport is not complete.

THE RIFLE.

Riflemen.

The greatest shooting tournament ever held on the Pacific Coast takes place to-day and will be continued till to-morrow evening. This, as we all know, is given by the California Rifle Association, an organization worthy of receiving the patronage of all riflemen and sharpshooters on the coast. The association was incorporated June 7, 1875, and, like any other organization that has existed seven years, it has seen its hard times. The first president was Col. H. G. Shaw. Under the management of this gentleman and the Board of Directors the association prospered for three or four years, when a change was noticed as riflemen took less interest in the tournaments and only a few of our military companies took part in the shooting. By examining old records the conclusions arrived at are that the old Board of Directors were a little too cautious in the matter of offering prizes and other inducements to get rifle teams into competition. Since the election of the last Board of Directors and with Col. J. Dickinson as President a new and livelier interest has been taken in shooting. The cash prizes, trophies and medals offered have brought to the front all the old teams and many other teams from distant parts of the country. A rifle team from Victoria, B. C., and another one from Washington Territory were intending to participate in to-day's shooting but both for some cause or other have been disappointed. Though the northern sharpshooters could not come down, the California riflemen have the pleasure of contesting with equally as good shots from across the mountains. The Carson Guards of Carson City and the Emmet Guards of Virginia City, Nevada, have sent representatives from their respective companies, to carry off, if they can, some of the prizes.

The visitors from Carson City are: Captain Crawford, Mr. Thaxter, Captain Parker, Mr. King, Sargent Saffell, Mr. Little, Mr. Slocum, Mr. Haskins, Mr. Cowing and others. From Virginia City come Captain Gallagher, Lieut. Galusha, M. H. Burk and J. C. Kane. It is to be regretted that business prevented two or three more of the best shots from coming down.

In our next issue we will give a full account of the California Rifle Association's fall tournament.

Company D.

Last Sunday the sixteenth annual target excursion of Company D, Second Artillery Regiment—N. G. C., took place at Shell Mound Park. The Company's medals and prizes were shot for but will not be distributed till one week from to-morrow. The rifles used were the U. S. Springfield. The winners of cash prizes and their scores on the public target were:

W. C. Erbin.....	12 12-24	\$20 00
J. E. Klein.....	12 11-23	12 50
F. Kuhls.....	8 12-20	10 00
J. C. Lohmeyer.....	10 10-20	7 50
L. Haake.....	10 10-20	4 00
Mr. Fortman.....	12 8-20	3 00
G. Reck.....	12 8-20	2 00
H. Steil.....	7 12-19	1 00

The S. F. Fusileers.

Last Sunday the San Francisco Fusileers, Company C., Second Artillery Regiment, N. G. C., held their last quarterly shooting for this year at the Shell Mound shooting ranges. The following are the scores of the riflemen in their respective classes.

FIRST CLASS.

1st, Sergeant Otto Lemke.....	4 5 4 5 4 4 5 5 5 4-45
2d, Corporal H. J. Mangels.....	5 4 5 4 4 1 5 4 4 4-43
3d, Private C. Scheurer.....	4 3 4 5 4 4 4 4 4-40
4th, Private F. Kuhls.....	3 4 4 4 4 4 4 3 5-39
5th, Private H. Petri.....	4 4 4 5 4 2 4 4 4-39

SECOND CLASS.

1st, L. Haake.....	4 4 3 5 4 4 5 4 5-42
2d, Sergeant D. Wurliern.....	3 4 5 5 4 4 4 3 4 5-41
3d, Sergeant P. H. Will.....	3 3 3 4 5 4 5 4 4-39
4th, Sergeant A. Huber.....	4 4 4 3 4 4 4 4 4-38
5th, Private Gloss.....	4 3 3 4 3 4 4 5 4-38

THIRD CLASS.

1st, Henry W. Frank.....	4 3 3 5 3 4 5 3 4 4-38
2d, Joseph Schmitz.....	3 4 4 4 3 4 5 0 5 5-37
3d, Corporal H. Schmeser.....	5 4 3 3 3 3 3 3 4 4-35
4th, Private J. C. Nobmann.....	3 3 4 4 3 3 3 3 3 3-33
5th, Private Schuelken.....	4 4 3 3 5 3 4 3 4 0-33

COL. BODINE'S REPORT.—Col. Bodine, who has been selected to act as Captain of the American Rifle Team in the International match of 1883, has recently given "an account of his stewardship" in the shape of a voluminous report, stating his views as to the cause of the recent defeat at Creedmoor, and making a number of suggestions for consideration by the Board of Directors of the National Rifle Association. He frankly admits that the American defeat was due as much to ineffective arms as to inexperience, and makes the astonishing confession that he merely acted as a figurehead, or "went through the motions"—as he expressed it—in coaching the team. The series of experiments by our riflemen, at a time when all should have settled down to careful practice, he condemns as unwise, but his foresight was not sufficient to prevent it.

CALIFORNIA SCHUETZEN CLUB.—October 15th this club held a prize shooting in Alameda Schuetzen Park for best center shots. All members fired at thirty-six-inch targets, distance 200 yards. Those shots striking the six-inch bullseye were measured and prizes awarded accordingly. 1st Prize Rahwyler; 2nd Bertelsen; 3rd Zecher; 4th Baerwald; 5th Jacoby; 6th Bremer Jr.; 7th Wertheimer; 8th Rapp; 9th Eckmann; 10th Bremer Sr.; 11th Roschel; 12th Strecher; 13th Boeckmann; 14th Hatje; 15th Krahman; 16th Bremer Jr.; 17th Hotz; 18th Adams; 19th Lingenfelsen; 20th Thompson; 21st Fischer; 22nd Hauser; 23rd Schurer; 24th Heeth; 25th Utchig; 26th Saeghorn; 27th Homeyer.

THE KENNEL.

Pacific Coast Coursing Club.

Last Saturday night the members of the Pacific Coast Coursing Club held their drawing of dogs to run at the fall match. The list of entries was not quite up to the expectations of the sanguine ones but it was fairly good considering the fact that the match was a club match and entries were confined to dogs actually owned by members of the club. The dogs were drawn as follows:

Old Dog Stake—First prize, \$70; second, \$40; third, \$30; fourth, \$20. C. Fowler's be b Delebut against W. Halpin's band w b Culverine.

C. O. K. Jeffcott's bd and w b Lady Bird against Mark Devlin's w and bd d Chief of the Canyon.

C. O. K. Jeffcott's be and w d Spa Boy against W. Shay's w b Theresa.

J. Egan's bd and w b Lady Franklin against J. C. Pennie's f d Duke.

T. Cronin's b and w b Minnie against M. Devlin's be b Tampete.

W. W. Sessions' b b Maid of San Francisco against F. Brady's w and bd d Paul Jones.

J. Dugan's bd and w d Foxhall against W. Halpin's be and w d Blue Cloud.

J. Dugan's bd and w b Sally Henry against J. C. Pennie's f and w d Cherokee.

D. L. Levy's f and w b Lady Plaipe against C. Fowler's b d Corruaway.

J. C. Pennie's bd d Longfellow against T. Cronin's f and w d Parnell.

Puppy Stake—First prize, \$40; second prize, \$20. T. Brady's bd d Lady Costello against W. W. Sessions' b and w d Chief of San Francisco.

P. K. Jacoby's b and w b Cassa Maria against T. Brady's b and w d Connaught Ranger.

M. Galvin's b d Bingo against T. Cronin's b and w b Lily of Killarney.

J. C. Pennie's b d Master Joe against M. Devlin's b and w d Michael Davitt.

When the time came to select officers to carry on the match the first named for judge was Sheriff A. J. Meany of Merced, whose kindness to coursing men visiting Merced is so well known as to be taken as a matter of course (this is not a joke). Under the rules of this club three judges are required and to look after Meany, J. Dillon and Chris Johnson were selected. Joe Stadfelt was selected for slipper, Mark Devlin President, Judge J. C. Pennie Vice-President, Charles Fowler Treasurer, J. J. Bryan Secretary, and for the important offices of field stewards M. Galvin, J. Brady and Charles Fowler were pressed into service. The members of the club and guests left San Francisco at 4 p. m. last Tuesday. The crowd numbered seventy-six, including a round dozen of ladies, and for their accommodation and that of the dogs two special cars were hitched on to the Southern Pacific local train. This was one car more than the railroad officials expected to be called on to furnish and though the train was delayed some time there was no grumbling and everything was done to make the jovial excursionists comfortable. Seventy-six ordinary people could ride from San Francisco to New York without raising their voices louder than that tone which gentlemen generally use to enliven the movements of a sleeping car porter, but with cursing men it is somewhat different.

As soon as the train started Mark Devlin and Judge Pennie who, under ordinary circumstances, are quite demure folks, engineered all the ladies and old fogies into one car and put the boys in the other. Then the fun commenced. An aggressive youth in paternally loud check suit bound with black braid, and who so persistently murdered what he was pleased to call his "aches" produced two instruments of torture, sometimes called concertinas from a valise and proceeded to inflict on the crowd a new version of "Sadie Ray," set to slow time. He was waited upon by a committee who offered him the choice of throwing his concertinas out the window or being thrown out himself. He refused both, and what happened then is best not told for fear some estimable citizen might be compromised. Suffice it to say, neither he nor the concertinas have been heard of since, unless the body picked up near Long Wharf yesterday should turn out to be his corpse. When he was gone a well-known member of the bar sang: "Wearing of the Green," while the boys chipped in with the chorus of "Marching through Gorgia." The other passengers on the train said they would willingly dispense with the serenade but when the conductor told them he had no power to interfere they either resigned themselves to their fate or got off at the next station to wait for Wednesday's train. By the time Lathrop and supper were reached the boys were so hoarse that peace was assured for the rest of the trip and a holy calm settled on the car, only broken when a dog chanced to howl or one of the jokers of the crowd smashed in the hat of a misguided man who thought he had a right to sleep. About 10:30 p. m. Merced was reached; but a description of Merced is so important a matter that it is necessary to commence a fresh paragraph.

The chief point of interest about Merced is the El Capitan Hotel, kept by a bloated aristocrat named Bloss, who has been the autocrat of Yosemite excursionists, so long that one naturally takes off his hat and bows to the ground before daring to ask for a bed. The man does not live brave enough to slap Bloss on the back and say: "Blossom, old boy, just fire this valise into No. 12 and tell that cursed cook of yours to fix me a rare steak."

Bloss is a stylish man in his dress; not quite so nifty as Ed Fay, the toney ginslinger of the Palace Hotel, but able to give points to Bank Commissioner J. M. Litchfield or Postmaster Backus. In fact, Bloss is so stylish and his hashery so vast that one scarce knows which is Merced and which is Bloss and the El Capitan Hotel. Since the southern overland road has opened and Bloss has a chance to bankrupt two sets of passengers a day instead of only one as before, he has grown so much in girth that it is hard to tell at times whether one is asking Bloss to give him a room in the hotel or asking

the hotel to furnish a nice room with a bay window in Bloss.

Merced also possesses a fine courthouse and school-house, besides a few stores and the finest lot of saloons to be found outside of San Francisco. The saloon business is the chief industry in Merced. When a sheepherder or a thresher hand has amassed \$100 he instantly opens a saloon in Merced and keeps it open until the Sheriff comes along and closes it. The duller the season the more saloons in Merced. So this year as the wheat crop is a half failure the saloon crop is booming. When Merced was the headquarters of the Yosemite travel and could not half a dozen tourists every day the people got high-toned and put on airs about such small places as Modesto and Stockton. But now that Yosemite passengers start from Madeira it is possible to find a Merced man who will admit that his town is not much bigger than London and New York combined. Pandango houses are a time-honored institution in Merced. What coin the saloons let slip they absorb. They are said to be very lively places, but your correspondent has no personal knowledge of them and has so far failed to find any San Francisco visitors who have paid them a visit.

The arrivals included over seventy members of the Pacific Coast Coursing Club, besides many visitors. On Wednesday morning these, with a very large addition from the population of Merced, repaired to the coursing grounds. The ground was in splendid condition for travel, the weather left nothing to be desired, and a finer day's sport is seldom enjoyed. The results of the day's racing were as follows:

Old Dog Stake, first ties—W. Halpin's Culverine beat C. Fowler's Delebut.

Mark Devlin's Chief of the Canyon beat C. O. K. Jeffcott's Ladybird.

C. O. K. Jeffcott's Spa Boy beat J. Shay's Theresa.

J. Sharp's Lady Franklin beat J. C. Pennie's Duke.

M. Devlin's Tampete beat T. Cronin's Minnie, after an undecided course.

T. Brady's Paul Jones beat W. Sessions' Maid of San Francisco.

M. Halpin's Blue Cloud beat J. Dugan's Foxhall.

J. Dugan's Sally Henry beat J. C. Pennie's Cherokee.

D. L. Levy's Lady Plaipe beat C. Fowler's Corruaway.

T. Cronin's Paruell ran a bye in the absence of J. C. Pennie's Longfellow.

Second ties—Chief of the Canyon beat Culverine.

Lady Franklin beat Spa Boy.

Tampete beat Paul Jones.

Sally Henry beat Blue Cloud.

Lady Plaipe beat Paruell.

Third ties—Chief of the Canyon beat Lady Franklin.

Tampete beat Sally Henry, after an undecided course.

Lady Plaipe ran a bye.

This concluded the day's out-door sport, but to write the history of the evening's doings, from the time that the grand attack was made by the tired and hungry mob on Bloss' larder to the time of the retirement of the last of the boys, would require more time and space than we are able to devote to it this week. Suffice it to say that the dog fanciers slept that night as only men can sleep who have ridden all day at break-neck speed over the rough plain prepared by Nature in California, and improved by squirrels and gophers, for the breaking of unwary horses' legs and riders' necks.

On Thursday morning the sport was renewed with the following results:

Old Dog Stakes, Final ties—Mark Devlin's Chief of the Canyon beat Lady Plaipe.

Tampete and Chief of the Canyon being both owned by Mark Devlin did not run off, but divided first and second prizes.

D. L. Levy's Lady Plaipe won third prize and J. Egan's Lady Franklin fourth prize.

Puppy Stakes, First ties—T. Brady's Lady Costello beat W. W. Sessions' Chief of San Francisco.

T. Brady's Connaught Ranger beat Jacoby's Cassa Maria.

T. Cronin's Lily of Killarney beat M. Galvin's Bringo.

M. Devlin's Michael Davitt beat J. C. Pennie's Master Joe.

Second ties—Connaught Ranger beat Lady Costello.

Lily of Killarney beat Michael Davitt.

In the final race T. Cronin's Lily of Killarney won the first prize, Connaught Ranger second.

The Consolation race was won by W. Halpin's Culverine, J. C. Pennie's Cherokee second, W. Halpin's Blue Cloud third.

C. Fowler's Delebut beat Maid of San Francisco in a private match for a heavy stake.

This closed the meeting and on Friday the special train brought home two car-loads of well-satisfied and thoroughly tired admirers of the noble canis.

Nice Points in Dog Law.

That extreme good fellow, the dog, has become rather an expensive companion to keep, and, indeed, when the "Friend of Man" costs 7s. 6d. a year, payable to the authorities of the Inland Revenue on the first of every January, the man, especially if he be a poor one, may have to acknowledge with a sigh that a four-footed friend is not one "for the likes of him," and surrender to richer folks the privilege of keeping dogs at all. At Worship Street Police Court last Saturday the valuable time of the magistrate was taken up with the hearing of over twenty summonses taken out by the Inland Revenue against persons who had failed to satisfy the authorities with respect to the payment of their dog-licenses. In one case the defendant pleaded that he was not the owner of the animal in question, but that it had belonged to his former landlord, and that the dog had "stuck to the premises." But the magistrate told this defendant that the person who is the occupier of the premises on which a dog is found is liable under the act to pay for a license, even though the premises should be only a portion of a house, and the occupier only a lodger. The defendant could not deny that he had fed the dog, although he added that he had tried to "stray it" and the magistrate, holding the fact of feeding to be a constructive "harboring" of the dog, fined the "occupier" five shillings. If the animal who "sticks to the premises," and who declines to be "strayed," be a dog of anything like right feeling, he will at once return to his right owner, and refrain from "sticking" to a place where his presence is obviously unwelcome.

Some of the defendants urged that they had taken out licenses late that year and that they thought the payment cleared them for twelve months; but it was explained that all licenses, even if taken out at Christmas, expired on the 31st of December. One defendant, however, triumphed over the tax-gatherer. This was a lady who stated that the dog in respect to which she had been summoned was not her property, but belonged to a lodger who was in her debt, and that she only held the dog as a security. The magistrate decided

that, under the circumstances, she was not liable, and the summons was withdrawn.—*London Telegraph.*

Gilroy Field Trials.

Mr. W. F. Whittier of the firm of Whittier, Fuller & Co. has presented to the Executive Committee of the Gilroy Field Trials a silver cup, value \$25, for the best brace of puppies run at the trials, the property of any member of the Gilroy Rod and Gun Club. This is a good beginning on the part of Mr. Whittier, who is a good judge of dogs and has had for some years the finest breed on this coast. The example should be followed by other wealthy sportsmen, as the only way to purify our breed of dogs is to let us see them perform in public, and by a union of judgment decide which are the best. Field trials are only in their infancy here and require the patronage and help of all good sportsmen to make them what they will be in a few years, a self-sustaining institution. No one can read the carefully reported account of the trials on prairie chickens at Fairmount, Minnesota, without being amazed at the vast improvement of a few years in the sporting dogs of this country, and we have no hesitation in saying that we can shortly throw down the gauntlet to England herself and challenge her with pointers and setters as successfully as we do with our high-flying racers that so completely astonished the aristocratic breeders at Epsom and Newmarket. We would suggest to our wealthy sportsmen—to whom the value of the thing is absolutely nothing—that they offer a prize for the best broke dog at the trials irrespective of natural qualities, and also one for the dog with the best natural qualities, irrespective of breaking. There are many dogs whose natural qualities are of the grandest description that from some cause or other will not break well for a public trial, and require more time than is usually allowed for a trial run off their superfluous energy and show their real merits. Take the great Countess for example, who in one of her early trials scampered over two or three thousand acres of grain, before Mr. Burkele, the best trainer in England, could whistle her in. Then again, take the Irish setter, he is generally so full of spirit and life that the time is up and he is put out of the race before he has really got a clear understanding of what he is doing, when, give him the whole day, and he will probably discount his antagonist. The trials are fixed for Monday, Nov. 27th, and we hope to see a good showing of dogs from this city; otherwise we shall be outdone by Portland, Oregon, which has already four entered.

Llewellyn's Setter.

The following letter to the *Turf, Field and Farm* will be of interest to many persons in this State, though open to considerable criticism:

You will oblige me if you can insert the following statements, which I desire to address to those American sportsmen who are interested in the strain of setters which bears my name:

I brought forward a protest before the committee of the Kennel Club, proving the impurity of Pride of the Border.

I also demonstrated the probability that my old Countess was sister to Pride of the Border.

The definition of a Llewellyn setter is, and always has been, the blood of Duke and Rhoebe (or of Duke or Rhoebe) with the Laverack.

I have proved, by the evidence I laid before the Kennel Club, that Pride of the Border was not bred as Laverack stated in his pedigree tables. Since the date when I laid that evidence before the committee fresh information has come to hand from Sir F. Graham and Ed Armstrong, and has been let out by the Laverack defenders themselves, which shows that the rest of the ancestors of Pride of the Border are bred in the same way as Pride himself, and that consequently all the descendants of these dogs have those same crosses in them.

Sir F. Graham states that Mr. Laverack bought his original setter bitch from Mr. Connell, banker of Carlisle, for £8 ss. and crossing her with his (Sir F. Graham's) strain, formed his breed.

Ed Armstrong states that Sir F. Graham is perfectly right in the above statement, and that the bitch alluded to was bought on his father's recommendation, and that Laverack made frequent crosses to his knowledge, from the late Sir James Graham's kennels, and from that of the present baronet (Sir F. Graham).

The evidence laid by me before the Kennel Club proved a very recent cross of red Irish blood to have been made by Laverack in his breed, and to this fact I wish to call particular attention.

The decision of the Kennel Club on my protest has given to these various crosses the right to the appellation, "pure Laverack."

The definition of Llewellyn setter was given and accepted several years previous to the date when the Kennel Club gave their definition of "pure Laverack."

It has frequently been pointed out by myself and friends, in American papers, that the red setters going under the name of "pure Laverack," are not such.

I hereby give notice that no dog that inherits this red blood however much he may be crossed with any breed has a right to the name of "Llewellyn setter," except under protest from me.

The dogs so-called pure Laveracks having this red blood, and whose descendants are thus barred, are Laverack's Mystery, Ned, Hollin's Tory.

The reason for the above action I shall be ready and desirous to explain to anyone interested in Llewellyn setters, but I am determined to avoid empty discussion and abusive personalities, such as have been admitted into certain of your contemporaries. I will, therefore, produce to any meeting of gentlemen interested in Llewellyn setters, or forward to any person who shall have a suitable introduction, a copy of the proofs in support of my action.

The cross with red Irish blood, which was made at a recent date by Mr. Laverack, caused to his breed a loss both in show and field qualities at once striking and disastrous. The dogs of Laverack's breed which did great things, and caused his name to be known, were all of a date prior to his introduction of Irish blood, viz., Countess, Nellie and Daisy.

I also experimented with Irish blood on Laverack's breed at about the same date as he did, and the result was the same, viz., loss in high qualities. I, however, succeeded better in my experiments with Irish blood than Laverack did, for while he failed in producing one single animal of that cross of either show or field merit, I produced Flame, a champion winner at our largest shows, and the dam of the winners, Mr. Duncan's Rival and Thetis, and Shorthose's (late Mr. Duncan's) Royal, also the field winner Sampson.

Still, although I could produce better results when cross

ing with Irish blood than Laverack, that cross was far info

rior to my other cross, viz., that with the Duke and Rhoeb blood, which has done so well. I therefore had enough of crosses with Irish blood, and made a complete clearance of all dogs so bred from my kennel.

The dogs of Laverack's breed of a date prior to his crossing with Irish blood were superior animals, and it is that Laverack blood, and that alone, that my breed possesses. The Laverack blood which flows in the veins of the Llewellyn setter is wholly and entirely Laverack's blood prior to his infusion of red Irish, and no Laverack setter possessing in the slightest degree that recent cross has been bred from by me. Laveracks of a date many years previous to the Irish crosses alone have been used in the formation of what is known as the Llewellyn setter.

The evidence of Sir F. Graham, etc., goes to show that the composition of the early Laveracks (prior to the Irish cross) was of blood very similar to that of Duke, through that of Sir Vincent Corbet's kennel, etc., and that therefore those old Laveracks possessed blood resembling that of the strain termed the "Llewellyn setter."

I have shown that after Mr. Laverack spoiled those old Laveracks by crossing with Irish blood, they lost completely in all high qualities, and that the only dogs of his breed which made his name famous were those old Laveracks before the unlucky Irish cross, and the composition of which old Laveracks Sir F. Graham has pointed out.

The similarity in blood between the Laveracks of that early date and the Llewellyn setter, and the superiority of both those old Laveracks and of the Llewellyn setter to the recent Irish crosses, explains the reason of the success of those old Laveracks. Yours truly, R. L. PURCELL LLEWELLYN.

FORSE HOUSE, Lybster, Caithness, Scotland, Sept. 24, 1882.

ATHLETICS.

The Usual Result.

On the 12th inst there was a wrestling match at Irving Hall, New York, between chosen members of the New York and Boston police. A. Quigley represented the New York police force and Walter E. Brown the Boston force. The men were called on to wrestle an hour each at Greco-Roman and collar and elbow, and the man getting the most falls to be declared the winner of the style and he who got a majority of falls on both styles to be declared the winner of the match, to bear the title of champion of the police forces of Boston and New York and to receive a gold medal worth \$100. Shortly after 8 o'clock the men appeared on the stage. Brown was dressed in a white sleeveless shirt, drawers of the same color, and trunks of black velvet trimmed with gold lace. Quigley was clad in red drawers, white shirt and blue trunks. P. J. Griffen, of Boston, was umpire to Brown, and Quigley had as his umpire a Captain James Daley. Harry Hill was referee. Brown won the toss for choice of styles, and selected to wrestle, collar and elbow. At first both were wary. Brown was soon on his back by a "trip and twitch and back heel," amid great cheers for the New Yorker. Time of bout was six minutes. At 8:31 the men after five minutes' rest, jumped on the mattress for a second bout. They had been wrestling 2:15, when, amid great excitement, Quigley caught a right "ringer" on Brown and threw him in the air. Brown, however, was not to be caught so soon, and, by a quick movement, made a beautiful bridge, thus saving a fall. They were then separated and started afresh and kept up a continual series of tugs and taps for the remainder of the hour, without a fall being gained by either man, and the bout ended with a point in favor of Quigley. At 9:37 o'clock time was called for the Greco-Roman contest, the men for this bout appearing minus their shirts. No time was spent in useless maneuvering, but work, and good work, too, was immediately begun. After struggling three minutes Quigley caught Brown and held him between the stage and the ceiling and threw him to the ground. Brown made a bridge but the referee gave the fall to Quigley. This evoked a deal of discussion, Brown claiming that it was no fall, while Quigley on the contrary maintained that he threw Brown fairly. Brown then signified his willingness to at any time wrestle Quigley, but that he must refuse to proceed with the present contest, as he thought he had been unfairly dealt with. Every person in the hall then attempted to clamber upon the stage, but were prevented from so doing by the police. Harry Hill presented the medal to Quigley.

Myers and George Matched.

Upon the arrival of W. G. George, of Worcester, England, the celebrated amateur athlete, and his friend, W. H. Caldicott, on Saturday last, and of which mention was made in the *World* of last Sunday, he at once began negotiations for a series of races with L. E. Myers, the amateur champion of the world. These for a time were unsuccessful, owing to the obstinacy of both men in maintaining their claims to run their favorite distances first, Myers wishing to run a half mile and George nominating as his choice a mile. So matters stood until George, who had made the journey at an expense of time and money, with no hope of pecuniary reward, despaired of closing the negotiations. On Friday night, before Myers left for Philadelphia, where he ran yesterday, a meeting was called in the parlors of Gns L. M. Sachs, at the Windsor Hotel, and at which George, Caldicott, Myers, W. B. Curtis, G. W. Carr and George H. Thomas were present. Mr. Curtis explained the way in which George was induced to visit this country. It seems that when Myers was in England, in 1881 he challenged George, but the latter being ill, nothing was done. Upon the return of Myers to this country he received word that George was willing and even anxious to run him any distance over half a mile. Myers was then tied down to business and could not again cross the Atlantic. Learning this, Mr. Wm. B. Curtis, on the part of the New York Athletic Club, extended to George an invitation to visit this country and run a series of races at one-half of a mile, three-quarters of a mile and a mile, he to be the guest of the club. This was accepted by the Mosely Harrier Club, to which Mr. George belongs.

These points were considered by the meeting and it was decided to toss to see who would have the privilege of naming the distance to be first run. This was won by Myers, who chose the half mile. George then nominated to have the mile as the second event. This left the three-quarter mile to be the last to be decided. The dates were arranged as follows: Half-mile race, Saturday, November 4; one-mile race, Saturday, November 11; three-quarter-mile race, Saturday, November 18. In addition to these, the Manhattan Athletic Club propose to give a ten-mile handicap run, in which George will be placed on scratch and a number of the best runners for the distance will be given starts varying from half a mile to a mile.—*World*.

GEORGE IN NEW YORK.—Among the passengers on the steamer City of Rome, which arrived at this port on Satur-

day, Oct. 7, was the English amateur champion runner W. G. George, who came to this country for the purpose of testing his powers against those of the American champion, L. E. Myers, in a series of match races at half a mile, three-quarters of a mile and one mile. To those who take interest in athletic matters the performances of George are almost as familiar as those of Myers, and as we gave a very full sketch of his career before the public in our issue of April 15 last, it will suffice to say here that his time for each mile from one (4:19 2-5) up to ten (52:56) is the best on record by an amateur, as is also his time for three-quarters of a mile (3:8 2-5). Myers has the record for all the regulation and some other distances up to and including a half mile (1:55 3-5) and 1,000 yards (2:13), while his time for three-quarters of a mile is 3:18, made more than two years ago. Since then he has improved at middle-distance running, and is thought to be capable, when fit, of showing considerably faster time. The only race of the three now arranged which is considered to be really in doubt is the six-furlong dash, the half-mile being generally conceded to the American, while it is believed that George can scarcely lose at a mile. The stranger was met at the pier by a number of well-known athletes, who since his arrival have been making it as pleasant as possible for him, and he has already seen considerable of the inside and outside of New York. George is twenty-four years of age, stand 5 feet, 11½ inches, in height, in condition weighs 147 pounds, and is a modest gentleman of pleasant manners, well calculated to win friends among strangers. He is the guest of the New York Athletic Club, on whose track at Mott Haven he will prepare for the coming races, making his home at the Knickerbocker hotel hard by. All that is now wanted is for the weather to hold good during the work of preparation, so that both men may appear at the mark in the best of condition.—*New York Clipper*.

The *Turf, Field and Farm* and the *New York Spirit of the Times*, in their comments on Haley's 9 4-5 performance, quote from the prominent San Francisco papers, including this journal. We beg leave to state that we are not in the fight for the 100 yards time record, and reference to our files will fail to convict us of any such weakness. All intelligent amateur or professional athletes are well aware of the chances for errors in timing or starting a race of 100 yards, and it takes more than one performance to convince them of the genuineness of any ten-second record. Our remarks in regard to the effect of warm weather on a native of San Francisco are mockingly quoted by the *Turf, Field and Farm*, and editorially it reminds us that our representative athletes were East in September. We would remind our brother scribe that all the Eastern newspapers last September, both daily and weekly (and if we are not very much mistaken the *Turf, Field and Farm* was one of them), were teeming with accounts of the unprecedented heat of that particular month, and were loud in their lamentations for the sufferings of President Garfield, which, as they openly stated, were on account of the extreme and unusual heat. Pacific Coast athletes are now well aware that the warm weather did not seriously affect Sime or Hawes, the handicapping and their performances being the same as in San Francisco. Haley, as is well known both here and there, did not train enough to show how the weather would affect him. Belcher, when he left here, was undoubtedly the best amateur that had ever been seen on the Pacific Coast at any distance from 120 yards up to and including 440 yards. He was burdened with a superabundance of soft flesh, and needed plenty of time, but easy work, to prepare him for any race beyond 120 yards. Unfortunately he was the one that was prostrated by the heat of that particular September, and California was badly left in the championship and other meetings. This year Haley can give Belcher more than one yard in a dash of 100, with Belcher at his best. Perhaps Haley cannot do even time. We don't propose to argue that point, but if Myers can come out here and beat him (or Masterson) 100 yards, with a penalizing start, his friends can rest assured that they will win more than they lost on the Brooks-Myers race. The remarks about the college days of the *Pacific Life* reporter were probably intended to be sarcastic, and the 10½ seconds was undoubtedly a typographical error of at least one small second.

The usual small audience witnessed the shoulder and elbow wrestling match, last Monday evening at Turn Verein Hall, between McMillan, the Bodie champion, and Homer Lane. One individual mournfully remarked that a Democratic meeting had captured a majority of the lovers of a square wrestle, and consequently the money received at the door would be correspondingly small. He was right. The average San Francisco sport well knows the difference between an honest contest and a job match. As one intelligent party in the audience sententiously remarked, when bantered for a bet, "I don't bet on what no man can do—unless I have a hand in it myself." Early in the evening bets were made of \$4 50 to \$2 50 in favor of McMillan. The programme opened with the customary song, a recitation, and, for the inevitable encore, "one of my own composition." Next came two glove contests that were really earnest but friendly affairs, unlike the usual hoodlum shams seen at such entertainments. There was some difficulty in selecting a referee for the wrestling match, but about 9:30 everything was arranged satisfactorily and the principals appeared on the stage. Homer Lane showed the most science, his opponent making very little play, seemingly depending almost entirely on his weight and strength. The Bodie man very soon threw the ex-champion, but the decision of the referee was "no fall." When time was again called Lane quickly and most unaccountably treated McMillan to a square back fall to the immense delight of the sporting fraternity present, who, however, failed to take the bets that were freely offered by McMillan's friends that he would win the match. In the next two rounds Lane was entirely on the defensive, but McMillan won both too easily to make it interesting for the audience. He had backed himself with his own money.

The following is a verbatim copy of a challenge posted on the Olympic Club bulletin board:

Challenge.—The California Athletic and Lacrosse Club will match Jos. Masterson against any one amateur on this Coast, R. S. Haley preferred, in a series of events to take place on one day, for a medal valued at from twenty to fifty dollars and the Coast championship. Starter to be mutually agreed upon, each man to select one judge, who shall appoint a third, and National Amateur Association rules to govern. An answer to this will receive prompt attention by addressing A. H. Hogg,

Pres. C. A. and L. C., 229 Leavenworth street.

Addenda.—The competition shall comprise nine events, each club to name four and toss for the odd.

Field Day Open Events.

The open events at the University meeting next Saturday will be 100 and 220-yard handicaps, 120 and 440-yard and one-mile scratch, and running high jump. Games will be called promptly at 2 p. m.

CRICKET.

The Australian Cricketers arrived on the overland train last Friday morning and as the steamer did not sail until Sunday it was expected that they would give an exhibition of their play on Saturday. They were most likely tired of hippodroming for only four of them were present at the Recreation Grounds, where a game was arranged between a picked team and the Occident club. The Australians divided, two on each side, and the result was as follows:

Hennessy. Time—Three Hours.

Sporting Churchmen.

A minister entered his horse at a county fair up in Wisconsin, and got into the sulky and drove. When one of the drivers ran his horse and passed the parson on the backstretch, the minister went into the judges' stand and made as grand a "kick" as an old driver. Another man who drove in one of the races was a Methodist, and when the drivers tried to crowd him to the fence he made their spokes rattle like the strokes of an enraged parent on the seat of the youthful pantaloon. And so when the professional walked into the judges' stand to make his complaint against the man of God, there stood the Methodist with his whip raised over his head, ready to chastise the artist if he dared to utter a falsehood. It is needless to say the case went by default, as the professional dare not make the false complaint. The next week the two Christians were hauled up before the church committee appointed to try them, and were condemned and excommunicated. The church became divided in consequence and the parson was installed by friends of the horse in a dilapidated hall to proclaim the church and the turf until a \$100,000 house can be built for him where the right to visit the racecourse or drive a trotting horse will be incorporated into the church code.—*Dunton's Spirit*.

THEO. WINTERS,
JOS. CAIRN SIMPSON, Sec'y. President.
C. M. CHASE, Assistant Secretary.

J. O'KANE,
MANUFACTURER AND IMPORTER OF
HARNESS, SADDLES, BLANKETS,
HARNESS, SADDLES, BLANKETS,
WHIPS, BOOTS, ETC.

767 Market Street, San Francisco.

SPECIAL ATTENTION given to the manufacture of "boots" of all kinds for horses. Can refer to all the principal trainers and horsemen on the Pacific Coast.
N. B.—My acknowledged superiority in this branch of business is largely due to careful observation and the valuable suggestions of the most skillful tanners of the United States, the benefits of which revert to the public in the shape of a **GENTLE WELL-FITTING ARTICLE.** Sole agent for Dr. A. H. Dixon's "Condition Powder" and for Makinney's patent "Eureka" and "Eclipse" Toe Weights. Repairing done with neatness and dispatch. Has always on hand the finest assortment of English ladies' and gentlemen's saddles, bridles, whips, spurs, bits and 2½ lb. race saddles.

THE VICTORIAN TROTTER CLUB,
(Ld)

—OFFER—

The undermentioned Prize, to be competed for on a day to be named early in January next, 1883:

PRIZE OF 2,500 DOLLARS,

With Entrance Fees and Sweepstakes of \$50 each from starters added.

Mile heats, best three in five.

Open to all comers, bar geldings.

Winner to receive \$2,500; second, two-thirds of Sweep and Entrance Fees, and third, one-third. Entrance 5 per cent.

Entries must be in the hands of Secretary at or before 4 P. M. on WEDNESDAY, 6th December, 1882.

The Victorian Trotting Club holds membership in the National Trotting Association of the United States, under which Rules the races will be governed.

Any further information desired can be obtained by addressing

R. J. GIBNEY, Secretary,
Kirk Bazaar, Melbourne.

TO
Sportsmen & Pleasure-Seekers.

THE
SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING A with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT OF THE

"HOTEL DEL MONTE,"

IS UNRIVALLED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known

Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R. The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known fisheries, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE. These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel, A. C. BASSETT, H. R. JUDAH, Superintendent. Asst. Pass. & Tkt. Agt.

By S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street, at 9:30 A. M.

THE STANFORD STAKE.

ADAIR—By Electioneer.

Again it becomes necessary to eulogize the work of our artist, and, in presenting the picture of the winner of the first Stanford Stake, claim that as a likeness it would be difficult to improve upon it. It is an admirable representation of the colt, and there are few who will not agree with us that he has the formation of a fast trotter. He is a "rangy" blood-like animal of fine size and plenty of substance.

There is a good deal of resemblance to the "King of the Track," St. Julien, and there is much of the same easy method of covering the ground. Little exuberance of action, a sort of "stealing gait," that is more effective than the more showy bending of knee and hock. This appears to be a family characteristic of the Electioneers, and scarcely one of them hat does not exhibit the graceful, gliding action that is now

more thought of than the sharp-bending of the knee in old times thought to be so essential to trotting speed. He is fully fifteen and three-quarters hands high, and is of the "lengthy" order in his build.

It is almost supererogatory to add written description to that of the artist further than to state that he is a very handsome shade of bay, without any white markings. The most striking thing in his configuration is the capacious chest and good middle piece, and what some regard as defective, rather a "slack loin." As very many of the best race horses and trotters we have known have this formation we are inclined to think that there has been an erroneous impression concerning the shape of this part of the body, and when there is width enough it matters little if there is a droop in front of

the coupling. So many of the descendants of imported Bedford show the peculiarity that it has been designated as the "Bedford hump," and the prominence of the spinous processes at this point certainly gives a better chance for the attachment of the muscles.

Without going into a minute description of Adair it will be sufficient to say that he is a "taking colt" in his whole appearance, and will attract attention from the critical as well as those who are not so well posted on the form of the horse. It is only necessary to refer to his sire, Electioneer, as he stands without question as the most wonderful trotting sire of the day. In the Stanford stake of the twenty-one nominations six were of the get of Electioneer and the three starters were

Concluded on page 297.

N. S. WALES SPORTING ITEMS.

Our Regular Letter from the Antipodes—Racing, Rowing, Etc.

SYDNEY, N. S. W., Oct. 5, 1882

EDITOR BREEDER AND SPORTSMAN: In my last and first Sydney letter to the BREEDER AND SPORTSMAN I was unfortunately, I mean for your readers' sake, taken at a slight disadvantage, inasmuch as our great spring racing carnival was at its zenith, and Thursday, the day on which I penned most of my notes, our publishing day, so that you can guess of the amount of worry and anxiety there was in my mind at the time. Our Australian Jockey Club spring meeting extends over four days, two of which I sent you, and wherein I stated that many admirers of the Hon. James White's stable were fully expectant to witness the downfall of the A. J. C. Derby winner, Navigator by Hecla, in the same stable as Segenhoe, who had held the position of favorite. Those who expected Mr. E. De Mestre's handsome and symmetrical colt unable to pace alongside of Hecla over one mile and a quarter were doomed to disappointment as will be learned anon. Thursday (Sept. 7) opened with charming weather; indeed the weather throughout the reunion has been all that could be desired and much too so for the good of the country. In the suburban handicap of seven furlongs a great surprise was in store for backers. Twenty-two runners faced the flag; Stockdale was considered very good goods at four to one. It seems rather strange that the favorite belonged to Tom Brown's stable and the winner, Rupert, was an "offcast" from the same stable. Rupert is a hollow-backed animal with a very light "middle piece" but as nice a "fore hand" as you would see on any racehorse. He is sired by the well-known stallion King of the Ring, his dam Musidora, she also the dam of the Derby and Oaks winners Miss Jessie and Briesie, the filly who won V. R. C. Derby, Oaks and Cup, so that you will perceive what a long and illustrious line of ancestors Rupert hails from. The Grand Stand Plate of \$750 for three-year-olds and upwards, one mile and a quarter, was won by Tom Brown's brown gelding Brian Boru (106 pounds), Hopeful (105 pounds) second, and Balthazar (105 pounds) third. Time, 2:16. The winner was afterwards submitted to auction and realized \$1,350, the club benefiting through the sale to the amount of \$600, the gelding having been entered for sale at \$750. The next race was eagerly looked forward to as several of the "cracks" met over a mile and a quarter journey at weight-for-age. Here again Sting justified the confidence of his party by winning from Sweet William and Saionara. The latter, a three-year-old, carried 107 pounds while the former pair (4 years) carried 126 pounds. A field of eleven came to the post. The time was 2:13 and considered very good. All attention was now turned to the four candidates for the A. J. C. Mares' Produce Stakes, one and a quarter miles, colts 122 pounds, fillies 117 pounds. The betting was 5 to 4 on Hecla and even money against Navigator. Nicholas, a stable companion of Navigator, made all running for half the journey, when Hecla, at the four furlong post, went to the front. At the turn into the home stretch Navigator went up to Hecla and at the distance came away and won comfortably by two lengths, the mare not appearing to finish very kindly. The withdrawal of Segenhoe from this race was a great disappointment to his backers, but owing to a bruised heel which he received his trainer thought it advisable to scratch him rather than injure his chance for the V. R. C. Derby, which is run for on the 28th of October, for which event Navigator is first favorite and Segenhoe next, despite the easy defeat he met with at Randwick course (New South Wales). Gnesswork from South Australia, and winner of the blue ribbon there, is greatly fancied, and Fryng-pan from Saucepan, the dam of Haricot, the Melbourne Cup winner, and Irish Stew, a good handicap animal, have come into great favor during the past week. The day terminated by Mr. Fitz Wentworth's brown horse Sardonyx, by Fireworks, from Onyx, carrying 106 pounds, beating Proctor (122 pounds), Balmoral (112 pounds) and twenty others for the Sydney Handicap. Value, \$1,000; distance, 1½ miles. Time, 2:39½. In this race four horses fell through, one, Harebell, catching her fore feet in the heels of Comet and falling. Several of the riders received ugly bruises, but none of them are seriously injured, unless Williamson with a fractured shoulder blade.

The fourth and concluding day was ushered in with the same characteristic weather of the meeting, and the attendance—about 25,000—the largest ever seen on Randwick course.

Proceedings opened with the hurdle race, for which event four started, and was won by Dr. W. R. Cortiss' Nigger (by the way, the racing disciple of Esculapius is a brother to the celebrated bicycle rider, who is about to find his way back once more to the antipodes). The members' Handicap, a sweep of \$25 each, \$1 forfeit, with \$500 added, one mile and a furlong, was won by a very handsome chestnut filly belonging to Mr. E. De Mestre, named Malmaison, by Robinson Crusoe (Derby winner, and the only survivor of the number of horses who went out in the ill-fated City of Melbourne in 1876) from Rose d'Amour, one of the best and gamest little mares of her day that ever graced a racecourse, and was very successful while trained by Mr. Jno. Tait, of "Barb" celebrity. Boseawen (104 pounds), second; Belvibere (107 pounds), third. Eight others started. Time, 1:59½. A good deal of speculation ensued over the Randwick Plate, of \$1,500, for three-year-olds and upwards; second horse \$500 from the prize; weight for age; three miles. Six started. Betting, two to one against Sting, three to one against Proctor, four and six to one against any other. Lord Brughly (135 pounds), made the pace for the first two miles then "died

away" and Proctor almost immediately assumed command, but only for a couple of furlongs, as The Drummer and Sweet William, both full of running closed on him and Sting coming very fast on the outside of his field was nearly on even terms with them as they swung round the "home turn" into the "stretch." At the distance Sting challenged Drummer and Sweet William, a great race ensued for supremacy between the trio, ending in favor of Sting, passing the judges' box by a clear length from The Drummer, a head separating the latter from Sweet William. Time, 5:50—rather slow, which is accounted for by the fact of the race being made too much a "waiting one." Great excitement prevailed over the next event when the popular "yellow and black" and all "black and yellow cap" of "honest Jno. Tait" were seen to the front for the Waverly Handicap, a sweep of \$25 each, \$1 forfeit, with \$1,000 added. One and three-quarters miles. The winner, Strathearn, is an aged brown horse, by The Barb, dam Mavourneen, a highly prized brood mare belonging to Jno. Tait. Strathearn carried 103 pounds; Harebell, (94 pounds), second; Balmoral (122 pounds), third; besides eleven others started. Time, 3:06, which is very fast. Old Jno. Tait's colors have not been seen passing the judges' box first for many a long day, and the spectators were quite beside themselves with excitement. He left the saddling-paddock at the odds of twenty to one against him, while four to one was the best offer against Harebell.

The Steeplechase was of a similar monetary condition to the above-mentioned handicap; distance three miles, and resulted in an easy victory for Hotspur, an animal nearly twenty years old, the favorite, Kanaka, getting second honors.

The gathering was successfully wound up by Mr. W. Forrester's black horse Gypsy Cooper (aged, 120 lbs), beating Hon. John Earle's Comet (122 lbs), Prima Donna (104 lbs) and twelve others for the Free Handicap of \$500 with a sweep of \$5 each to go to the second horse; one mile and a quarter; time, 2:12.

The above-named spring meeting of the Australian Jockey Club is characterized as one of the best ever held on Randwick racecourse since its commencement, the club making nearly \$8,000 clear profit. A great number of alterations are now going on at the course and when next summer's meeting is held quite a change for the better will have come over the scene in the Lager stand. Several minor meetings, such as Orange and Dubbo spring meetings, have taken place since, but not of sufficient importance for me to chronicle.

The all-absorbing question now is who shall win the Camfield Guineas and cup, run for in Victoria on the 7th and 16th of October. Then follows the greatest spring event of the year, the Melbourne cup, for which event Sweet William rules first favorite at 100 to 12, and Connamulla at 100 to 10. About any other 100 to 3 down to 2 is obtainable. The first-mentioned meeting will throw considerable light on the form of a few of the principal horses. Navigator is firm for the V. R. C. Derby and Segenhoe is coming into more favor.

The cricket season is now in full swing and each ground is full every Saturday, busy at practice. So far no matches of any great importance have taken place. The Hon. Ivo Bligh's English cricketers are expected shortly to arrive, following the Australian eleven.

There is very little new in the trotting world unless a small meeting held at Elsternwick park in connection with the Victoria Trotting Club be deemed worthy of mention. The first event was a maiden trot of \$200 and sweep of \$10; mile heats, best two in three. It was won by Mr. C. Colbath's g. m. Bella Campbell, aged, who won the first and third heats, Mr. P. G. Dixon's Maid of Mona, by Merryhawk, winning the second. Time, 2:52, 2:55½, 2:50½.

Three-minute class, \$350 and sweep of \$15; two-mile heats, best two in three. The first heat was won by Mr. J. Miller's b. m. Flight, by Alarm. Time, 5:46½. Mr. D. Collins' g. g. Leithamstead, by Alarm (ridden to saddle), won the next two heats straight away in 5:40½ and 5:41.

Dr. J. Weir has disposed of his lot and is now busying himself about home cares.

AQUATICS.

The principal feature in the aquatic world has been the farewell dinner given to the well-known barrister Mr. J. H. Want, the popular commodore of the Prince Alfred Yacht Club, by the Vice Commodore, Dr. Milford. Mr. J. H. Want, who is suffering slightly from over-exertion in his profession, has resolved to recover his health by traveling round the world. He will visit Colombo, India, China, Japan, San Francisco and through America. His loss will be greatly felt in the aquatic circles of New South Wales, such an interest has he taken in yachting. Besides, he is one of the best of jovial good fellows. It is his intention, should he see a nice craft of about forty tons, to buy her and bring her out to the colonies.

Another event that is creating some speculation in the Parramatta River is the result of the Francis Punch trophy of \$1,500 to be competed for by all comers pulling a pair of sculls in wager boats on a straightaway course on the Parramatta River. Mr. Punch also agreed to increase the amount to £500 provided in the event of two rowers from America and two from England coming to compete. However this last did not eventuate, and the race has been entirely left to colonial scullers, in fact, to New South Welshmen, for Bob Edwards, of Melbourne, thinking the company "too hot" for him, declined to row. Largan, of England, entered, and sent out his boats and trainer, but he himself has never shown up, and, it is believed, is looking for a long lost brother in America. Perkins, a young English professional, said to be a speedy man for a mile, and with an elegant finish in his rowing, entered, and came out to the colony, but thought there was "not sufficient in it" for him to show his powers, declined to row, after being placed in a division, but will be heard of shortly in a match that will be arranged. The trophy was therefore left in the hands of Trickett, Laycock, Rush, Beach, McDonald and Pearce, and on Wednesday, the 4th of October, those divisions pulled the first heat. Appended are the results:

FIRST HEAT, FIRST DIVISION.

Course: From Bathing-house, Charity Point, to Gladsville Wharf. E. C. Laycock, Sydney, 12st 8lb. 1
D. McDonnell, Clarence, 10st 2lb. 2

Immediately on the arrival of the umpire's boat at the starting point both men paddled over to the bathing-house, and not an instant was lost in getting the men away. Eli Laycock appeared as fit as a fiddle and greatly pleased his supporters. McDonnell also looked well, but was, of course, entirely overmatched. At Ulir's Point Laycock led by four lengths, pulling 30 strokes per minute to McDonnell's 28. Laycock continued leisurely on, frequently allowing his opponent to gain on him. At Putney something appeared to have gone wrong with McDonnell's slide, for he suddenly stopped, but again went on, and made frequent efforts to catch Laycock, without avail, as he came in winner easily by a dozen lengths. Time, 17:42.

SECOND DIVISION.

Course: From Gladsville Wharf to Bathing-house, Charity Point. Michael Rush, Clarence, 12st 4lb. 1
H. Pearce, Sydney, 13st. 2

Rush looked exceedingly well and strong, but Pearce appeared to have too much flesh on him to pull well. Both men were sent away without delay, Rush having a slight lead, and Pearce making for the southern shore. At Hen and Chickens Wharf both men were level, pulling 38 against the tide. At Putney Rush, pulling easily, was leading by three lengths. After passing Putney, Pearce put on a spurt, but Rush increased his lead to six lengths off Blackland's Point, Pearce apparently laboring a good deal. Off Gascoine's Rush took a rest for a few seconds, and allowed Pearce to come up to him, but he was then off and away again; and notwithstanding Pearce's efforts, beat him on the fall" of the flag by half a length. Time, 18:32.

THIRD DIVISION.

Course: same as No. 1. E. Trickett, Sydney, 12st 6lb. 1
W. Beach, Dapto, 11st 10lb. 2

The appearance of Edward Trickett once more on the river was the signal for a burst of applause from the company on the steamers, and he paddled past to the starting point. He certainly looked the pink of perfection, and those who fancied him out of sorts, must have been much at fault, for it was universally agreed amongst his numerous friends that they had never seen him look in better condition. Beach looked exceedingly well, and the power, manner, and style in which he rowed, showed him to be wonderfully improved; although he may not gain a place on this occasion, it is quite evident that he is the coming man amongst Australian sailors. Both men got away together, and rowing a strong steady stroke, Trickett obtained a lead of half a length, and for some distance both men rowed stroke for stroke, Beach watching his opponent carefully. It was soon quite evident that Beach was not so easily shaken off, both men rowing in earnest, Trickett's style magnificent, and off Blackland's Point Beach had gained and got a half a length lead from Trickett. The first mile was done in 6:20, Beach leading at the beacon by half a length and clearing a foul with his right scull, which gave a chance to Trickett to close up, but Beach again took a short lead, pulling strongly and eliciting much favorable comment. At Putney a foul occurred, but the men quickly extricated themselves and got away, Trickett first, and soon got a lead of a length and a half, which he then increased to four lengths, and afterwards to six lengths; but, before reaching Gladsville, it was reduced to three, by which distance Trickett first passed the flagboat. Both men were heartily cheered. Time; 17:27.

Second heats—The second heats will be rowed this Oct., 5th afternoon, in which there will be two divisions.

First division, Beach, Pearce, Trickett.
Second division, McDonald, Rush, Laycock.

The following is a letter published by Perkins in the Sydney newspapers, on which I will not comment.

"TO THE EDITOR OF THE EVENING NEWS, Sir: As, in my opinion, the public is entitled to some explanation for my sudden withdrawal from this contest, I beg herewith to give, through the medium of your columns, my reason. In the first place, I have to complain of the marked discourtesy with which I have been treated by the committee. Notwithstanding the terms of Mr. Punch's prospectus, in which it was stated that the boats of competitors would be brought out free, and an arrangement had been made with the P. and O. and Orient lines for a reduction in the passage money, I had not only to pay full freight for my boat, but the entire rate of passage as well. On going up the river to train, I addressed a polite letter to the committee, asking them, if they felt disposed, to grant me something towards my training expenses, I being the only competitor who had traveled 16,000 miles at his own expense to compete with Australian oarsmen. To this letter I received no reply. Under these circumstances, acting under the advice of my friends, I have resolved to withdraw from the contest. I may also add, to use a popular term, that there is very little "in it" as a monetary speculation for a young sculler, inasmuch as Mr. Punch has secured all the steamers, and there has been no talk, so far as I can gather, of any consolation stakes for the unsuccessful competitors. Yours, etc., G. J. PERKINS.

"Harbor View Hotel, Dawes Point, October 3."

BICYCLING.

Six Days' Bicycling.

A six days' go-as-you-please for the professional championship of Australia and a money prize, supplemented by a cup, presented by the proprietors of the Melbourne Sportsman, was commenced at Melbourne on Sept. 18, at 11 o'clock. Seven competitors started, competing: J. Rolfe (champion), 56-inch machine; W. J. Press (champion, S. A.), 56-inch machine; J. Thomas (Victoria Club), 56-inch machine; J. Hoskins (Victoria Club), 54-inch machine; Hon. L. (Victoria Club), 54-inch machine; Mitchell (unattached), 54-inch machine, and Maddigan (Scymour), 54-inch machine. With the exception of Maddigan, all the competitors kept on the track until time was called at eleven p. m. The score board registered as follows:

MONDAY.			THURSDAY.		
	Miles.	Yards.		Miles.	Yards.
Press.....	166	416	Press.....	593	1650
Thomas.....	164	344	Rolfe.....	592	220
J. Rolfe.....	163	310	Thomas.....	575	884
J. Hoskins.....	148	1390	Mitchell.....	535	70
Hon. L.....	136	842	Hoskins.....	455	1360
Mitchell.....	128	485			
Maddigan.....	50	618			
TUESDAY.			FRIDAY.		
	Miles.	Yards.		Miles.	Yards.
Press.....	325	772	Press.....	723	346
Rolfe.....	320	1582	Rolfe.....	722	710
Thomas.....	316	330	Thomas.....	695	780
Hoskins.....	288	312	Mitchell.....	655	300
Mitchell.....	272	1276	Hoskins.....	513	900
Hon. L.....	212	924			
Maddigan.....	50	796			
WEDNESDAY.			SATURDAY.		
	Miles.	Yards.		Miles.	Yards.
Press.....	474	175	Press.....	854	960
Rolfe.....	470	230	Rolfe.....	852	1570
Thomas.....	456	87	Thomas.....	793	640
Mitchell.....	410	86	Mitchell.....	751	480
Hoskins.....	387	1080	Hoskins.....	541	170
			Hon. L.....	268	
			Maddigan.....	50	496

The result was a victory for W. J. Press, the champion of South Australia. Press kept the strong lead he held of Rolfe till Friday night, when the latter reduced it to about a mile, both men finishing up fresh at 10:45, with Thomas second, 695 miles, 780 yards, and Mitchell fourth, 655 miles, 300 yards. On Saturday morning the men resumed the track at a fair pace, and continued steadily all the afternoon to the evening, when the pace became much faster, Rolfe spurring frequently to reduce the distance between him and Press. The latter, however, kept on in fine style, and when the pistol was fired had won by almost a mile and a half. Thomas, who had retired after scoring 793 miles, 540 yards, secured third prize, Mirebell fourth, and Hoskins fifth. The machines ridden by Press, Rolfe and Thomas were each a 52-inch Singer, and that by Mitchell a 50-inch Club.

TURF AND TRACK.

"Old Bush."

Bushwhacker, Bonnie Scotland's ill-used son, won the Bowie stakes at Pimlico October 21st, although he did not meet Glenmore as was hoped. The following description is from the New York *World's* report:

At the fall of the flag Hartford was in front, but he quickly gave place to Bushwhacker, who led at the quarter by three lengths, with Hartford second, five lengths in front of Ella Warfield. There was no change in placing and but little in the distances apart for the first three miles, where Bushwhacker only led by a length and a half, with Hartford but three lengths in front of Warfield. In the run round the turn on the last mile the distances were equalized by two lengths each, which was gradually reduced as they went down the backstretch, first by Ella Warfield passing Hartford and closing up on Bushwhacker, until at the half mile, amid the shouts of a majority present, Ella Warfield showed at Bushwhacker's saddle skirts, and as she headed him in the next half dozen strides the enthusiasm was redoubled. In the run round the turn Ella increased her lead to a length and a half, and as Hartford continued to drop back it was plain that he would be distanced. As they ran past the three-quarters and round the turn Murphy made a slight effort to send Bushwhacker along, but as the old veteran did not respond with any great show of speed he took a steady pull and Ella Warfield galloped home an easy winner of the heat by half a dozen lengths in 7:35½, with Hartford away outside the distance. The instant both horses were unsaddled they were quickly led away, Ella Warfield to be cared for by Bill Bird, assisted by her owners and other Maryland experts, while Bushwhacker had the attentions of his regular trainer, McCabe, assisted by Jim Williams. At first the mare seemed to have the most friends, but before the forty minutes expired the followers of Bushwhacker rallied and considerable money was bet at "evens." In fact was public opinion so evenly divided that, while in the closing pools Bushwhacker was a trifle the favorite, Ella Warfield had the call all along the line of bookmakers.

In response to the call, Bushwhacker was the first on the track, but Ella Warfield was the first mounted, both being received with some applause. They promptly took their positions and without any delay galloped up for the flag, which they got, Bushwhacker taking the lead and opening a gap of four lengths, which advantage he held for the whole of the first mile. At the beginning of the second mile Ella Warfield dropped back a trifle, which allowed Bushwhacker to lead by fully six lengths for the whole of that mile. But as they began the third mile Shauer somewhat unexpectedly cut loose and in the first quarter closed up within two lengths, and keeping right along he reached Bushwhacker just before the half. For nearly a quarter of a mile the two men ran on as even terms as they could, with the admirers of both horses shouting all they could. Among those best informed as to the old-time system of racing it was freely said that Shauer had made his run fully a mile too early, and as Bushwhacker led by nearly half a length at the end of a third mile, not a few said that the filly would never again head him, which proved to be true, for at the club-house Bushwhacker began gradually to draw away, leading by two lengths at the quarter and four at the half, after which Murphy eased up and slowly galloped up the stretch, the winner of the heat by a dozen lengths in the fairly good time of 7:46. Again both horses were promptly taken in hand and Ella Warfield given a slow gallop up the home stretch under heavy blankets. As usual there were plenty of rumors but no betting. Those that had backed Bushwhacker before the race were contented to remain where they were. In fact, the only offers made were 7 to 1 against Ella Warfield. During the forty minutes' interval every rumor possible was floated and it was affirmed that "Bushwhacker had broken down," that "the race would be postponed until Monday" and that "Ella Warfield was lame." In the meantime it grew so dark that the moon began to make shadows and the crowd to grow impatient. About 5:45 the horses were called and they promptly appeared, and were as fresh as horses could be that had already run eight miles. They took the flag together and Bushwhacker at once took the lead. Galloping out into the gloaming the two ran down the backstretch like shadows. But at the end of the first three miles the white face of old Bushwhacker was the first to catch the eye of the crowd and to be saluted with ringing cheers. At the end of the third mile Ella Warfield was only three lengths behind Bushwhacker, and as she reduced it to two lengths at the quarter and got up even with him at the half an unparalleled scene of enthusiasm followed. The two ran so even round the far turn that in the little light left they looked like one horse, but the last quarter was too much for the mare. She dropped back on the turn and was finally beaten for the heat and race by two lengths in 9:00½ and with that announcement the crowd broke for home, satisfied that if they had not seen the fastest Bowie on record they had seen Bushwhacker win. He is the only horse that has succeeded in doing so twice, and he has run twelve miles each time to do so. In fact, as an old admirer said: "Old Bush" never won a dollar that he did not have to work for."

The American entries for the Doncaster St. Leger of 1884 are as follows: Mr. H. Keene's bay filly, by The Ill-Used out of Lady Mentmore. Mr. J. R. Keene's chestnut colt, by King Alfonso out of Hester; bay colt, by Monarchist out of Return; bay colt, by Virgil out of Boniform; bay filly (sister of Foxhall), by King Alfonso out of Jamaica; Mr. P. Lorillard's Pontiac, De Soto; Choctaw, Emperor, Nitocris, Vixtrix, bay colt by Duke of Magenta out of Hortense; bay colt by Duke of Magenta out of The Squaw. For the Park Hill Stakes, Mr. J. R. Keene enters the sister to Foxhall and Mr. Lorillard enters Nitocris, Nevada and Vixtrix. For the Kempton Park July Meeting of 1883, Mr. J. R. Keene makes the same entries in the International Two-year-old Plate, which he names for the St. Leger, and they are also entered in the Kempton Park Grand Prize, to be run at the May meeting of 1884. In the Great International Breeders' Foal Stakes, to be run at Kempton Park August meeting, 1885, the entry appears of Mr. J. R. Keene's bay colt, by Cremorne out of Rustic Queen. Mr. Keene also repeats his St. Leger entries in the Great Sapling Stakes, to be run for at Sandown Park Autumn Meeting, 1883, and enters the Boniform and Return colts in the Hurstbourne Stakes, Stockbridge, 1883, and the Rustic Queen colt in the Stockbridge Foal Stakes of 1884.

There was a tremendous race at Lexington, Ky., October 16, between Budd Doble's brown stallion Monroe Chief and W. F. Anderson's bay mare Rosa Wilkes. The stallion won the first heat by a head, in 2:19½; the mare won the second in 2:19½, and the third in 2:19½; the fourth heat was dead, in 2:20, and the stallion won the fifth and sixth, time of each heat, 2:21½.

THE FRENCH DERBY.

A Vivacious Description of the Great Prix du Jockey Club.

The "Derby" is a great Parisian event, a "sporting solemnity" that no one of any consequence in boulevard and boudoir dares to miss. The real name of the race is the Prix du Jockey Club; but the French imitate the English in turf matters (just as we do in America) and call it the Derby! It is run for on a Sunday, always in the same week as the great Epsom event, and over the beautiful course at royal Chantilly. I hurried to the Gare du Nord at an early hour, there to find a score or more of "horsey" fellows, each and every one of whom was for giving me a "tip" which might surely be depended on. I am always getting tips, and yet I never win anything. The tip which my coachman came near giving me as he turned the corner of the Rue Lafayette was the nearest to a success that I remember to have ever had.

The sky is blue, the heat overpowering, the crowd is great, and Chantilly is far away. We take our seats in the car and en route study the programme. Two bookmakers opposite me look mysteriously solemn, but depend on't they won't find me among the many who are seduced into betting by their eloquent offers to lay this and that odds against the Quick-as-Lightning, the Rent Day (because it comes round so soon) or the Ghost-of-Lexington of my imagination. Ah! here is Chantilly station, and yonder is the forest, with its tender green, its pretty lanes, and its paths carpeted with moss and wild flowers. There is a fine collection of antique carriages, which have come in from all the surrounding country, seedy and discolorate looking affairs, sprigs worn out, sad, funereal-looking concerns, into which we mount and move on. The sun continues to burn hot, the long lanes disappear in distant thickets, far away in the horizon "a cloud no bigger than a man's hand" shows itself, slowly climbs the sky and grows greater as it grows older. All the whips are cracking, the carriages creaking, and the "old stock in harness" raising great clouds of dust, through which hundreds and thousands of "sporting" mortals, not millionaires like myself, slowly plod their weary way. Out yonder, at the feet of ancient oaks, parties are breakfasting on a cold bite and a bottle of red wine. Further on are lines on lines of betting men, standing on chairs and stools crying the figures which, after much mathematical calculation, they imagine will prevent their taking a tumble. Already the favorite, Comte Alfred, for whom the renowned Archer has been brought over, begins to go behind in the betting, but those who have confidence in the Chamant Stables shrug their shoulders and proudly walk up and down the lawns wearing the stable colors at their button-holes. So, too, promenade the supporters of Lestrage, of Ephrussi, of de Castries, of Lupin; of Delmarre, of all of them.

The crowd becomes enormous. The cloud has crept on apace until now the sky is overcast, but it is not time yet for the rain to come down. There are two or three hundred *petite creves* over by the buffet, all with the same hat, the same trousers, the same eyeglass in one eye, the same pink ticket dangling on the same riding-coat; they all have the same thought, which is to "pose" until people look at them, and that makes them very happy. It is a magnificent sight that we are overlooking. In front, the handsome chateau and private grounds of that popular Orleans prince known as Duc d'Aumale; then the prim houses of this little town; and then, in the foreground, the thousands upon thousands in the free fields of Chantilly. The private stand of the Orleans family is crowded. Monseigneur the Duke has given a breakfast party to fifty-two invited guests, all of whom have gone over the course; and I recognize among the number the Count de Paris and his son, the Duc d'Orleans; his two brothers, the Duc de Chartres and the Duc d'Aumale; his uncle, the Duc de Nemours; also, the Duc de Nevers, the Prince Czartoryski, the Duc d'André-Pasquier, Alexandre Dumas, Meissonier, Gerome, the Count von Moltke, Minister from Denmark, and a host of others, including many ladies of the *real monde*, and children of all ages. The Orleansists are as prolific as Hibernians, most of whom are also descendants of kings, to hear them tell it. The grand stand is filled with people of both sexes, and the sun shines down upon the many-colored throng. The orange, the blue, the red, the maroon, the yellow, the this, the that, and the other color worn by well-dressed jockeys stand out in picturesque contrast to the gray-green foliage of nature and the works of art which women of elegance and beauty have donned for the day. Decidedly checkered patterns are prominent, and there are exquisite satins and silks, and laces and diamonds, with hats that look like inverted fruit-baskets—those kind that came into Paris holding cherries and strawberries; also Rembrandt hats, loaded with feathers; the eyes, the lips, and the complexion all painted with great care, and every mother's child of them "too lovely for anything."

But suddenly a majestic thunder-clap rolls along, then comes down the hurried rain. A while ago what a lovely *coup d'oeil*; now what a spattering. The crowd rushes for the stand, the *coulisses* are jammed, there is no standing room in the buffet, men put on their rubber coats, women their waterproofs and dusters; fine feathers and flowers are covered with satin skirts and starched petticoats; little heels sink into the mud; umbrellas are up, and so are the jockeys for the first race. As I dashed out through the dismal wet to see the finish, I pass a *belle petite*, who is swearing away like a Chicago hotel-keeper because in the crowd some unfortunate person has happened to let some drops of champagne fall on her lovely dress of resida silk, the skirt of which is fluted like the pipes of a church organ. The rain lasts but a short time, but meanwhile bets are being made on the Derby. The quotations on Comte-Alfred still keep going down, and these of Dandin keep going up. The names of Hottot and Vigilant are whispered about, but the despised Saint James has but few to do him reverence. At last, however, the cloud passes; the thunder ceases, the rain stops, and the *pelouse* resumes its animation. Delicious perfumes come from the dampened woods, diamond drops sparkle in all the tree-tops and on "blades o' grass," eyes brighten, and women's lips take on that same eternal smile.

But the riders are up and the horses are paraded past us in single file, seventeen of the best three-year-old colts that France can boast of. There are three false starts, and when the good one comes, poor Rovey, who has his horse where he shouldn't have been, is left far in the rear. It is easy to see that Archer will not win; and the new favorite is making a capital pace of it, leading all the way round. In the last 350 yards Saint James and Jassin lap Dandin, and all three run to the post in close order. An immense shout goes up. Some cry this name and some cry that; there is a clatter of hoofs, a flash of red, of blue, and of violet, and it is over. One of our well-beloved cousins from the other side of the channel cries out: "A dead 'eat, by Jove!" and so it is, with Jassin only a throat-latch behind the winning couple. The owners, Count Lestrage and Michael Ephrussi decide to divide the stakes, 109,800 francs, and all the world fall to growling be-

cause the race is not decided as it should be. I heard a good deal said about the excellence of Goater's jockeyship, and, being of a curious disposition, I ventured to ask one gentleman, who is particularly loud in his praise of that individual's riding, the reason for the faith that is within him.

"Why, man, didn't you see the finish? Didn't you see how Goater lifted Dandin along at the post, and so escaped defeat. Didn't you see it?"

Of course I saw it, and confessed it; but I also told him that I saw Hopkins' riding, and that if it hadn't been for the way he handled himself and Saint James, Goater would have won beyond peradventure. I added further that it was all very well to hurrah for Goater, who is a "fashionable jock," but that, in common fancies, the youngster who had the mount of one of the far-away fielders—so far, in fact, that on Saturday they were laying 50 to 1, and yesterday, at the post, 30 to 1 against his winning—should come in for his share of praise also, and having expressed myself freely and fully to the effect that Hopkins had done better than Goater, because, if handicapped, Dandin would have had to give Saint James at least fourteen pounds, I hurried off to ask the Orleans princes and their illustrious guests what they thought about it.

With his usual courtesy, the Duc d'Aumale expressed his perfect willingness to be interviewed. I asked him if he would be willing to tell me something about the origin of racing at Chantilly. "While cauterizing one afternoon in front of the chateau," said he, "in company with a dozen or so of gentlemen, it suddenly occurred to me that the sod was very elastic, and that it was quite the equal of the turf at Newmarket. So we arranged for a race. We made up a pool and M. de Normade, one of the best gentlemen riders we have ever had in France, was the winner. That was in 1833."

"Tell me something about the French Derby."

"Well, the young gentlemen of our house took these races held on our estate under their patronage. In 1835, the Duc d'Orleans and the Duc de Nemours arranged for a race which they called the Derby, in imitation of that of Epsom; and they devoted themselves from that time to making Chantilly the rendezvous of fashion and of high life that would rival the famous meetings at royal Ascot. The first Derby was run in 1836, with a modest 5,000 francs of added money, which, as you know, has grown by degrees to the large sum of 50,000. But here is Madame the Vicomtesse de Greffulte; I will ask her to tell you something of the past history of the Derby."

His royal highness presented your correspondent "in due form" to the noble lady, who, although quite sixty years of age, has all the charms and elegances of a young woman of thirty. She smiled very sweetly, and said:

"I remember perfectly the fetes of 1841, for that was the year the good Queen Victoria gave to the world his royal highness the Prince of Wales, whom we all love very much. The races lasted from Thursday, May 13, to Sunday, 16th, inclusive. The Orleans princes had issued their invitations, but the space was so limited that a great many noble ladies and gentlemen were obliged to look on the fetes from a distance. The honors were done by the Prince Royal, with that gracious affability that won him the hearts of all. He was assisted by the Duchesse d'Orleans, the Duchesse de Nemours, whose husband was fighting in Africa, and by the Prince de Joinville, whom you afterwards saw on General McClellan's staff in America, by Madame Meuche de Loignes, by la Baronne Liadieres, and by Madam Firmin Rogier—the one as brown as an olive, the other as fair as an ear of wheat—and by Madame Baignieres, sister of Charles Lafitte. They were all rivals in beauty and fashion, all equal in social position. Nothing was spared to make those four days one continuous and brilliant fete. On Thursday, after the races, there was a reception and grand ball, at the Chantilly Chateau. On Friday the artistes of the Comedie Francaise came out to give performances. On Saturday there were no races, but, instead, we had a grand stag hunt in the forest; and in the evening there was a *curée froide* by torchlight in the great courtyard of the chateau. Then, on Sunday, came the Derby, and, later on, there was a *fete de nuit* in the park. The groves were filled with musicians, the trees with lanterns, and the thickets with bengal flames and fire-works, that lit up the lakes and streams, on which floated boat-loads of fair and brave ones from home and afar.

"In the town everything was at fever heat. There was a coming and a going, of which no description of mine can give you any idea. The place was crowded to its very attic. The hotels and houses were taken by storm, and the residents exacted the most exorbitant prices for all that was occupied. Gentlemen had to pay as high as 50 francs for a basin of water in which to wash their hands, and 50 more for the corner of a table on which to eat the cold victuals that their valets had brought from Paris. Along with the invited guests at the Chateau, there were also a more bourgeois society. It was made up of the wealthier financiers of the Chausse d'Autin, and of rich merchants. All these people had arranged for a life of four days in the country. The ladies displayed the most extravagant toilets, and gave themselves up to competition in the way of hats and head dress. The latest innovations of Palmira—the Worth of 1841—hats discovered by Herbault in his learned studies; collars and sleeves, in which Colliot displayed his great genius, made their first appearance at Chantilly. The ladies betted among themselves, with their husbands, or with their lovers, and the stakes were left to the discretion of the losers."

"There was, also, another monde which came to Chantilly, filling it with its noise and follies. Many of the gentlemen, not satisfied with bringing out supplies of food and changes of linen, also gave places in their carriages to the gay demoiselles. The town was overrun with the fair but fast ones of the Capital. Their fetes rivaled the royal ones in number and in elegance. The Rue de Paris became a branch of the Boulevard de Gand. The *lions* and the *lorettes* danced, gambled and supped without intermission. It was a bacchanalian revel of four days and as many nights, and into which our husbands made altogether too many excursions. And, in the camps, in all the mondes, the upper, the lower, and the middle, the whole of this merry crowd shouted, that Sunday afternoon, the name of Poctess, winner of the great event, and hurrahed for her owner, Lord Henry Seymour!"

—J. H. Hayne in New York Spirit.

Some fine Arab horses were sold at auction a few weeks ago in London, England. About two hundred persons were present at the sale, among them Lord Bradford, Lord Rosslyn, Lord Hardings and Mr. Percy Wyndham. Eleven horses were offered, and the total proceeds were \$7,750. Pharaoh, a pure Arab stallion, brought \$2,625 from Count Potoki, who takes him to Poland. Brood mares averaged \$600 each, and a two-year-old filly went for \$750.

Kensington Park, at Melbourne, Australia, containing 180 acres, including the racecourse, has been sold for sub-division purposes, for £48,000.

Racing and Religion.

The *London Sportsman* makes the case of Abe Buford a peg on which to hand the following sensible homily on the comparative "depravity" of the turf:

Col. Abe Buford of the United States of America, ex-militaire, ex-owner of racehorses, and present active and conscientious "member of the church," has recently adopted a course of action from which many courageous men would shrink. As a preliminary he has frankly owned to an error of judgment. It is not every one who would do this publicly. But more important still, he has had the courage to avow that the pursuit of racing is not necessarily sinful and provocative of duplicity and dishonesty, and he has boldly proclaimed that he thinks he can run racehorses without detriment to his professions of religion. We are sorry indeed to say that therein Col. Abe Buford will forfeit the respect and esteem of many pious, but narrow-minded people, both in his own country and in this. Perhaps the valiant soldier has made up his mind to bear with equanimity all the opposition and odium which his latest protestations may entail. If so, all honor to him for so doing. And we say again that his courage is admirable in the extreme, and may profitably be imitated by those who, perhaps, are "haling-between two opinions"—fear of what "the world" so-called might say, and inclination to do that which innate conviction deems proper and right. When some years ago Col. Abe Buford joined "the church" he promptly sold all his racehorses, and relinquished his connection with the turf. He owns that at the time he deemed this the only course left open to him under the circumstances—or, in other words, that the pursuit of racing was not compatible with a profession of piety. The possibility is that he was thereupon welcomed as "a brand snatched from the burning," and some of the "unco guid" rejoiced that he had been led to turn from the error of his ways. What they will say now that the Colonel has decided to again evince interest and take an active part in sport we cannot divine. But, as we have suggested, many may regard him as a renegade, and treat him accordingly. And this consideration leads us to glance at the absurd prejudices and miserable bigotry entertained by certain classes in England. We have already accused detractors of racing of "narrow-mindedness," and we are prepared to prove that they may properly and justly be so denominated. As was the case with the Pharisees of old, they "strain at a gnat and swallow a camel." Take the instance of a person who sometimes speculates on races. The pious accuse him of endeavoring to wrongfully deprive his neighbor of his substance. They overlook the fact that the "neighbour" now and again has what racing men term a "look in" and wins. In such case, may it be asked, is he equally culpable? But if speculators on races are to be branded with infamy, is it not strange that the gamblers in stocks and shares should escape scot free? They are thorough-going adherents of the "doctrine of chances," and yet they are never treated to opprobrium. Quite as justly, we think, might a provision dealer be accused of iniquity, when, being possessed of capital, he purchases largely in a falling market with the idea of hoarding up his stock until affairs shall take a turn for the better. Who would adjudge such a person to be guilty of defrauding the public? Speaking plainly, the spirit of speculation pervades all classes of society, and very usefully so. Let us take an extreme illustration, as some people might designate it, though such instances are by no means rare. Now and again persons hear that railway extensions have been determined upon in certain localities of crowded cities, and they thereupon buy up all the premises on the projected route. Perhaps the sellers of the property know of the railway scheme. Therefore, can it be said that they are defrauded? Again, the purchaser doubtless reckons upon striking an uncommonly good bargain with the enterprising railway company when they shall need his newly-acquired possessions. To adopt the epithet applied in racing matters, the man who buys such property is a double-dyed scoundrel. But no—his mode of procedure is characterized by the conveniently harmless term "enterprise." And the same word is supposed to adequately describe stock exchange operations. The truth of the matter is, an immensity of sentimental humbug prevails with regard to the turf. Now and again dishonest persons venture more than they are capable of paying. This is deplorable. But in other speculative projects people are continually doing the same. The only difference seems to be—adopting, of course, the popular view—that as far as regards racing the defaulter is a downright scamp and villain, whereas in respect of commercial transactions he has simply been "unwise" or "unfortunate." We certainly feel that a debt of gratitude is owing to Colonel Abe Buford for having pluckily assumed a stand against vulgar prejudice. The owner of racehorses may be as just and equitable in his dealings with all mankind as the common trader. But stupidly sentimental notions have stigmatized him, and it will be long ere silly and unjust ideas are dispelled. Colonel Abe Buford has taken a step in the right direction. May others speedily imitate him.

SOME KENTUCKY TWO-YEAR-OLDS.—Cardinal McCloskey, by Ten Broeck, out of Waterwitch (Fonso's dam), by Weatherbit. This promises to make a real, clinking, good three-year-old, barring his size. He has both speed and bottom, the two great requisites of a first-class race-horse. Lordnatus, a large bay, by Longfellow, dam Semper Felix, by imported Pheton, is a grand colt, with great speed, and is sure to make his mark; indeed we have seen few better looking ones in years, or one that has a finer turn of speed. He got off badly in the Maiden Stakes at Louisville, won by Cardinal McCloskey, in a deep track, in 1:22. He was ridden very badly by the little boy West, who ran him next to the rails in the deepest part of the track, and finished second. Queen Ban, a splendid daughter of the young rising sire, King Ban, out of War Reel, by War Dance, barring accidents, promises to be one of the best fillies seen on the turf in years. She has size, great quality, uniting both speed and bottom, and won the Blue Grass Stake in 1:16 quite handily, beating Bellona, Miss Woodford and others. The other two-year-old is Lord Raglan, by Ten Broeck, dam Catina, who won the Welter race, in 1:46½, with 113 pounds up. He is a large colt, and, barring his curby-looking hocks, is a grand big youngster. Ten Broeck and imported King Ban added much to their reputations as sires by the performances of their two-year-olds at Louisville. The Kentucky Derby, next year, with Lord Raglan, Barnes, Ascender, Cardinal McCloskey (late Tenwitch), Queen Ban, Punster, Violator, Pike's Pride, Hassan, Bondholder, etc., all of whom are engaged, will make it one of the best races of the year.—*Live Stock Record*.

There was a running race at Stewart's Point, Sonoma county, last Saturday, between three horses entered by Dan Stump, Jas. McClellan and Wm. Norton. The race was a quarter of a mile, best two in three, for a saddle and bridle. Stump's bay raked in the trappings.

Trotting in Australia.

The Melbourne *Federal Australian* recounts a trotting meeting at Elsternwick course:

The Victorian Trotting Club held another meeting Sept. 21st on the new track at Elsternwick, in the presence of a moderate number of visitors. The weather was beautifully fine; but, although the fields were large, some of the finishes were very uninteresting. The course was in tolerably good order, although slightly cut up. The first event on the card was the Maiden trot, for which eight horses sported silk. Maid of Mona was installed first favorite, five to two on her being freely offered at the start. Bella Campbell, however, who got well away at the start, fairly did what she pleased with her opponents, and won easily from Maid of Mona, who just saved being distanced.

In the second heat Bella Campbell broke when she seemed to be winning easily, and taking a long while to settle down was defeated; but in the third heat she retrieved her honors, winning cleverly. The American system of pool selling was introduced, Mr. Goyder acting as auctioneer, the winner receiving the whole money in the pool less 5 per cent. commission to that official. Thus a buyer gave £7 for first pick and selected Maid of Mona, the total amount in the pool being £12 whilst the winner went for ten shillings. Of course the first buyer makes the price and protects himself by running the other buyers up; thus, in a subsequent heat, a well-known sweep-promoter gave £5 for first pick of two starters and chose the non-favorite, and then bid up for the other to £5, when it was knocked down to him. He thus received his own money less ten shillings commission. Native Cat was made hot favorite for the three minute class; but he broke badly and the race lay between Leithamstead and Fright, both by Mr. Cripp's horse Alarm. Had Fright's driver displayed more patience she might have won the last two heats, as she did the first; but he "busted her," and she broke badly, and was defeated. Below are details:

MAIDEN TROT

Of 40 sows. Mile heats. Best two in three.
M. C. Colbath names g g Bella Campbell, aged. (Milton)..... 2 1 1
Mr. P. G. Dixon names br m Maid of Mona, aged. (Giles)..... 2 1 2
Mr. J. Male names ch m Jessie, aged. (Childs)..... 2 1 2
Mr. J. Cleeland names br m Darcin Maid, aged. (Cleeland)..... 2 1 2
Mr. W. Wood names b g Whiskey, aged. (Fisher)..... 2 1 2
Mr. L. Leonard names blk m Eleanor, aged. (Grimwood)..... 2 1 2
Mr. T. N. Curnow names br m Victoria B, aged. (Sheppard)..... 2 1 2
Time—2:52, 2:55½, 2:50½.

Betting: Five to 2 on Maid of Mona, 3 to 1 against Whiskey, 5 to 1 the others.

At the start Maid of Mona rushed to the front, but was immediately passed by Bella Campbell, who forged ahead and soon placed a long lead to her credit. The first quarter post was reached in 42, the half-mile post in 1:25, the three-quarter-mile post in 2:5½, and the winning post in 2:52. Bella Campbell was never caught and won easily, Maid of Mona being nearly distanced. Time, 2:52.

There was very little betting on the second heat, 3 to 1 being offered on Bella Campbell, without takers.

A good start was effected, of which Maid of Mona had slightly the best. Bella Campbell, however, soon assumed lead, and maintained it until within half a mile from home, when she broke badly, and allowed the Maid to get on terms. The pair then raced up the straight, but Bella Campbell breaking again, Maid of Mona won easily.

In the third heat the quarter-mile post was reached in 42, the half-mile in 1:25, the three-quarter post in 2:4, and the winning post in 2:55½.

Betting: Even on Maid of Mona.
Bella Campbell went to the front soon after starting, reaching the quarter post in 41½, the half-mile in 1:22½, the three-quarter post in 2:3, and the mile in 2:50½.

THREE MINUTE CLASS.

Of sixty sows. Two-mile heats. Best two in three.
Mr. D. Collins names g g Leithamstead, 5 years, by Alarm, 2 1 1
Brady..... 2 1 1
Mr. J. J. Miller names b m Fright, 5 years, Sheppard..... 2 1 2
Mr. F. Robin names g g Native Cat, aged, Collins..... 3 0 0
Mr. F. Robin names b g Captain Darborn, Owner, 1st..... 2 1 2
Betting: Even on Native Cat, three to two Leithamstead, seven to four Fright, five to one Captain Darborn.

The lot were dispatched to a moderate start. Native Cat took the lead, closely followed by Fright, with Captain Darborn last. The latter, however, soon made up his ground and headed the Cat, who was in turn passed by Leithamstead. They continued in this order until the first round had been nearly traversed, when Fright took command and led to the finish, followed by Leithamstead, who secured second place, with Native Cat third. In this heat the first quarter-mile post was reached in 42½, the half-mile in 1:12; three-quarters in 1:22; the mile in 2:54; the one and a quarter mile post in 3:37; the mile and a half in 4:20; and the mile and three-quarter post in 5:2; and the two miles in 5:46½.

In the second heat the betting was two to one on Fright, four to one against the others. Fright got the best of the start followed by Native Cat, with Leithamstead last. They proceeded in the order above named until nearly home, when Fright broke. Leithamstead passed Native Cat and overhauled Fright. The latter struggled on gamely up the straight, but she broke again, and the grey horse won easily. Time, first quarter post, 42½; one-half mile, 1:28; three-quarter mile, 2:9; one mile, 2:53; one and a quarter miles, 3:35; one and a half miles, 4:17; one and three-quarter miles, 4:58; two miles, 5:40½.

The betting was even in the third heat. Fright led to the half-mile post, where she left her feet, but repassed the grey. Approaching the three-quarter post she again broke, and the grey trotting steadily beat her by six lengths in 5:41½.

From accounts Hinda Rose's performance electrified the Kentucky breeders. They all with one accord said she was a wonder, and took their defeat quietly, making no excuses. Gov. Stanford has reason to feel proud of the victory. It was a hazardous undertaking to take a two-year-old filly from California to New York, and then south, and expect to beat a field of Kentucky colts, on their native soil. The judges were Col. R. West, James Miller, and T. J. Megibben. Timers, Dr. Herr. Geo. Linderberger, and B. G. Bruce.

The six-days' go-as-you-please walking match in New York ended at 10 o'clock last Saturday, the score standing: Fitzgerald, 577 miles, 2 laps; Noremac, 567 miles, 4 laps; Herty, 541 miles, 1 lap, Hughes 525 miles. The gross receipts, including the bar and all other privileges, amount to \$26,373; rent, \$10,000. The other expenses, including 15 per cent. to Peter Duryea, will reduce the net receipts to almost nothing.

Mason Chief, by Mambrino Patchen, dam by Alexander's Abdallah, a stallion imported from Kentucky by G. W. Peck of Annsville, Marion county, Oregon, has arrived safely at Portland. Mason Chief is described as dark brown without a white hair on him, five years old and is 16 hands high, a finely formed horse, and to the eye a true type of the American trotter.

Gano at Pimlico.

The Eclectic stakes at Pimlico, run on Saturday, October 21st, were handsomely won by E. J. Baldwin's Gano. The following description of the running is kindly furnished us by Mr. H. G. Crickmore of the New York *World* and "Krik's Guide to the Turf."

The Eclectic Stakes, for two-year-olds, at \$200 each, half forfeit, with \$700 added by the association and \$500 by Messrs. A. H. Cridge & Co., of which \$400 to the second; the third to save its stake; colts to carry 110 lbs.; fillies and geldings, 107 lbs.; subscribers allowed to name and start more than one horse upon paying a separate subscription for each starter; closed with eleven subscribers; one mile.

C. Reed names E. J. Baldwin's b c Gano, by Grinstead, dam Santa Anita, 110 lbs. (Halloway)..... 1
C. Bowie names br f Empress, by Narragansett, dam Mandina, 107 lbs. (W. Donohue)..... 2
P. Lorillard names b f Breeze, by Alarm, dam Blairgowrie, 107 lbs. (Shaver)..... 3
D. Puffer names E. J. Baldwin's Lucky B, 110 lbs. (Blaylock)..... d
J. F. Kelly names ch f Bella, 107 lbs. (Hughes)..... d
F. Gebhard names ch c Eolist, 110 lbs. (Barbee)..... d
G. Bowie names ch f Fairview, 107 lbs. (Huston)..... d
Dwyer Bros. name ch g Wandering, 107 lbs. (J. McLaughlin)..... d
Time—1:45½.

Pools.—Breeze, \$100; Baldwin's pair, \$100; Bella and Wandering, each \$40; Eolist, \$25; Bowie's pair, \$25. Betting.—Nine to 5 against Breeze, 3 to 1 against Gano, 6 to 1 against Wandering, 7 to 1 against Bella, 8 to 1 against Eolist and 10 to 1 against Lucky B, Fairview and Empress. Mutuels paid \$18 70.

After nearly forty minutes' delay during which the antics and temper shown by Wandering, Lucky B and Bella nearly exhausted not only the patience of the starter but of very many of the crowd, the flag was dropped to an even start with Eolist, Bella and Wandering in the lead followed closely by Empress, Fairview and Gano with Lucky B last. In the round by the club house Eolist secured a lead of nearly two lengths, but as Fairview got out of the crowd she raced up to Eolist so that at the quarter he led by only a length with Fairview and Wandering together followed by Bella and Breeze with Gano, Lucky B and Empress bringing up in the rear. The race down the backstretch to the stables was very fast, and as they were running well out Shaner got through, with Breeze taking second place. She was only a length behind Eolist at the half-mile, with Fairview at her saddle skirts and Bella alongside of Fairview, closely followed by Gano and Empress. Before they reached the turn Breeze passed Eolist, and opposite the tree she was leading by nearly two lengths amidst the enthusiastic shouts of her backers, "Breeze wins." At the bend of the track in the three-quarters both Fairview and Bella dropped back, as also did Wandering, their places being taken by Empress and Gano, both of whom closed up quickly on Breeze, so that at the three-quarters the favorite only led by a head, with Empress second, half a length in front of Gano, he half a length in front of Bella, with Eolist and Lucky B in immediate attendance. Breeze retained her lead until well into the stretch, when Gano under whip closed up and the two reached the seven furlongs nearly together. Half way up to the pickets Billy Donohue closed up with Empress, and challenging Breeze and Gano, the favorite almost instantly dropped back. Gano, however, drew away, and amidst the greatest excitement crossed the line the winner by a length in front of Breeze. Close up was Lucky B, followed by Bella and Eolist with Fairview and Wandering bringing up the rear. The success of the Californian was received with some applause which was almost instantly hushed as the rumor ran through the crowd like wildfire that Governor Bowie had made an objection to Gano on the ground that he was a three-year-old. The judges took the matter under consideration, and as Mr. Baldwin, who was present, quickly furnished satisfactory evidence that the question of Gano's age had been settled in California before he left that State last June, the judges promptly hung out the numbers of the horses as they finished, Gano first, Empress second and Breeze third.

Racing appears to be overdone in England as well as in some other countries at times. An English paper says: The failure of the Liverpool meeting was complete and ignominious. About £3,000 was added to the various events, and the average of the fields was under four. It would be in vain to search the volumes of "Races Past" for an example of a handicap to which £500 is added attracting but four starters. After this collapse, surely the managers will recognize the propriety of their forthwith abolishing this "fixture," and they will do well to do their best to improve the character of the sport at the spring and autumn meetings, which of late has left much to be desired.

The Turf in Oregon.

UNION, Oregon, Oct. 12, 1882.—Novelty race for two-year-olds; purse \$150: first at half \$50, at three-quarters \$50, at end of mile \$50.
Wm. Claypool's Mazurka..... 1
A. Labuff's Chester..... 2
F. T. Glean's Cap Wilson..... 3
Time—2:04.

Same day.—Trot for two-year-olds; mile heats, two in three; Purse \$100, \$75, \$25.
J. Caviness' Laura C..... 1 2 1
S. Crowell's Au Revolt..... 2 1 2
F. T. Glean's Henry..... 3 3 3
Time—3:27, 3:28, 3:28.

Track heavy from recent rains.

CITY VIEW DRIVING TRACK, PORTLAND, Oct. 21, 1882.—Trotting race, for foals of 1880, mile heats, two in three; entrance \$60 each, payable \$20 April 1st, \$20 June 1st and \$20 day before the race; total amount \$180; first horse six-tenths, second three-tenths and third the remainder.
John Harkins, East Portland, names r f Flora H, by Kisber, dam by Pathfinder..... 1 1
John Pender, Vancouver, W. T., names s c Young Kisber, by Kisber, dam by Millman's Bellfounder..... 2 2
Lou Godard, Portland, names b c Ben, by Kisber, dam Minnie..... 3 3
Time—3:37, 3:26½.

Same day.—Purse \$250: three-fourths of a mile.
R. E. Bybee's b f Neyella (2), by California—Laura Barnes, 90 lbs..... 1
W. G. Scoggin's br b Jim Merritt (5), by Langford—Sweetwater, 120 lbs..... 2
Time—1:19½.

The track was heavy and the horses ran twenty feet from the pole. Jim Merritt was the favorite at \$10 to \$6 and had the inside to an even start. They ran head and head for the first hundred yards, when the filly showed a neck ahead. Merritt immediately closed the gap and they ran deadlocked until they entered the homestretch, when the weight told on the horse. Neyella won by three-quarters of a length.

The fall races at Prineville, Wasco county, Oregon, will commence Nov. 30th and continue three days. The races are to be under the management of J. B. Lafolette, A. B. Webdell, John L. Luckey and John E. Harris; races to be governed by the rules of the Oregon State Agricultural Society; three to enter and two to start; no horses eligible except Wasco county raised horses; Cotton Nose and Lula Biggs barred.

During the Yreka fair Jay Beach sold to Dr. J. W. Robertson of Yreka a pair of high bred two-year-old colts, which the doctor will convert into a spanking road team.

Pro and Con.

Down in Australia, where they have very stringent laws against gambling, the Paris Mutual plan of pool betting has been legalized, although not without some misgivings as to the effect upon public morals. For the purpose of determining the latter point a commissioner was appointed by the government to watch the workings of the machine and report his impressions, which he does in the following language: "As regards the working of the totalisator it is difficult to state authoritatively whether it has been beneficial or otherwise during the short time it has been legalized. Presuming that betting is a vice, it is impossible to say whether the money staked through the totalisator would be greater or less than the money that would have been staked had it not been in existence. I will, however, point out some of what appear to me to be the main advantages and disadvantages of the totalisator, by which its benefit or otherwise may be somewhat tested. Its advantages are: It gives fairer odds in most cases, as the public can use their own knowledge and judgment, and act accordingly, without being misled or induced to stake their money by misrepresentations. It affords less inducement to dishonest running on the part of owners or persons having the control of horses, and of dishonest riding on the part of the jockeys, inasmuch as what may be termed 'individual' betting is greatly lessened. It lessens 'credit' betting, and the effect of this would, I think, lessen the temptation that would exist for people without means to run into debt, or commit crime in order to meet the losses which are brought about by betting. A man who has no means would probably not commit a crime, or even run into debt, for the purpose of obtaining money to put into the totalisator. The crime of embezzlement by young men to pay racing bets has very much decreased since its introduction. It materially lessens the bookmakers' occupation, the effect of which is that most of the money which passes through it remains in the colony. This was not so formerly, as the bookmakers were mostly men from the other colonies, who came here about the time of a race meeting, and who, of course, carried their earnings away with them, as much as £19,000 having been thus taken away on one occasion. It does away with 'welshers,' a class of men who frequent race meetings, and who have either no means to pay or the disinclination to pay what they have lost. The foregoing appear to be the advantages of the totalisator. The disadvantages are: It increases the number of hettors on the course, as many a man puts some money into the totalisator who would never think of making a bet with a bookmaker. It is apt to promote over-racing. I mean that the probable profits to the proprietors are apt to induce them to have more race meetings than they otherwise would. This is, of course, an evil that might be remedied by limiting the number of times at which it might be used."

Racing at Boise City, Idaho.

MONDAY, Oct. 23, 1882.—Purse, \$100, free for all two-year-olds, dash of half a mile.		
M. Nellis names Hattie Harris.....	1	
M. Fenner names Bob Ingersoll.....	2	
J. Thurman names Monarch.....	3	
Time—56.		
Same day—Purse, \$100; handicap for all ages, three-quarters of a mile.

Orlando Robbins names Lady Lightfoot.....	2	2
Dow Vincent names Owybee Jim.....	dis.	
Eugene Goffs names Billy Hise.....	dis.	
Time—3:29½, 3:18½.		

MR. LORILLARD'S NEW TRAINER.—Tom Cannon, Mr. Pierre Lorillard's new trainer, was in grand form at the Newmarket Second October meeting, when he divided the riding honors with Charles Wood, each riding nine winners to four by Archer and three by Fordham. In five of the nine races won by Cannon he wore Lord Rosebery's "primrose and rose," viz: on Kermesse in the "dead heat" with Mr. Leopold de Rothschild's Nellie for the Select Stakes, on Prudhomme for the Cambridgeshire Welter Stakes, on Kermesse for the Newmarket Oaks, on Roysterer for the Third Welter Handicap and on Bonnie Jean for the Prendergast Stakes. Lord Rosebery also won the Ditch Mile Nursery Handicap for two-year-olds at a mile, the winner being ridden by Lemair at 113 pounds. The other races won by Cannon include one each for Lord Stamford, Lord Ellesmere, Mr. H. E. Beddington and Mr. Pierre Lorillard—for the last named he won the Bedford Stakes with Touch-Me-Not. Seven of the nine races won by Woods were with the "all scarlet" of Mr. W. S. Crawford, viz: the October Produce and the Middle Park Plate with Macheath, the Cesarewitch Trial Handicap with Edelweiss, the Royal Stakes with Sonnie Lass, the Cesarewitch with Corrie Roy, the Ashley Stakes, for which Keir "walked over," and a "head heat" for the Champion with Thebais. Woods also won a race for Sir John D. Astley, and one for Mr. Girard. Archer's four victories were one each for Mr. Girard, Mr. Lefevre, Lord Falmonth and Mr. A. Cooper, while Fordham's three were the Clearwell Stakes and the Second October Nursery for Mr. Lefevre and the "dead heat" for the Select Stakes on Nellie for Mr. Leopold de Rothschild.

The Cambridgeshire.

The forty-fourth renewal of the Cambridgeshire Stakes, a handicap for three-year-olds and upwards, at £25 each, £100 forfeit, only £5 if declared on or before Sept. 5, with £300 added, the second to receive £100 out of the stakes, the third to save its stake, intrance £3; the winner of the Doncaster St. Leger to carry 124 lb.; winners of a handicap of the value of £300, after the publication of the weights (August 31), to carry 10 lb., or of any other handicap £5 extra; the winner of the Cesarewitch to carry 14 lb extra, but if also the winner of the St. Leger, to carry only £7 extra; closed with 137 subscribers, of which 39 declared; Cambridgeshire course, 1 mile and 240 yards.

Mr. R. Peck's b f Hackness, 4, by Albert Victor, dam Cicely Hackett, 88 lb. 1
 Mr. Jardine's br c Shewsbury, 3, by Brown Bread, dam Voyageuse, 94 lb. 2
 Lord Colthorpe's b f Venusta, 3, by Playfair, dam Wild Duchess, 83 lb. 3

Twenty-eight others ran, including Mr. P. Lorillard's Sackem, 3, 99 lb., Mr. J. R. Keene's Don Fulano, 4, 112 lb., and Bookmaker, 4, 100 lb., and Lord Ellesmere's Wallenstein, 5, 126 lb.

Hackness the winner of Cambridgeshire, was rescued, as it were, from the hunting field. She did not run as a three-year-old nor as a four-year-old until she started for the Cambridgeshire. At one time she was fancied for the Cesarewitch but, as the party controlling her could not get their money on at odds to suit them, they scratched her. Hackness was bred by Mr. Deighton and was sold a yearling at Cobham on Saturday, July 14, 1879, by Mr. Rymill to a Mr. Foy for 500 guineas. As a two-year-old, in 1880, she ran in seven races, carrying the colors of Mr. Foy in five of them. She won the Kempton Park March two-year-old plate and a selling sweepstakes over the Rous course at the Newmarket first October meeting, after which she was sold to Mr. T. Brown for 520 guineas. The next time she was seen she ran as the property of Mr. R. Stuart, under whose colors she was beaten twice. Since then she has never once shown in a race, but she did so well in the hunting field that she was laid up for a handicap, and getting into the Cambridge at 88 pounds (being the lightest weighted four-year-old in the race) she won probably with a stone in hand and landed a large pot of money for those who own her, the odds at last mail advices being 100 to 6 against her, at which date *Bell's Life* said: "Hopper has three under his charge in Peregrine, Blue Ribhon and Hackness. It strikes me the first two are not likely to see the post. If Hopper wins, it will bewith Hackness. With a start her prospects of success are very seductive, after what was seen of her in the gallops with her stable companions, Blue Ribhon and Fortissimo, just previous to the Doncaster meeting, and more recently with her owner's purchase at that meeting, Baliol, who was in good form at the time."

The Final Course.

Years ago, at a race at Ascot, the famous horse Tiberius broke his leg by bounding against one of the posts of the barrier just after the start. His owner, Lord Millbank, lost heavily in bets, besides the value of the horse, the law of the course being that accidents should not be taken into account as relieving a horse in case of defeat. Three days afterwards Lord Millbank gave a sumptuous dinner, to which the most distinguished of the English peerage had been invited, and at which they were present. The conviviality ran high. Toward the close, and at a late hour, after numerous toasts had been drunk, the noble host arose at the head of the table, and proposed that they should drink to the memory of the departed Tiberius. It was clamorously received. The master of the feast remained standing, with a brimming glass in his hand. "We drink to Tiberius," he said, "the most beautiful, the most enduring, the most courageous, and the most spirited courser that ever trod the British turf." Shouts of applause shook the walls. "You know," continued his lordship, "the achievements of the horse. His deeds belong to history. Fame has taken charge of his glory. But it remained for me—for you, my lords and gentlemen—to do honor to the mortal remains. I wished that this noble courser should have a burial worthy of his deservings. He has had it. My cook had fitly prepared him, and you have feasted upon him to-day. Ah, my lords and gentlemen, the meat which you have relished so keenly, and the rich flavor and delicacy of which have awakened so much inquiry, was Tiberius. My grand courser hath found a fitting sepulture. May your digestion be light!" For a brief space the enthusiasm of the company received a check; but the meat had been good nevertheless, and with another burst of applause, the idea took the turn of a sublimity, and more bumpers were drunk to the memory of the strangely entombed Tiberius.

The weak points of a horse can be better discovered while standing than while moving. If he is sound he will stand firmly and squarely on his limbs without moving any of them, the feet planting flatly upon the ground, with legs plump and naturally poised. If one foot is thrown forward with the toe pointing to the ground and the heel raised, or if the foot is lifted from the ground and the weight taken from it, disease may be suspected, or at least tenderness, which is a precursor of disease. If the horse stands with his feet spread apart, or straddles with the hind legs, there is weakness in the loins and the kidneys are disordered. Heavy pulling hends the knees. Bluish or milky cast eyes in horses indicate moon blindness, or something else. A hard tempered horse keeps his ears thrown back. A kicking horse is apt to have scarred legs. A stumbling horse has blemished knees. When the skin is rough and harsh, and does not move easily and smoothly to the touch, the horse is a heavy eater and his digestion is bad. Never buy a horse whose respiratory organs are at all impaired. Place your ear at the side of the heart, and if a wheezing sound is heard, it is an indication of trouble—let him go.

SALE OF TROTTING STOCK.—A large sale of trotting stock the consignment of Mr. Charles Backman, proprietor of Stonyford Stock Farm, took place in New York Oct. 24th. The sale attracted a large gathering of horsemen, among them Messrs. Robert, David and Ally Bonner, George B. Alley, H. W. T. Mall, W. H. Wilson, C. S. Moulton, Shepard F. Knapp and Jonathan Hawkins. The prices obtained were low, the bidding not being at all spirited. A number of excellent animals went for almost nothing, the gray stallion Exchange, by Rysdyk's Hambletonian, a perfectly sound horse, selling for \$115. The highest amount obtained for any one animal was \$500, for a four-year-old filly, by Messenger Duroc, out of Rosetta, by Rysdyk's Hambletonian. Mr. Robert Bonner was the purchaser. The next highest price was \$475, for the five-year-old mare Ellie, by Messenger Duroc, out of Mary Sanford, by the Plunkett horse, that went to Mr. Ally Bonner. Fifty-one head of stock were sold, the sale in the aggregate amounting to \$12,175, an average of not quite \$239 per head.

May Queen (record 2:20) by Alexander's Norman, out of Jennie by Crockett's Arabian, has been purchased from Joseph Harker by Gov. Stanford to add to his breeding establishment at Palo Alto.

Pooling.

Our Australian cousins are taking kindly to many of the American sporting notions and no doubt will find them all useful and convenient in their way. Since the advent in the colonies of the trotting horse and the consequent interest in trotting events the adoption of the timing system is extending to the running races, which will be found an excellent idea. The Paris mutual pool system has also been introduced and is on trial, meeting, of course, with some objection from people who have not yet become familiar with its workings. From the following extract from the Melbourne *Sportsman* it appears that the auction pool plan is also to be tried, and if properly conducted, we prophesy that the turfmen and speculators will adopt it on every course in the colonies:

A novelty in the way of post speculation is about to be introduced to Australia by the Victoria Trotting Club, it being notified by the secretary that "pool betting"—i. e. the putting up to public competition all starting horses in the same way as in Calcutta sweeps—will be carried out at Elsternwick next Saturday. This style of investment, however, will be strictly confined to members of the Victoria Sporting Club, and the fee for joining "the happy hand" till the end of the present year is only one guinea, which also includes the privileges of admission for a gentleman and two ladies to the commodious stand. Applicants must send in their names, when they will be duly ballotted for.

TROTTERS IN THE COLONIES.—Four of the American trotting mares, and one of the geldings, imported by Dr. Weir, have been sold at satisfactory prices, through Mr. T. S. Clibborn, of Sydney. Daisy has become the property of Mr. J. J. Miller, Ella Chieftain of Mr. Jennings, and Richard of Mr. Stevens, whilst Mr. Andrew Town bought Clara and Violetta for breeding purposes. The pedigree and the personal qualities of these horses have already been referred to in these columns, and the purchasers and the seller are alike to be congratulated on their bargains. In addition to the two trotting mares mentioned above, the celebrated American bred trotting stallion, Childe Harold, has just arrived to his order from England, where he has been making himself a grand reputation, as also in France, where he has been giving the Mounseers a turn. On the Alexandra Park track he did the fastest time ever made in the old country—to wit, a mile in 2:34 with ease, and half a mile in 1:13. Childe Harold was got by the same sire as the world-famed Maud S., so this speed is not to be wondered at. An entire called Blackwood Abdallah, imported to New Zealand from California, had already been secured by Mr. Town, who evidently "means business."—*Melbourne Sportsman*.

ATHLETICS.

University Field Day.

The University games take place to-day on their new grounds in Berkley. The programme includes nineteen events, and the meeting will probably be the best they have yet given. The following is a list of the events of the day:

1. Throwing base ball.
2. Putting weight.
3. Mile walk.
4. (a) 100 yards scratch (seniors). (b) 100 yards scratch (juniors). (c) 100 yards scratch (sophomores). (d) 100 yards scratch (freshmen).
5. Standing broad jump.
6. 100 yards handicap open.
7. 100 yards scratch run, match race.
8. 440 yards scratch open.
9. 100 yards scratch winners of No. 4.
10. Standing high jump.
11. 220 yards handicap open.
12. Running wide jump.
13. Running hop, step and jump.
14. One mile scratch open.
15. Running high jump.
16. Running high jump.
17. 440 yards run open.
18. 120 yards hurdle run.
19. Tug of War.

For the open events the following entries were made in the list posted in the Olympic Club which closed at 12 o'clock last Wednesday: 100 yards handicap, open—Wm. C. Brown, C. H. Slater, C. L. Elmer, W. R. Stewart and E. S. Emmons of the Olympic Athletic Club; Jos. Masterson, Cal. Athletic and Lacrosse Club; Jas. Thornton, Andrew Loeber and Thos. McGovern, Golden Gate Athletic Club; J. M. Bonner and A. L. Harris.

Two hundred and twenty yards handicap, open—C. H. Slater, E. S. Emmons and W. R. Stewart, O. A. C.; Jos. Masterson, C. A. and L. C.; Thos. McGovern, G. G. A. C.; J. M. Bonner and A. L. Harris.

Four hundred and forty yards scratch, open—Jos. Masterson, C. A. and L. C.; W. R. Stewart, O. A. C.

One mile scratch, open—D. Eiseman and Eugene Van Court, O. A. C.; Thos. McGovern, Howard Vernon and Ed. Lond, G. G. A. C.

Running high jump, open—C. H. Slater and C. L. Ebner, O. A. C.

One hundred and twenty yards scratch, open—W. R. Stewart, Wm. C. Brown, C. H. Slater, O. A. C.; and A. L. Harris. Games will be called at 2 p. m.

NOTE.—Since the above was set in type it has been decided to postpone the University Field day to Nov. 11.

INTERNATIONAL ATHLETICS.—The programme has been announced for the Athletic meetings at which Mr. W. G. George of the Moseley Harriers, Birmingham, England, and Mr. L. E. Myers, of the Manhattan Athletic Club, run their match races. For the first day, Nov. 4, on which occasion the cracks decide the half mile match, the following events will be decided, open to all amateurs: 150 yards, one mile and a three miles bicycle race, all handicaps. On Nov. 11, the day of the mile race, the three outside events are handicaps at 220 yards, half a mile and a one mile bicycle race. For the last day, Nov. 18, the handicaps are 100 yards, 440 yards and one mile walk. On that day the match is at three-quarters of a mile. The entries for each meeting close on the preceding Monday, and silver cups will be given to first and second. Mr. George is getting along well in his training and those who know most about what he has been doing state that record time will be beaten in each of the three races if the winner is run out.

The New York Athletic Club will hold a meeting on their Mott Haven ground on election day. There will be two open handicaps, one at 300 yards and the other at 1,000 yards, and at the latter W. G. George will be at scratch. The valuable Travers medal and the new Oelrichs medal will be competed for by the club members.—*Herald*.

THE PADDOCK.

Breeding Horses.

The farmer who proposes to breed horses should have a well-defined object in view. The breeding of draft horses is profitable business, if properly conducted. The breeding of the Clyde, the Percheron and the English draft can be made to pay on large, productive farms, and it is better to adhere to one breed than to cross breed. Large, common mares can be bought and their produce by stallions of the above named breeds would sell at good prices. The brood mares and colts should be well fed so as to give good size and early maturity. The demand in the lumber regions and in our large cities for large, strong horses is considerable, and good prices are paid.

The general purpose horse is another good kind to breed. They should not be so large as the draft, should have size, say sixteen hands, and be well proportioned, and have good style, good solid color, good action and there should be as much similarity as possible in the general form, color and make up of those that are raised. This breeding to one stallion one year, and to another quite different one another year, is not quite the thing. Get a good idea in the mind of what you want to breed, and try to approach it as near as possible from year to year. The best way to do it is to get a stallion that is the ideal of what you want to raise in size, style and carriage, and then get mares as near what you would like to raise as possible, and success is almost certain if proper care is taken of the brood mares and their produce, for like begets like.

There is a wide demand for the general purpose horse, for he answers for the buggy, carriage and business of all kinds. He is in general demand for any kind of farm work. Of course the finer and better those that are raised, the better prices they will command. If in addition to good size, style, form and color, there is good trotting action, so much the better—for speed adds to the value. There are plenty of high bred trotting stallions and mares having all the qualities desired, such as size, form, color, etc., that could be selected and used for breeding purposes for the general purpose horse with the best results. Such horses as would be produced from such selected stock would find ready sale at large prices in any market. If the investment would be too great to get such brood mares, select the best within your reach and means, for the high bred stallion does much to imprint his form and action on his progeny. Of course if trotting speed was one of the main objects aimed at, a different course should be pursued in the selection of brood mares. They should have good trotting action and should have speed at that gait, for speed in both sire and dam is quite essential to insure speed in the progeny.

There are many earnest, intelligent breeders of horses in the country, and they should aid in encouraging a better system of breeding by writing for the public press. We need almost have line upon line and precept upon precept to effect a change.—*Rural World*.

The Tandem.

The driver of a tandem must not only be an accomplished horseman, thoroughly able to master his team, but he must give his undivided attention to his horses. Old drivers say that it is easier to manage six horses before a coach than two horses in a tandem. A four-horse tandem may be "set up" for a trifle over \$4,000, and a two-horse one for something less than \$2,000. For the more elaborate equipage the figures are: for the coach, about \$2,500; for the four horses, \$1,000; for a plain road harness, \$500, and servants' liveries, \$250. For the two-horse turn out, the tandem-cart costs only about \$800, the two horses \$500, the harness \$350, and the groom's livery \$175. These are very low figures compared with the cost of setting up and maintaining a four-in-hand coach. Col. Kane has made public his memorandum of a season's expenses with the Tally-ho, reaching considerably over \$6,000 of which \$1,650 was for the keeping of sixteen horses seven months, at \$15 a month each; five grooms for seven months, at \$40 a month each; shoeing sixteen horses, \$2 a month each, \$224; guard's salary, \$1,000; depreciation in coach, \$500; new set wheels, varnishing and general repairs, \$250; depreciation and repairs to harness, etc., \$400, and rent of city stable, \$800. This, it will be seen, makes no account of the original cost of the equipage, but only of the running expenses. In driving a tandem a gentleman may use a two-wheel dog-cart, a gig, a Tilbury, a White-chapel, or Surrey cart, or even a four-wheel dog-cart. The gentleman usually wears a loose-fitting drab or gray overcoat, with wide sleeves and a low-crowned hat. The groom wears narrow breeches, and top boots, a close-fitting coat, and a tall hat.—*Dunton's Spirit of the Turf*.

Feeding Young Colts.

A correspondent who has just lost a brood mare, leaving a colt five days old, asks for advice as to the best method of feeding the little orphan, to which the *Breeders' Gazette* answers:

The best possible substitute for the milk of the dam is cow's milk. It should be sweetened at first, as the milk of the mare is sweeter than that of the cow. A little patient effort will soon result in teaching the colt to drink milk readily, but be careful not to give him too much at a time. A half pint is quite sufficient for a colt of the age mentioned; but the ration should be repeated often, not less than six times a day, the idea being to really give the colt all it will need, but to feed so often that it will not require much at a time. As that colt grows older, the ration should be increased, and grass, with oats, should be added as soon as the colt is old enough to eat. No ration is better for a colt than cow's milk with these adjuncts. After the colt is two months old, skim milk should be substituted for the fresh cow's milk. Should there be any trouble from constipation it will be well to add one pint of oil meal per day to the ration; in fact, we would recommend the use of oil meal in all cases, as it furnishes a large proportion of muscle and bone forming food. If the oil meal is not obtainable, flaxseed may be used. A half pint of flaxseed boiled with two quarts of bran will make two good feeds for a colt, and this ration may profitably be alternated with other food.

The Brood Mare.

The object we have in view in horse breeding should be an annual improvement. The investment is remunerative when applied to good shape, soundness, and vigorous action, combined with the stoutest and most fashionable blood in the several classes. Horse breeding can only pay by the breeding of the very best, for which the demand exceeds supply, which phase of the case has ruled strong for two years without alteration; the difficulty is to get horses good enough for the best London trade.

It is important to regard constitution in the parentage, apart from the essential consideration of size, freedom from hereditary blemish or defect, good, sound legs and feet, a symmetrical body, wind, eye-sight. Action is contributed by the mare in regard to force, by the sire with regard to direction. These are influenced by the deep shoulder, the moderate arm, length and musculature of the forearm, a well defined trapezium at the back of the knee, and well defined sesamoid bones at the upper posterior portion of the fetlock, shortness from the knee down, length in all bones, capability of mobility in the superstructure. Good shoulders are deep and well laid back in all good horses. Quality in the hindquarters is determined by proportion of parts—loins, thighs, gaskins, hocks—strong loins, muscular thighs and gaskins, clean, bold hocks, the point of the hock in all cases well defined. We thus have considered the bases of speed, action, endurance. Beauty of proportion and style of movement are features no harness, hack or hunter breeder can afford to despise; and the same holds good in regard to heavy draft horse stock for export.

Leading breeders have always a high standard as a fixed aim; in some cases their efforts excel, in others fall short of their beau ideal. When the latter is the case the mare is invariably at fault. An upstanding, roomy mare—that is, one with a lofty fore-hand, a long barrel, well coupled up or ribbed home, wide across the hips, deep at fore and back rib, evincing gentleness, but no droop in the quarter, on short, flat, clean legs—this would be the brood mare of our choice to re-quip outlay.

Mares with their first foals require the greatest attention. The mare should be served nine days after foaling, and again tried at the end of a fortnight. If the mare then refuses, it is conclusive; but should she stand, she must be tried on the termination of another fourteen days' interval. Mares have a strong aversion to smells—viz: tar, carrion, vegetable putrefaction. The leaves of the willow and savin are equally obnoxious. Pine varnish is the material that should be used, rather than tar, for palings. All excitement should be avoided—the neighing of entires, etc.

For foaling a roomy, sheltered, and well-ventilated box is a desideratum. No draught, nicely littered down, level and soft in surface, not too deep. The mare must be watered three times a day. Mares at this season are liable to gorge themselves with clean litter, and they frequently exhibit a morbid appetite, which must be restrained. Therefore dry, used litter, taken from under other horses, is the best for present use. Register the time when the mare should foal down. Ten days before she is likely to foal make the necessary preparations and frequently examine her at least twice or three times a day without disturbing her, and, as the event nears, a nocturnal visit or two must be paid. A roomy mare, naturally fed, neither too gross nor too poor, seldom requires external aid. A waxy substance on the teat, a sinking and expansion of the pelvis, rendering the act of parturition easy, are unmistakable signs. After delivery the mare will lick her foal—leave her to it, but watch the placenta or afterbirth that it does not recede; and when it has come away remove it. Give the mare a nice pailful of warm linseed gruel, succeeded by a bran mash. Get the foal to suck as soon as you conveniently can. In any case of difficulty or doubt, do not delay to call in your professional friend and adviser, the qualified veterinary surgeon.

Most of the treatments relative to the brood mare accept the cardinal features of first-rate management applicable to neat stock—quiet, cleanliness, supervision.—*R. H. Milhouse, in English Agricultural Gazette*.

Persistent Pinkeye.

A correspondent of the *New York Spirit* has been talking with the Kentucky breeders about the pinkeye and relates their experience and observations:

The pinkeye has been prevalent in Kentucky since last spring. The stock of all the breeders have suffered more or less from it, some of them losing as many as fourteen head. Dr. Herr says he has not had any fatal cases as yet, although some of his stock have been attacked twice. The Doctor is of the opinion that it is only contagious by reason of removal to certain localities. For instance, if a horse is removed from this State to a distant part of the country, or vice versa, he would be apt to contract the disease, if it was prevalent at his new home; but, take a horse from home who is suffering from it to another section where it is not epidemic, it would not be contagious. He thinks it is in the air, and it is epidemic in the same sense as yellow fever or cholera visits the human family. It is now assuming a milder form in Kentucky. Some of the animals show a lingering constitutional weakness, and any horse that has had it severely in the spring, has not been in fit condition to trot a good race since. Some horses are predisposed to a certain class of diseases, and those who are predisposed to pinkeye have more difficulty in recovering from it. The Doctor adds that he has known horses to have apparently recovered, and another attack would develop itself in a milder form—he lets mild cases run out in the open air, but if severe, he gives them constitutional treatment.

R. S. Strader relates his experience as follows: Our stock has been ailing all season, owing to pinkeye. We cannot get them into marketable shape; business was very good with us in the spring, but we have had forty head under treatment during summer, and eight of them died. It often leaves constitutional troubles, such as rheumatism, muscular prostration, and occasionally affects the wind. It is a very deceptive and baffling disease, for when they are to all appearances over it, and you begin working them, they seem to have lost their strength. It requires patience and good care to await their recuperation. Col. Stone has a brood mare that contracted it three times. I learn they have lost 14 head from pinkeye at Alexander's Woodburn Farm, and Gen. Withers has had a hard siege of it with his stock.

Cribbing in Horses: I see an inquiry asking for a cure. I will give you a cure generally successful in a young horse, and sometimes for old ones. Get some cayenne pepper (red pepper pods will do), and make a strong pepper tea. Wash the stall, manger and feed-box thoroughly with the tea boiled down very strong. Also wash the neck-yoke, and wagon or sleigh-tongue, if driving the horse daily. Do this once a week for several weeks, and if it is a young horse it will most likely cure him. A good many old ones have also been cured.—*Cor. Ez.*

The Care of Farm Horses.

Very much is said, in a general way, regarding the care and feeding of the farm horse, to fit him for the labor he has to perform without injury to his health, and that the greatest amount of labor may be obtained at the smallest cost. The constitution of horses vary in their requirements as much as the constitutions of men, rendering it impossible to give minute directions for their care, as in each case a knowledge of these requirements is necessary to form an opinion. Personal observation alone will be necessary to designate this treatment, as the same feed that profits with one will destroy with another. The nervous, active race horse, whose entire usefulness is exhausted in the shortest possible time, is treated upon principles that ages of experience has taught as the best calculated to attain that object. The careful groom will observe the languid movement, which indicates a loss of vitality, and if from his observation he is satisfied that his horse is suffering from fever or other derangement, he should lose no time in applying the proper remedies and at once change his food, even if necessary to change the labor he is performing, to give him time and opportunity to recuperate his vitality and overcome the effects of his climatic change. Self-interest demands that he be protected from the cruelties or ill-temper those having him in charge so often expose him to, as well, also, as the pain and suffering which avarice inflicts through the neglect to furnish him with proper food and general attention, and that those alone be retained in his care and management that have given voice that "the merciful man is merciful to his horse."—*Rural Messenger*.

The Walking Horse.

The English have a saying: "A riding horse is not worth its corn if it cannot walk well." We condense some excellent "walking talk" from an English contemporary:

The walk is one of the principal paces of a town hack, one of the greatest luxuries of a hard-worked man, be he a lawyer, doctor, artist, judge, politician, or city financier. A horse may be a very good hunter, yet a bad walker, but then he is fit only for the stable of a rich man. A hunter that can walk safely and fast home is a luxurious treasure.

The walk is the pace that may be vastly improved without the rider having any of the natural and acquired talents of the professional horse breaker. But he must have patience. "To make a horse walk well," says the author of "The Book of the Horse," "there is nothing more stupid than ill temper, the use of the whip, and the abuse of the spurs."

A hack, to make a first-class walker, must have the courageous temperament that never shies, when once settled down from early morn freshness, and also the natural form and action that makes him carry his head in the right place and step out of the ground.

Four miles an hour at a stretch, done in harmonious cadence at the first asking, without tumbling, dropping, shuffling, or breaking, is very good work. To do five miles an hour in good form is a very rare performance.

We are told that there are some horses that can walk six miles an hour with a light load, but have never seen anything like this. We were once riding a nearly thoroughbred horse, over sixteen hands high, with the wild stagbonds, and left off nine miles from the horse's stable. He did the distance, and brought us back in time to dress for dinner, in an hour and twenty minutes. That is about five miles and one-third in an hour.

To improve the walk the first step is to sit down on the horse and ride at a sharp pace until he is settled, without fatiguing him. Then, if he is young, be content with the slowest pace of walking, as long as he does not break and jog. At every break he must be stopped firmly, collected, and made to begin again. This is the best practice in returning home to your hack's stable and corn. Of course, it is no use to waste time over an aged hack whose habits are fixed, or a horse foaled to stumble all his life.

The young one must be firmly and tenderly held, so that he will be compelled to move each leg alternately and evenly. By a judicious, smooth, firm and even grasp of the reins, the curb reins held very lightly, the horse's head will be drawn into the right place (provided always that it be properly put on his neck), and thus induce him to bring his hind legs under him in regular time, in support of his fore legs. While the reins restrain him, the spurs, gently used, urge him, and the corn invites him to step out his best. By these means, patiently practiced day after day, a really clever hack will get into the habit of walking at his best pace as soon as the rider mounts and indicates by the pressure of his legs that such is his pleasure.

Young horses and thoroughbreds drafted from the turf into hack or hunter stables should be often ridden across the deep furrows of plowed clay fields, both at the walk and trot. Riding across turnips set on the ridge will improve the action of four-year-olds both at the walk and trot, if their forelimbs are so made as to be capable of high, true action. Finally, with time and patience, most young horses' style and pace in walking can be greatly improved.

THE BEST DRAFT HORSES.—The *Mark Lane Express* of London, having circulated questions respecting draft horses among a number of great firms, etc., employing them, has obtained much information in reply. To the question: "Is there any breed of heavy draft horses which, more than another, is especially adapted to heavy work in paved towns?" the Southampton Dock Company replies: "With twenty-five years' experience we find that Belgian and English mixed-breed horses are best adapted for heavy work on paved and rough roads. Geldings are always preferred and roans are the favorite color." Messrs. Courage, great London brewers, object to heavy flesh-legged horses for work on the stones. As to heavy-legged horses opinions are divided. Mr. Wallis, of Dublin, who hires the express wagons of several leading Irish millroads, says that the English and Scotch horses are much more easily managed than the Irish. One authority pronounces in favor of the mixed Belgian and English horses so far as price, power and durability are concerned, but most are decidedly in favor of the breeds of the United Kingdom. The feet of foreign breeds will not, they say, stand the stones.

A late number of a London live stock paper says: Over-big horses for any purpose are a mistake; so the corporation have found out. When they started to do their own scavenging, instead of contracting for it, they selected all the giants they could get—17 hands was preferred. The mistake has been found out; 16 hands is now the favored height. These do more work, are less subject to roaning, and are altogether more healthy.

F. F. Burt has on his ranch in Tehama county a Clydesdale stallion of two years, that weighs 1,110 pounds. He considers him to be the largest animal of his age in the state of that breed.

How Horses are Made Stylish.

The New York Times "gives away" some of the secrets of training schools for horses, and shows how jockeys manage to transform an ordinary roadster into a high-stepping carriage horse, with a thoroughbred air about him. To a reporter of the Times, a veterinary surgeon said:

"The great thing is to make a horse look like a thoroughbred. I don't suppose you know what a thoroughbred is. He is a horse with a pedigree, with blue blood in his veins, for many generations. Any judge of horses can tell one in a minute. I will tell you some of his characteristics. His neck, to begin with, is beautifully curved. He holds his head up, with his chin drawn in towards his breast when in harness. He has delicate legs and feet almost like a deer. He is a succession of lines of beauty. His neck is not set into his body, as if a carpenter put it there, but joins it gently and gracefully with a long sweep. His body, immediately behind the fore legs, comes down almost to a point. After a slight curve in the fore part of his back, his back is almost straight all the way to the tail. He lifts his feet high when he walks. His tail falls with a graceful arch, and hangs like a festoon at the back. Look at one of the fine thoroughbreds you see on the race tracks. Just in front of the hind legs you can span him with your arms. But measure that horse around the body, just behind the fore legs, and you will find he is as big around as an elephantine dray horse. Here lies his strength and staying power. His heart and lungs are large and work with great power. When he comes in from a long race his lungs work like a mill. This is not because he is exhausted—it is a sign of health, strength, vitality. His ankles are hardly bigger than your wrist, but take a section of bone out of the ankle of a thoroughbred, and a section of the same length out of the ankle of a cart horse; although the latter may be twice as large in circumference, the piece out of the thoroughbred will weigh the heavier. The thoroughbred's bones are solid, compact and heavy, while the bones of the common horse are spongy and weak. It is on the same principle that some gentlemen with wrists like a woman's are stronger than gigantic laborers. This is the perfect horse. He is found in his best estate in Arabia. The Anglo Arabian horses rank next. All our finest thoroughbreds are Anglo Arabians.

"Now, what the horse dealers have to do," the surgeon continued, "is to take a common horse and make him look as much like a thoroughbred as possible. The plebeian horse stretches out his neck. He drags his feet along; his tail hangs straight down. His back, instead of being a straight line, sags down toward the tail: He is a succession of unsightly angles. If he is sound and hearty, he is worth, perhaps \$200 in his natural state. The dealer takes him in hand, spends perhaps \$50 on him, and makes him worth \$500. A good part of the work is legitimate training. Some of it, perhaps, is cruel. I will describe it to you and you may draw your own conclusions. I do not do this because it does not pay me in my business, but I am well posted on the way it is done.

"We will say," continued the doctor, "that I am a horse dealer engaged in the business of improving horses. A country horse comes in and I buy him. He is awkward, gawky, and countrified. He is, in short, compared with city horses, just what an awkward backwoodsman is compared with a polished gentleman. First of all I fatten him up, give him good feed and have him carefully groomed twice a day to make him smooth. It is a new experience for him, and he likes it. It is like a boarder in a Water street boarding house going to a first-class hotel to live. It makes him good natured and happy. No matter how sleek and fat he may be no gentleman would have him in front of his carriage as long as he carries his nose out in the air and his neck is straight like a piece of board. He must be made to arch his neck and to pull in his chin. I put a 'mouthing iron' on him. This is a solid iron bar, like a heavy bit, with rings on the ends. At the middle of it three heavy tassels are fastened so they will rest on top of the tongue. This weight of iron makes him lower his chin and draw it in toward his breast. I put a surcingle on him, put straps through the rings in the ends of the mouth-iron, fasten the other ends of the straps to the surcingle, and brace them up tight. This makes the horse arch his neck. He must do it whether he wants to or not. Two or three weeks of this treatment will get him in the habit of holding his head properly. It is painful to the horse, of course. Sometimes they make a fuss, and I have known them to faint with the weight of iron on their tongue. But they generally stand it very well. The mouthing-iron is removed only when the horses are feeding, and the feed box is so arranged in a short stall that the horse has to keep his chin drawn back to reach the oats. You can always tell a horse that has been treated in this way, for it drives up the glands on the side of the head, toward the ears, and swell. They remain somewhat distorted permanently.

"This makes the head and neck question all right. But the horse still drags his feet along the ground like a man in loose slippers. I send a ton or less of straw to a clean part of the stable-yard and have it spread loosely over the yard till it is perhaps two feet deep, but loose. While the mouthing-iron is still in the horse's mouth, I have one of the grooms take him out into this straw and walk him about for three or four hours every day. This soon gets him into the habit of stepping high, for he lifts his feet well up to get clear of the straw. While one groom leads the horse another goes behind and turns the straw up with a pitchfork to prevent it from packing. This process, singularly enough, has the same effect upon the groom in a limited degree, that it has upon the horse. It teaches him to step high, and does him no harm. If the owner of the horse should see him after he had gone through two or three weeks of this training he would not recognize him.

"The front end of the horse by this time is all right. Now for the other end. What looks more ungainly than to see a horse with his tail held down close against his flanks like a cow or mule? He must be taught to hold his tail out and give it a graceful curve. Formerly this was done by uicking the tail on the under side, so that it became sore, and the horse then held it up because it pained him whenever it touched his body. But Mr. Bergh considered this cruel, as it undoubtedly was, and put a stop to it in this city. As soon as the head and neck are right the horse is fastened in a stall, with a pulley in the ceiling immediately over his tail, a cord is put through this pulley, with a weight of ten or fifteen pounds on one end. The other end is fastened to the upper part of the horse's tail. The weight keeps the tail elevated, and gives it a pretty curve. It does not answer to do this while the mouthing-iron is at work, for the unusual sensations at mouth and tail at the same time would fret him too much, and, perhaps, injure his health. There is some little risk in the tail improvement. The horse will fight hard to whisk his tail out of the fastening, so it has to be strapped pretty tight. If he pulls too hard on it the strap may cut and the sore become irritated. I have known horses to die of lockjaw from the process.

"These are the principal methods employed," the surgeon concluded, "to turn country boobies into city swells. Thou-

sands of horses are so trained every year. There are many other devices—so many, indeed, that it would take me all day and half the night to describe them. It is an easy matter to give the horse a shiny appearance. Take any horse, trained or untrained, thoroughbred or common stock, feed him well, groom him well and often, and you may use his sleek side for a mirror. Look out for that gray mare, she's a little ugly. Good morning."

An Oft Told Tale.

If you want to test and bring to the surface the meanest trait in man's composition—if you would know whether he has a heart as big as a bullock's or small enough to rattle in a mustard seed and mean enough to steal acorns from a blind sow—just let him have your horse to work for his feed, and in ninety-nine cases out of a hundred, five dollars to a green persimmon is a safe bet that he returns you a lame skeleton without shoes. This is a sad commentary upon the intelligence and humanity of the majority of men, but as true as gospel, and we need not go outside of this city to find a number of instances in proof of the assertion. Within the present hour we have seen two such cases, and although we are generally disposed to be lenient toward evil doers, it would afford us the greatest pleasure to see the gates of the penitentiary closed behind a man who would starve and abuse a dumb brute—indeed we would find no fault with the death penalty to see such a man step from the scaffold to eternity, for we sincerely believe if there is such a thing as an unpardonable sin, cruelty to dumb animals is that sin.

Liverymen can preach a more intelligent sermon on human depravity than the wisest minister who has had no experience in their line, and they would make excellent detectives for if a crime were committed by an unknown, they would have no trouble in tracing it to some unprincipled individual who had at one time or another abused a hired horse. We have known men who would drive a hired horse as long as he could go, and abuse and starve him nearly to death, but would take good care of him if he were their individual property, not because of any kindly feeling toward the poor dumb servant, but because their money was at stake, and ill treatment would cause him to depreciate in value. Then there are others, not only men, but women, who, through ignorance or moral depravity, seem to think a horse should be able to go as long and as fast as the vehicle can run, and without any further care or consideration than either wagon or harness require. But if we could have the making of law and the control of judges the plea of ignorance would not save them from punishment—and a light fine or a few days jail, either, but we would class them with wife-beaters, re-establish the pillory and whipping post, and deal out justice in doses that the vilest criminal would deserve. If their crime is the result of ignorance it is of a kind that can only be enlightened by the whipping post, and if prompted by pure meanness, unadulterated depravity, the severest punishment short of death should be applied and repeated till a cure is effected, or the fiend placed beyond the power to torture his superiors in all that is good and noble on earth.—*Western Sportsman.*

A Mule Story of Mexico.

A Standard reporter dropped in at the rooms of the Sazerac Lying Club yesterday as one of the new members was relating the following yarn. It is a true "tail," and a fair sample of the capabilities of the members of the club: While at Guatemala recently I was traveling from Esquintla to the capital city over one of the most rugged and villainous roads to be found probably the wide world over. On nearing the summit of a high range of hills, where a turn of the road revealed an immense ravine or chasm some 500 feet deep, I overtook a Mexican riding a mule with a string of five more attached to the leader. The custom of leading mules in that country is as follows: Their tails are tied in knots with a bunch of grass or cornstalk leaves, fastened to each as a bait. A strip of cowhide is firmly tied from the tail of the leading mule around the neck of the one following, and so on to the last. The rider mounts the leader and urges him on by a vigorous application of whip and spur, the baited tails enticing the rest to follow. The leading mule stumbling over a boulder, the rider commenced to yell, whip and spur. This unlooked for indignity made the mule lash out, reaching the head of No. 2 with a terrific whack. He, aroused and insulted, did likewise, with like result to No. 3, who followed suit on to No. 4. Ditto from 4 to 5, and 5 to 6, who, being last, had to kick at vacancy. Here then were six mules all kicking behind, as mules never kicked before. The Mexican swore, sprang and whipped to his utmost: It was soon evident they were backing down the hill with the sheer force of kicking. It was the most ludicrous sight I ever saw. I expected every moment something would give way, but rider, mules, tails and cowhide held together. At last the edge of the precipice was reached by the hind mule, who tumbled over, dragging the next after him—still kicking. He pulled the one preceeding over, still kicking, and so on until the first was reached—all still kicking. Looking down a ravine, I could dimly discern the whole mass of mulanity all in a heap, still kicking, and for aught I know are still kicking there to this day, as a Guatemala mule never, no never, tires of kicking.—*Portland (Or.) Standard.*

A colored blacksmith of Vienna, Georgia, was shoeing a mule not long ago, when the animal disengaged itself and drove one of its hind feet against the negro's head with the force of a battering ram. A few days later some one asked the owner if the blacksmith sustained severe injuries. "I can't say that he did," responded the man, dejectedly, "but the mule goes on three legs."

HERD AND SWINE.

Sheep Raising in Dakota.

The Yankton Press has the following in relation to the sheep interests of that Territory:

Sheep farming in Dakota has been demonstrated by practical men, who have had experience in, and understand the business, to be a safe and profitable enterprise. The dryness of the atmosphere in winter time, and its purity and healthfulness at all seasons, the abundance and nutritiousness of the native grasses, and other favorable conditions, insure the health and good condition of the flocks at all seasons. These facts are becoming known to and are being taken advantage of by practical wool-growers, and a number of them have recently located in our territory and engaged in the business. Among the number is C. B. Bagley, who owns a range about fifteen miles from Yankton, in the northwestern part of Clay county. He owns a fine flock of Spanish Merino bucks and Cotswold sheep, in fine condition and health and returning a handsome profit on the capital invested. Mr. Bagley called

on us a few mornings since and showed us a fleece weighing twenty and one-half pounds, and it is the finest and best quality, worth in the market at present prices from thirty-two to thirty-five cents per pound. Mr. Bagley was formerly engaged in sheep raising in Vermont—a state which produces the finest sheep in the world, and may be said to be the world's market for the best and purest blood—and is, therefore, thoroughly posted in the business. He is confident that Dakota possesses as good, if not superior, natural advantages as Vermont for successful and profitable sheep farming, and founds his faith upon his personal experience in our territory.

Dairy Notes.

As soon as I find an animal in distress from bloat, from eating wet grass or clover. I wet it along on the back with cold water, and also place a large cloth or blanket of several thicknesses over the paunch; after being saturated with all the cold water that it will absorb, add over that a dry blanket. If the cold is properly applied, one will not have long to wait for a cure.—*J. R. Finley, Breckenridge, Mo.*

The Society of Public Analysis of Great Britain has adopted a standard for the poorest milk at 9 per cent. of solids and 2.5 per cent. of fats. Professor Cameron states that examinations of the milk of forty-two Shorthorn cows during the winter of 1880, gave 9.70 per cent. of solids and 4.20 per cent. of fats in the poorest milk, the cows being housed and well-fed. The average yield per day was 11½ quarts per cow. In every instance more milk was given in the morning than in the evening. The quality of the milk improved in each case as the time for calving drew near. The older cows were found to give both more and better milk than the younger ones.

It takes longer to churn the cream from a cow when farrow than when she is fresh. It is not a good practice, therefore, to mix the milk of a farrow cow with that of a cow recently in milk, if it is to be made into butter, as its cream will be so much the longer in churning that most of it will be left with the buttermilk. When the milking season is well advanced the difference in churning is less and the farrow cow's milk can be mixed with better advantage.—*L. B. Arnold.*

The value of the butter product of the country is about five times that of cheese, but only 3 per cent. of it is as yet shipped abroad, while 30 per cent. of the cheese goes there. American dairymen have unquestionably succeeded remarkably in pleasing the palates of the English with their cheese, and even in continental countries, even in noted dairy districts like Holland and Belgium, American cheese is offered to the traveler. No packing of butter has as yet been able to bring the American maker into really serious competition with the French and other continental makers: The English like fresh butter. The shipments from New York, mainly to ports in Great Britain, from May 1, 1882, to January 11, 1882, were 16,893,482 pounds to 23,907,205 for the corresponding period last year.

On the Elgin, Ill., board of trade last year there were 287,664 boxes of cheese sold, weighing 11,327,526 pounds. The highest price paid for cheese at Utica was 13½ cents; at Little Falls, 13 cents; at Elgin 13 cents. In all cases the cheese was full cream. The lowest price paid at Utica was 8½c, at Little Falls, 7c., at Elgin, 5c., the last being closely skimmed cheese. The Elgin board, therefore, reports more boxes of cheese sold than the Utica or Little Falls boards, though the weight is less. These figures are: 240,476 boxes, 14,444,760 pounds, for Utica; and 253,025 boxes, 15,181,500 pounds, for Little Falls. The Elgin board has transactions the year round and sold more cheese in December than any other month, January being the second.

The enormous quantity of cheese manufactured in this country, for export, as well as home consumption, leads us to ask why we should be under the necessity of importing milk sugar. Those who may be engaged in making the latter, or intending to embark therein, will be interested to learn of the latest improvement in that line. In the evaporation of whey, from which the cheese has been removed, a considerable portion of the sugar of milk is lost through conversion into uncrystallizable lactose by the action of the acid in the whey. Engling, therefore, recommends the neutralization of the acid with fine chalk, and then after evaporating it to one-half, he allows it to settle. The clear liquid is afterwards decanted or drawn off from the precipitate, which consists of albumen and phosphate of lime, and evaporated still further. The sugar separates from the purified solution in adherent scales and crusts; upon a further evaporation of the mother liquid, a second crop of crystals is obtained. The thick liquid that remains can be dialyzed, and more sugar obtained. From 100 quarts of summer whey eight pounds of refined milk sugar can be obtained.

A Small Breed of Pigs.

An English contemporary speaking of a breed of pigmy porkers, three sows and a boar from Nepal, on exhibition at the Zoological Gardens, London, says:

This species is so rare that since Hodson described these animals, fifty years ago, there has not been a single specimen attainable in Europe, and even the museums have been unable to get more than a single skin. They are very small in size, scarcely bigger than a large wild rabbit; or probably a better idea of their size may be formed by giving their weight at seven or eight pounds each. They are very active on their legs, running very swiftly, and they are very shy. Their skins are well covered with short, reddish-brown hair, or rather bristles; they are very clean feeders, and also very cleanly in their habits. Their flesh is esteemed very good for eating; and thus these interesting little porcines are naturally the subjects of other contemplations than their zoological rarity. If they can be bred in the Gardens, the Society will find profitable results repay the price given for them, by disposing of the first offspring to other menageries; and the acclimatization of the subsequent progeny would seem to be well worthy of attempt, as they might be kept seemingly without offensiveness in the yards and gardens of domestic houses, and be fed upon potato parings, vegetables and debris of food. They are very fond of rice, and will eat small portions of meat; but they will not touch the wash of greasy matters commonly given to ordinary pigs.

The Sierra Leader says: The recent storm caused havoc among the herds of the dairymen in the mountains. Stock has been scattered far and wide, many perishing from hunger and exposure. Every one was caught unawares, and had no time to collect their cattle and provide a shelter.

The trade in Angora goats is increasing wonderfully in Wyoming, Utah and Colorado, and during the past two years Mr. Bailey of Lander county, Nev., has disposed of over \$30,000 worth of these goats.

ADVERTISING RATES.—Displayed \$1.50 per inch each insertion or pro rata for less space. Reading Notices, set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, November 4, 1882.

THE EMBRYO STAKE.

The free rains this week have necessitated a postponement of the Embryo Stakes which were to have been trotted at Oakland Park to-day. The conditions require that in case of postponement the race shall be trotted on the first good day and track after the day first set. The unsettled weather makes it impossible to say now when the matter will be decided, but probably next Wednesday will be appointed. The three races which the stake requires should for the number and quality of the colts named be all good ones. In the yearling dash of a mile opinion seems to favor A. P. Whitney's Dawn by Nutwood, although Antevolo, full brother to Anteco, Mr. Simpson's entry, is doing well and is much admired. Possibly one factor is omitted from the calculation, for a juvenile from Palo Alto, Albon by General Benton, will be among the starters and may prove to be a dark horse in the race. He has the advantage of being entirely sub rosa as far as what he is doing and can do is concerned, while the performances and progress of the others are well known to most people who feel any interest in them. Seven colts have paid stakes in the yearling class and it is probable that some more than the those above named will start—possibly the winner is yet in the shadow. Of the two-year-olds nine have paid stakes but the proportion of these that will show up when the race is called is at present unknown. It is assured that Mr. Rose's Neluska, Dr. Hick's Pride, and John Howe's filly will be among the starters and that will insure a good race should none of the remaining six appear—a contingency not probable. Of the three-year-olds fourteen have not declared out and the last will be the great race of the day. Anteco, Fred Arnold, Bonnie and Nutwood Maid will be among the starters and the result cannot be prophesied. The three races of the stake will make a great day's sport and the behavior of the colts as a premonition of future stars of the turf will be watched with interest akin to anxiety.

COURSING.

The California Coursing Club have decided to give a handsome gold cup for competition at the club coursing matches which take place in the fall of each year. We consider that this is one of the best ideas that could have been advanced for the popularizing of this noble sport. One valuable cup, which must be won three times before it becomes the property of the nominator, is a far greater incentive to breed and train fine dogs than is the custom of giving three or four cups at each meeting. Cnps and mugs won at coursing matches in this State have become rather common and cease to carry with them any distinctive honor, but the possession of such a cup as this club proposes to get up will be recognized as the highest honor to be obtained in this State in coursing competitions. A handsome parlor ornament, it would be with pride that the holder would show it to his friends and say: "This is the champion cup of the California Coursing Club. I won it at such a time with such a dog." It will also be productive of good fellowship, for the man who wins it will, of course, take many an occasion to fill it to the brim with sparkling wine in which to pledge the health of the good dog whose gallant speed and dauntless pluck put it in his possession. Its existence will always be a real tangible something to hold the club together, a sort of trust fund for the maintenance of coursing, and we predict that from the day it is first run for at Merced until the time when it shall have become necessary for the club to purchase another emblem the fortunes of the California Coursing Club will steadily increase.

EDITORIAL NOTES.

Californians have a habit, a sort of second nature it is, of doing things in a whole-souled way; that is to say of throwing their whole energies into anything and everything they undertake. It is a peculiarity that makes an agreeable impression upon the stranger when he first sets foot on these shores and one that goes far to explain how a growth of thirty years shows such wonderful results in the western slope. Just now California is in the throes of an election and every other interest is secondary to the one of parties and candidates. It is a trifle awkward for one whose endeavor is to keep alive and promote matters that can by no manner of construction be made to take on a political character. If he approaches a man for information as to the history or lineage of a horse he is answered with the pedigree of a candidate. A query as to what may be the chances of a coming race, will in most cases elicit the reply that Brown will be elected beyond a doubt. Any attempt to discover anything new in the sporting world at this time is sure to be met with a disquisition on the management of "fights"—the favorite term for a political campaign. Politics are a necessary evil in this government and it is a healthy sign when all classes and all citizens take an active interest therein but it will be a relief when the ballots have been counted and the names of the successful ones been decided so that the city can settle back into its normal condition. We hope the political ardor will have cooled out before the inauguration of the Blood Horse meeting, that the good people of San Francisco may be in a condition to enjoy the sports of the turf and appreciate the efforts to amuse them. Politics have become a trifle tiresome to non-political journalism and it is with no little self congratulation that we view the near approach of election day.

The Blood Horse Meeting.—The committee of the Blood Horse Association to whom the business arrangements for the fall meeting were confided have decided upon the Bay District as the course over which the races will be run. The fields are very strong both in numbers and quality and the outlook is that this meeting will eclipse any former gatherings of the kind held on this Coast. The heavy rains this week ought to be succeeded by a season of our delightful fall weather if there is any logic in judging one season by another, and with a cool, bracing atmosphere, fine roads, and the complete and elegant appointments of the track to supplement the racing the meeting ought to attract a large attendance and be productive of good sport.

Overman—The match between Overman and J. P. Morris went off by the owner of Morris paying forfeit but the race with Helene after being postponed on account of unfavorable weather was trotted at Fleetwood Park, New York, last Wednesday. It was announced as a match for \$2,000 a side and was won easily by Overman, who took the second, third and fourth heats in 2:21, 2:26½, 2:23½. These matches have caused Mr. Hickok's horse to be much discussed among horsemen and the turf editor of the *Herald* notes the report that some one says (perhaps the public) that Overman is a second St. Julien and can be sold for more money than any horse ever brought out if the owner wishes to sell.

The death of H. R. Covey and the purchase of the Courts farm have brought about some minor changes at Gov. Stanford's establishment. The thoroughbreds will be as heretofore in charge of Henry Walsh but headquarters of that grand division will be at Matadero. The stock at Palo Alto will be in charge of C. Van Buren pending the return of Charles Marvin, who will then assume command of the trotters. Both divisions will be under the general superintendence of Major J. L. Rathbone, who will represent Gov. Stanford during the Governor's absence in the East.

Rowdy Boy, the well-known gray gelding by Rustic will be offered at auction on the Bay District course on the 16th inst. Rowdy Boy is one of the promising colts of the State. He is four years old and has a record of 2:31½ but was timed at the late State fair at 2:25 in a race where he was outclassed and could not win. He is stabled at Mr. Randlett's near the Oakland Trotting Park and can be seen at any time previous to the sale by applying to James Garland at Randlett's hotel.

The chestnut trotting gelding Ashley will be sold at auction by Killip & Co. at the Bay District track on Thursday, the 16th instant. Ashley has a record of 2:24½ and would make a capital roadster, being of good size and a steady goer at road paces. He drives single or double and would hold an easy edge over most of the road horses that go through the park, his turf training having been very thorough. It will be a rare opportunity to secure a fast one.

J. A. Roberts of Melbourne, Australia, the owner of Boccaccio has offered a purse for two-year-olds, the get of his stallion, to be trotted in the spring of 1883. The race will be a stake of \$15 each, \$150 added by Mr. Roberts. As Boccaccio did a fair business in the stud it is likely that a number of colts will be named in this stake, and the race will give some indication of the quality of the mares and the fitness of the climate for breeding and raising trotters.

The peculiar fall weather is regarded as very favorable for stock raisers, the warm rains bringing up the grass with such rapidity that cattle find an abundance of new feed already. The expected clear skies that were to follow the unusually early rains have not yet appeared and it looks as

though the rainy season was to be strung along over five or six months. This will be good for grazing lands but augurs poorly for grain crops.

Mike.—J. A. Cardwell of Jacksonville, Oregon, has sold his stallion Mike to James Sutherland of Scott Valley, Siskiyou county. Mike is a son of old Vermont and has been kept at Scott Valley for several years, where he is very popular as a stock horse. He has sired several fair trotters but has had no opportunity to mate with mares that had speed or any of the requisites. He is a better horse than his colts so far show.

POULTRY.

At the February meeting of the North American Poultry Association the subject of incubation was thoroughly discussed, and the following facts substantially established: That the only way to raise chickens with certainty for early market is by the use of incubators; that a good incubator will hatch from seventy to eighty per cent. of the eggs put in it; that people living in cities, who have not room to keep hens, can use incubators successfully, getting eggs from grocers and farmers near by; that with special care two hundred chickens may be raised to market size in a room fifteen feet square; that the business of raising poultry is particularly adapted to ladies and infirm people both in city and in country; that live chickens from eight to twelve weeks old will sell in the East in April, May, June and July at from 40 to 75 cents a pound, or from \$1 to \$1.50 each, according to variety and condition. [This is a mistake. They bring about 75 cents each at retail there in April.—Ed.] As the mass of the people are ignorant of the profits of poultry raising, cannot afford to buy expensive incubators, and do not know that they can make a good, cheap incubator themselves, with which to hatch both early and late chickens, the following resolution was adopted: Resolved, That the Secretary of the North American Poultry Association be authorized to inform the people, through a leading newspaper in each State, that plain directions and diagrams for making a good incubator, that they can make at home at a cost of less than \$5, and that will hold 250 eggs, can be obtained by addressing our secretary.—J. M. Bain, New Concord, Ohio.

Americans can justly be proud of their achievements in the improvements of live stock, and in poultry especially, the justly famous Plymouth Rock breed of fowls being an enduring monument of pains-taking experience. There are various breeds of poultry which, for single and special purposes, may exceed the Plymouth Rocks, yet as a general purpose fowl where profit is desired, there is no better, nor is there likely to be. The farmer and fancier alike are loud in their praise for they seem to "fill the bill" exactly. They are from medium to large in size, have plump, well-rounded bodies, and fit for table use at almost any age. They are hardy, good layers of large eggs, and the eggs are uniformly fertile. They make good, careful mothers, and are as free from disease as any other breed known. One feature which makes them especially desirable for southern breeders and farmers is that they feather up so quickly, when very young, and are thus secure against the fierce rays of the sun at this stage of their growth. The Asiatics (the Brahmas and Cochins) remain so long almost or entirely naked many of them become "scalded," causing them to droop or die, or else stunt them so badly that they seldom, if ever, get entirely over it, even when they are fully grown and matured.

In using eggs as food there is a danger of forgetting how useful they are. It is safe to say that more than one-half of all the millions of eggs which are consumed every year in this country are used in cakes, puddings, custards, cream and confections. How much real good do these do? Dr. Holbrook says: "About one-third of the weight of an egg is solid nutriment. This is more than can be said of meat. There are no bones and tough pieces that must be laid aside. Practically an egg is animal food, and yet there is none of the disagreeable work of the butcher necessary to obtain it." This is where we find the true value of eggs. The mechanic opens his lunch basket and finds boiled eggs, containing more nutriment than meat. The labor of the afternoon is performed by their staying qualities, for an egg is animal food. There is a place for everything, and who shall say that the place for the egg is not on the tables as a substitute for meat?

BASE BALL.

Mr. Robert Hall, butter inspector in Ohio, says: "When butter is properly churned, both as to time and temperature, it becomes firm with very little working, and it is tenacious; but its most desirable state is waxy, when it can be moulded into any shape, and may be drawn out a considerable length without breaking. It is then styled gilt-edged. It is only in this state that butter possesses that rich, nutty flavor and smell, and shows up a rich, golden-yellow color, which imparts so high a degree of pleasure in eating it, and which increases its value manifold. It is not always necessary, when it smells sweet, to taste butter in judging it. The smooth,unctuous feeling, in rubbing a little between the finger and thumb, expresses at once its rich quality; the nutty smell and rich aroma indicate a similar taste; and the bright golden, glistening, cream-colored surface shows its height of cleanliness. It may be necessary, at times, to use the trier, or even use it until you become an expert in testing by taste, smell and rubbing.

There is a shooting match to come off next Sunday at Shell Mound between teams of fifty each, men from the First and Second Artillery Regiments. The match is only a friendly competition.

Concluded from page 289.

all his sons. For the following notes concerning the dam of Adair we are under obligations to his owner, E. H. Miller Jr.:

Addie Lee was bred by E. J. Winegar, Esq., of Fort Jones, Siskiyou county, Cal. Her sire was Culver's Blackhawk, Culver's Blackhawk was said to be by Dave Hill of Vermont out of a thoroughbred mare.

Addie's dam was Nancy, pedigree unknown, but was a trotting mare and dam of other trotters than Addie.

In September, 1872, Addie got a record on a San Francisco half-mile track of 2:36. She was then in foal by California Blackbird, and dropped a colt, Berlin, April 11, 1873.

In 1874 I had her trained; she showed a mile in 2:27, on Oakland track, but she went lame from a splint. In 1875 I bred her to Fred Low and she dropped a colt, Adelia, April 21, '76. She was bred in '76 and '77 to Fred Low and dropped a colt to him each year, to wit: in 1877 and 1878; she was then bred to Electioneer and on May 2, 1879, dropped Adair and has been bred each year since (and dropped a colt every year) to Electioneer.

Berlin, her colt by California Blackbird, has a record of 2:32, got in a race at Sacramento (which he won) June 3, 1880, being at the time dead lame in both fore feet.

Adalia by Fred Low, has a record of 2:33 obtained last spring (in June) at Sacramento races, where she won both the 3 m. and 240 races.

Adair you know of—I have by Electioneer out of Addie, Adella two-year-old, Adina, yearling, and a sucking colt, all as promising as Adair was at same ages.

Stanford Stake, 1882. List of Nominations.

No. 1. Jos. Cairn Simpson, Oakland, names bay colt Anteeo, by Electioneer, his dam Columbine by A. W. Richmond, grandam Columbia by imp. Bonnie Scotland. Anteeo was foaled May 5, 1879; is dark bay, black points, save that the near hind foot is white and a small white spot on right hip.

No. 2. Palo Alto Stock Farm, H. R. Covey, Superintendent, names br f Bonnie, by General Benton, her dam America by Rysdyk's Hambletonian, grandam Fanny Star by Seely's American Star. Bonnie was foaled March 14, 1870; is brown, star in forehead, white hind ankles.

No. 3. Palo Alto Stock Farm names ch f Isnia, by General Benton, her dam Irene by Mohawk Chief; Grandam Laura Keene by Rysdyk's Hambletonian. Isnia was foaled June 10, 1879, chestnut, star, white hind ankles.

No. 4. Palo Alto Stock Farm names b f Hattie C., by Electioneer, her dam Melinche by St. Clair. Hattie C., foaled April 1, 1879, is brown, hind feet white.

No. 5. Palo Alto Stock Farm names b c Benefit, by General Benton, his dam Lucetta by Rysdyk's Hambletonian, grandam Lucy Almack by Young Engineer. Benefit was foaled April 10, 1879, is bay, white blaze in face, white spot on near hip, and white spot on side.

No. 6. N. T. Smith, San Francisco, names br c Clay, by Electioneer, his dam Maid of Clay by Henry Clay, grandam by Bullface Consol, son of imp. Consol. Foaled Feb. 22, 1879.

No. 7. E. H. Miller Jr., San Francisco, names b c Adair, by Electioneer, his dam Addie Lee by Culver's Blackhawk.

No. 8. C. A. Spreckels, San Francisco, names b c Gus S., by Speculation, his dam Jennie, a pacing mare, pedigree unknown. Gus S. is bay, star in forehead, both hind ankles white.

No. 9. C. A. Spreckels, San Francisco, names ch f Keystone, by Speculation, his dam Lady Aptos by Lodi, grandam Keystone by imp. Lapidist. Keystone is chestnut, star in face, white spot on off knee, near hind leg white.

No. 10. Claus Spreckels, S. F., names b c Speculator, by Speculation, his dam Patsy, by Alexander, grandam Molly, bred in Ohio, from a Bachus horse. Spectator is bay, star, four white feet.

No. 11. J. D. Spreckels, S. F., names b c I. N. Pool, by Speculation, his dam by Skaggs' Rattler. I. N. Pool is bay, small white spot in forehead, near fore foot and off hind ankle white.

No. 12. John Mangels, San Francisco, names ch c Settler, by Speculation, his dam Ceta by Alexander, grandam Nora by Glencoe. Settler is chestnut, white stripe in forehead, a little white on off hind ankle.

No. 13. A. Waldstein, San Francisco, names b f Nellie W., by Electioneer, her dam sister to Aurora, by John Nelson. Nellie is bay, three white feet.

No. 14. H. W. Seale, Mayfield, names ch f Hattie Weir, by Elmo, her dam, Ella, by Chieftain.

No. 15. H. W. Seale, Mayfield, names ch g Longfellow, by Primo, son of Elmo, pedigree of dam unknown.

No. 16. James Garland, San Francisco, names dark bay filly Fanny Wickham, by Irvington, her dam, Fanny Wickham, by Niagara, grandam Fanny Wickham, by Herald. Fanny Wickham was foaled May 24, 1879, bay, star, white near hind foot.

No. 17. William Corbitt, San Francisco, names ch c Arthurton Jr., by Arthurton, brother to Irvington, his dam Camille. Arthurton Jr. was foaled March 28, 1879, chestnut, small star, white hind ankles, white fore foot.

No. 18. J. B. McDonald, Marysville, Cal., names g c Brigade, by Brigadier, his dam American Maid.

No. 19. L. J. Rose, Sunny Slope, Los Angeles county, Cal., names J. W. Mackey's b f Eva (sister to Sweetheart), by Sultan, her dam Minnehaha. Eva is bay, one white hind foot.

No. 20. L. J. Rose names blk f Oro, by Del Sur, her dam by The Moor. Oro is black, has two hind legs white up to the hocks, one fore foot the same, the other a little white on the coronet, blaze face, white on lower jaw, and center of tail white.

No. 21. M. Sanlsbury, San Francisco, names br c Jack Gilmer, by Gibraltar, son of Echo, his dam Kitty Gavin, by Field's Royal George. Jack Gilmer is brown, with star in forehead.

The Race.

Weather so lovely as to make the most extravagant praise of it seem but a poor effort to reach out for the unattainable, track in perfect order and all the concomitants that go to make it the ideal race meeting, had only induced a small number of devoted turfmen to be present when the great stake was trotted. But what an appreciative and truly critical crowd it was. Scarcely a man among them but knew the points and performances of the horses as well as the men who had trained them and could gauge their speed almost to a second as they brushed around the track. Decently and in order the usual preliminaries were disposed of and then the work for which much labor and preparation had been spent commenced. In the sulky behind Adair sat Wilbur Smith, the man who had trained him. Calmly conscious of victory he handled his horse as though about to take him round the stretch for an exercise trot. Hank McGregory, of whom the

boys say that he can drive a horse without a watch and tell within two seconds how fast he is going, drove Clay while Joseph Cairn Simpson took the destinies of Anteeo into his hands. Two scores and away the trio went, Clay leading his sulky's length as he passed the stand with Adair and Anteeo as even as a double team. Where the track turns sharp at the top Clay left his feet and Smith, who had kept Adair well in hand, allowed him to go up to first place. Simpson seeing Clay was in trouble pushed Anteeo along, but at the quarter he broke badly and made no further effort in the heat. Adair made the quarter in 40 seconds and though five lengths ahead of Clay did not slacken speed but rather improved it making the second quarter in 38 or the half in 1:18. Clay was nearly four lengths behind at the three-quarter pole, reached in 1:58, but McGregory had hopes of winning the heat and shook him up for all he was worth. Smith evidently knew that he had a bit in hand with Adair for he made no responsive effort and trotting the heat out easily, won with three lengths to spare; Anteeo a poor third. Time, 2:34. This was the fastest heat that Adair had ever trotted but the ease which he did the work and the evenness of his stride showed that on a pinch he could cut off nearly all the odd seconds, and made the betting men very eager to get a slice of the pie that was awaiting his backers.

The start of the second heat was very unsatisfactory to the friends of Anteeo, though later events showed that he was not well enough to win in any case. After one false start they were tapped off. Anteeo was breaking before he reached the wire and his driver, not expecting a send-off, was caught napping. As before, Clay had the lead, which he lost at the top turn by a break. He caught soon and at the quarter was two lengths in advance of Adair. In this order they went to the half-mile where Clay broke again and Adair ranged alongside but did not seem able to pass. Clay caught his gait very quickly and behaving well drew away from Adair as they rounded the lower turn where Smith drove rather wide. Exactly at the bottom of the track Adair misbehaved for the first time in the race, making a most demoralizing break. When he caught, his stride was short and he seemed nervous. A few yards more and he broke again, allowing Anteeo, who had fallen away badly, to come up to his wheel. This inspired Adair with ambition and the balance of the heat he trotted beautifully but had lost so much ground that Clay had lengths to spare at the finish. Anteeo was a poor third. Time, 2:36. Backers looked dubious and in their anxiety to hedge sent Adair down to \$9 in the pools against \$20 for the field.

The third heat was the slowest of the race owing to the number of breaks made by the leading horse. Adair commenced by breaking as soon as the bell tapped and behaved so badly that when Clay and Anteeo were going on even terms at the quarter he seemed to be virtually out of the race. But when he turned into the straight stretch at the back of the track Adair began to recover from his troubles and trotted faster than ever before in his life. Anteeo had fallen away behind Clay and past him Adair went as though he belonged to another class. Before the half was reached McGregory was startled out of his contemplation of a clear course ahead of him, by seeing Adair push first his head alongside of his wheel and then introduce his entire body to the front place. When McGregory got over his surprise at the appearance of Adair, whom he had fondly imagined was yards in the rear, he gave Clay a shaking up; but in spite of all his efforts Clay could not shake the big bay colt off. He got discouraged in trying and broke at the bottom of the track. Adair was leading two lengths when they straightened out into the homestretch and had an easy race, but repeating his galloping performances, he fell away two lengths behind Clay. This was less than 200 yards from home and though Adair when he caught trotted fast his task seemed hopeless and second place would have been the limit of his success had not Clay most fortunately tired and left his feet a few yards from the wire. Adair went up with a rush and won the heat by a bare neck, Anteeo a poor third. Time 2:40.

The fourth heat was not very fast but it was the best contested and most exciting one of the whole race. The horses were rather fractious at the score and three false starts were made before they got away. Anteeo had no occasion to complain of the start this time, for he was a full length ahead when the wire was passed. Clay did not do as well and when the quarter pole was reached was a good distance behind the leaders who were going like a double team. The pace was too hot for Anteeo and Adair had only to keep moving to open a gap of two lengths before the half mile was made. Clay by this time had got down to work and passing Anteeo challenged Adair for the lead. From the last turn to the stables Adair and Clay were neck and neck. Anteeo, who seemed to improve always at the end of the mile was coming up very fast. It was any one's race at about twenty yards from home when Clay left his feet and Adair won by about a length and a half; less than half a length separated Anteeo from Clay. Time 2:38.

Adair's victory was very popular, and long and loud were the cheers that greeted him and his driver, Wilbur Smith, as they turned to come back to the start to weigh. The spectators were heartily pleased with the race all through, and were satisfied that at least for once in their lives they had seen three horses in a race all fully extended from end to end. The race deserves to rank high among those which conduce to the honor and popularity of the track. There is no other State in the Union that could produce three such starters in a stake race, and though the time was not as fast as some expected to see it is certain that any one of the three entries could have trotted as fast as thirty but for the ravages of pinkeye and its attendant loss of work.

How to Make Fine Butter.

The process of making butter is an important one, for the best butter may be spoiled and poor butter improved in the working. When the butter is churned it is taken from the churn and placed on a smooth maple, birch or chestnut table or other butter worker, or put into a bowl. If the churn will admit of it the buttermilk may be drawn off and clear, cold water poured into it and the butter washed in that way in separate waters until it runs off quite clear and the butter is quite free and clear. This is indispensable if the butter is expected to keep well. It is then salted at the rate of one ounce to the pound of butter. The butter is pressed out with the ladle, and never to be worked by the hands under any circumstances, and the salt is spread over it; it is then doubled and spread out again and cut and gashed with the ladle, but never rubbed or plastered, but only squeezed and pressed, until the salt is pretty evenly mixed; it is then put away in a cool place for twenty-four hours or less, as may be convenient. It will then appear streaky and patchy, and is worked over in the same way as before until it becomes free from this streakiness and even in color, by thorough mixture of the salt. This is done by squeezing it with the ladle, a small piece at a time, and pressing it out into a flat sheet, doubling it, and again squeezing it out, so as to get all the salt and moisture in it evenly through the mass. The color is then alike all over.

No more working is then required. The first working requires ten minutes for twenty or twenty-five pounds, the second about fifteen minutes. It should then break with a coarse, uneven fracture, much like that of a piece of beeswax, and should appear when cut of a granular texture and quite free from greasiness, and fine drops of brine should follow the knife as it cuts. It is not well to try to get all the moisture out of the butter, as this improves its texture and flavor. If the cream has been well kept and the butter well made and churned, it should have a very sweet and fragrant scent, quite free from acidity or pungency. It is a peculiar scent, and belongs only to the best butter, and when this odor is absent the right flavor is wanting, because the scent and aroma, and the flavor as well, are all attributes of pure fresh butter. The butter should be packed as soon as it is worked the last time; no butter needs a third working; the packing should be quite free from all disagreeable scent or impurity; white oak, spruce, or white ash, are the best materials for the tubs or pails. White oak has an agreeable scent when fresh and stands first for butter packages. The package should first be scalded, then rinsed in cold water, and then rubbed with a little salt, then rinsed with a little water, just enough to wash off the salt, but not to freshen the wood, and the butter is packed in the damp pail at once, being pressed down solid so that no air holes are left. The pail is filled completely full, and may be covered with a piece of muslin dipped in brine, or with paraffine paper, and close up at once tightly and put away in a cool place or sold, which is the best plan.—*Chicago Weekly Herald.*

Insects on the Surface of Oranges.

When a dish of oranges is seen on the table for dessert the fact is hardly realized that in all probability their surface is the habitat of an insect of the *coccus* family. This tiny creature is found on the orange skin in every state of transformation, from the egg to the perfect insect, during the winter months, instead of remaining dormant in the cold weather as is the case with most of the insect tribe. It would hardly be possible to find a St. Michael's or Tangerine orange that had not hundreds of these little creatures in various stages of development on its surface. Lemons, too, are frequently covered. Upon inspection, the skin of an orange will be found to be dotted over with brownish scarlet spots of various sizes. These specks can be easily removed with a needle; and when placed under a microscope an interesting scene is presented, consisting of a large number of eggs which are oval white bodies standing on end, like little bags of flour, some of the inhabitants of which may very probably be seen in process of emerging from the open end of the egg. The female insect, upon leaving the egg, has six legs, two long hair-like appendages, and no wings; it thrusts a sucker into the orange in order to obtain nourishment, and never moves again, passing through the various stages of development until it lays its eggs and dies. In the case of the male insect, the chrysalis after a short period opens, and the insect flies off. The male is supplied with wings twice the length of its body, and each of the legs has a hook-like projection. It has four eyes and two antennae, and is so tiny that it cannot be seen when flying. From some parts of Spain oranges come to us having their rind covered with a *coccus* of quite a different type. The surface of oranges, indeed, affords the possessor of a microscope an infinite amount of interest and amusement.—*Chambers' Journal.*

Clean Stables.

There is possibly no more repulsive sight than a filthy cow-stable, and one in which dairy cattle are housed is especially offensive. It has been demonstrated that cows who are neglected in this respect fail to yield a perfect flow of milk, and it is reasonable to suppose such is the case. The richest of food may be given them, but if their condition in the stall is neglected, they will not thrive. The foul odors of a filthy barn must necessarily permeate not only the animal's hide, but it has been proved that the meat of stall-fed steers, who have been fattened under these circumstances, will, when put upon the block and cut up, taste of the stable impurities. It would seem, therefore, that owners should appreciate the force of the old adage that "cleanliness is next to godliness," and beyond the fact that they are enabled to receive additional profits by closely watching their stock and providing clean quarters for them, advance even one step higher, and from the stand-point of the humanitarian at least treat their stock with common decency. City consumers often detect to a greater or less extent the presence of the barn-yard odor in their milk. Burns for the accommodation of dairy cows should receive the same care as those devoted to the average horse. Their health depends largely on their surroundings, and reeking piles of manure with the foul air which naturally arises therefrom are not conducive to health, nor is it possible under these circumstances to furnish good, pure, wholesome milk.

Jay Beach is negotiating for a ranch in Rogue river valley probably in search of a better place to winter his trotters than he has at Linkville. Cascade farm is a healthy place and the pure air and substantial grasses insure hardy and vigorous horses, but the snow precludes that all-the-year round education which Mr. Beach's more southern neighbors are able to give their colts, and we suspect that he does not propose to allow these climatic disadvantages to continue.

The Walla Walla Statesman says that there is not a six months' supply of beef cattle in that section of the territory,

THE RIFLE.

SHOOTING AT BERKELEY.

The California Rifle Association's Tournament at Shell Mound Park.

Last Saturday and Sunday the above named Association held their fall shooting at Shell Mound, Berkeley. The day was pleasant and quite calm for this time of the year; the attendance was large and composed of sharpshooters who took a keen interest in every shot that was fired.

The shooting for the first day began for the Andrews Trophy.

This trophy was given to the Association by Col. A. A. Andrews of the Diamond Palace, to be competed for by military company teams. It was shot for first in May, 1881, and won by Company E, First Artillery Regiment; it was won at the fall shooting of that year by the same company. Last spring Company C, First Regiment, won it, and again last Saturday on a score of 519 which is the best score on record in the United States. The following are the individual scores:

COMPANY E, FIRST INFANTRY.	
T. C. Carsod.....	4 3 3 4 5 5 5 4 5 5-43
W. F. Leaman.....	5 3 4 4 4 3 3 4 4 3-39
M. N. Laufenberg.....	5 3 2 4 5 4 5 0 3 2-33
J. Stewart.....	4 3 4 4 3 4 5 4 4 4-40
T. Murphy.....	4 5 3 3 3 5 4 5 3 3-40
L. Barrere.....	4 4 4 4 3 4 5 4 5 4-41
Total.....	4 4 5 4 5 4 5 3 5 4-42
COMPANY C, FIRST INFANTRY.	
H. T. Sime.....	5 4 5 4 5 4 4 5 4 5-45

J. E. Kleid.....	4 4 4 4 5 4 5 4 5 4-41
Total.....	5 5 4 5 5 4 5 4 5 5-47

Pacific Slope Match

was for a beautiful bronze figure of a horseman. This trophy was put up for the competition of all military teams of the Pacific Coast. It was shot for and won the first time, in the fall meeting in 1881, by the California team. This time it was won by the Nevada team, whose score of 866 deserves special notice. The trophy will have to be shot for in Nevada the next time it is competed for.

NEVADA TEAM.	
W. H. Burke.....	5 5 4 4 4 5 5 5 4 4-44
G. C. Thaxter.....	5 5 4 5 5 5 5 5 5 5-49
C. H. Galusha.....	5 5 5 5 4 5 5 5 5 5-47

The Centennial Trophy

was given by the City of San Francisco in 1876 for the competition of regimental teams of the National Guards of California. It has been won for seven years by the First Regiment. The original intention was to have the trophy shot for, for one hundred years, but on after consideration the time has been reduced to five years. The First Regiment have again laid their claim to the trophy by winning it the first time on the five year stretch.

The Association Pistol Trophy.

In order to encourage pistol practice and pistol sharpshooters the association offered a silver cup of elegant design to the team that should win it three times. It was won the first time last spring by Capt. Douglas' team, No. 1, S. F. Police; this fall by Captain Douglas' team, No. 1; Capt. Short's team, S. F. Police, and the Citizens' team tied in points but the latter made the better score according to Creedmoor.

The Second Day.

The day was quite as pleasant as the day before; the attendance was just as large. Two days could not have been taken together that would have proved more satisfactory to the riflemen than those selected. There was just enough wind on both days to blow off the heated air or mirage that rises from the ground on warm days, and not enough to interfere with the shooting. The shooting of the second day began with the

Governor Perkins' Trophy.

This trophy was presented to the association by Governor Perkins in 1876. It was won the first time by F. Kuhle, twice by Sergt. N. Williams of the Oakland Light Cavalry, and the last time by F. Kuhle again. It has to be won three times by one person before it becomes his property. In connection with the trophy were seven cash prizes ranging from \$15 to \$1. The following are the competitors and their scores:

PRIZE WINNERS.	
Lieut. F. Kuhle.....	5 4 5 5 4 5 5 5 5 5-48
S. I. Kellogg.....	5 5 5 5 5 4 5 4 5 5-47

Geo. C. Haskins.....	45 P. H. McElhinny..... 45

General Barnes' Trophy.

In 1878 Gen. Barnes gave a beautiful medal that goes under the above name. It has been won twice by Sergt. N. Williams, once by F. Kuhle and the last time by S. I. Kellogg. It has to be won three times by one person. The following are the competitors:

S. I. Kellogg.....	5 5 5 5 5 4 5 5 5 5-49
T. F. Kelly.....	4 5 5 4 4 5 5 5 5 5-47
F. Cummings.....	5 5 4 5 4 5 4 4 5 5-47

L. Haake.....	7 9 4 8 8-36
J. E. Stewart.....	6 2 10 6 11-35

Military Match.

This was a new match with all cash prizes. The distance was 200 and 500 yards, Creedmoor targets. We would call

attention to the first three scores, as they are the highest ever made with a military rifle.

had few or rather no points to spare. Two instances can be recalled, one where the Nevada State Trophy hung on the making of one point and the other when the Short Range Trophy was won on a similar circumstance. In the first instance the Nevada team had made their score of 422 points, Company C's team had all shot but one man, Lient. J. E. Klien, his getting or not getting five bullseyes in his last score would decide the match. Both teams stood in breathless suspense while Mr. Klien was shooting, and on his making his fifth bullseye both teams gave him a rousing cheer. In the Short Range match the circumstances stood precisely the same and Company C's man, Mr. F. Cummings, was also loudly cheered when he made his final and deciding shot. Well might they be cheered, for the men from Nevada that they shot against, were "foemen worthy of their steel," and had it not been that one of the Nevada shots, Mr. Thaxter, has been sick for several months and was in poor shooting condition, the match might have terminated otherwise.

The Nevada teams used the Sharps military rifle while the California teams used the Springfield military rifle. There are some persons in the East who are partial to the Sharps rifle and think that a Springfield ought to be compared to the old-fashioned musket for shooting qualities, but the above scores show that the Springfield rifle is not to be laughed at.

On Tuesday evening the victorious teams assembled at the military headquarters on New Montgomery street to receive the prizes. After the trophies and medals had been distributed, the cash prizes were given out; many of the smaller cash prizes were donated to the Association by the more liberal minded. After the distribution was finished, Company C invited all the sharpshooters, military and private, to their armory on Post street, where they were entertained with music, speeches pertinent to the occasion, and recitations. Refreshments were served at 10 o'clock, after which Col. A. A. Andrews, in behalf of the members of Company C, stepped to the front and, with a well-worded speech, presented Col. J. H. Dickinson with a beautifully framed certificate of life membership in the company, as a token of the respect with which all the members hold their commander.

The Association's cash receipts of this year amount to \$1,500. The money paid out for cash prizes amounts to \$1,200, for medals and trophies \$300 and the other \$100 or less has been paid for necessary expenses. There is some talk of the association getting a range of its own. This is a very good idea and if a move is made in this direction it should receive the support of all who are interested in rifle matters.

The Next International Rifle Match.

The National Rifle Association held a meeting yesterday at 102 William street. Mr. Seabury read a draft of a letter which the Committee on the Return International Match ask to be empowered by the Executive Committee of the National Rifle Association to address to the National Rifle Association of Great Britain. The necessary authority was granted. The letter requests that the National Rifle Association of Great Britain will consent to such modifications of the conditions under which the last match was shot as will permit in the return match the use of the wind gauge on the rear sight; the improved barley-corn sight, which is a straight vertical projection instead of being cone-shaped, as were the sights of the British team in the late match, and concede the eligibility of National Guardsmen for places on the American team who may enlist on or before January 1, 1883. In general terms it urges the advisability of rendering the conditions of this and subsequent international matches capable of such changes as will admit the use of whatever improvements may be made from time to time applicable to military weapons. The terms of the last match required that all members of the American team should previously have been members of the National Guard for one year. It is desired to change this clause that there may be a large field from which to select the American team. The Executive Committee was also asked to authorize the purchase in England of ten Miford rifles, such as were used by the British team, the object being to have on hand serviceable weapons in case American manufacturers should fail to produce in time a gun equal to the British. This was laid on the table on representations from Colonel Bodine and Colonel Litchfield that guns of American manufacture would soon be ready which would render such foreign purchases unnecessary. Colonel Bodine is already testing a new gun. —N. Y. World, Oct. 20.

HONOLULU RIFLEMEN.—A rifle match took place about the middle of last month between a team composed of officers of the United States steamer Alaska and a team selected from the Honolulu Rifle Association. His majesty, who is President of the Association, did the honors of the occasion. The range selected was 200 yards, and resulted in favor of the Alaska team by forty-one points.

It is commonly known that owls have two or three sets of young in the course of a season; but as far as I can make out, after sitting upon the first egg, or pair of eggs, and hatching the birds, no further effort in incubation is made. Directly after the owlets are out of the shell, the hen-bird lays one or two more beautiful white eggs, but does not sit, devoting herself to feeding the insatiable little monsters she has started into life, and the warmth of their bodies hatches the next owlet. This one hatched, another egg is laid with the same result, that is vivified by the young ones' warmth, escapes from the shell, and once more an egg or two occupy the nest, so that in the same corner in a shallow spot may be seen an owlet three-parts grown, another half grown, another a few hours old, and a couple of eggs—four stages in all; and, if inspected by day, the three youngsters will be seen huddled together in very good fellowship, one and all fast asleep, and the eggs in the coldest place outside. The sight is not pleasing, as may be supposed from the description of the young owls; but if the eye is offended, what is to be said of the nose? Take something in a bad state of putrefaction and arithmetically square it; the result will be an approach to the foul odor of a nest of owls in hot weather. The reason is not far to seek, when it is borne in mind that the owl is a bird of prey; but all the same I have visited the nest earlier in the season, and found the place quite scentless, and that, too, at a time when ranged in a semicircle about the young were no less than twenty-two young rats and full-grown mice, so fresh that they must have been caught during the preceding night, the latter being supplemented by a couple of young rabbits. If, then, a pair of owls provide so many specimens of mischievous vermin in a night, they certainly earn the title of friends of man. When hunting for food, the owl glides along on silent wing beside some barn or stack, and woe betide the cowering mouse or ratling that is busy on the grain! As an owl passes over, down goes one leg, and four sharp claws have snatched the little quadruped from the ground, the four points seeming to slope toward a common center, so that escape is impossible. Every seizure is performed with claws; the beak being reserved for dividing the animal when too large. —London Graphic.

THE GUN.

Decoying Snipe.

The fondness which a large class of shooting men have for what is known as "bay snipe shooting" cannot be overestimated. Indeed, it is a sport which fills a gap in the sportsman's year, as it occurs at a season when all game birds save the woodcock are directed by law not to be shot at or had in possession. Thus very many persons who are averse to taking the field during the heated term prefer the pleasure of shooting at birds that come to them rather than expose themselves to the discomforts of toiling after the woodcock in its almost impenetrable swamps. The pleasures of bay snipe shooting are many, as it affords an endless variety of shots and requires but little or no exertion to follow successfully, as the guns lie concealed in blinds and the birds are attracted within shot by means of decoys or stools and by the whistled imitation of their calls.

The practice of shooting fowl over decoys dates back to a very early period, and for a long time only live birds were employed by the sportsman. Then, in wild fowl shooting, it was the customary practice to use wild ducks and geese, tame birds resembling the wild ones in color sometimes being selected by way of a makeshift, but the wild birds that had been crippled and then tamed were always preferred. These birds were readily taught to invite their brethren to destruction, and the most clamorous were considered the most valuable. But in Italy a revolting practice was in vogue, that of burning out the eyes of the decoy fowl with a red hot needle. This would make them very noisy, and the fowlers upheld their cruelty by saying: "These are the happiest birds in the world because they are always singing." Later on, however, it was discovered that, except in goose and black duck shooting, it was impracticable to collect live decoys, so our handy bayman turned his attention to making a wooden counterfeit, which was found to answer as an economical and excellent substitute. Indeed, the custom of manufacturing their own decoys has grown to be so prevalent among the coast gunners that during the long winter evenings it is a common thing to see the bayman busily engaged in whittling away at a duck's head or a set of snipe stools before his cheery cabin fire.

The snipe family, much less wary than their webfooted cousins, were for a long time so plentiful that a sufficient bag could be made by simply stationing one's self on the meadows where they resorted to feed. But no sooner was the flint and steel supplanted by the detonating system than they, too, had to be lured by the modernized wooden stool. At first the counterfeits were clumsily contrived, and even now in remote localities of our coast triangular blocks, daubed with one color, with a ten-penny nail stuck in one point for a bill, will be found perched about on the mud flats during the season. But the educated and æsthetic snipe of the fashionable gunning stations now demands a correctly modeled and artistically colored decoy, else he will say, "Not for Joe," while he quickly ascends to realms of bliss. But no painted bird can be compared to the dead one, and most of our most experienced gunners utilize the birds they shoot by running the point of a reed or slight stick under the skin of the neck and set them up in natural positions on the mud flats or sand bars. The best decoys, however, are the wing-tipped birds. They are "pegged out"—that is, a string about a foot in length is tied to one of their legs and the other end is secured to a stick which is driven into the sand. No sooner does a flock of birds come in sight than the cripples begin to flutter in vain to join their traveling friends. This attracts the attention of the passers, and, after a few repeated answers to each other's call, the flock circles over the cripples, and often alights on the sand beside them.

There is another way practiced by the gunners of Southern New Jersey and Virginia which is the most killing device known in eulaw shooting. On the large, bald marshes there the "Sickle bill" and "Jack" select places to roost. Should the gunner be fortunate enough to wing one of these birds he secretes himself in a bunch of high grass. When the curlew return towards evening from their feeding grounds they lower their flight and come whistling over the marsh. The gunner, who holds the cripple by both legs, begins bobbing it up and down and by pinching the back of its neck obliges it to cry out. The moment the flock spy the fluttering bird and hear its cry they wheel in their course and swoop down upon it. Nor does the rattling of the shoot into their ranks appear to hinder their kindly intention to succor an unfortunate brother; for they return again and again to their aerial charge, until, dismayed and alarmed at last by the incessant firing, the depleted flock call together their scattered forces and bear away for a safer retreat, leaving behind the ground covered with the dead and wounded. In this way many birds are killed, but in all bay bird shooting a large number of cripples are not recovered.

There is still another mode carried on for alluring the bay snipe, which applies more strictly to the shooting of the marlin willet, ornithologically called the semi-palmated tatter. In the egg season these birds congregate in vast numbers on the low sandy beaches of Eastern Virginia. There the gunner goes, taking with him a sample of the orthodox "yaller dog." The little cur has been trained to run wildly about, but to instantly return to his master at the sound of his whistle. No sooner has the dog been let loose among the tribe of little mothers than the utmost consternation prevails, the birds leave the sand and fill the air with their plaintive and terrified cries. Darting backward and forward at first, and circling over the intruder, their fear soon gives way to rage. At him they go, swooping down and almost striking him with their bills and wings. Watching these maneuvers from a distance stands the gunner. When he sees that the birds have centered their whole attention upon the dog he gives a low whistle, and as straight as an arrow the dog comes running to his master's feet, while the infuriated birds follow him up into the jaws of death. Thus are the affectionate instincts of the mother

made use of by man to bring about her destruction. Hundreds of willets are by this means toiled up to the gunner in one day, and the bags are often immense and the profits correspondingly great. As a mode of butchery it is a success, but those who follow it deserve the contempt of every gunner in the land. The dividing line between killing cruelly and shooting for sport is plainly defined, and the torturing of crippled birds as described above does not belong to the true sportsman.

The shooting at bay snipe is either carried on from blinds or boxes. The former are constructed on the bars and high shoals and on the marshes, beside the ponds where the tide does not reach. They are made of cedar boughs and salt water bushes, grass, reeds, etc., and often contain a bench for the accommodation of the shooter. The boxes, however, are only used on the shoals during ebb tide, or on the bald marshes where the wary curlew makes his home. They are made of light material, so as to be easily handled, and in size resemble a coffin somewhat. The box is taken to the shoals and sunk in the sand, and as it is made watertight the shooter can lie on his back without fear of a ducking. Whenever it is practicable the stools should be placed to the windward of the blind, and at all times the decoys should be set face to the wind. This arrangement will afford much better flock shots, as the birds need the resistance of the wind before alighting, and while circling to secure this advantage the flock is apt to double and "lap," and as the birds hustle together the best chances are given for a raking shot.

The birds fly best during a stiff southwesterly wind, their flights being conducted early in the morning and late in the afternoon. In the middle of the day, except in cloudy or rainy weather, the heat of the sun causes them to rest in their aerial voyage. But when a "flight is on" there are always enough scattering flocks passing during the midday to keep the eye of the shooter on the constant lookout and his hand in practice. Seated in his place of concealment he watches the quarter from where the birds are sure to come. Soon a small cloud is seen approaching, which, as it nears, proves to be a flock of snipe. Long before their shrill whistle is borne down upon the wind the ever alert bayman has sent out his call of welcome. Herein really lies his art, and nothing but long practice will enable him to distinguish at the great distance the variety of birds coming towards him; for out of the twenty or more different kinds of bay snipe each variety has its own peculiar cry. With rare skill can most baymen imitate each call, from the prolonged, shrill quivering whistle of the jack curlew and the plaintive treble notes of the black-breast plover to the whispering chirp of the tiny oxeeye. It is the tyro alone who overdoes the matter and pays dear for his whistle by seeing the birds swing away after having headed for the stools and give his blind a wide berth. —New York Herald.

Bear vs. Panther.

Peter Stewart was once hunting in Rockland when he saw some deer bones lying at the mouth of a crevice in some rocks. He knew that it was a panther's den, and that the bones were the remnant of a feast the occupants had made on a deer they had captured. Stewart hid himself behind a tree and waited developments. Imagine his surprise when he saw a big bear come out of the cave, carrying under his arm a panther kitten, which was squalling and kicking with all its might. The bear rose on its hanches and gave the kitten a box or two on the ears with its fore paw, squeezed it to death and threw it on the ground. The bear then returned to the cave, and in a short time came out with another kitten under its arm. This was treated as its companion had been. What the future intentions of the bear were Stewart never found out, for the second kitten had barely been killed when the mother panther appeared on the scene. This seemed to take the bear by surprise. The old panther saw her kittens lying on the ground. She bounded first to one and then to the other, smelling and licking them, and uttering plaintive cries. Then she turned to the bear, which remained in the erect position it had assumed when squeezing the second kitten to death. With a yell that almost froze the blood of the hunter, used as he was to the fury of panthers, she sprang upon the bear, and fastened her claws in the shaggy coat and her fangs in its throat. The bear hurled its antagonist ten feet away with its powerful paws, and then attempted to escape a second attack by flight. But the panther was upon it in an instant, and a terrible conflict ensued. The bear endeavored to catch the panther in its hug, but the latter was too agile, and with every spring upon its huge enemy the panther inflicted terrible wounds with its sharp claws. The blood poured from a dozen great gashes in the bear's body, and at last the panther leaped on the bear as it stood facing her, and, fastening her teeth in its throat, thrust the long, sharp nails of her hind feet into its vitals. The bear fell to the ground dead. As the panther was returning to her dead kittens Stewart shot her through the heart.

BAD LUCK.—Two young hunters got aboard the last train from Alviso, last Sunday, and hastily pushing their game bags under the seat sat down; their faces wore an expression that resembled in length the resolutions of a temperance meeting at the beginning of a political campaign. They said but little and would not let anyone see the contents of the bags. One of their friends, however, pulled the bag out from under the back seat and found five ducks. The two hunters finally let it out that they had lost their way in the fog on the marshes and could not find the blinds till nearly 10 o'clock. This accounts for their bad luck and Mr. H. Gotcher and T. Pearson may be congratulated in escaping the scandal of obliquity of vision over the gun barrel for it is not charged by anyone that they scored any dogs, pigs or tame turkeys on this trip.

CATCHING A BEAR WITH SALT.—Recently two teamsters, coming to Hailey from Vienna, camped near the timber above Boulder, one going out for game while the other remained to make bread. As he got out a sack of salt, a cinnamon bear approached, and the teamster, knowing about catching bears with salt, held a handful out, which the bear immediately licked clean—then asked for more. The third handful was being appreciated when the other man returned, and immediately took the trace-chains and some rope and bound the bear tightly. His bearship stood the tying with good humor, and was placed in the wagon and brought to Hailey.

Pheasant Shooting.

"I tell you what it be, sir, it ain't been no poachers at all, but you can't have both foxes and pheasants." The speaker was a burly Yorkshireman, clad in velveteens, a keeper on a northern estate, and the individual whom he addressed was his master, the landlord, the time 4 o'clock in the afternoon of a day in October. The gentleman in question had asked, as usual, a large party down to shoot his covers, and he was rather disgusted to find that the game on the property was less by half than they had found last year. Six or seven years before there was no better stocked preserve in the whole country, but after a lapse of twenty years fox hunting had been reintroduced, and every lord, keen shots or otherwise, had been asked to support the M. F. H., who maintained the pack at his own expense. Foxes had been brought in and laid down in large numbers, and after a few years there was one to about every five acres of gorse or woodland. Game, of course, began to get very difficult to preserve, and each season saw a slight diminution in the death-rate at the close of the day's sport; but so long as the hedge-rows were full of rabbits, pheasants remained unmolested. Reynard will always prefer fur to feather if he can get it, but the moment fur begins to fail he will make a meal of anything. Indeed, I recollect seeing one on a cold winter day, when snow was on the ground, take, after much effort, the body of a dead rook off a pole in a field of young wheat. It is then that, in spite of all the precautions of "velveteens," pheasants begin to disappear, the old hen is lifted off her nest, or the whereabouts made known of the young brood by the evening crow of the old cock, and used one by one for breakfast or supper as required. Of course, the keeper is blamed for not watching better for poachers, but in a country where foxes abound poachers well know that the pheasants are not likely to repay them for their risk and trouble. Yet the keepers in such positions find themselves most awkwardly placed. The coverts are drawn blank twice running, and then every hard-riding young squire openly gives in a verdict of "unjustifiable vulpecide." Not unfrequently the landlord of the estate, if a keen shot, gives his keeper orders not to kill foxes, but in such a way as to lead the man to shoot them when he gets a quiet chance, and there is nobody looking, and put them out of sight. Notwithstanding all that it is impossible to rear pheasants in the old-fashioned way in a fox-preserving country, and so we have during the past few years introduced the barn-door system with its most unsportsmanlike attendant, the hatnet. In the good old days of clumbers, pheasant shooting was a sport for princes, as nothing could be finer than the sensation experienced in knocking down a grand old cock as he came sailing majestically over the tree tops, straight in his flight as an arrow. Hens were spared in those days, and the birds reared were, in every sense of the word, wild, save that at the boxes in the woods they received their daily feed of Indian corn. Now we have pheasant farming carried out on an extensive scale, and in a year or two we shall no doubt see birds raised under steam incubators, and fed, as poultry is at present for market, by artificial processes. When that comes we shall no longer be able to class a pheasant as a wild bird, and we shall, indeed, have to take it out of the game list altogether. To describe the modern system of battue shooting is to describe that which is literally nothing else than pheasant slaughter—there is no sport in it. The birds are quite as tame as ordinary barn-door fowls, and, if the sportsman cared, would run to be fed from his hand, as they have done for weeks to the keepers. Possibly they have been made wild by noise, throwing of stones, and firing of guns a few days before the sportsmen arrive, in order that they may take wing on the approach of the beaters, and, poor things, afford the sportsman(?), who, gloved and perfumed, waits, cigar in mouth, at the end of the wood to bowl them over as he would do a drop-kick at foot-ball—better shots. "Bonquets" or flights of a dozen or so, coming close enough to allow of eight or nine shots at once, are considered special little tidbits, but grand old "rocketers" come so rarely that when they do they are invariably missed. Some ignorant writers on such matters confound grouse driving with this unsportsmanlike system, but it is almost needless to state that such men have never fired at a driven grouse in all their lives. Nothing is more difficult to kill than the latter, which goes at such a rate of speed that the sportsman invariably misses it in rear, and the very best shots of Hurlingham have been chagrined to find that, smart as they were over traps, they were no use at that sort of work at all.

Perhaps the most enjoyable of all pheasant shooting is to be found in the West Highlands of Scotland, where foxes are looked upon as vermin, and treated accordingly. There, on a nice morning in October, met on the lodge by the loch side, are the keepers and the beaters, the latter mostly shepherds from off the hill. The dogs are a mixed lot, and comprise Clumbers and Sussex spaniels, retrievers, and occasionally rough-haired Scotch terriers, most useful for working out rabbits from bracken and gorse. The cover consists of the natural Scotch copsewood, of hazel, alder and birch or oak saplings, running along the fresh water or inland sea loch for miles, with here and there an isolated button standing in the middle of some corn fields. The game likely to be found will be black game, brown hares, woodcock (natives), and pheasants, which have known no more domestication than an occasional handful of beans. The "rides" are roughly cut, and the ground the beaters have to pass over rough in the extreme. Sometimes, scrambling through thickets which one would think impenetrable, they will startle the woods with the cry of "Roe-deer away on the right," and the sportsman on the right hand side of the beat will feel his heart throb as a nice young roe steals out twenty yards in front of him, and gives a bound in the air as he sends the contents of his harrel in behind its foreleg. A minute more and the call is "Mark, woodcock," and sure enough over comes "Master Longbill," zig-zagging in his old way, skimming the trees, you are on his line in a moment, and down he goes. A brown hare steals out at your feet and is rolled over, but as yet you have come across no pheasants, though told that that part of the wood is full of them. Do not be afraid; they are only running on ahead, and won't rise till they come to the first break in the wood. You had better move on, however, and take up your place where you are likely to get a good chance at them. "Mark!" comes the call early again, and "What," you say, "is this coming along?" hard as a pheasant, but without the whirring noise which the latter makes with its wings—an old black cock going sixty miles an hour. Now be steady and let him cross above you, for he requires all the shot you can give him, and well driven home. He staggers under your right and you give him the left just as he is recovering. He reels, swings first to the left and then to the right, and comes down with a distinct thud. Be quick to load, however, for the beaters are fast closing up. You have just re-cocked, when "Mark!" is heard, followed by that well-known noise, "Soho!" Down he comes, a grand old fellow, who has had to make his living as best he could about the hedge rows, a beautiful wild bird, who would scorn to associate with his steam-hatched brethren of the South. He

is making his point for some outlying bottom, and will cross you on your right. He is going like a steam-engine, stately and straight, so get on his line and be well-forward. You think all this in one second if you are a sportsman and a shot—your right finger knows its business from long practice; there is a clear bang, and the bird that was sailing grandly and proudly through the air but a minute before, is falling dead headlong to the ground. "Mark!" again, and wheel to the left to hear the keeper, however, call out "Ware hen!" for the hens must be spared to breed. "Mark cock!" is followed, however, by another whirring of wings, and you swing in to him in the good old style, with an equally good result. After that there is some work on the left side, though nothing like the blazing that takes place at a hot corner in the south, and you shift to fresh ground. At the bottom some capital shots are made, the old cocks rising in grand style, and going away with that sailing flight which you only get in the woodland-reared wild cock. Snap shots at pheasants in rough, untrimmed cover, uncut by rides, and through which you have to scramble, require to be very smartly and cleverly taken, otherwise you may lodge your shot in the trunk of some tree ten yards in front of you. When hens are to be protected—and we should like to see a return to the good old sportsmanlike system—the practice is difficult, as amongst the trees you are apt to pull on anything that rises.

It is possibly no use, however, to write about pheasant shooting, except in what might be called the war correspondence style, as in our illustrated papers we see pictures which, with a few dead horses and men might pass for Tel-el Kibir. It is a case of blaze! blaze! blaze! blood! blood! blood! with as much sport about it as an average London butcher can get any day at the public shambles.—*Bell's Life.*

STOLEN.—Last week the Cordelia Club had five duck boats with the appurtenances and four and one-half dozen decoys stolen from the ditch near the house where several of the members were sleeping. This theft was no doubt made out of sheer cussedness or spite by some of those hunters who are opposed to preserves and clubs. The boats could not have been taken very far from the marshes as the thieves would have been discovered before they could get away with the plunder, which is probably hidden in the tules on the river.

Rabbits have become such a pest in Golden Gate Park, destroying young trees as fast as they are set out and doing other mischief, that for over two months boys have been, with the sanction of the authorities, hunting them with dogs. All this being of no avail to reduce the number of these depredators, poison is to be scattered about in wheat, and it will be unsafe for hunters to take rabbits or other wild game in the Park.

A pretty good score was made last Sunday by Billy Richards while shooting at the Cordelia Club preserves. He bagged (which means he brought in) ninety-two ducks for his day's shoot. When it is stated that this work was done with a No. 16 gauge Scott's hammerless gun, it shows good shooting and good grounds. This is the biggest bag of the season.

Judge Belden, of San Jose, has crossed the mountain quail with the valley quail and the product is a beautiful bird, nearly as large as the mountain quail. Judge Belden is now experimenting by mating the male with the female of this cross, and, if successful, the product will be a distinct variety.

It is reported that the fall race meeting given by the Idaho Park Association was a failure. Upon this subject the Baker County *Reveille* says: It seems that a general depression came over all the race meetings in Eastern Oregon and Idaho this year—a fact which is greatly to be regretted.

Mr. C. Kellogg, Mr. Bradford and Mr. A. C. Tabbs of the Cordelia Club were up, last week, at the String of Ponds on the Club's preserve. In two days' shooting seventy-two ducks were bagged, most of which were widgeon; there were several sprig and teal but only four mallard.

We wish to rectify a mistake made in last week's issue: Mr. Harry Babcock of the Cordelia Club, bagged, week before last on the club's ponds, eighty-six instead of fifty-six ducks; this is the largest bag made this year, for one day's shooting on this preserve.

Messrs. Whittier, Fuller, Smith, Traylor and Titcomb—members of the Teal Shooting Club—were at their preserve at the Teal Station, last week, and bagged 181 ducks in one day's shooting.

Last week a party of three persons at Sherman Island killed fifty-five ducks in one forenoon. The bags were as follows: Crittenden Robinson 25, H. S. King 20, and Ramon Wilson 10.

Mr. Wilson and George Elliot were down last Sunday at Millbrae and bagged twenty-six quail. Mr. J. Keegan was down there also and came home with seventeen quail.

English snipe are quite plentiful but very wild at Alvarado. Last Sunday a good many hunters made good bags of snipe and also of ducks.

The Suisun marsh is thought to be the best in the State for duck hunting. Certain parts, however, are preserved by shooting clubs.

Mr. Richards, Mr. Willard and Dr. Toland were last Sunday up on the doctor's preserve and bagged 180 ducks in the forenoon.

The quail range around Warm Springs has been shot over so much that twelve birds is now considered to be a large bag.

Coots are quite plentiful in the tules on the Suisun marshes. What a splendid place for a chicken ranch!

A pigeon shoot and a coursing match are being arranged for at Dixon to come of on the 29th and 30th inst.

Fred Butler brought in sixty-three birds last week while after ducks at the Cordelia Club preserve.

The lower bays are filled with coots since the rains. The ducks will soon be along in abundance.

A large buck was killed just back of the Mission San Jose, last week, by a gentleman of this city.

Some miscreant has been destroying fish in the Stanislaus river by the use of giant powder.

Mr. H. Spencer and Mr. Hofeling killed forty-seven ducks last Sunday at Alviso.

Mr. T. Bennet does not like hammerless guns. What is the matter?

Last Sunday George Muller bagged thirty-nine ducks at Alviso.

The Teal Shooting Club upon Suisun marsh quite frequently bag sixty birds a day to the man.

One evening recently 75 ducks were killed after 4 o'clock at Farm Station, Santa Clara county.

Mr. Whittier of the Teal Shooting Club bagged seventy-nine birds the other day.

Carson hunters are greatly disgusted with the scarcity of game this year.

The Cordelia Club has had good shooting lately.

FISH.

Habits of the Carp.

In central Europe, where the water of carp ponds becomes very cold, the fish will, at the beginning of the cold season, seek deeper water, making holes in the mud, where they pass the winter in a kind of sleep. They make a cavity in the muddy ground called a "kettle." In this they pass the time until spring, huddled together in concentric circles, with their heads together, the posterior part of the body raised and held immovable, scarcely lifting the gills for the process of breathing; and without taking a particle of food. It is a most striking fact that the carp, though it does not take any food during this winter sleep, yet does not diminish in weight. In the warm climate of Southern Europe, Italy, Spain, Dalmatia, etc., the fish become lively at a much earlier season in the spring, and it is doubtful if in these climates it ever goes into a lethargic state, or ceases to feed during the winter. When the spring is early or the water has become warmed by the sun, in Central Europe, it is ready to spawn by May and continues spawning at intervals for a month or two. Days and weeks may pass before it will have left the last egg to the care of nature. In Sicily, and in Algeria, which have climates not dissimilar to the interior of California, it commences to spawn in April. The female carp yields an immense number of eggs. One of five pounds, weight has produced half a million. The eggs are adhesive, and are, when extruded, attached to aquatic plants, brush or stones. The male fish follows the female among the growing water grass and weeds, and impregnates the eggs after they are extruded. If the weather is warm the young fish are hatched in about two weeks. Cold water delays the hatching of the eggs for about three weeks. Ponds of water with a rock bottom are not favorable to the growth of this fish. If the water is warm, and the pond has a muddy bottom, the young fish should, at the end of the third summer, weigh an average of three pounds. If the pond contains large quantities of food, the fish may weigh as much as five pounds at the close of the third year. The fish is said to live to a great age, and is also said to increase in weight up to about thirty years. Ponds for carp, in California, need not be over three feet in depth.

White sea bass are very abundant in spring and summer from San Francisco southward. This fish feeds on crustacea, anchovies, etc. The young are sold as sea trout, and are often considered by fishermen a distinct species. This is one of the most valuable food fishes of the coast, having firm, white flesh. Examples of from fifty to sixty pounds, weight are not rare in our markets.

Messrs. King, Roman, F. Deming and Bogart were fishing at Goat Island last Sunday. They found the fishing to be the best east of the Island. The fish bit as fast as the line was thrown over. Upwards of eighty pounds of good fish were caught. Tomcod bit best on the flood tide and rockcod on the slack high water. The fishing in the vicinity promises to be very good during the winter.

Sunday last several parties were fishing at Ross' creek, just back of San Quentin, on the tide water. Owing to the extremely high tide but few salmon trout were taken, though many were seen during the preceding week. The best way to reach the fishing grounds is by Sausalito to Tamalpais station, from which a walk of a mile will bring one to the creek.

Last Sunday was good fishing in Oakland creek at Brooklyn; most of the fish caught were flounders. These same fish are said to be quite plentiful in Lake Merritt, but as the waters of the lake are confined and receive the sewerage of the city the fish have both a disgusting look and taste.

It has been reported that Throckmorton's Lagoon, about six miles back of Sausalito on the ocean side, is now open to the tide water and that a great many salmon trout have been seen in the lagoon.

The trout season closed on Tuesday last but fine sport can now be had with large fish at the mouths of all creeks running into the bay.

Ducks are now plentiful at Lake Merced; they have been coming in in large flocks for several days past.

On Oakland wharf large numbers of red-tail perch have been taken with hook and line during the past week.

THE KENNEL.

California Coursing Club.

Last Wednesday night the members of the California Coursing Club held a business and social meeting at 539 California street. The subject before the club for discussion was the best way to improve the breed of greyhounds belonging to the members of the club and all dogs throughout the State. Many valuable suggestions were offered and at last it was decided to procure a magnificent gold cup for competition among the club members, to belong forever to the nominator who wins it three times. The Treasurer reported being \$300 and \$400 cash on hand and no outstanding bills. Several members offered subscriptions toward the purchase of the cup and it was arranged to leave the matter in the hands of John F. Carroll, John Hughes and A. Jackson, who were appointed a committee to procure designs and estimates for the cup to be submitted to the club at its next meeting.

After some debate it was decided that no dogs could compete at the coming fall meeting except those actually owned by members of the club. In addition to the cup the regular money prizes will be given at the coursing match. On Saturday night, November 11, the club will meet to receive entries, draw dogs, and appoint officers for the match, which will take place at Merced Wednesday and Thursday, November 15th and 16th. The time of departure and other matters will be found in our advertising columns.

PACIFIC COAST CLUB MEETING.

A Detailed Report of the Annual Coursing Match at Merced.

In giving a bare outline of the coursing match at Merced last week in our last issue we doubtless disappointed several people who expected to get a complete account earlier but the fact that under present arrangements it was not possible to get news in San Francisco from Merced after the match was over before this paper goes to press is the only reason we can offer. The match was one of the pleasantest affairs we have seen for many a day and we hope to assist at many such meetings in the future. It has been asserted in the past that one of the regulation episodes of a coursing match is a big kick from the losers. We are neither prepared to accept nor deny this theory, but we can say that the losers in the late match possessed such angelic tempers that they accepted the dicta of the judges in the best possible spirit. Some complaint has been made about the lack of public spirit on the part of the Merced people who, though they make some profit out of these coursing matches, have not decency enough to provide rideable horses for the judges.

If the eternal fitness of things is any criterion by which one can judge of the reason for their existence it is safe to assume that Merced was created expressly as a coursing ground for San Francisco sportsmen. The country swarms with game of all kinds, from the agile rattlesnake to the lordly antelope, but it is of all places in the world the home and haunt of the hare, vulgarly called the jack rabbit. A Merced hare is meaner, smaller, can live on less, go faster and keep up his gait longer than the hare of any other country. There is a tradition in Merced that one old stub tailed hare has been chased by every coursing club that ever struck the town since 1856 and is good for ten years to come. He was on hand last Wednesday, and after leading a brace of dogs a fine chase of about three miles he finally made up his mind to run, which he did, at such a gait that both of the dogs sat down and cried with shame and grief. Merced stable keepers have a holy horror of San Francisco equestrians and keep in reserve for the judges at coursing matches a breed of animals said to be horses but which are slower than any animal previously discovered on this continent, and less fitted to carry a grown man at a decent gallop after a pair of dogs than a Mission goat would be to pack Chang, the Chinese giant. Apart from their slowness and weakness these wierd animals are to be condemned for having originated half a dozen gaits, each of which is a more excruciating instrument of torture than the other. One could forgive their trick of suddenly halting stock still when in the nearest approach to a gallop they ever reach, but their trick of rolling over whenever reminded by whip or spur that life is too short to waste at a three-mile-an-hour gait cannot be too severely deprecated. The secret of their existence leaked out the other day when a too frank stableman incautiously admitted that they had been bought up from a batch of played-out Yosemite saddle horses. Merced may possess other features of interest than those enumerated but they are not obvious to the San Francisco visitor.

By 10 o'clock Wednesday morning the San Francisco contingent and a host of local celebrities were out on the coursing ground which is a level stretch of country about 10 miles west of the city. As soon as the wagons and buggies which took the visitors out to the grounds were formed in line President Devlin called for the first pair of dogs, and Charles Fowler's Delebut and W. Halpin's Culverin were handed over to P. K. Jacoby who was chosen to act as slipper in the absence of Joe Stadfeldt. Meany was called away on business and after some persuasion T. T. Williams was induced to accept the saddle of torture along with J. Sillery and Chas. Johnson, the other judges. The three samples of crow-bait were had even for Merced and after glancing at the squirrel holes that dotted the plain the three martyrs bade a tearful adieu to their wives and friends and prepared for the worst. A hare was soon started and away went the dogs, Delebut in the lead and the judges a good distance in the rear. Delebut made the first turn but came to grief in some safe ground where her lack of condition gave Culverin a chance to "go bye" and save himself and win a meritorious kill.

The next pair, Devlin's Chief of the Canyon and C. O. K. Jeffcott's Lady Bird, had the luck to pick up a Merced hare that evidently had a business appointment in San Francisco and was in a hurry not to keep the other fellow waiting. Chief led from slips and won a very hollow victory showing very marked superiority both of speed and work. The hare changed his mind when he had gone a mile or so and popped into a squirrel hole instead of putting the dogs to any further trouble.

C. O. K. Jeffcott's Spa Boy and J. Shay's Theresa were the next pair slipped. They struck a fast hare that went sailing away in a straight line almost disdaining to notice his pursuers until Theresa ran up and turned him on to some plowed land. Spa Boy took his work leisurely and allowed the bitch to serve herself before he went to work to reduce the value of the hare's life insurance policy. When he did start in he went to work with such earnestness that the hare headed for a place of safety in a patch of weeds half a mile ahead. Twice before he got there Spa Boy turned him and twice he "went bye" Theresa as if she was moored. When he reached the weeds the bitch was played out and so were the judges' horses. The finish will ever remain a mystery, unless Spa Boy can be taught to talk, but he fairly won the course from the work that was seen.

J. Ryan's Lady Franklin and J. C. Pennie's Duke wasted no time in nonsense when they sighted their game. The hare favored Duke at the start but Lady Franklin had the most bottom and won the course handsily.

Tampete and Minnie were unfortunate in getting unsighted before they had made a point and had to be taken up for another course which was decided in favor of Tampete. The next race, between W. W. Sessions' Maid of San Francisco

and T. Brady's Paul Jones, was one of the best of the day. Paul led and made the first turn, but when they got straightened out, much to the surprise of all, Maid of San Francisco made a neat "go bye," the hare favoring her slightly in turning. Paul looked utterly disgusted and set to work to make up for lost time with such a hearty good will that Maid had but little further interest in the match. After a hard chase in rough, rolling ground, the hare was killed just as he was about to seek safety in a gopher hole.

W. Halpin's Blue Cloud beat J. Dugau's Foxhall with but little to spare. In the first of the race Foxhall led in points handsomely but tired away at the finish.

J. Dugau's Sally Henry and J. C. Pennie's Cherokee were a very even match. Cherokee had the most speed and made the first three and a half points, but when Sally got in she kept the hare to herself and after serving herself twice she guarded the hare in beautiful style and made one of the neatest kills that was seen during the match.

D. L. Levy's Lady Plaine beat Corronaway without allowing him to make more than one point in a long straggling course.

J. C. Pennie's Longfellow was too sick to run and T. Cronin's Parnell ran a "bye."

This finished the first ties and the party adjourned to lunch and to rest their bones. It was noticed that the judges took their lunch standing and though it wrung their hearts they most positively refused to join a party of ladies who had spread a nice repast on the green turf. Some one suggested that they change horses with each other after lunch, but he was instantly frowned down by the trio who preferred the beasts they knew to the ills they had no means of gauging.

After lunch the second ties were run off. As before, hares were plentiful and all that could be desired in the matter of speed and endurance.

Chief of the Canyon came against Culverin and had about all he could do to win the match. The hare chose a course over some ground so rough that one of the judges was afflicted with a complaint akin to sea-sickness from riding over the mounds.

Spa Boy and Lady Franklin were next paired. Lady Franklin led from the slips and never let her opponent in. It is but just to the hare to say that he beat both the dogs out of sight.

Tampete and Paul Jones gave the spectators a beautiful course. Paul Jones took the lead and twice worked the hare. He looked like a sure winner when he unfortunately stumbled in a hole and hurt his leg. This gave Tampete a chance to get in. She is a close working bitch and guarded the hare in splendid style, taking point after point without assistance for some time, until Jones came up and assisted her to make a kill which gave her the race.

Sally Henry beat Blue Cloud in a most hollow manner.

Lady Plaine and Parnell ran a smart course which was easily won by Lady Plaine.

This ended the second ties and Chief of the Canyon and Lady Franklin were put in slips for the third time over. Chief led from the slips and seemed to forget that there was another dog in the race for he and the hare had a little picnic all to themselves which ended when they had gone about a mile and a half.

The next pair slipped were Sally Henry and Tampete. Tampete opened a gap from the start and made a turn before Sally got up. The merit of the next turn lay with the hare, who swerved over to Sally. Sally took the hare all to herself and made three points before it ran into a hole. The points being even the judges gave it an undecided course and after the legal rest the pair were slipped again. Tampete took the lead and had things pretty much her own way. One of the judges by dint of beating and spurring him managed to surprise his horse into a gallop. When the mule recovered from his surprise he resented the affront by incontinently pitching head over heels in a gopher hole, landing his rider ten feet ahead and on his nose. Fortunately no more harm was done than a barked proboscis and a bruised shoulder. The judge remounted and saw the race out. Tampete won bravely.

Lady Plaine, being an odd dog on the card, ran a bye and finished up the day's sport.

After a bath and dinner the San Francisco visitors strolled out to take in the sights of Merced City. A political meeting in full blast at one end of town and a fight between two sheepherders at the other, were about all the sport that could be found, and the boys were at their wits' end when some genius suggested a dance. It took about three minutes to procure a band, which consisted of a guitar and a fiddle; a large saloon served for a hall, and then the fun commenced. There were not enough of the female sex to go around, so more than half of the sets were stag affairs, but the music ground away steadily and the boys kept up the fun until it was absolutely necessary to get a wash and brush up in time for breakfast.

On Thursday the party was early at the coursing grounds. The number present was larger than on the first day, many gentlemen living in the neighborhood having come out for a day's sport. Dr. Gale, U. S. N., was out with his wife, and family, and young Mr. Ashe who owns a ranch near by and many others. The weather was perfect, just warm enough for buggy riding with not a spot of dust to cause discomfort. The final ties were called and Mark Devlin's Chief of the Canyon and Lady Plaine were put in slips. The three crow-baits that had tired the judges' patience the day before were again brought out and not another horse could be procured for love or money. "It had been a bad year," they said, "around Merced and horses were scarce." Resigning themselves to their perilous fate the judges mounted and the crowd moved ahead to beat up a hare. Puss was ready about 100 yards ahead and Jacoby stealing up on her with great caution gave the dogs an excellent send-off.

A Merced hare never commences to run real fast until the dogs take first turn out of her. Then when it is apparent that business is meant back go the long ears and away goes the hare, taking jumps of twenty-five feet at a bound. This particular hare had evidently been chased by a cur dog before and had a great contempt for the canine race. It just gambled ahead until Chief of the Canyon, who had opened a wide gap between himself and Lady Plaine, reached for it with mouth wide open. To see that hare turn again and then start off at a gait which would make a steam engine burst its boiler with envy and shame made the boys cheer and made Chief of the Canyon feel as though the dog that despises the speed of the hare he is chasing lacks good sound sense. But Chief is a dog of nerve and he soon commenced to get over his disgust and pegged away in good style, utterly ignoring the fact that there was such a dog as Lady Plaine living. After he had twice turned Lady Plaine got in and took a hand in the game but Chief soon went by her. He turned the hare and she made a good kill with his assistance. The course was awarded to Chief of the Canyon.

This left but two dogs in the match, Mark Devlin's Chief of the Canyon and a blue bitch called Tampete, entered by the same gentleman. Tampete was imported two years ago

from the celebrated Trevor Kennel in England, by Mr. H. Tevis, and had run at Merced three times before without making a favorable record except for great speed out of slips. But on this occasion she had shown bottom as well as speed, and it looked as if when it came to the final course she would be the winner. Chief had cut the pad off his foot and lost a toenail. Considerable money was bet on the result and the spectators were rather surprised when Mark Devlin announced that as both the dogs belonged to him he would not run the final course off but would divide first and second honors between the dogs, as he had a perfect right to do under the rules of the club. Of course under those circumstances all bets on the result were drawn. But some of those who had bet against Chief of the Canyon for first place refused to divide the stakes and intend to send East for a decision on the subject.

Next came the Puppy Stakes and T. Brady's Lady Costello and W. W. Sessions' Chief of San Francisco were put in slips. Lady Costello led from slips, but the hare taking over a stretch of soft sand with some weeds bluked the dogs and threw both out before a point was made. When the dogs had passed puss came out again and the dogs, chancing to see her, gave chase once more. Lady Costello proved to be the best of the pair and won the race. They did not kill and were so unfortunate as to start up a fresh hare before they were caught, which ruined Lady Costello's chance of a prize.

T. Brady's Connaught Ranger and P. K. Jacoby's Cassa Maria made a nice race. They worked the hare very closely and killed in good shape. Connaught Ranger showed the most speed and dash but was rather badly thrown out at the turns. In spite of this, however, he won handsily.

T. Cronin's Lily of Killarney had an easy victory over M. Galvin's Bingo. After the first turn Bingo seemed to tire away and Lily had to do nearly all the work.

Mark Devlin's Michael Davitt beat J. C. Pennie's Master Joe with points to spare, though the result might have been different had the loser been put in proper shape for the race.

Second ties—Connaught Ranger and Lady Costello came together and made one of the best matches in the Puppy Stake. Ranger made the first turn and from that four points were evenly divided until the dogs got out of sight for an instant behind a patch of rolling ground. When they came in view Ranger was leading and from that out held the advantages of speed and work until puss holed.

Lily of Killarney beat Michael Davitt with points to spare, but owed some of the success to the fact that the hare threw Davitt out by doubling round a mound.

The final race between Lily of Killarney and Connaught Ranger was run on a level plateau of land in full view of all the spectators. Connaught Ranger led from the slips and made first turn and from that time to the kill the hare was never 30 feet from the dogs. They turned evenly a couple of times when Lily went by with a fine burst of speed and tripped the hare, who whirled around towards the Ranger. He turned back and away went hare and dogs back toward the wagons. A meritorious kill finished the course and gave the first prize to Lily of Killarney, Connaught Ranger taking second honors.

A consolation race for beaten dogs, \$5 entrance and \$5 added by Moran of the Cosmopolitan hotel, was gotten up to finish the day's sport.

Sheriff Meany, of Merced, was unanimously elected judge and P. K. Jacoby slipper. Six good courses ensued and first prize was handsomely won by W. Halpin's Culverin, J. C. Pennie's Cherokee second and P. Halpin's Blue Cloud third.

A match race was then made between Charles Fowler's Delebut and W. Sessions' Maid of San Francisco. The stake was \$30. Delebut proved to be much the best dog and won with ease.

In concluding the report of this match a few words of praise must be said for P. K. Jacoby, the honorary slipper of the meeting. He performed his work well and fairly. Not a single dog got out of the slips and only one "no course" was run through dogs being unsighted at the start, no mean feat for a slipper over such rough ground as the hares ran over last week. Sheriff Meany did all in his power to help the visitors enjoy themselves and even was so obliging as to loan his horse to the judges when the miserable animals hired by them threatened to die on their hands. Merced county is to be congratulated on having an official who can so generously and gracefully do the honors to visiting clubs and we hope to have the pleasure of meeting him at many a coursing match to come.

FINE SETTER FOR SALE.—In our advertising columns will be found a notice of a fine Gordon setter for sale. His owner is parting with him only because ill health makes it impossible for him to hunt. Dorr is a dog that has made a grand reputation East as a field trial dog, and his pedigree is unexceptionable. His owner refers by permission to the members of the Massachusetts Kennel Club and does not desire to sell until prospective buyers are well satisfied of the truth of all he claims for his dog. The following extract from the *Forest and Stream* shows in what repute Dorr is held where he has been seen working: "Dorr is a large sized dog with fine style, carrying his head well up, ranging and quartering in good style, showing superior nose, and considered by the judges and many others as the most stylish dog on point and back of any that ran. Flint I thought fully his equal in all except in staunchness and backing. Dorr stands either at point or back with his head and tail high, often taking his position at either; he does not seem to move a muscle of his body. I never saw one so staunch. Flint's style, both on point and back, is a low, crouching attitude, with head and tail on a line. Both retrieved well, pointed and backed, etc. This heat was given to Dorr, but, like the one between St. Elmo and Lizzie Lee, it was very close. In the closing decision of the judges, Lizzie Lee won first prize, St. Elmo second, Dorr third." Such a chance is seldom presented to Californians and we hope the dog will not be allowed to leave the State. It would be well for Mr. Taft to enter Dorr in the Gibroy Field Trials which will be run on November 27.

A BIG DOG STAKE.—The English coursing world is taking vast strides. It is contemplated getting up a monster stake to be run for at Plumpton, on 1st January 1883, and competed for by dog and bitch puppies born since the first day of January, 1881. The winner to receive the magnificent sum of £1,000 and a valuable cup, second dog £300, the next four dogs to receive £100, and the winners of two and three courses £5 each. Thus if the stake is well filled the whole amount to be divided will amount to something like £1,600, being a much larger stake than the one competed for by Hugh Gosforth the latter end of last season, when Mr. Alexander's far-famed dog Alee Halliday proved victor in the Gold Cup Stakes.

A match trial of hounds will take place on Sunday between Silk's Fly, of San Juan, and Phillips' Prince, of Fairview. It will come off next week, on the San Benito river bed, near town, where hare are numerous.—*Hollister Advance*.

YACHTING.

An Electric Propeller.

The following article from the London "Times" will be of interest here as an indication of the introduction in the near future of a new agent for the propulsion of vessels, and one which has for many years been vainly sought. The experiment noted proves that, on a small scale, it has been made a success:

"Great Western Hotel, Paddington, Sept 28.—At half-past three this afternoon I found myself on board the little vessel Electricity, lying at her mooring off the wharf of the works of the Electrical Power Storage Company at Millwall. Save for the absence of steam and steam machinery, the little craft would have been appropriately called a steam launch. She is 26ft. in length and about 5ft. in the beam, drawing about 2ft. of water, and fitted with a 22-inch propeller screw. On board were stored away, under the flooring and seats, fore and aft, forty-five mysterious boxes, each a cube of about 10in. in dimensions. These boxes were nothing else than electric accumulators, of the latest type as devised by Messrs. Sellon and Volkmar, being a modification of the well-known Plante accumulator. Fully charged with electricity by wires leading from the dynamo or generators in the works, they were calculated to supply power for six hours, at the rate of four-horse power. These storage cells were placed in electrical connection with two Siemens' dynamos of the size known as D 3, furnished with proper reversing-gear and regulators, to serve as engines to drive the screw propeller. Either or both of these could be 'switched' into circuit at will.

"After a few minutes' run down the river, and a trial of the powers of the boat to go forward, slacken, or go astern at will, her head was turned citywards, and we sped silently along the southern shore, running about eight knots an hour against the tide. At thirty-seven minutes past four London Bridge was reached, when the head of the launch was put about. Slipping down the ebb, the wharf at Millwall was gained at one minute past five, thus in twenty-four minutes terminating the trial trip of the Electricity.

"Calculations show that the expenditure of electric energy was at the rate of 3.1-11 horse power.

"It is now forty-three years since the Russian Jacobi first propelled a boat on the waters of the Neva by aid of a large but primitive electro-magnetic engine, worked by galvanic batteries of the old type, wherein zinc plates were dissolved in acid. Two years ago a little model boat was shown in Paris by M. Trouve, actuated by accumulators of the Faure-Plante type. The present is, however, not only the first electric boat that has been constructed in this country, but the very first in which the electric propulsion of a boat has been undertaken on a commercial scale. Looking at this first practical success, who shall say to what proportions this latest application may not attain in the next decade? Yours,

"SILVANUS P. THOMPSON."

The Seawanhaka Matches.

With the mosquito races of the present and the Seawanhaka races of the coming week the yachting season of 1882 will close. In regard to the latter, it does not seem, at the present writing, that the enterprise and liberality of the Seawanhaka Club will meet with the encouragement deserved from American yachtsmen. So far as now appears, the only typical American sloop that is to start will be the Gracie, and the races will prove nothing as to superiority of type. If the Gracie shall beat the cutters it will be said that no other result could have been expected from a yacht of her superior bulk, and if the cutters beat the Gracie the advocates of the sloop model will claim that she could not be expected to beat a cutter in a strong October breeze and sea, and so, after all, we must wait until the next season to determine the vexed question of superiority of model from actual experiment.

If the deep and narrow vessel is to become popular with American yachtsmen it must prove its superiority in the months of June, July and August, and on the placid waters of that "paltry sheet," Long Island sound. Doubtless our yacht-owners ought to cruise to the West Indies, or the Azores, but hitherto they have obstinately refused to do so, and there is too much reason to fear that for some years to come they will still obstinately refuse, and will prefer to sail in pleasant weather and quiet waters. It is here, then, that the cutters must compete for supremacy, and by Sept. 1 next an intelligent verdict may be given. The season now about ending will be known as the cutter season, enough of these boats having been built to admit of fair comparison between the two types of model during the next season. The gentlemen of the Seawanhaka Club hoped to have had the Valkyr, Vixen, Fanita, Maggie, and a few of the fastest of the Eastern sloops, and there may be yet a larger number of starters than now appears probable, but it is not likely that this will be the case, for the reason that the season is too far advanced, and owners of sloops, even if they could spare the time necessary for these races, do not regard it as fair that they should match their boats against cutters at this season of the year when strong breezes and rough water are to be expected as a rule. Nevertheless, the Seawanhaka Club is to be commended for its effort to give a brilliant finish to an exceptionally successful yachting season, and if it shall turn out a fiasco the club will not be anywise to blame.—N. Y. Spirit.

Ex-Commodore L. A. Fish, of the Atlantic Yacht Club, has contracted with the Poillons for a centerboard schooner yacht of the following dimension: Length over all, 91 feet 6 inches; length on water line, 81 feet 6 inches; breadth of beam, 23 feet; depth of hold, 8 feet; draught of water, 6 feet 2 inches. Her design is by Mr. Philip Elsworth and the lines in character have more resemblance to those of the schooner yacht Comet than to those of the schooner Montauk, both of which are by the same designer.

The Albany Towing Company have three very fast tug boats, and the superintendent thinks them the best in the world. He will match them against any steam yacht for a distance of two hundred miles or more, and he said that he would wager \$500 that any one of the three would come to Newberg from New York in 3 hours and 40 minutes. This would be at the rate of sixteen miles an hour, which is not only wonderful fast for tugboats, but is a good speed for a sidewheel steamer.

Forest and Stream hears that probably three small single-hand cutter yachts will be built by Stephens this winter, on lines similar to those published this week, and that a new 5-tonner is also in prospect. It has also been proposed to organize a special club in the interest of small yachts of this class. The model of the lines published can be seen at Mr. Stephens' shops, West Brighton, S. I., and is certain to be found very taking in type and appearance.

The cruise of the S. F. Y. C. to Vallejo was pleasant as far as weather was concerned, but it was a drift. Some of the yachts did not get up at all, there was so little wind. Those that went up, however, had a pleasant sail down. It is a little late in the season for cruises unless the yachtsmen have plenty of time. But when they have to go to Vallejo and return 20 miles each way, in 24 hours, with light prevailing wind, there is apt to be some work about it.

The new boat building by Farmer has her deck on, and work will soon begin on the cabin. Her cock-pit floor is unusually high, the deck forming the seats.

The celebrated open sloop Sophia Emma has been sold to Mr. Charles Rorf, of the New Jersey Yacht Club, who proposes to take her to New Orleans.

The Sawanake elub is doing a graceful thing in affording the British cutter Maggie another chance against the Vixen under circumstances more favorable for the cutter than the races were at Marblehead.

It will not be worth while to look for much local yachting news hereafter as most of the boats will be laid up.

The Anna is going for a week's cruise up river after election day. The boys will try Montezuma Slough.

There was quite a little fleet went with the S. F. Y. C. to Vallejo and the closing trip was a success.

The Emerald only got as far as San Quentin Saturday night, and gave up going to Vallejo.

Spreekels, yacht has her spars all on. She will not be finished for some time yet.

The Emerald is going off on a duck hunting cruise next week.

The Lively has been dismantled and hauled out for the winter.

The little yawl Ariel has got back from a cruise up river.

The Azalea came over on this side on Wednesday.

The Mist has been taken into Oakland Creek.

The Clara did first rate on the trip to Vallejo.

The Chiquita is laid up at Oakland Creek.

ROWING.

The Challenge Cup—The Season Closing.

The race for the BREEDER AND SPORTSMAN'S cup on Thanksgiving Day (Nov. 30) will close the boating season on this coast. The season has not been productive of many sensational events despite the lively manner in which it opened with the establishment of several new clubs and a shower of challenges. The few club races that ensued helped to deaden the interest in rowing instead of to revive it, for the beaten clubs seemed to retire permanently from competition and have since been seen but little on the water. The clubs which have announced their intention to take part in the competition for the challenge cup are composed of stronger material however than the wiling organizations that have been almost snuffed out by mild defeat. Each of the three clubs that will compete for the BREEDER AND SPORTSMAN'S cup has enjoyed the exhilaration of defeat as well as the gratification of victory without losing interest in aquatic sport. The three clubs go into the competition for the championship with the utmost confidence and whoever may win, it will be an assured fact that the trophy will fall to the most deserving crew. The weather has been unexpectedly unfavorable for practice so far. In other years at this season it was usually most advantageous but this year the rains have been remarkably early. A few weeks of good weather before Thanksgiving Day will enable the crews to make up for the indifferent practices which so far they have been able to take. The Pioneer crew rows together on an average three times a week and the members take in addition considerable exercise in sculling. The Ariels are out whenever they can get good weather. Golden Gate crew is equally industrious.

English Opinion.

Pendragon in the London Referee prints the following comments on Kennedy, who is coming to California to winter and train for the match with Hanlan:

While Ross and Hanlan were conducting negotiations for their new match in the vain belief that between them lay the title of champion, another pro rushed suddenly forward and somewhat rudely altered the aspect of affairs. When Hanlan issued his challenge to the world he took Ross, Courtney and Lee to represent the most prominent scullers in it. Ross' claims on first-class position we all know; Lee's victory at Saratoga, and Courtney's subsequent performance at Canadago gave them—temporarily maybe, but still gave them—claim on first rank. As neither Lee nor Courtney cared to take up the challenge it seemed as if the question as to who is the absolutely best professional sculler in the world would have to be fought out between Ross and Hanlan, until a person named Kennedy appeared on the scene to dispute the claim with either or both of them. Kennedy's challenge as issued only mentions Hanlan, but it is stated in papers that profess to know all about him that he is not particular. "Perhaps a recruit might chance to shoot great General Bonaparte." So ran the recruiting song early in the century; and on the same principle perhaps Kennedy might chance to take down Hanlan's number. Still it must be conceded that Kennedy's is a somewhat sudden development. Previously he has exhibited no desire to compete in "single-scull" matches with opponents of rank, though he and Davis have repeatedly dared the world to meet them in double harness. Readers may remember that when Ross and Hanlan, who were then

friendly, issued a challenge to double-scull any other couple, Trickett and Laycock being the men in their minds, the offer was accepted by Davis and Kennedy. After a good deal of paper war the affair fell through, owing, as was at the time stated, to the belief that Hanlan's partner was rather too well inclined to the interests of Davis and Kennedy. That there was ground for this suspicion was shown soon after by their offering to match Ross against Hanlan. Those who supposed that Davis and Kennedy would stand any chance—in a straight race—with their more celebrated opponents, based their belief on the fact that Davis and Kennedy rowed so beautifully together, and got such way upon their boat directly a start was made, that they would be sure to baffle a couple more powerful than themselves, and perhaps far better individually, but not able to row so evenly or with such mechanical accuracy. According to all accounts, both Davis and Kennedy are lightweights somewhat about the size of little Clasper, certainly a good deal smaller than Spencer. Without in any way believing that size is everything in sculling, it is bound to have its effect, everything else being equal. I for one certainly do not believe that anyone so very much smaller than Hanlan could make any impression on him after the first quarter of a mile, no matter how speedy at starting, and no matter how ready and anxious he may be for a match—in the columns of the local newspaper. That is, of course, without Hanlan's permission.

HANLAN'S CONDITION.—The Turf, Field and Farm states that Edward Hanlan is in New York for a few weeks. He looks well and hearty and takes an occasional pull over the Harlem river. In reply to a question as to whether he would row Courtney again he said: "It is not my place to challenge him, as I have beaten him twice; but I will say this much, I will give him \$500 if he will row me for \$2,500 a side next year."

Maret Report.

FLOUR—We quote: Best City Extra, \$5 37½¢ 50; Superfine, \$4 50¢ 47½¢; Interior Extra, \$4 75¢ 85 25; Interior Superfine \$3 75¢ 84 10 p bbl. WHEAT—The market still continues to be very quiet. The range of price for shipping parcels is from \$1 60 to \$1 65. The accepted figure for milling lots is \$1 67½. Recent quotations are No. 2 Novembers \$1 61, do March \$1 64 per cwt.

BARLEY—The market is fairly steady. Sales of No. 1 Feed, November, \$1 35½, do December, \$1 37; No. 2 Feed, December, \$1 34½ 37½. Brewing, \$1 35½ 37½.

OATS—In good demand. Prices range from \$1 70¢ 82 10 p cwt.

RYE—Quotable at \$2 12½¢ 25 for No. 1, and \$2 75¢ 81 90 per cwt for No. 2 grade.

FEED—Ground Barley, \$2 29½ 31 p ton; Cracked Corn, \$3 98 p ton. Short sellers are asking \$20 p ton. Oilcake meal the oil works sell to the trade at \$32 50 p ton, less the usual discount. Middlings, \$27 20 28 p ton for lots at the mill.

HAY—Alfalfa, \$13 50¢ 84; Wheat \$16¢ 17; Wild Oat, \$15 50¢ 86; Mixed \$12 50¢ 84 p ton.

PROVISIONS—Eastern Hams, 19½¢ 20¢; California Hams, 16½¢ 16¢ for plain, 16½¢ 17¢ for sugar-cured canvased; Eastern Breakfast Bacon, 17½¢ 18¢; California Smoked Bacon 16½¢ 16¢ for heavy and medium, and 17¢ 18¢ for light and extra light; Clear Sides, 16½¢ 16¢; Pork, \$21 50¢ 22¢ for extra Prime, \$24 25¢ for Prime Mess, \$25 25¢ 50 for Mess, \$27 for clear and \$28 28 50 for extra clear; Pigs' Feet, \$16¢ 18 p bbl; Mess beef, \$14 for lbs and \$7 for lb bbls; Extra Mess Beef, \$14 50¢ 15; Family Beef, \$16 16 50 p bbl; California Smoked Beef, 14 14½¢ p lb.

FRUIT—The weather is not favorable for any general trading. We quote prices as follows: Apples, 30¢ 50¢ for common and 75¢ 81 p box for good; Pears, 50¢ 61 25 p box; Strawberries, 8¢ 88 10 p chat; Peaches, 60¢ 61 25 p box; Eggs, 60¢ 61 p box; Grapes, 30¢ 35¢ for common, 60¢ 85¢ for Black Hamburg, 60¢ 85¢ for Rose of Peru, 60¢ 90¢ p for Muscat and 50¢ 90¢ p box for Tokay; Wine Grapes, \$2 25 p ton; Quinces, 75¢ 1 25 p box; Watermelons, \$5 50 10 per 100; Cantaloupes, 50¢ 75¢ p crate; Lemons, 87¢ 88 p box for Sicily and 83 p box for California; Limes, 85¢ 87 per box for Mexican; Tamarinds, 12¢ 13¢ p lb; Bananas, \$2 40 50 p bunch; Tahiti Oranges, \$3 50 37 50 p thousand; Mexican do \$25 p thousand. New crop Western Cabbages are at hand, offering at \$15 50 17 p bbl.

VEGETABLES—Business was rather quiet this morning. SWEETNESS.

And open to all horses that have never beaten 2:22. Entrance, 10 per cent., to accompany entry. National rules to govern. Entries close with the Secretary Monday, Nov. 13th.

F. W. HINCHMAN, Secretary,

No. 1435 California street.

FOR SALE.

DORR, Imported, Gordon, winner in Nebraska Field Trials. Has been hunted on chickens, grouse, quail, woodcock and snipe in the New England States, North Carolina, Minnesota, Nebraska, Missouri, Iowa and Indiana. Retires without injury (dead or alive) anything from a snipe to a goose, from land or water. V. H. C. on the bench at Boston; also several money prizes and medals as a performing dog. Is probably the best broken dog on this Coast. On account of an attack of paralysis in my legs, which will prevent my using him this winter, I offer him for sale before returning to Massachusetts.

FRED A. TAFT, Truckee, Cal.

ENGLISH SETTERS.

BRACE OF THOROUGHbred setters, well broke, for sale. Ap 17 to E. J. LIVESLEY, Gilroy.

FOR SALE.

A VERY FINE HAMBLETONIAN stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over \$1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volanteer. Can be seen at Club Stables.

Belmont—Mambrino Chief—Blackbird, for Sale.

BAY YEARLING COLT, BY Pilot, grandson of Williamson's Belmont, his dam by Albambra (by Mambrino Chief, from Susan, by American Eclipse) grandam Oriole, by Simpson's Blackbird. Is now in Oakland at the stable of

KILLIP & CO.,

LIVE STOCK & GENERAL AUCTIONEERS,
N. E. Cor. Kearny and Sutter Sts.

THURSDAY, NOV. 16TH, 1882,
at 12 o'clock, noon.

ON THE TRACK OF THE

Bay District Association
WE WILL OFFER FOR SALE AT PUBLIC
auction the noted trotter

Rowdy Boy

(record 2:31½) by Rustic, dam by Belmont. Rowdy Boy is a gray gelding, four years old, and one of the most promising trotting colts in the country. Charles Marvin timed him three heats during the State Fair in 2:25.

Can be seen any time previous to sale on applying to
JAMES GARLAND,
Randlett's Hotel, near race-track, Oakland.

Also at the same time and place we will sell the well-known chestnut gelding

Ashley.

Ashley is well known throughout the State as a trotter of superior merit. Has a record of 2:24½. He is a splendid roadster and as a pole horse is unsurpassed. He was sired by Plumet (he by Werner's rattler), his dam by George, grandam by Belmont. For further information apply to the auctioneers.

FINE THOROUGHBREDS
FOR SALE.

BY DIRECTION OF MR. W. L. PRITCHARD
We will offer for sale at public auction at 12 M. at the grounds of the

Bay District Association

SAN FRANCISCO,

ON THURSDAY, NOVEMBER 16,
a choice lot of thoroughbred horses, comprising

Brood Mares—four-year-olds,
three-year-olds, two-year-olds and yearlings.

These animals are of the choicest blood and afford a rare opportunity of purchasing first-class stock. For other information or catalogues apply to

W. L. PRITCHARD,
Sacramento,
or KILLIP & CO., Auctioneers.

J. A. McKERRON,

MANUFACTURER OF FINE HARNESS.

327 Sutter Street,

BETWEEN DUPONT AND STOCKTON, SAN FRANCISCO.

HORSE BOOTS A SPECIALTY.

Repairing neatly and promptly executed.

A. C. BASSETT, Superintendent, **H. R. JUDAH,** Asst. Pass. & Tkt. Agt.

S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO
Sportsmen & Pleasure-Seekers.

THE
SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rockcod, Baraenda, Pompho, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 X 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known

Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R. The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE. These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Gunstaken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

BODINE.

Reminiscences of an Old-Time Fast One— Campaigning in the Eastern Circuits.

When I took him in May, 1873, Bodine had a record of 2:30 $\frac{1}{2}$, was not a pure-gaited horse, hitching very badly behind, and was a puller. I tried at first to improve his gait by taking him back, hoping that by this means he would go squarely, but it did no good. Finally I became disgusted with him, and one day while working him on the Dexter Park track, let go of him, and hit him a severe blow with the whip. He started off on the squarest kind of trot imaginable, and from that day never hitched a step. The first race in which I drove Bodine was at Dexter Park, Chicago, July 1, 1873, his opponents being Fred Hooper, Ripon Boy, Ella Wright, Byron, and some others. I won the second heat in 2:25 $\frac{1}{2}$, but Fred Hooper captured the race, Bodine getting second money. This race was trotted in the mud, and the next day Bodine went lame behind so badly that I was obliged to let him up until the following September, when I took him to Aurora, Ill., and trotted against Red Cloud, Brother Jonathan and Lady Mac, Bodine winning the race without lowering his record. The following week we were at South Bend, Ind., where Mambrino Gift beat Bodine, my horse winning two heats; and had Gift not had the assistance of Mollie Morris as a "helper," Bodine would certainly have captured the race. From South Bend I went to La Porte, where Bodine won a race in straight heats from Col. Barnes and Mollie Morris, the time of the fastest heat being 2:27. The next week at Elgin, Ill., he defeated Ella Wright and Lady Fox, that race closing his trotting career for 1873. He had trotted his fastest heat (2:25 $\frac{1}{2}$) in his first race, and I had never driven him a mile at greater speed, either in races or his work.

It was in 1874 that Bodine began to show what a really great horse he was. I took him to Freeport, Ill., in May of that year for preliminary work, and his first race of the season was trotted there about the 1st of June, the other starters being Pilot Temple and a chestnut horse called Dan, that came from the West. Bodine beat them easily enough without lowering his record, and then we went into Grand Rapids where he had to trot against a large field—the best one that he had ever met. For some reason, my horse was all out of form and had so completely lost his speed that Red Cloud, Fred Hooper, St. James and Huntress all beat him in the race, the first-named winning. At Jackson, the following week, about the same lot started, Fred Hooper being the favorite, but Bodine had rounded-to in the meantime, and went to the front easily in straight heats, Thomas L. Young getting second money and Hooper third. Dixon, Ill., was the next place at which we started, and here we struck Pilot Temple again, being entered against him in two races. The first turn on this track was a very sharp one, and when we went away in the first heat of the race, I sent my horse along so fast that when we made the turn the sulky capsized. The judges allowed me to start in the second heat, however, and I won it. The third heat also fell to Bodine, and then the race was postponed until the following morning. When we came out to trot, I was surprised to have the judges announce that they had decided to distance Bodine for the mishap of the previous day; but there was no appeal and the medicine had to go down. Two days later, Bodine and Pilot Temple came together again, and had a hot race. I was very careful not to take any chances of being distanced, and after each horse had won two heats, and Bodine cooled out well for the fifth, I felt quite confident of winning. I beat Pilot Temple out a length or more, and supposed of course that the race was ours. The driver of Pilot went to the judges, however, and charged me with foul driving, showing a place on his horse's foot where the hair had been knocked off and saying that my sulky-wheel had done the damage. William Dickson, who had driven Pilot the previous year, happened to be

present, and told the judges that the scar was there when he had the horse; but it was no use, Bodine was set back to last place and the race given to Pilot Temple.

Cleveland was the place of our next race, and in it Bodine won the first heat in 2:22 $\frac{1}{2}$, that being the first time he had beaten his record of 2:25 $\frac{1}{2}$, obtained early the previous season. He was beaten for the race however, Lula being victorious, and trotting the second heat in 2:20. At Buffalo, the following week, Bodine astonished the people by winning the race in sensational time. He lost his first two heats to Castle Boy, being a hot second each time, and then won the next three in 2:21 $\frac{1}{2}$, 2:21 $\frac{1}{2}$, 2:21 $\frac{1}{2}$ —the last heat being the fastest fifth heat ever trotted up to that time. Bodine was now in fine trim, and at Utica beat the same field, with the addition of Lula, in straight heats, without reducing his record. Then came a race at Hartford, the result of which caused considerable bad feeling at the time and created a good deal of comment. Bodine was entered in a race with Gloster, Seusation and others, and as Gloster had obtained a record of 2:17 at Rochester only two weeks previous, the race was considered a certainty for him, and nearly all the betting was between Bodine and Sensation for second place. Bodine won the first heat in 2:21, his fastest mile up to that time, but in the second heat made a break when half-way down the homestretch, and was beaten by Gloster. In the third heat I found that my horse could out-trot Gloster easily. I took the pole, and then waited for him so come up to me. When he did I carried him to a break, and then waited for him. I didn't want Bodine to beat 2:21 if it could be helped, and my idea was that this was the best way to accomplish that object. When we came to the finish of the mile I drove so as to just beat Gloster, and supposed that I had done so. But the judges gave the heat to the other horse, and then some of the New York crowd went to the judges and complained that I was pulling Bodine. They talked so eloquently that I was taken from behind Bodine before the fourth heat and Charley Green put up in my place. He didn't ask me how the horse was driven, but in scoring for the fourth heat used his whip very freely, and when the word was given Bodine made such a bad break that he never seemed to fully recover from it during the mile, and was away behind the distance flag when Gloster went under the wire. Probably the New York men who were so afraid I would pull Bodine felt easier after this performance. Of course by being distanced Bodine lost all claims to any part of the purse, and as he could not have failed to win first money, which was \$2,000, the change of drivers was a rather serious misfortune to his owner, Mr. Goodrich. That gentleman vowed he would never again trot a horse over the Hartford track unless the matter was settled, and the following spring the Hartford Association paid him \$1,000 to compromise the matter. This was the first time that a stranger ever held the lines over Bodine during the four years he was in my charge, and it was also the last. From Hartford he went to Mystic Park, Boston, and beat Lula, Hopeful, Castle Boy and George in a five-heat race without lowering Bodine's record, Lula winning the second heat in 2:18 $\frac{1}{2}$, and Hopeful the third in 2:23. Bodine being first or second every heat of the five. At Beacon Park, the following week, he defeated the same field and lowered his record to 2:19 $\frac{1}{2}$, Hopeful being the contending horse. A race at Saginaw, Mich., where Cozette and Lady Turpin were beaten, closed the season.

By this time Bodine was recognized as a star trotter. I wintered him carefully in Chicago, and in the early part of June, 1876, went to Grand Haven, Mich., to trot the free-for-all there. On reaching the place I found that the only entries in the race were Bodine and Rarus, the latter horse having at that time a record of 2:20 $\frac{1}{2}$, and being in the care of James Page. As the race did not fill, the association offered a purse for Bodine to trot against 2:25, and although the track was a good one it was about all the horse could do to win it in 2:24 $\frac{1}{2}$. Going from Grand Haven to Grand

Rapids, Bodine won a race, and then traveled on to Jackson, where he met American Girl for the first time. She sold about even against the field in the pools, the other starters being Bodine, Bella and Fred Hooper, but after winning the first heat was obliged to give way to Bodine, who took the next three, trotting one of them in 2:24, which was the fastest mile that had been trotted over the Jackson track at that time. At Saginaw, the following week Bodine trotted against Judge Fullerton and American Girl. He won the first heat in 2:19 $\frac{1}{2}$, which is his best record, but came as near losing it as a horse ever did and win. Soon after the word was given Judge Fullerton made a break, and knowing what a bad actor he was I supposed him out of the race for that heat at least. American Girl was ahead, and knowing my horse could beat her whenever I wanted him to, I stayed behind the mare until past the three-quarter pole. When Kelly, who was driving the Girl, swung into the homestretch, he went pretty well to the middle of the track, and as I was on the outside of him, it left room enough between American Girl and the pole for a horse to come through. When we were about half way down the homestretch, and had the Girl beaten, I happened to glance over my left shoulder and saw Fullerton clattering along on the inside of both of us. I started Bodine up, and from there to the wire it was about the hottest race a man ever saw, Fullerton being beaten a nose only in 2:19 $\frac{1}{2}$.

After this race Bodine showed lame in one of his forward legs, and as a splint soon developed itself he was turned out, not being taken up until January, 1876, when Dr. Paaron operated on him and the horse went sound. About the 1st of May I took Bodine to Kalamazoo, Mich., and began jogging him, the first race in which he started being at Jackson. The track was very muddy on the day of his race, and Bodine was the fourth horse at the finish, Frank Reeves winning. At Saginaw the next week Kansas Chief beat him, Bodine being sore from the Jackson race, but at Detroit he was a good horse, beating Kansas Chief, Gen. Garfield and Cozette. At Chicago, which was his next starting place, he defeated Mollie Morris, Gen. Garfield and Badger Girl, and then started through the central circuit in the free-for-all race against Goldsmith Maid, Smuggler, Lula, Lucille, Goldust and Judge Fullerton. In this series of races, which lasted seven weeks, Bodine was the only horse of the lot that trotted in every race, and in only one of them did he fail to win a part of the purse. That was at Cleveland, where Smuggler beat the Maid. At Buffalo Bodine met the same horses, and got third money, Goldsmith Maid winning. She did not start at Rochester, and here Bodine was fourth. At Utica he was third, and at Poughkeepsie second. In this race Smuggler, Lula and Judge Fullerton all broke soon after the word was given in the first heat, and Bodine forced the Maid out in 2:16 $\frac{1}{2}$, all the rest being distanced. The Hartford race was one of six heats, in each of which Bodine was fourth. Before starting in this race Mr. Alden Goldsmith suggested to me that if a heavier shoe was put on Bodine he would be steadier and go faster. Up to this time he had been wearing sixteen-ounce shoes, and, acting on Mr. Goldsmith's idea, I had him shod with nineteen ounces, but found that he did not go so fast nor so far. The next week, at Springfield, I put the light shoes on Bodine again, and he was second in the race to Goldsmith Maid, beating Smuggler and Judge Fullerton, neither of whom was distanced.

Bodine was then shipped back to Chicago. While at Hartford, Mr. Goodrich met Mr. Alley Bouner, and in the course of a conversation with him learned that his father, Mr. Robert Bouner, would pay a large price for any horse that could equal Dexter's feat of pulling a man and wagon weighing 319 pounds a mile in 2:21 $\frac{1}{2}$. On reaching Chicago, Mr. Goodrich decided to make a trial of this kind with Bodine, believing him capable of accomplishing the task. The horse was very thin from the hard races he had trotted, and I did not think it advisable to attempt the task, but Mr. Goodrich was anxious for the trial, and so we made it one afternoon at the Central Park track. I drove Bodine two heats to a skeleton wagon, the extra weight being made up by a bag of sand. The best the horse could do was 2:28, 2:27. That trial settled Bodine for the balance of the season. He had bled a little at the nose before that, but after the trial was over he bled very badly, and at no time that fall was he able to go a quarter in thirty-six seconds. We went to Cincinnati to trot against Rarus, Silversides, Cozette and Elsie Good. Rarus had shown a mile in 2:21 $\frac{1}{2}$ in his work, and his party were very anxious to have me send my horse a mile, but I knew he couldn't go fast enough to scare anybody, and so declined. Rarus won the race easily in 2:24, 2:25 $\frac{1}{2}$, 2:25 $\frac{1}{2}$, Silversides being second and Bodine third. That was the

last race I ever drove Bodine, and a month or so later Mr. Goodrich gave the horse to Budd Doble, who took him to California, where he trotted several excellent races. In the spring of 1877 Bodine returned from California, and started in a race against Little Fred, at Dexter Park, being defeated; and with this race his turf career ended, he falling lame behind the day after the race, and never being started again.

In some respects Bodine was a peculiar horse to train. One feature of his disposition was that he never needed a "repeat," but in place of this it was necessary to move him up pretty sharply for a quarter or a half mile every day, or else he would lose his speed. Another point was his jogging. He never wanted much of it, and after he had gone a mile and a half or two miles at a jogging pace he would want to speed. If you objected to this he would pull, and act mean in every way, acting as sulkily as a spoiled child. In fact he liked to have his own way about everything, and it was just as well to humor him. Road work he despised, and a very little of it would make him lose his speed. He was a very clean going horse, never needing boots of any kind, although I drove him with shin boots behind, having put them on originally because of a swelling on one of his ankles. I always drove him with a side-check and a snaffle bit. He would fight an overhead check, and if driven with a bar bit would drive on one line entirely. In disposition Bodine was very vicious, and was a really dangerous horse in the barn, unless constantly watched. He never wanted to make friends with man or beast, and was constantly on the lookout for some one to kick or bite. The various boys who took care of him knew this, and were careful in consequence, but all of them felt his teeth at some time. Going into his stall one day I incautiously picked up one of his front feet without first tying up his head, and the minute I stooped over he grabbed me by the back and shook me as a dog would a rat. At Buffalo, in 1874, I went into the stable after trotting a heat, and the boy incautiously turned Bodine around the wrong way, bringing me behind the horse. He at once began kicking in the most savage manner, knocking me down, and then hammering away at the walls of the stall while I crawled under him. A favorite trick of his, while stabled at Dexter Park, was to watch the stable doors while being led by them in his walking exercise in the afternoon, and kick over anybody who might be sitting there. He didn't seem to know the difference between a chair and a man, for he would kick an empty chair left in the door just as savagely as though it were his worst enemy. But other horses, or the boys leading them, he would not molest, seeming to know that they were entitled to exemption from his anger. During the four years that I drove Bodine he won about \$32,000 in purses, his cost price to Mr. Goodrich having been \$10,000. He was sold about three years ago to a man named Reynolds, who lives near Springfield, Mass., and is now being driven on the road.

—P. V. Johnson, in *Chicago Breeders' Gazette*.

Three Barrels of "Dead Rats."

One of the most remarkable occurrences of which we have ever heard took place in the northwest part of Talbot county on Tuesday last, in the shape of a huge rat slaughter. For some time past Mr. John Carlisle, a well-to-do farmer of this county, has been troubled with rats. There stands on his place, in one of his most fertile fields, a tenant log cabin, which for several years has been occupied, and of late has been used by the proprietor as a general storage house, about 200 bushels of peas in the hull being the last article it contained. In the early spring Mr. C. planted the field on one side of his cabin in corn and when the corn grew up to half-leg high, something began to cut it down, and by close watching he found that the rats were playing sad havoc with his corn, and he positively states that they cut down two acres of the cereal for him. On the other side of the house he planted cotton, and with equal emphasis he says the little varmints absolutely dug the cotton seeds from the rows and ate them up, doing this to such an extent that he had to plant over about two or three acres. So bad did they become at this time that he determined to try poison; so he bought of Dr. Bagwell a lot of "rough on rats," and put it out, and he says it killed so many of them that the vultures came and feasted on their carcases. This had the effect to stop their depredations for a while; at least until the cotton began to open, when Mr. Carlisle soon had trouble with the rats again. They absolutely riddled his cotton as fast as it opened by picking it from the bolls and eating the seed and scattering it all over the field.

He tried rat poison again, but he found it no good, as the rats seemed to have learned better and refused to eat it. He next examined his peas that he had stored in the house, when he discovered that the rats had eaten all but about fifty bushels, and he put in the house two hundred bushels. Upon this discovery, Mr. Carlisle determined to make a new and different war upon the rats; so last Thursday he summoned his forces and went to battle. He is the possessor of two fine bulldogs, one of them being the finest we ever saw, and with these and five colored men he began to tear down the dirty chimney to the house. The house being located in an open field, the rats had no means of escape from the dogs and men, and, as the chimney was torn down, the rats poured down by hundreds, and were killed as fast as they came. This was kept up without intermission until the chimney was torn down to its foundation, when it was discovered that the rats had tunneled into the ground and had a tunnel from the chimney about twenty yards to an old hollow stump. This tunnel was about twelve inches in width, and was round and smooth with a large bed about every ten feet where the young were raised, and Mr. Carlisle says that the hole was jammed full of rats from the chimney to the stump. This rat tunnel was dug out and destroyed by inches by Mr. C. and his assistants, and he says that the rats were killed as they came to them, the dogs taking an active part all the way through and enjoying the fun largely. Some of the rats were so large that the dogs had a regular battle with them; and the rats would grab the dog by the nose and bring a yell from him every time. It certainly must have been great sport to the participants.

The work lasted a half day, and when ended Mr. Carlisle had an empty flour barrel brought and had the dead rats measured, as there were too many to count. He says that there were more than three barrels of rats piled on as long as the barrel would hold, and he estimates the number at more than three thousand. Many men discredit this rat story, but Mr. Carlisle says he can prove it to the satisfaction of any man; he solemnly declares it to be the truth. Now, then, who can beat it?—*Talbotton (Ga.) New Era*.

On our desk lies the BREEDER AND SPORTSMAN, published by Joseph Cairn Simpson, 508 Montgomery St., San Francisco. It is a perfect typographical gem, and bears the impress of an excellent publication. Mr. Simpson is doubtless the best posted man in matters pertaining to turf and field sports, and will certainly make his journal a success. We welcome it to our exchange list.—*Sutter Co. Farmer*.

TURF AND TRACK.

Two-Mile Performances.

We find, by reference to the compilation in Hiram Woodruff's book, that as long ago as 1842 Ripon trotted two miles, in harness, at Philadelphia, in 5:07. Prior to that notable performance had been under saddle, and Lady Suffolk had a record of 4:59 at that way of going. In 1849, at Union Course, L. I., Lady Moscow went to the head of the list, gaining a harness two-mile record of 5:04. At the Eclipse Course, June 23, 1859, Princess clipped two seconds from this record, but August 16, 1859, over the same track, Flora Temple cast all previous performances fairly into the shade by trotting two miles, in harness, in 4:50. Perhaps it was on account of the apparent impossibility of surpassing this achievement that two-mile heats went out of vogue. The years of the war followed, and very soon after its close the prevailing system of mile heats, best three in five, was inaugurated, and has since flourished, well nigh to the exclusion of other ways of going. Certain it is that the 4:50 of "the little bob-tailed mare" was almost old enough to vote before it was displaced from the head of the records. The old queen had her last unequalled distinction taken from her by the gray gelding Steve Maxwell, at Rochester, New York, August 10, 1880, he trotting two miles, in harness, in 4:45, beating the feat of Flora Temple by plump two seconds. An analysis of this performance, which remained unequalled until last Saturday, will be of interest in comparison with the performance which surpassed it. In his first heat Steve Maxwell went to the quarter pole in 30½ seconds, a 4:52 gait; to the half in 1:12, a 4:48 gait; to the three-quarter pole in 1:45½, trotting the third quarter at a 2:14 gait to the mile, and finishing the first mile in 2:21, last quarter in 35½ seconds. He passed the fifth quarter in 2:56, at a 2:30 clip, trotting the full mile from that point to that point again in 2:19½, and passed the half, on the second round, in 3:22, trotting the mile measured from that point in 2:20. The speed for the first three-quarters of the distance, maintained to the finish, would have resulted in the heat being trotted a little better than 4:43, and as Steve Maxwell jogged in in 4:48½, it is probable that only merciful considerations prevented him from being driven out in 4:45, or thereabouts.

It will be noticed that this great performance of Steve Maxwell was very uneven in the rate of speed for different portions of the heat, one mile being trotted at a pace that would have finished the heat in 4:39, and a quarter of a mile at a rate that would have finished the heat, were it possible to have kept it up throughout, in 4:28. In this respect his feat strongly contrasts with that of last Saturday, of which we now inform our readers. Its hero was the brown stallion Monroe Chief, by Jim Monroe, dam by Bay Chief. In the early part of the week his grand finishes, in his severe race with Rosa Wilkes, had attracted much attention, and resulted in his merits as a two-miler being canvassed among the horse-men of Lexington, Ky., where he was, and a wager was made that he could not beat the 4:45 of Steve Maxwell, the Kentucky Horse Breeders' Association offering a silver cup, in addition, should the record be eclipsed. The day for the trial, Saturday, Oct. 21, was not altogether favorable, the track being heavy from recent rains, but Budd Doble brought out his stallion in grand condition. The timers in the stand were Dr. L. Herr, Col. R. S. Strader and Mr. B. J. Treacy. Doble set a rating pace for his horse, going to the quarter in 37½; the half in 1:13, the three-quarters in 1:48½, and trotting the first mile in 2:23. Here he was two seconds behind Steve Maxwell's time at the same point, but the sequel showed that Doble was regulating his horse to a speed that he could sustain throughout the heat. He went to the fifth quarter in 2:58, two seconds behind Maxwell, to the half on the second round, in 3:33, only one second behind Maxwell, and finished, full of trot, in 4:46, beating all previous records for two miles in harness, by two and a half seconds. While Maxwell trotted the first mile in 2:21, he dropped back in the second to 2:27½, but Monroe Chief trotted both miles in precisely the same time. This performance is one in which the judicious driver fairly shares the honors with the game and speedy horse.

The great achievement will stimulate discussion as to the possibilities of trotters at this distance, and while we do not expect that two-mile races will again become fashionable, there is no doubt that, from time to time, attempts will be made to acquire distinction in this direction. And there is also no doubt, fast as the performance of Monroe Chief is, that it is destined to be beaten and considerably beaten. Mand S., like Monroe Chief, is a very strong finisher of a mile heat, and at a much faster rate than the stallion has ever shown that he can go. When in good form, she can trot a mile in 2:15 or better, and last quarter the best of the heat, and cross the score full of go. It is perfectly reasonable to believe that after trotting a mile in 2:20, a mere exercising gait for her, she could do another in 2:15, making the two miles in 4:35. Perhaps the Mand S. of the present will never make such trial, although she is to be trained with a view to being tracked next year, and may do so; but some Mand S. of the future is very certain at some time to place the two-mile mark several seconds further below that of Monroe Chief than he has suppressed the record of Steve Maxwell, or even of Flora Temple. And while experience has taught us that races of two-mile heats, between horses casually brought together in a class, are rather sorry exhibitions in these days, because animals are not trained with a view of going such a distance at a high rate of speed, and because they furnish too easy opportunities for trickery; yet we do favor these occasional supreme tests by our fastest trotters as proofs of the endurance begot by judicious breeding.—*New York Spirit*.

FINE HORSES.—Capt. Ewing, of Shelby county, Mo., arrived at Fresno this week with a lot of the finest draft horses ever seen in this section. The imported horse Prince Napoleon has especially attracted much attention and been greatly admired by stock men who have seen him. There are also two Clydesdale horses in the lot. These fine horses will be a great advantage to the stock raisers of this section, and we hope that none of them will be sold outside of the county. They can be seen at Fleming's stables.—*Fresno Republican*.

There were three unimportant races at the track on Thursday, and not a large attendance. Too much election at present for Venturans to take much interest in races. The first race, a mile dash, was won by Wildidler over Peanuts. The second race was a trotting race, and was taken by Covarrubias' buck-skin horse over Jack Hill's bay in 3 minutes. The third and last was between Belle G., Doty Dimple and Sespe. At the three-quarter pole Sespe stumbled, fell and threw his rider. Belle G. came in ahead closely followed by Doty Dimple. As we go to press on Friday, the races are again in progress.—*Signal*.

Answers to Correspondents.

LOUISVILLE, Ky., Oct. 3, 1882.

EDITOR BREEDER AND SPORTSMAN: Will you please in your paper give the age and breeding of the filly Manon (by Nutwood) that recently made a record of 2:24? J. W. D.

Answer—Manon, b f, foaled 1877, by Nutwood.

First dam Addie, by Hambletonian Chief.

Second dam by Harry Clay.

SAN FRANCISCO, Nov. 8, 1882.

EDITOR BREEDER AND SPORTSMAN: Please give in your columns the pedigree of Chieftain and oblige B.

Answer—Chieftain, b h, foaled 1856, by Hiattoga (Old Togue) son of Rice's Hiattoga; dam by Trimble's Eclipse, son of American Eclipse.

The Starter.

Now that racing has been so firmly established in the South and West, a just criticism of the different official positions intimately connected with the racing itself must be of interest to all concerned. The owner or breeder is peculiarly interested in a very great degree when he brings his horse to the post, and every facility known should be used by associations to enable the contests to be on equal terms. The starter, therefore, for the time being, is the one official on whose honesty and fairness all can safely count. Partiality or incompetency destroys the best of superiority in speed and bottom, for the demonstration of which the races were instituted. Of equal, if not more consequence, are the judges to whom all must bow, and from which there is no appeal. We can, therefore, presume that the starter and judges should be, like Caesar's wife, above suspicion, possessing the confidence and trust of those so dependent on their honest administration of their duties. The rule on the subject reads as follows:

"No one interested in the result of a race, either because of ownership of any other horse, bets, or otherwise, shall act as judge or starter therein."

All racing law, therefore, recognizes the fact that to start or judge a race impartially precludes the idea of any interests by bets, or otherwise. There are large money transactions dependent on the result, and age and experience has taught that to be unbiased, we should have no interest in what we are to judge. Should not this same rule apply to the critics of the press? What right has the prophet of races, to be run, with pockets stuffed with pool tickets, his mind and judgment biased in every way, to undertake to criticize a start and race where his talent is used to excuse the error of his prophecy or to devise ways and means to palliate his want of judgment? The reporter or critic should be placed on the same category as the starter and judges. Then he could calmly judge of the requirements of the one, the fidelity of the other.

The honest efforts of a gentleman who, though he may err sometimes, are more acceptable to the public, to the uneasiness, and we must say, from recent experiences justly entertained, occasioned by those professional gentlemen who are known to be interested in the result of the races.

At New Orleans, Nashville, Louisville, and Lexington, the presidents of the associations start the horses, and during the recent meeting, which embraced sixty races, the average was the best seen for many a day.

Louisville, in the spring, is the great racing point where most of the young horses commence operations; hence, the number of green horses is greater, the fields larger, and the starting more difficult than elsewhere in America. Horses and jockeys in the fall are less troublesome in starting than in the spring on this account. Of course, this only applies when both are meant to aid the starter, and not to delay him in his efforts.

The public little appreciates the many arduous difficulties surrounding the position of starter. The great breeders of this country are those who keep up the racing interests, and to their petition the clubs above named have responded by nominating the official possessing in the greatest degree the confidence of the public and owners. Whatever redounds to the fairness of treatment of the breeders certainly can not be detrimental to the other owners of race horses.

On every large course there are always a certain class of privileged people who, under the guise of a friendly interest in the success of the club, advise the appointment of this or that friend for the most responsible position. The professional starters this season have given far less satisfaction to the owners of horses and the general public than the efforts of the non-professional gentlemen who head the different clubs already enumerated. Starting requires a control over the jockeys, engendered rather by respect for the honesty of intention and appreciation of a fixed desire on the part of the starter to give fair starts, rather than a tyrannical power to rule off, suspend, or fine the boys. Any familiarity between the jockey and the starter destroys at once the functions of the latter. Jockeys soon ascertain whether or not they can trifle with the starter, but to their credit be it said, that frequently, as in two-year-old short dashes, the colts themselves become hot and unmanageable, and many of the delays are thus but instances of the patient desire of the starter to do justice to all concerned, a fact not often considered by the public at large.—*Turf, Rod and Gun*.

Of the one hundred and eighty horses that have lowered their records in the 2:30 list this year, fifty-four of the number began their turf career in 1882, or at least had no record that we can find; seventeen of the horses without record in 1881, trotted this year in 2:25 or better; one hundred and nineteen are new to the 2:30 list; and forty-one of the one hundred and eighty are stallions, and have an average record of 2:26. Twenty-one of these forty-one are direct descendants in the paternal line of Rysdyk's Hambletonian. Moreover, of the one hundred and eighty horses, seventy-nine of that number are descendants of Hambletonian. It will be seen from the foregoing that Hambletonian blood is rapidly coming to the front—indeed, is there already. Not from any desire to push a horse or any number of them to the front do we give the above facts, but that those who have no time to investigate for themselves may see just the situation. Men may theorize as much as their inclinations dictate, but unless they bring their theories to practical tests, they will be little or no wiser for their theorizing. In regard to the trotters of 1882, however, we desire to say that it will be a profitable study to note the families from which the dams of the 2:30 horses of 1882 have descended. Mambrino Chief, 16; Henry Clay, 13; Morgan, 12; Rysdyk's Hambletonian, 9; thoroughbred, 8; American Star, 5; Champion, 4; and Pilot Jr., 4. It will thus be seen that while Hambletonian has contributed very much the largest number of the 2:30 list paternally, that maternally Mambrino Chief, Henry Clay, and Justin Morgan all lead him largely.—*Dunton's Spirit*.

NEW COMERS IN THE 2:30 LIST.

The Horses that have Dropped into the Standard Class During 1882.

The great 2:30 list of trotters has been increased this season by the accession of 141 new members. The entire list as it stands to date numbers nearly fifteen hundred horses that have trotted their mile in 2:30 or better. The 2:20 list, which is the list of lists, now has ninety-eight members, fourteen of which entered this season—a greater number than have entered any previous year, with the exception of 1880. The fastest mile trotted this season was in 2:14 by Clingstone, a son of Rysdyk, out of Gretchen, by Chosroes. The youngsters came unusually strong—two three-year-olds, five four-year-olds and eight five-year-olds having made their marks. Of the old members sixty-five lowered their records, five improving in their five-year-old form. The season developed several phenomena, among them the chestnut gelding Captain Lewis, who started as a green horse and never was defeated.

We give below a list of the new horses and also all horses that have lowered their records up to date:

New Horses For 1882.

Abe Dowling, ch b, Buffalo, N. Y., Aug. 12.	2:20 1/2
Adele Gould, ch m, Buffalo, N. Y., Aug. 4.	2:19
Albert W., b c (4 years), Stockton, Cal., Sept. 23.	2:22
Algate, b f (3 years), Chicago, Sept. 20.	2:25 1/2
Alice Oath, b m, Dover, Del., Sept. 29.	2:27
Alice Stoner, b m, Lexington, Ky., Aug. 29.	2:24 1/2
Alroy, b c (3 years), New York, N. Y., Oct. 3.	2:27 1/2
Amelia C, b m, Boston, Sept. 16.	2:28 1/2
Annie S, ch m (5 years), Lexington, Ky., Oct. 16.	2:28 1/2
Archie, b f (4 years), Providence, R. I., Sept. 13.	2:28 1/2
Barbara Patchen, b m, Rochester, N. Y., Aug. 11.	2:24 1/2
Barrett, b h (5 years), Springfield, Mass., Sept. 7.	2:25 1/2
Becher, H. W., bl b, Boston, Mass., June 13.	2:25 1/2
Belle Wilson, ch m, East Saginaw, Mich., June 20.	2:23 1/2
Betsy Ann, ch m, Jefferson, Wis., Sept. 27.	2:29
Big Ike, g c, Youngstown, Ohio, July 7.	2:29 1/2
Billy Buton, ch g, Jersey City, Oct. 18.	2:29
Bob Acres, ch g, Cincinnati, Sept. 28.	2:28 1/2
Brandy Boy, b g, Boston, June 22.	2:21 1/2
Bronze, b f (4 years), Chicago, July 15.	2:25 1/2
Brown Dick, br g, Milwaukee, July 25.	2:29 1/2
Captain Lewis, ch g, Springfield, Mass., Sept. 6.	2:20 1/2
Carrie B, b m, Boston, Mass., Oct. 27.	2:27 1/2
Charles Hood, b g, Philadelphia, May 4.	2:29 1/2
Clara Cleveland, ch m, St. Joseph, Mo., Sept. 5.	2:23
Clara M, b m, Boston, June 7.	2:29 1/2
Clara, bl m, Chicago, Sept. 22.	2:18 1/2
Commander, b b (5 years), Maysville, Ky., May 18.	2:26 1/2
Cora Belmont, gr m, Hartford, Conn., June 22.	2:24 1/2
Cornelia, bl m, Utica, N. Y., August 18.	2:21 1/2
Dick Orgau, bl g, Pittsburg, Pa., July 13.	2:25 1/2
Dr. Norman, b g, Cleveland, Ohio, Sept. 7.	2:19 1/2
Don, gr g, Boston, June 14.	2:24 1/2
Douglass, gr g, Boston, June 6.	2:25
Elmer, br g, Albany, N. Y., August 22.	2:25 1/2
Ewing, ch g, Cleveland, Ohio, Sept. 5.	2:21 1/2
Ezra L, b g, Springfield, Mass., Sept. 8.	2:25 1/2
Fanny Wilkes, br m (5 years), Cleveland, Sept. 6.	2:26 1/2
Florence M, ch m (5 years), Maysville, Ky., May 16.	2:25 1/2
Frank, b g, Poughkeepsie, N. Y., June 28.	2:26 1/2
Fred Goldust, ch b, Cleveland, Sept. 5.	2:27 1/2
Freestone, b g, San Francisco, Cal., Aug. 5.	2:20
Gen. Beantish, gr g, Philadelphia, Oct. 4.	2:28 1/2
Gen. Russ, b g, East Saginaw, Mich., June 22.	2:29 1/2
George A, b g, Boston, Sept. 16.	2:28 1/2
George M, b g, Poughkeepsie, N. Y., June 28.	2:24
George V, ch g, Grand Rapids, Mich., Sept. 29.	2:29 1/2
Giff Jr., br b, Cincinnati, Sept. 27.	2:27
Gypsy, bm, Boston, July 25.	2:24 1/2
Gladiator, b g, Hartford, Conn., August 29.	2:22 1/2
Guess Not, b m, New York, N. Y., Oct. 5.	2:27 1/2
Happy Thought, b h, Boston, Oct. 25.	2:25 1/2
Hardwood, b h, Chicago, July 18.	2:24 1/2
Harry Wilkes, b g, Lexington, Ky., Oct. 12.	2:23 1/2
Highland Stranger, b h, Maysville, Ky., June 19.	2:25 1/2
Hotspur Chief, b g, Pittsburg, Pa., July 11.	2:29 1/2
Hudson, b g, Cranston, R. I., June 2.	2:29
Ina G, b m, Maysville, Ky., May 19.	2:24
Inca, br b, Santa Rosa, Cal., Aug. 26.	2:27
Independence, br h, Poughkeepsie, Aug. 23.	2:23 1/2
Jack Sailor, b g, Boston, June 15.	2:25 1/2
Jay Eye See, b g (4 years), Chicago, Sept. 23.	2:19
Jewell, b g, Norwalk, Conn., Sept. 15.	2:28 1/2
Jim Bowman, b g (4 years), Chicago, July 22.	2:29 1/2
Joe Rhea, b g, Lexington, Ky., Oct. 11.	2:23
J. W. Thomas, b g, Boston, Mass., Oct. 27.	2:27 1/2
Kate Taylor, b m, Cleveland, July 26.	2:23 1/2
Keno, b g, Maysville, Ky., May 19.	2:23 1/2
King Almont, b h, Philadelphia, Oct. 4.	2:26 1/2
King Wilkes, br h, Pittsburg, July 11.	2:26 1/2
King William, blk g (5 years), Cleveland, July 27.	2:20 1/2
Kitty Rives, gr m, Hoosick Falls, N. Y., July 25.	2:29 1/2
Kitty Silver, ch m, Lexington, Ky., Oct. 16.	2:27 1/2
Lady Kearns, b m, Dubuque, Iowa, June 7.	2:29 1/2
Lady Leah, gr m, Cambridge, N. Y., Aug. 1.	2:29 1/2
Lady Thornton, b m, Boston, Mass., Oct. 27.	2:27 1/2
Legal R, b g, Lawrence, Kan., Sept. 22.	2:30
Lillian, ch m, Louisville, Ky., Sept. 16.	2:23 1/2
Lona Griffin, bm, Indianapolis, Ind., July 14.	2:23 1/2
London, ch g, Cleveland, July 26.	2:20 1/2
Louis D, b g, Sacramento, Cal., Sept. 11.	2:24 1/2
Louise N, b m, Boston, Sept. 15.	2:24 1/2
Lulu F, b m, Boston, June 6.	2:29
Madeleine, b m, Wheeling, W. Va., Sept. 12.	2:28 1/2
Manon, b m (5 years), Oakland, Cal., Sept. 4.	2:24
Maud Messenger, b m, Lexington, Ky., Oct. 16.	2:25 1/2
Maud T, b m, Maysville, Ky., May 18.	2:26
Maxy Cobb, b b, Des Moines, Iowa, Sept. 8.	2:30
May Thorne, b m, Boston, Sept. 19.	2:24 1/2
Mike, br h, Lexington, Ky., Sept. 2.	2:28 1/2
Milton Medium, b b, Portland, Or., July 22.	2:27 1/2
Minnie Warren, ch m, East Saginaw, June 20.	2:27 1/2
Mistletoe, bl m, Youngstown, Ohio, Sept. 23.	2:30
Molly Bell, br m, St. Joseph, Mo., Sept. 6.	2:30
Mountain Girl, b m, Lawrence, Kan., Sept. 22.	2:30
Nauie Talbot, ch m, Maysville, Ky., Sept. 23.	2:28
Nell, bl m, Boston, July 27.	2:29 1/2
Nellie G, b m, Youngstown, Ohio, Sept. 23.	2:30
Nellie R, ch m, Stockton, Cal., Sept. 23.	2:20
Neta Medium, b m, Chicago, July 20.	2:22 1/2
Nickle, b g, Boston, Oct. 25.	2:25 1/2
Oolong, br m, Hoosick Falls, N. Y., July 25.	2:29 1/2
Overman, ch g, Buffalo, Aug. 2.	2:20 1/2
Pedro, gr m, Minneapolis, Sept. 6.	2:25 1/2
Prince Arthur, b g, (Smith's) Minneapolis, Sept. 7.	2:27 1/2
Prince Arthur, b g, Hastings, Minn., June 13.	2:29
Ray Gould, b g, Lebanon, Pa., Oct. 5.	2:29 1/2
Red Bird, b g, Boston, Oct. 27.	2:27 1/2
Reveille, br h, Philadelphia, Oct. 5.	2:27 1/2
Rigollette, b m, Grand Rapids, June 21.	2:29 1/2
Robert H, b g, Boston, Oct. 28.	2:29 1/2
Romeo, b h, Crown Point, Ind., Oct. 15.	2:29 1/2
Rosalind, gr m, Janesville, Wis., Oct. 5.	2:22 1/2
R. P. b g, Utica, N. Y., Aug. 15.	2:30
Sadie H, b m, Canton, Ohio, Aug. 31.	2:29
St. Gothard, b h, New York, N. Y., Oct. 5.	2:29
St. Louis, b g, Cleveland, Sept. 6.	2:25
Sleepy George, ch g, Goldendale, W. T., Sept. 29.	2:29
Socrates, r g, Philadelphia, Oct. 5.	2:27 1/2
Solo, b m (5 years), Albany, N. Y., Sept. 28.	2:28 1/2
Stranger, g g, Maysville, Ky., Sept. 23.	2:28
Strong, H. M., ch g, East Saginaw, June 22.	2:25 1/2
Sunshine, ch b, Akron, Ohio, August 18.	2:30
Ticonic, b g, Milwaukee, Sept. 26.	2:27 1/2
Tom Rodgers, bl b, Grand Rapids, June 27.	2:23 1/2
Topsy, br m (5 years), Minneapolis, July 4.	2:30
Topsy, br m, Poughkeepsie, N. Y., Aug. 22.	2:21 1/2
Toronto Chief Jr., br h, Albany, N. Y., Sept. 27.	2:26 1/2
Tump Winston, ch g, Stockton, Cal., Sept. 21.	2:25 1/2
Valley Boy, b g, Albany, N. Y., Sept. 27.	2:24 1/2
Vanderlyn, b h, Stockton, Cal., Sept. 19.	2:22
Vivid C, b g, Philadelphia, May 18.	2:28 1/2
Vision, b m, Boston, Oct. 25.	2:29 1/2
Waiting, b g (4 years), Chicago, July 15.	2:25 1/2
Walnut, b h, Buffalo, Aug. 5.	2:22 1/2
Walter, ch g, Akron, Ohio, August 18.	2:29 1/2
Wick, b g, Maysville, Ky., Sept. 19.	2:30
Willie Woods, b g, Lawrence, Kan., Sept. 22.	2:30

Wilson, b g, Rochester, Aug. 12.	2:21 1/2
Young Fullerton, ch b, Pittsburg, Pa., July 12.	2:22 1/2
Zelda, b m, Boston, July 21.	2:29 1/2

The following have reduced their records:

	From	To
Aldine, br m, Hartford, Aug. 31.	2:26 1/2	2:19 1/2
Black Cloud, blk h, Chicago, July 22.	2:21 1/2	2:17 1/2
Blass, b m (5 years), Chicago, July 8.	2:30	2:21 1/2
Brigadier, b h, Sacramento, Cal., Sept. 14.	2:22	2:21 1/2
Buzz Medium, b m, Pittsburg, July 11.	2:23	2:20 1/2
Camors, b g, Boston, July 25.	2:25 1/2	2:20 1/2
Catchly, b m, Lexington, Ky., Oct. 14.	2:25 1/2	2:20 1/2
Clemmie G, ch m (5 years), Hartford, June 22.	2:30	2:27 1/2
Clingstone, b g, Cleveland, July 28.	2:19 1/2	2:14
Crown Point, ch b, San Francisco, Aug. 5.	2:24	2:24
Dexter, b b, Portland, Or., Oct. 4.	2:30	2:24 1/2
Director, blk b (5 years), Stockton, Cal.	2:27	2:23 1/2
Early Rose, br m, Hartford, June 21.	2:25 1/2	2:20 1/2
Echora, b m, Stockton, Cal., Sept. 20.	2:25	2:23 1/2
Edwin Thorne, cb g, Chicago, July 21.	2:17 1/2	2:26 1/2
Fanny Witherspoon, ch m, Poughkeepsie, Aug. 25.	2:19 1/2	2:18 1/2
Florence, ch m, Philadelphia, Oct. 3.	2:24 1/2	2:23 1/2
Forrest Patchen, b g, Boston, Sept. 16.	2:24 1/2	2:20 1/2
Frank Lauders, b g, Columbus, Ohio, May 26.	2:29 1/2	2:26 1/2
Fred Douglass, ch h, Chicago, July 21.	2:24 1/2	2:20 1/2
Goldfinder, ch h, Boston, July 27.	2:23 1/2	2:23 1/2
Grand Sentinel, b h, Cedar Rapids, Iowa, July 15.	2:29 1/2	2:28 1/2
Harry Velox, b g, Toledo, Sept. 12.	2:28	2:26 1/2
Helene, ch m, New York, N. Y., June 29.	2:22	2:21
Indicator, ch h, Grand Rapids, Mich., Sept. 27.	2:29	2:27
Ingomar, ro g, Hoosick Falls, N. Y., July 26.	2:29 1/2	2:29 1/2
Jenny L, gr m, Philadelphia, May 19.	2:29 1/2	2:27 1/2
Jerome Eddy, b h, Buffalo, Aug. 3.	2:27	2:16 1/2
Jerret, blk g, Buffalo, Aug. 1.	2:23 1/2	2:22 1/2
Joe Bunker, g g, Lexington, Ky., Oct. 11.	2:26	2:20 1/2
Judge Hawes, b g, Maysville, Ky., Sept. 22.	2:27	2:24
Kentucky Girl, b m, Fort Dodge, Iowa, June 30.	2:29 1/2	2:29 1/2
Kitty Clyde, b m, Janesville, Wis., Oct. 5.	2:30	2:29 1/2
Leontine, b m, Erie, Pa., June 28.	2:27 1/2	2:27 1/2

Patrons of the Turf.

During the reign of Henry VIII a bill for the improvement of the breed of horses was passed by Parliament. The preamble set forth the facts that as the generation and breed of good and strong horses within the realm extended not only to the great help and defense of the realm, but also a great commodity and profit to its inhabitants which is endangered by reason of small horses, etc. The bill authorized the destruction by the authorities of all stallions under fifteen hands high and mares under thirteen hands high found on the heaths, downs or pastures within the realm, etc. So Henry VIII may be claimed as the most prominent patron of the turf and the defender of the horse. Queen Elizabeth was a grand horse-woman and did much to improve the breed of horses, and to promote the interests of the turf. James I was a turf-man. He owned and ran successfully many horses during his reign. The Earl of Derby, whose wife was a Beaufort, founded the English Derby in the year 1780. The first English Derby was won by Diomed, who was imported to the United States, and from whom many of the horses of the present day have descended. The Derby is a race of one and one-half miles, and run by three-year-olds over the Epsom Downs, in May annually, where also is run the "Oaks," a race for fillies, same age and distance, and named after the country seat of Gen. Burgoyne. The St. Leger was founded in 1778, and is run in Doncaster, one and three-quarters miles. There are a number of other grand races in England, all of which are patronized by the first people of the realm. William IV established the Hampton Court Stud, and his daughter Queen Victoria has kept up the reputation of the stud in every possible way. Many thousand dollars are appropriated annually for the support of the English turf, and you have a Queen's Plate to be run for in every prominent city in the realm. Parliament adjourns as well as all conventions, both of State and of Church, to witness the running of the Derby. So you may truthfully say that all England is a patron of the turf, and that the purses are furnished from the public treasury. Millions of people witness the Derby, and should a minister rise in his pulpit and cry out as they do in this country against the members of his church witnessing the races, he would simply be removed from the ministry. The Rev. Mr. King, who at one time was a member of Parliament of England, owned a stud of thoroughbred horses all his life, and he lived to be eighty years old. He trained and ran these successfully. He won the Oaks and St. Leger with Apology, and several Queen's plates with Holy Zion. Apology was lame just before running the Oaks and her trainer wished to scratch her. Mr. King said no, his friends had bet on his name and they should be protected if she was lame, and have a chance for their money. So she ran and won. The church at one time attempted to arraign the reverend turfman, but he defended his position so successfully that he was allowed to pursue the even tenor of his way. The ladies of Chicago have, as they have all over the country, adopted the race-horse fashion of bobbing the hair, and so why cannot the churchman follow the example of the Bishop of Canterbury and many other ministers in patronizing the turf. Washington, the father of our country, as pure a christian and patriot as ever breathed the breath of life, was a patron of the turf, and on many occasions had his friends gathered around him at Mount Vernon to engage in a fox chase with his hounds and horses, of which he was exceedingly fond. Henry Clay, the master spirit of Kentucky in his day, whose towering monument stands more conspicuous than all others in the heart of the Blue Grass country, was a patron of the turf, and a Christian who owned and bred at Ashland many grand horses, among whom were Yorkshires, Magnolia and others.

Gen. Grant's fondness and good judgment of the horse is proverbial. I saw him pick the winner at St. Louis out of a large field, not knowing a single horse in the lot. I will be safe in stating that the Congress of the United States are patrons of the turf, if I am to judge by the number of the

members that attended the Ten Broeck and Parole race at Baltimore two years since. I know Senators Bayard and Beck cannot stay away from a race when in reach. Their judgment is good, and they often back it. In fact, the enlightened Christian of England and New England are patrons of the turf. This current of liberality in church matters is moving west, and will soon be upon us with all its force. We have a club of Christian gentlemen at Jerome Park, headed by such men as Belmont, Jerome and others, where racing can with truth be compared to Caesar's wife—without suspicion—and when a sportsman or jockey is ruled off he may make his final bow to the turf, as his chances for reinstatement are slim indeed. Such I regret is not the case in the West.

We then have as patrons of the turf at the present day, the Queen of England, her son Prince Albert, Count Lagrave, Duke of Beaufort, Earl of Derby, and a host of lords and earls, all of whom are members of the church. In America we have the State of New York, Belmont Withers, Stanford, and a host of others. In Illinois you have Singleton, Rowett, Ayers, Dow, and many others, who, if not members of the church, ought to be. In Tennessee, Gen. Harding, Jackson, Cheatham, and Cockrill. In Kentucky, Alexander, Clay, Brodhead, Swigert, etc. In Maryland, Gov. Bowie and Hall. In Missouri, Gov. Crittenden, Hunt, Haney, and a host of others, all belonging to the church. So we may well say that both in England and in America the turf is strongly patronized by the church, although in order to keep up the traditional feeling against the turf, you will find some preachers to say that there is no sympathy between the church and the turf.

By introducing in the charters granted to the various jockey clubs a feature organizing the clubs as a banking institution, and making it a penal offense for any officer or agent of the club to be guilty of fraud, by punishing this fraud with five or more years in the penitentiary, there would be a strong tendency to lessen these evils. These evils are all charged against the horse. He has the sins of the world to pack. He has not only the burdens of the world to bear, of the man who makes his bread by the sweat of his brow, but also the sins of the man who violates both the law of God and man. It is not altogether fair that all gambling should be charged to the horse; some of it should be charged to the soldiers. During the recent contest for prizes offered for the best drilled military company at Indianapolis, where many of the best organized bodies of men entered the arena, and where many thousand of people witnessed this grand display of military skill—on this contest many pools were sold, and much betting done. There was heavy gambling on the result, and dare you tell me that in consequence of this gambling it becomes the duty of a Christian to discourage the development of the military spirit of the youth of our country? That it is his duty to abandon the military organizations of the government through which we defend the nation in war? That we must throw away our arms, and give up everything on account of this gambling, and thus surrender at discretion to the great power of his Santanic majesty? This giving up of everything would endanger the salvation of our souls far greater than a little betting where there was no fraud practiced. The Master does not love a coward, and an indolent Christian is his abhorrence. He has laid down certain duties for us to perform, and when we fail to perform these duties he will fail to fulfill his promises to us. He does not tell us to give up anything and serve him alone, nor did he tell us to stay away from the race-course. Quite to the contrary, as St. Paul says: "Run that ye may obtain." God, to accomplish his great purpose of suppressing sin, sent forth his apostles over the world, two and two, armed and equipped with his divine powers and with orders to engage the enemy wherever found, and notwithstanding the aid of their great commander on high, the majority forfeited their lives in the war waged for the suppression of sin. And you tell me that I shall not follow their example. Yes, to elevate the turf I would, as the apostle did, be willing to forfeit my all, but as long as I do live I hope no one will attempt to fetter my conscience or force my opinions. "The right of private judgment and the liberty of conscience is the privilege and duty of all," so say the doctrinal views of my church. So this question of Church and Turf rests alone with me and my God, and man has no right to interfere so long as my Christian conduct and vital piety are safe. The liberality of the Christian Church, in thus placing this question where it legitimately belongs, is what won my allegiance, although by some it is styled an anti-turf church; still, when this question comes to be fairly discussed and properly understood, this impression will be dispelled.—Church and Turf, by Gen. Abe Buford.

Vanderbilt's Stable.

As the dwellings of modern Americans of wealth have developed into palaces, so the stables of rich owners of horses have become buildings fitted up in a manner that surpasses in costliness and elegance the houses of a majority of the people. Pressed brick, brown stone and marble, costly woods and plate-glass combine to make the millionaire's stable a place of luxury and even splendor. Maud S and the other trotting wonders in which Wm. H. Vanderbilt takes pride are housed in a manner befitting the pets of the richest man in America.

A Tribune reporter visited Mr. Vanderbilt's stable at Fifty-second street and Madison avenue recently, and was shown through the building. Entering from the office the visitor found himself in a spacious room. It was just after dark, and numerous gas jets were burning around the walls, the light streaming through porcelain globes, each ornamented with a broad band, in the center of which was a horse's head. Walls, floor and ceiling were all of polished wood, cherry, ash and black walnut being arranged in strips and panels in a way that brought out the beauties of each to the best advantage. In one place a long mirror reflected the line of somber and stately coaches opposite, and in another a case of nickel-plated bits, on a background of black velvet, hung glittering on the wall. A set of Fox's English hunting scenes, and oil portraits of Maud S and Fullerton, in heavy gilt frames, relieved the bareness of the ash walls. In the corner, on a platform of cement a stableman was washing a light wagon which had been whirled over the road that afternoon behind Aldine and Early Rose. The stable implements which lay around him flashed in the gaslight with their heavy mountings of polished brass, and the pall in which he dipped his sponge was decorated with a big brass monogram. There was no scent of the stable in the air. The noises of the horses in the stable a few feet away could scarcely be heard through the thick walls and the heavy doors of black walnut and plate glass. Only the man at work on the wagon in the corner and the long line of coaches against the wall gave the large, well-proportioned and really elegant apartment any appearance of connection with a stable. There is no loud noise, no confusion and no dirt in this big hall at any time. Even when some famous trotter comes into the stable, fresh from some new exploit on the road, or the stout coach horses

come in champing their bits and rattling their harness heavy with silver, the wheels of the light wagon or the heavy coach roll on a broad strip of carpet stretched diagonally across the floor, and there is no din or tumult.

Looking into the harness-room, large cases with fronts of plate glass extending on all sides were seen. The walls of the room above the cases were of plate glass, and the light from the courtyard streamed through in a flood upon the shining black and the gleaming silver of the harnesses. Here were all sorts of harnesses, from the plain affair whose only ornament was the monogram of Mr. Vanderbilt, to those in which the leather was almost hidden by a profusion of heavy silver decorations. At the command of Mr. Phelps, the superintendent of the stables, two groomers rolled back two immense sliding doors, and a dim-lit apartment, roofed by a dome of glass, was entered. Up and down the center, on the hard cement floor were ranged a row of light vehicles and around them extended a tanbark track. This is called the "walking track," and here the horses are exercised. The red pressed brick walls of this place were hung with pictures of hunting scenes and celebrated horses which, with their bits of color showing in the semi-obscure, produced a pleasant and striking effect.

The most interesting part of the stable, however, was that devoted to the horses. Here the light from numerous gas-jets showed long lines of box-stalls of light and polished wood, trimmed with black walnut. Beyond was a line of open stalls where stood the powerful carriage horses. Even here there was no unpleasant odor, nothing but the smell of the clean straw with which the horses had been bedded down for the night. Up and down the passageway between the stalls moved the sturdy groomers, carrying feed for the animals and giving the last finishing touches to the bedding. The shadows cast by the walls, the deep panels of the roof and the dark forms of the coach horses produced a striking combination of light and shade. The picture was relieved and supplied with color by the bright blue checked skirts of the groomers and the matting of plaited straw and red tape behind the stalls of the coach horses, and the effect was still further heightened by the glitter of polished brass which adorned all the stable utensils and shone in the gaslight. Opening the door of a large box stall at the end of the room, the reporter entered it. The stall was lit only by the light that came over the top and was in a state of half darkness. In one corner, up to the fetlocks in straw, stood Maud S quietly eating her well-earned oats. Maud did not quite like the idea of being disturbed at her supper but, like a well-bred creature of gentle blood, gave very little indication of her annoyance. The blanket covering her was removed and her fleet-limbed symmetry was brought out to the fullest advantage by the background of light wood and straw. She submitted to being patted and caressed with the utmost unconcern when she saw that the intruder was Mr. Phelps, and paid strict attention to her supper.

Looking into the other stalls the other racers were seen quietly crunching away on their suppers in the twilight. Bay Dick looked up inquiringly as Mr. Phelps and the reporter entered his stall. After regarding his visitors intently for a moment he gave a contemptuous sniff and returned to his feed. When Aldine's stall was reached her blanket was removed and her good points commented upon. Aldine submitted gracefully—in fact, seemed rather to like it, and to be proud of the praise that was lavished upon her. Near the door leading into the courtyard was what appeared to be a box stall, but which, upon the door being opened, was seen to be a bedroom. Here every night sleeps one of the hostlers, in order to be on hand if anything goes wrong with the horses. In the partition dividing the room from the main apartment burned a bright light encased in glass. It was half in the sleeping-room and half outside, the light filtering into the sleeping-room through a green baize curtain drawn over the glass on that side. At night, when all the other lights are turned out, this one is kept burning.

Mr. Vanderbilt's stable was begun in 1879 and finished in October of the following year. It cost \$60,000 without the land, which is said to be worth at least as much more. The materials of which it is constructed are pressed brick and brownstone. It has a frontage of 75 feet in Fifty-second street and 100 feet in Madison avenue. All the rooms are spacious and the appointments of the finest. The box stall occupied by Maud S is 20x24 feet, and the others, though not so large, are still of good size.

There are at present in Mr. Vanderbilt's stable, Maud S, Aldine, Early Rose, Leander, Lysander, Bay Dick, Small Hopes, Charles Dickens and four coach horses, eight light wagons and two sulkeys. Six men are employed as groomers and hostlers.—*New York Tribune*.

Racing at Boise City, Idaho.

The fall meeting at Idaho Park, Boise City, was brought to a close on Oct. 28. The saddle race failed to fill and only one event was left on the card, but that was rendered somewhat notable by the performance of the winner. The weather was fine and the track in good condition.

SUMMARY.

BOISE CITY, Idaho, Oct. 28, 1882. Purse \$125, free for all, dash of one mile and a quarter.

T. Smith names Hattie Harris.....1
H. B. Eastman names Warwick.....2
H. Clark names Tim Brainerd.....3
John Earley names Dundrum.....4
A. O. Miller names Idaho Chief.....5
Time—2:18½.

After several trials they got a good start and came down the stretch well in a bunch, but Warwick and Brainerd soon drew ahead and as they went around the turn Hattie Harris was last. At the half mile pole she ran by Chief and Dundrum and as they entered the last quarter she was well back from the leaders but she came up the stretch with a terrific rush, passing the line a length ahead of Brainerd, who was half a length in front of Warwick. The filly carried fifteen pounds overweight.

The winner, a phenomenal two-year-old, is thus described by the *Boise City Statesman*:

Hattie Harris—This celebrated filly, owned by Tom Smith of Emmitsville, has made so good a record at our races that we feel bound to give her a special notice, not that we would detract or say a word against any other horse in the races, for there were several that did well and made good time and won money, but it will be conceded on all sides that Hattie, although considerable was expected of her for an untrained colt, did not in any case disappoint her owner or the public. She was bred and raised in Idaho, and for that reason is a favorite. Of course she is a thoroughbred, having been sired by Marmaduke, dam Pionette. Tom Smith, her owner, brought both dam and sire from Kentucky five years ago. The only race Hattie ever ran before her performance here last week was at Star ranch, in September, when she ran a three-fourths mile dash with two other two-year-olds beating them easily; but we are not able to give the time. She ran four races last week on Idaho Park track near this

city, winning every race, two of them against aged horses. The first race was a half-mile dash, against horses of her own age, Monarch and Ingersoll, Hattie winning in 56 sec. The second race was half-mile heats against three-year-olds, Whalebone and Baywood; Hattie won the first heat in 54½, and the second heat in 54. Her third race was a three-quarter-mile dash against two-year-olds, Ingersoll and Monarch; Hattie carried seven pounds and won in 1:24. Her fourth or last race was a free for all, one and a quarter mile dash, against Brainerd, Warwick, Chief and Dundrum, all aged horses; Hattie carried fifteen pounds overweight, not however as a penalty, but on account of her rider, and won this race in 2:18½. Smith was offered \$1,000 for Hattie as soon as she made her last performance, and refused it.

ATHLETICS.

George and Myers.

The following regarding the rival athletes we take from the *New York Herald* of the 1st instant:

Sporting matters are somewhat dull at present. The racing season is past and the campaign trotters have left the track for the gentle exercise on the road; the baseball enthusiast let his ardor cool with the decision of the League championship, and the oarsmen, as is their wont, are talking matches now that there is no possibility of rowing. All attention is therefore concentrated on the three great running matches which are to be decided on the Polo Ground track on Saturday next and the two succeeding Saturdays. The matches are between the two undoubted best men of the present day—and, for that matter, the best amateurs who have ever run—W. G. George of England, and L. E. Myers of New York. Mr. George unfortunately was not in good health while Myers was in England last year, and as he was anxious to meet the American, and had besides improved very much within the past year, he accepted an offer made for a series of three matches—one to be a half mile, which was presumed to be Myers' best distance; one at a mile, at which distance George had eclipsed all amateur records when he ran it in 4:19 3-5, and third a compromise affair at the intermediate three-quarters of a mile.

Mr. George arrived here on the City of Rome on October 7, and on the following Monday took up his residence at Mott Haven, so as to be near the New York Athletic club grounds, where he would do his training. He was accompanied by a Mr. Caldwell, and they had a rough experience on board ship, so that Mr. George was pulled down when he arrived here. A *Herald* reporter visited the track yesterday morning to see Mr. George practice, and shortly before eleven o'clock the athlete prepared for his morning run, which consisted of one lap at a strong pace, followed after a brief interval by a fast run of two laps, and when he had got over that he had a steady striding run of four laps, the track being of five laps to the mile. No time was taken, and it was only by the eye that the pace could be judged. Mr. George differs completely in style from any amateur we have here, and displays strength to a marked degree at every stride, striking the ground hard and bounding off his toes with marked muscular effort. His stride is long and well sustained, the tape showing within a fraction of an inch of seven feet between the spike marks on the second lap of his two-lap runs. His every movement and the way in which he carries his body betoken power, and Myers has in George a competitor worthy of his best effort. Speaking of his condition Mr. George said: "I was never better in my life. They told me at home I would never be able to run so fast here, but I think the other way, and believe I will run faster than I have ever done before. I am a lot heavier than when I began training. See, here is my daily weight stripped since I began work. You see I started as low as 142½ pounds—that was the voyage did that—then I gradually got heavier until I reached 148 four days ago, since that I have lost half a pound a day, but am up to 147 again to-day, and I will run at that weight."

"What work do you each day, Mr. George?"

"It depends on circumstances. In these distance races we vary work a good deal, but on an average it is about as follows: In the morning, about ten or eleven o'clock, two fast laps then a steady run of three-quarters to a mile and a quarter. In the afternoon I do a bit of sprinting, then a fast lap or two, and I might say, amuse myself about the track without doing a great deal of work."

"If it's a fair question what do you think of your chances?"

"Well, I think Myers ought to win the half, but he will have to run fast to do it—faster, I think, than he has yet shown; at least I hope so. In the mile we do not know what Myers can do; all we can say is, that he ought to run a fast mile. I have shown there are no ifs in my case, and without wanting to express myself as being too confident, I expect to win the mile. The three-quarters I think we can leave till we have seen how the others turn out."

As Mr. George is a complete stranger to all but a very few the following particulars of his career will be of interest: He was born on September 9, 1858, at Calne, in Wiltshire, and started his athletic career in 1877 as a walker, and from that time to the present has been constantly at work, first walking, then bicycling, running, football and cross country running—in fact, all kinds of athletic sports. He did nothing very brilliant during his first year on the cinderpath. He ran in fifteen races, of which he won nine, was second three times and third once. On May 16, 1879, he won a 600 yards challenge cup at Birmingham cricket and football sports, and on the same day was first in a mile handicap from scratch, running through a field of fifty-two starters in 4:29. Prior to that, however, he had won the Midland cross country championship and later on took the mile championship in 4:26, and the four miles in 20:51. The year's work resulted in eighteen wins, four times second and twice third, while he was unplaced but five times. In 1880 he retained the mile and four mile championships in 4:28 and 20:46, and on August 16, at London he won a mile handicap, from scratch, in 4:23 1-5; and on September 6, at the same grounds, won a four mile handicap, from scratch, time 19:49 3-5, which is the fastest on record. During the year he took part in twelve races—won nine, second twice, unplaced once. In 1881 he won a great number of races, but did nothing in particular, his record being twenty-seven firsts, eight seconds, five thirds, unplaced thirteen times. On February 11, 1882, he won the Midland cross country championship, distance about ten miles; 140 ran in it and George won by a quarter of a mile. On March 4 he won the cross country championship of England, distance 11½ miles; 107 ran and he won by four hundred yards. On May 1 he won the Mosley Harriers Ten Mile Challenge Cup in 52:56 2-5—which is record time. On March 25, at Stamford Bridge, he won a seven mile handicap, from scratch, in 35:55 1-5—which is also record time. At Lillie Bridge, on June 3, he won a mile handicap from scratch, making the marvelous time of 4:19 3-5. On July 29,

at Stamford Bridge, he won a two mile handicap from scratch, time 9:25 3-5, and during the year he has run in fifty-two races, of which he won thirty-four, was second six times, third three times and unplaced nine times.

Mr. George holds the English best on record at 1,000 yards—2:16 1-5—and in addition to that the following best on records, which amply prove his marvelous speed and staying powers:

Miles.	Min.	Sec.	Miles.	Min.	Sec.
¼	2	45	4½	22	58
½	3	08 2-5	5	22	47
¾	4	19 3-5	5½	25	36
1	5	10 2-5	6	26	54
1½	5	44	6½	28	13
2	6	57 3-5	7	29	31
2½	8	11 4-5	7½	30	49
3	9	25 3-5	8	32	09
3½	10	58	8½	33	28
4	12	17	9	34	45
4½	13	35	9½	35	55 1-5
5	14	42 4-5	10	39	25
5½	16	06	10½	42	11
6	17	22	11	44	51
6½	18	41	11½	47	33
7	19	49 3-5	12	50	20
7½	21	39	12½	52	56 2-5

The American champion, Lawrence E. Myers, has been before the public for a number of years, and his appearance as well as his records are well known to all who take any interest in athletics. The only athlete to approach him is his present antagonist, the two standing unrivaled and holding, or capable of holding, every record from 100 yards upward. In one or two of the short distance races Myers does not hold the record, but it is more the lack of opportunity than ability that prevents his name figuring on the list. He will run at 115 pounds, and as he stands five feet seven and a half inches in height, which is four inches less than George, there will be a marked contrast in their appearance. For these races Myers has trained most carefully, and the effects of his steady application to his work and the rules of training are plainly visible. His running is done at the Manhattan track, and it was there he was seen on Monday afternoon. He has muscled out in a really remarkable manner, and has the healthy look of a well trained athlete. In reply to a remark about his looking so well, he said: "Yes, I know I am; I was never in better health, and if I can't win it won't be because I am not well." His good health he attributes to the great care he has taken of himself. "I was determined as soon as George arrived to leave nothing undone, so I have left business alone entirely for three weeks now, exercising regular morning and afternoon, and keep good hours, and that's pretty hard for me to do, you know," he laughingly added. The routine of his daily work Myers detailed as follows: "In the morning I run from a quarter to half a mile hard and then do a long stretch. I have gone as far as two miles, and I don't find it hard to go a distance now. Then I sprint for a while before being rubbed down. I don't do so much in the afternoon: after eating a big dinner I am lazy, so I take it easy. A fast lap, an easy half and a little fun with any of the boys who are practicing is about the regular afternoon's work." Myers' opinion as to the result of the three races is pretty nearly the same as that held by George; he expects to win the half-mile and be made to run fast for it; the mile he fancies George may have to beat the record to win, and the three-quarters' race in that case will be a severe and close affair.

At the championship meeting Myers weighed 111 pounds, and the additional four pounds have been put on in the right places. After the half-mile race on Saturday Myers will take longer work for the mile race of the next week. At present he only surmises what he may be able to do. He has made no trials and does not intend to. "If I can't win a trial won't help me to do it, and I am likelier to win without one anyway."

In our last week's list of entries for the University Field Games, which take place to-day, the name of James Gorevan, in the mile scratch, was inadvertently omitted. His only well-known performance at that distance was in the Olympic Club games at the Mechanics' Pavilion, June 24, 1881. At that meeting he won the mile very easily, the time being about five minutes, and could have done better if pushed. If he is as good a man now as he was then, the Olympic Club representatives cannot beat him, and it is not very likely that there is one among the University athletes that can do five minutes.

The reports are that Haley says that he will not run Master-son again until next spring, and the latter is training for a half-mile race. If they meet next season, both in proper condition, there will be some grand races between them, at various distances, as Master-son can run a good race at any distance up to a half-mile, if he is given the opportunity to train correctly. The worst trouble for him is that he works ten hours every day, and is overworked and stale when he toes the scratch for a race. He may be better situated next spring.

Duncan McMillan of Bodie is anxious for a match with the Stockton champion. He will compete with him for the best two out of three events, the events to be, putting the weight, throwing the hammer, and hitch and kick.

The University Field day has been postponed to Saturday, the 18th.

Fruit For Fowls.

Fowls like a variety of food, and if long confined to any one kind, no matter how good it may be, will, ere long, become sickly and diseased, and cease to either improve or be profitable.

Those birds which must be kept in confinement, either to prevent the different breeds from mixing, during the breeding season, or on account of having but little available space in which to keep the fowls, or to prevent them from trespassing on gardens or lawns set apart for other purposes, must have some green food, something to keep them thrifty and healthy while they are kept on corn, wheat and other grain food principally, and fruit comes in nicely to fill the bill. On nearly every place where poultry is reared there is much fruit of different kinds raised, and there is necessarily much which is not fit for sale or for family use; this, when ripe enough, makes most excellent food for confined poultry.

There are also many peach and apple parings from the house, which the fowls can and will make good use of; in fact, they will turn it into much more profit than will the pigs, which usually get these "pickings" which the poultry should have. When fruit is not raised on the place, at the nearest grocery store can be bought, for a few cents, a basket or two of soft and unsalable apples, pears or peaches, which the fowls will be very glad to get. Fruit has the beneficial influence on the health of fowls that it has on that of human beings.—*Poultry Monthly*.

THE PADDOCK.

Surgical Operations on Horses.

In almost every parish is a worthy individual called by the natives a horse doctor, but without any official qualification for that office. At the same time hundreds of men have been very highly respected in their self-imposed calling, and for downright practical knowledge a great many of them could hardly be excelled. Many now living have had fifty years' daily experience among all sorts of cases, and, perhaps less hampered than they might have been by medical rules, they have worked out the causes of diseases and found cures for the same by actual practice. The necessities of the times demand a special education for veterinary surgeons, and it is doing those who have worked hard for the science an injury to allow uneducated men to share the fruits of study and investigation. A man possessing but a very moderate amount of book learning forty years ago might well occupy a different position from one owing to such deficiencies at the present day.

In another generation none but qualified practitioners, holding diplomas in the same way as in the higher branch of the medical profession, will be allowed to practice at all. No one can complain of this new order of things, as it must tend to raise the veterinary profession to a higher standard of importance, and it will serve also to sweep away a great many abuses that are still continued by the worst classes of local horse doctors, and by some of those possessing great experience, but too old to benefit by what they would call new fangled ideas and experiments. At a future day none but those who have been enlightened by a due course of study and college training will be qualified to doctor and prescribe for our horses. It becomes, therefore, of more importance than ever to draw attention to those abuses which should be swept away before the new school gets fairly settled to their work. Education must have a tendency to soften the heart towards the animal patient in this respect, and a well trained mind must see that an animal which cannot tell us of all his pains and ailments, and cannot assist himself towards a recovery from any malady, demands even more thought than it is absolutely necessary to bestow on the human subject. Ignorance or the absence of those special thoughts may, and probably does, ruin a great number of horses every year, and it has often struck me that ill-shapen horses, shambling goers, and the victims of palpable disease owe the whole of their misfortunes to some stupidly devised operations. Firing, nerving, the removing of tumors, and more serious operations often enough inflict as much injury on a horse, by the way in which they are performed, as if his ailments were allowed to remain unattended. The old-fashioned style at a farm of calling the laborers together to cast the unfortunate patient on a straw bed, or often on a field, with only the turf as a break, and with ropes fixed for the throw, and now pull together to bring the horse down with a crash, or a thud, sufficient to shake his limbs out of joint, is so very different from the hospital bed, or table, with pillows and kind hands for support, and the power of speech to say if this or that position hurts more or less. Do horses always get over these tremendous throws? and then the lengthened time they are often held down, and all for reasons for which the animal has no cognizance. Half the horse power of the country at least, goes through this sort of thing, as required by the necessity of castration, and it strikes me very forcibly that a lot of horses are spoiled by that operation. We see horses going weak from the hind quarter, or with no growth of muscles in the thighs, and there is altogether an appearance that at some time or other a wasting process must have taken place which has altered the natural gait and formation of the animal in many points. To those who observe as closely as we are always doing, this view of a horse must have been by no means unfrequent, and these horses that look to be the commonest bred are those that are chiefly noticeable for the deficiencies I am alluding to. Thoroughbred horses are usually performed upon by skilled veterinary surgeons and so are valuable hunting colts, but the ordinary country colts very frequently fall under the hands of those who still follow the old-fashioned plans of our forefathers. The wretched colt is not prepared at all for the operation, but the arrival of the horse doctor is the precursor of his being brought up from the field, and the farm hands are brought together to assist in casting the colt. There is a lot of noise and bother about adjusting the ropes; Jack or Tom does not do it right, and the doctor sings out to them, the colt in the meantime being half frightened to death, and amidst his plunges and efforts to get away, and with his forelegs drawn up to his hind, a pull, a long pull, and a pull together gives the poor young brute the biggest fall he has ever had in his life. Then the operation is performed, not over hastily, and somewhat roughly, according to the ideas of scientific veterinarians.

I have seen the operation performed in the rough-and-tumble way and in a very scientific way. In the latter case the horse was thrown with the greatest care, and the operator had previously very closely examined the bed, and instructed the helpers, two of them being his own men, his straps being also of his own contrivance. A horse operated upon by this skillful hand I have seen driven in a gig nine days afterwards, but one roughly performed upon I have seen so miserably stiff at the end of three weeks as to be scarcely able to move, and with that crippled appearance of hind quarter that denotes a probability to my eye of never recovering. He will get right according to ordinary notions, but his walk and all his paces will be cramped, or he will go wide from behind, or be what some people call split up, and years afterwards these detractions will be counted against his make and shape. According to my ideas a great deal depends upon how this operation is performed, and I consider that owners of colts, for the sake of their own pockets, besides every proper idea of humanity, should consider this subject very deeply before selecting an operator. I have heard that the most skillful hand ever seen in this country was an American. A few years ago I know the operator I allude to performed upon several colts that belonged to a friend of mine, and I was told that it was perfectly marvelous how he managed it all, as he never cast his patients, required very little assistance and applied something that kept down all swelling and inflammation. Most of our modern veterinary surgeons are, no doubt, skillful operators, and in this department of the profession I feel sure that science has gained many steps upon the old school of horse-doctors, however practical the latter may have been in the discovery and treatment of ordinary diseases. The greatest improvement that I have noticed, however, has been the gradual adoption of chloroform by several of the veterinary surgeons of my acquaintance in nearly all the operations they are called upon to perform. I am told by an excellent judge that a colt castrated under chloroform is convalescent five times as quickly as one performed upon in the ordinary way, no matter how skillful the operator may be, and that, in upwards of twenty cases, there has not been the smallest trace of mal-effect upon the ani-

mals. In such cases I am told that it is not necessary to throw the colts, nor to let them know that you are handling them at all, the colt being previously taught to come in a halter and stand still when required. By such a method nearly all shock to the system is avoided, and this is the danger that I maintain is so great in being likely to permanently injure a horse. Do away with the rough handling and keep the animal from the knowledge that something very hurtful has been done to him by his worst enemy, man, and there can be nothing to fear as to his deteriorating in his natural shape and make. Then why should not the use of chloroform become general for all the operations it may be found necessary to perform upon horses? There can be no objection urged against the expediency of using chloroform on the same plea to be advanced in the case of the human subject, that the administration may be dangerous to life, as, taking the scanty proportions of such accidents in the hands of the faculty, estimated at not one in five hundred, the loss of a horse against the greatly increased value of the many accounted for would be of the smallest consideration. At the same time, I do not believe that there would be any danger at all as regards horses, as the evidence of medical men would show that patients unfitted for the use of chloroform are those having an unusually weak action of the heart. Now, considering the enormous efforts of which horses are capable, it would appear very evident that the action of the heart was more powerful in the horse than in almost any other living creature, and that for that reason he should be the best subject of all for chloroform.

I am told by experienced veterinary surgeons that it is much easier to perform upon a horse under chloroform than when he is under the influence of fright and suffering, and the operation mentioned was nerving, which could be done with the greatest nicety in the interval of insensibility. I bring forward the suggestion as regards horses because I think thousands will be more fitted for general use by the adoption of such an assistant in necessary operations, and I plead on the score of humanity for animals that cannot speak to us to tell us how they suffer for our service, and do not understand that the treatment to which we put them may be for their ultimate benefit.—*Bell's Life*.

Predilection for Glossy Coats.

Glossiness of coat and sleekness have their special attractions. The owner is (says Mr. W. Day) satisfied, and the gazing eye of the wondering multitude pleased. The trainer, who indulges in the practice, is pleased to see his horse, if not "the glass of fashion and the mould of form," at least "the observed of all observers;" whilst the stable boy is half frantic with delight to observe the cunningly devised work of his own unaided hands.

Now I, for one, do not say for a moment that a horse is any the worse for trifling and tawdry embellishments, if legitimately achieved; just as I would not admit that he would be any better were he furnished like gold, striped like a zebra, and his attendant fancifully dressed like a zany. But there is too much inclination in this direction. Some, perhaps, would wish to plait or shave the tail and crimp or hog the mane to complete the picture.

I protest against the practice, because I aver looks are no test of condition. Bounteous nature has provided for the comfort and well-being of the animal kingdom warm covering of various sorts. To the horse has been given long hair, suitable to his nature, for his protection against the inclemency of winter. We all know that wild animals have a warmer covering in winter than in summer. It scarcely requires a naturalist to confirm what every observant person must be familiar with. We see that birds moult in autumn, that the feathers may be well grown, thick and long, against the approaching winter. Buffon, in his natural history, from which I take a few extracts bearing on the point, in speaking of the beaver: "It is winter they are chiefly sought, because their fur is not perfectly sound in any other season." Again, alluding to the sable, he says: "and yet this (winter) is the best season for hunting them, because their fur is better and more beautiful than in summer."

The same principle applies, almost in its entirety, to the horse. His coat, like theirs, is naturally longest in winter; although it can hardly be said to be then more beautiful, nor is it desirable that it should be so. Deprive him of this before summer, and you do him an incalculable, irreparable harm. Yet, for a fanciful purpose, he is subjected to all kinds of anomalies; kept improperly warm in the stables; made to take a daily condition-ball—and all for the removal of his greatest possible comfort, and the substitution for it of his summer coat in the depth of winter! Who shall say how many horses are annually lost in this way? And yet, with many, nothing but time and bitter experience will alter the practice. One thing may be safely predicated of it, a fact indeed that has not escaped even superficial observers—the horse with the most glossy coat is least seen in public; that with the roughest most often.

But when the love of popularity, in whatever form, takes hold of the senses, folly is apt to onst reason. It is difficult to say to what lengths this may not be carried to secure the object of the ambition of the hour, or, it may be, lifetime. When its idol is the appearance of the horses, the stable becomes a hot-house, its inmates, sudatory creatures, whose stomachs are made the receptacle of the contents of a chemist's shop. This is hardly an exaggeration; for it is not possible to tell the ingredients of the condition-ball, or their possibly deadly effect. We know full well that many a man who has the charge of his master's hack or carriage horse has been detected administering the harmful ball, or even arsenic in a crude form, to give the coat the desirable glossy appearance in winter as well as summer; with the one inevitable result—the death of the unfortunate animal and the punishment of the man; the latter richly deserved, it must be admitted.

Gentlemen are too willing to judge the appearance of their horses from the appearance of their coat. Were they to ask the desired information from the trainer, whose pleasure, duty and interest is to supply it, it would be more satisfactory to both. And though the result might not agree with the preconceived views of owners, they should still be content in the knowledge: first, that no one is so qualified to advise in such a matter as the trainer; secondly, no one has so sterling a motive to advise rightly. If this were the general practice, we should see horses looking better in summer, as they would be healthier, as well as in winter.—*Fancier*.

Where is the Lameness Located?

It may also be asked: Can we detect the seat of the disease by the nature of the lameness? Generally speaking, we certainly can not, though it will often materially assist our diagnosis. In shoulder lameness, we can generally ascertain the seat of mischief by the slow and labored extension of the limb, which is more evident in going down a

declivity, and likewise in the walk, than any other place, the horse having, in slow motion, more time to move the limb with the care that he wishes. In severe lameness from splints, there is often an unwillingness to bend the knee; this, however, is also shown in cases of slight strains of the sinews just under the knee. With these exceptions, the seat of disease, whether of the foot, pasterns or the fetlock, cannot be ascertained by the nature of the horse's action.

In examining a case of lameness, we should, if possible, first see the horse in the stable, and without disturbing him observe whether he points a foot, and in what particular manner he so favors it. We should then have him led from the stable and trotted gently in hand on a hard road or pavement, giving him his head at the time. Having thus ascertained what leg he is lame in, we should proceed to discover the actual seat of the mischief. For this purpose, the finger and thumb should be carefully passed down the leg, from the knee to the foot, to ascertain if there be any undue heat, or enlargement, or tenderness from pressure; we should also feel carefully the front and sides of the pasterns, as well as round the coronet. If a splint be the cause of lameness, the horse will evince considerable pain when it is pressed, and so likewise will he in lesions of the sinews.

Supposing that we have found no sufficient cause of lameness above, we must now direct our attention to the feet. In nearly every case, unless the mischief should be very clearly exhibited elsewhere, it will be advisable to remove the shoe; the foot should then be pared out, to ascertain if there be any wound or bruise in it. The nail holes should be carefully examined and pressed with the pincers, or gently struck with a hammer, to discover any symptoms of tenderness; the heels of the sole should be pared down, and the parts struck gently with a hammer; this is preferable to pressing the bar and crust with the pincers, as is usually done, for this often produces pain in some feet, when there is no disease, and often fails in causing pain in others, when there is a deep seated corn.

After paring awhile, the smith will very probably say there is no corn; but we must not be satisfied until we have pared almost to the quick. If the horse be very lame from a corn he will almost always favor the foot; but in so doing he will not, however, extend his limb out straight to its full length, but will elevate the heel without extending the foot very far, which will give a knuckling appearance to the limb. Should none of these symptoms be exhibited, we must consider the disease to be deep-seated, and then it is all-important to ascertain if the animal points his foot; for, if such is the case, in all probability the cause of lameness exists in the navicular joint, supposing it was a fore foot we were examining.

It will seldom be necessary to go through these various manipulations *seriatim*; we may sometimes pounce upon the seat of lameness at once, and very often detect it after a moderate examination; but there are cases that will demand our utmost attention and experience, and will often put to a severe test the professional talents and tact of even the most skilled veterinarian.

Horses sometimes exhibit a slight lameness immediately after being shod, though quite sound before. Such cases may arise from the shoe being nailed on too tight, and are often relieved by removing the shoe and re-applying it more gently, this lameness most frequently occurs in horses with very thin horn, and is ascertained by the manner in which it comes on, and the absence of any other visible causes. The shoe in such a case may also have an improper bearing, pressing severely on weak spots, or on the sole or heels; or the heels or sole may have been pared too much, or unevenly.

Persons unaccustomed to horses will more frequently pronounce the wrong limb than the right in cases of slight lameness. The cause of their blunders may be then easily explained. They perceive that a horse drops the moment one foot comes to the ground, and they immediately conclude that that must be the lame one, fancying that he drops from the pain received when it meets the ground; whereas the fact is, he treads as lightly as he can on the lame foot, and bears his whole weight on the sound one.

The World's Great Catastrophes.

There have been solar, lunar, stellar catastrophes innumerable. But our world has especially suffered—plagues, epidemics, cyclones, eclipses, earthquakes. At one toss of the earth in Tamboro out of a city of 12,000 only 26 people escaped. On the 1st of November, 1775, at Lisbon, 60,000 perished in five minutes, and 200,000 before the earth stopped rocking. Many centuries have not been able to resurrect the Pompeii and Herculaneum which Vesuvius in a few hours buried. Rossberg mountain, in Switzerland, falls crushing the village of Goldau. One mountain in Italy destroys 200,000 people while sound asleep in the night. By convulsion Japan was broken off from China, and the Caribbean islands from the American coast. Near the mouth of the Ganges three islands had 340,000 inhabitants. In one night the sea swept over, leaving 315,000 dead. It has been lately demonstrated that a whole continent, reaching from Europe to America, has sunk; a continent that allowed people to cross from Spain to South America, and they did cross, some of the inhabitants of the sunken continent going to Europe and some going through the valley of the Mississippi and pushing out into Mexico, remains of their cities and graves found in Ohio and Colorado, and on the table lands, and in various parts of our land; a whole continent gone down between Europe and America—a continent once densely populated. The Azores that we see off the coast of Spain is the top of one of the great mountains of the sunken continent. Plato wrote of that continent, its glories and its ruin, and men thought it a romance. But a fleet of German, British, and American ships—the *Gazelle*, the *Dolphin*, and the *Challenger*—have revealed by deep sea soundings the entire contour of the sunken continent. The Australian archipelago is only the top of the mountains of a continent that once extended from India to America. The most of the earth is now water; once it was land. Scenes of trouble on rock and sky and sea, in fauna and flora, geological trouble, oceanic trouble, political trouble, social trouble, domestic trouble. Standing in the presence of so many stupendous devastations, I tell you that the great need of the ages is divine sympathy and omnipotent comfort and they are to be found, not in the Brahma of the Hindoo nor the Allah of the Mohammedan, but in Jesus Christ, and to Him shall the gathering of the nations be.—*Extract from Dr. Talmage's Sermon, Sunday, Sept. 3d.*

Mr. R. W. Kohler, of Kohler's wax works brings to this State, from Sydney, Australia, the celebrated red greyhound dog Peasant Boy, by Mark Twain—Old Bet out of Bab at the Bowster, runner up to Lord Lurgan's Master McGrath in the Waterloo Cup stakes of 1867. Peasant Boy is said to be a model dog and has taken many bench show prizes in the colonies. When over the effects of his sea voyage we should like to see him tried with some of the get of Speculation or other local sires.

HERD AND SWINE.

Splenic Apoplexy.

An alarming disease among cattle has been and is still prevalent in many parts of the country. About Lexington several cases have occurred. The disease is of a charbonous or septic character, attacking chiefly cattle two years old and older. Cows are more liable to it than others. It is analogous in character to the disease called black-leg or black-quarter in calves a year old and under, developed by the same causes, but affecting different organs.

The cause to which the disease is to be ascribed is undoubtedly the rank vegetation of this year. Grass has seldom been so luxuriant; cattle that have been changed from one part of the country to another—from poor pastures to where there is abundance of grass—cows that have undergone the same changes or have likewise been turned dry, lay on flesh rapidly, blood accumulates in the system and becomes loaded with effete matter, rendering it unfit for proper nutrition and causing a putrefactive condition. This altered condition of the blood causes it to accumulate in the soft structures of the body, in the areolar tissues producing black-quarter, and in the spleens, the mucous membranes of the intestines, etc., etc., producing splenic fever or apoplexy.

In some cases death is very sudden, in others the disease will progress gradually, the animal will be dull and feverish for some days—one day better, another worse—the pulse quickens, the breathing becomes hurried and painful, the bowels costive, the urine colored, in some cases black—these symptoms will continue for some days until death ensues. In a few cases the disease assumes a milder form, when the animal will, after a few days' sickness, recover its usual health.

Examination after death shows the spleen three or four times its normal size and weight, and gorged with blood, the mucous membrane of the bowels covered with petechial spots and patches of extravasated blood, the liver and the urinary organs exhibiting the same appearances.

The treatment of the disease is very unsatisfactory; when an animal is first taken the bowels, if costive, should be relieved by a dose of oil or by injections—two drachm doses of chlorate of potash given three times a day, and if there is much fever an occasional dose of nitrous ether and belladonna will lessen it.

When the disease once appears in a herd—considering the cause to be a too abundant supply of nutritious food, producing this diseased condition of the blood, it will be necessary in order to effect a change in, or prevent that condition, to remove the stock to an old or bare pasture; good hay may be fed daily but by all means discontinue the use of an over-nutritious diet.—*Live Stock Record.*

The Pig in Agriculture.

The pig has recently been spoken of in contempt when compared with our domestic animals. But if we examine his good qualities at all critically, we must award him a high place in agriculture. He is found to produce a pound of product from less food than either cattle or sheep, and is, therefore, the most economical machine to manufacture our great corn crop into marketable meat. Our people are becoming wiser every year, and exporting less, proportionately, of the raw material and more of condensed product. If it takes seven pounds of corn on the average to make a pound of pork, as is no doubt the case, the farmer begins to see the economy of exporting one pound of pork, bacon or ham, instead of seven pounds of corn. The difference in cost of freight makes a fine profit of itself; besides, the pound of meat is usually worth more than seven pounds of corn in the foreign market. The production of pork should be encouraged on the further consideration that it carries off less of the valuable constituents of the soil than beef. The fat pig contains only three-fourths as much mineral matter per ewt. as the fat steer, and only two-fifths as much nitrogen per cwt.; and therefore the production of a ton of pork on the farm will carry off only a little more than half the fertility carried off by a ton of beef. Besides, a ton of beef will require nearly 50 per cent. more to produce it. This gives in round numbers the comparative effect of producing pork and beef. It is thus evident that the pig should have a high place in our agriculture; should be fostered in every way; his capabilities studied and pushed; his diseases carefully noted and prevented, for he is the most profitable meat-producing animal on the farm. The pig is an excellent adjunct to the dairy, turning all refuse milk and even whey into cash. As he is king of our meat exports, so let us treat him with great consideration.—*Rural New Yorker.*

COOKING FOOD FOR HOGS.—An extensive breeder, after feeding for eight or ten years, goes upon record in favor of cooking, and expresses the belief that one-fourth of the grain is saved thereby. The following experiment is given in his case: Two sows of the same litter, and the same every way, except in weight, were selected. No. 1 weighed 292 pounds and No. 2 280 pounds. No. 1 was fed for sixteen days on cooked unground corn, and from the consumption of two bushels and twenty-one quarts, gained thirty-six pounds. No. 2 was fed for the same time on raw whole corn, of which she consumed three bushels and three quarts and gain thirty pounds. Another instance is given in which shoats were fed on raw and cooked corn for six weeks, the result being that while those fed on raw corn gained ten pounds to the bushel, those fed on cooked corn gained fifteen pounds to the bushel—results which are certainly worth the candid attention of breeders.

A CANADIAN ENTERPRISE.—A special dispatch from London, England, to the *Toronto Globe*, says: "Another Canadian enterprise has been launched upon the market here. To-day the Canadian French Meat Importation Company issued its prospectus. The company has been formed for the purpose of placing cheap and wholesome meat at the command of all classes. It will import only the first quality of fresh meats of all kinds from Canada into the United Kingdom. The capital stock of the company is £50,000, in shares of £1 each. The Directors also draw attention in their prospectus to the well-known superiority of Canadian cattle over those from the United States. The company will be their own importers, and sell direct to the consumer from their own depot. The average cost of meat delivered in England is 5d per pound. A contract has been made with a responsible party in Canada to supply the meat.

The Auditor of Ohio reports 714,555 horses 1,318,755 cattle, 4,594,609 sheep and 1,624,077 hogs in the State and subject to taxation.

Cattle on the Plains.

There may be said to be three great cattle belts in the country, to be designated respectively as the north, the northwest and the south belts. The first takes in Montana and Dakota, and is tributary to the Northern Pacific road; the second includes the western half of Nebraska and the territory of Wyoming, and its tributary to the Union Pacific road; and the third consists of vast portions of Texas and the Indian territory, and seeks an outlet through the Iron Mountain, the St. Louis and San Francisco, and other roads leading to St. Louis. Of the three the northwest belt is at present the most important, but that to the north of it is growing the most rapidly, and with the completion of the Northern Pacific Railroad will gain and retain the supremacy. I realized this fact from the manner in which the stockmen laughed at me when I inquired if it was possible for cattle to go through the hard winters of that section unfed and unsheltered. "Why, way up in Dakota" was the reply, "the cattle come through the winters better than they do in Texas." I may here remark that anything like housing or feeding cattle in the winter is utterly impossible in any of the great belts. There is not timber enough in the territory of Wyoming to make sheds for the cattle owned here. And it is quite as unnecessary as it is impossible.

The cattle ranges of Nebraska begin about 200 miles west of Omaha. There is no line to mark where agriculture leaves off and grazing begins, but at about the point named timber and water become too scarce for profitable agriculture, and the ranchmen take up what the plowmen can't use. The land is owned in equal parts by the ranchero and the Government, but is enjoyed free of rent by the cattle men. The ranches vary according to the size of the herd and the run of the watercourse. The first essential in laying out a ranch is water. As for grass, there is always plenty of that, summer and winter. A moderate estimate is said to be two miles of water front, running twenty miles back, for each 1,000 head of cattle. So that a man with 20,000 head of cattle—which is about the largest number owned by any man and more than twice the average of all—would require forty miles of water front, running back twenty miles. It is not always an easy thing to find this. When found and occupied however, the rights of the finder and occupant are respected, by his brother stockmen to the extent that he is allowed to remain in unmolested possession. It is a maxim among them that stockmen respect each other's rights. There are persons called jumpers, however, who look upon the stockmen as having no rights which they are bound to respect, and who make it a business to pick out the best land in a range and settle down upon it under the homestead or pre-emption laws, remaining just long enough to be bought out, when they move to another range to play the same part. The stockmen complain grievously about this as an annoyance from which they should be protected by law. They cannot buy the land from the Government in quantities to suit them, and they think Congress should pass a law allowing them to lease it for a term of years, so as to allow them to improve it and to give them a fixed tenure. One of the gentlemen with whom I conversed on this subject told me of a queer mistake he had made by a failure to understand the nature of the United States land laws. A couple of years ago he commenced buying up land warrants, thinking that these documents gave the owner the right to occupy and possess public lands for their face value. He bought \$5,000 worth at an average of \$1.25 per acre, and supposed he had nothing to do but find 4,000 unoccupied acres suitable to his purpose and call them his own. Imagine his astonishment when he discovered that although he held the title, as he supposed, to 4,000 acres, he could occupy for his own use but 160, that being the only amount which could be entered by land warrant by any one person, no matter how many land warrants he held. So his \$5,000 investment was still on his hands.

It is undoubtedly true that Congress should regulate this matter for the benefit of the cattle men, but it is also true that in doing so Congress should carefully guard against rings and monopolies by restricting the amount of land to be leased to each person, and by giving, as far as possible, an equal chance to all who desire to invest in the business. The cattle men have their own association and their own regulations, which seem to be intended not only for the benefit of those who are in, but for the exclusion of those who are out. No cattle man has ever been known to encourage an outsider to embark in a cattle-raising business.

After a good deal of cross-questioning and figuring I arrived at some conclusions as to the profits of cattle-raising as a business. I met one man, for instance, who had just returned from Chicago, where he had sold 1,000 head of cattle at an average of \$40. They were a little over three years old and had been on the range two years. He bought them in 1880 for \$8 a head. Counting interest, care taking, loss by death, and all other items of expense, they stood him, when put on the cars \$11.50 each. Add to this an average of \$5 each for transportation from Ogallala, Neb., to Chicago—\$100 per car, the actual cost, and an average of twenty head to the car—and the animals on the market have cost him \$16.50 each, leaving a net profit of \$23.50 on the herd. This was simply one—and not a large one—of the many transactions made in the course of a year by the same stockman. Indeed, it was in the nature of an outside transaction, because the rule is to raise the cattle from birth instead of buying them at a year old.

This gentleman has already sold 16,500 head of cattle this year, and now has on his ranch 13,500 head, of which he expects to send about 5,000 head to market before the close of the season. It is very safe to say that a man starting with 2,500 head of cattle can, after the second year, keep up his herd and sell \$25,000 worth of cattle every year; that is to say, he can net that amount after paying every dollar of expense. But 2,500 is considered a small ranch. The average is more than twice that number. Of possible and actual losses to the business there are really none to speak of. Two per cent. will cover all the losses by death for a good year, winter and summer, and, strange to say, the losses are greater in the summer than in the winter. In a very bad year, when disease is prevalent, the losses never exceeded five per cent.

The stockman's year begins in May with what is called the "round up." At the end of the season, in early winter, the cattle are turned loose without herdsmen, and allowed to roam through the whole of western Nebraska and Wyoming, finding food and shelter as they can. When the spring opens a small army of cowboys is employed—each stockman contributing to the force in proportion to his interest—to range the whole plains, gather up the cattle, and drive them to certain stations or places previously agreed upon at a meeting of stockmen held at Cheyenne. From these immense gatherings each owner selects the cattle bearing his brand, and forms them into a herd to be driven to his ranch; he also brands the yearlings of his herd who have, up to this time, run with their mothers. After this grand division the cattle are put in charge of the cowboys for the summer.

The grass is fine and they improve rapidly, and are ready for the market in June or July. For the largest ranch the expense up to this time is not over \$600. The cowboys get about \$30 each for the "round up," but no stockman is allowed to furnish less than twelve, no matter how small his herd may be. Some are taxed as high as 2,000 cowboys. The matter is all arranged at a meeting of the stockmen, held under the auspices of the Stockmen's Association. When the cattle are all gathered in and branded for the summer, the only help needed for the rest of the year is a sufficient number of cowboys to watch the herds, which is generally done by sleeping in the grass under some friendly shade. Three cowboys will take care of 5,000 cattle, keep them all together, and drive to the railroad station such as are to be sent to market.

Grinding Cheese Curds.

The following question has been sent to us by a subscriber for information: "Do the factories of central New York grind all their curds, and what is the process?"

Yes, nearly all of our best factories grind their curds. Here and there is one which does not grind, but they are all gradually coming into the practice. We recall one of the very best which has not until this year ground the curd, but is now doing so, and will continue to do it.

The process is as follows: The milk is treated in the usual way until the whey is drawn. Then it is packed until the acid is developed sufficiently for the iron to draw threads of one-quarter to one-half inch long, and until the whey is well drained out of it. It is then run through the curd mill, some removing it to a curd sink for that purpose, and others grinding it over the vat. Most of the makers do not salt until after grinding, as it is thought that they can salt more evenly in the ground state. We do not see that it makes much difference, as factories which use either method sell here at the top of the market.

After grinding there is no hurry to put the curd to press. In hot weather particularly it will be all the better for the cheese, if the curd is allowed to lie from three-quarters to an hour before going to press. Thorough separation is more necessary for curd from poor milk than for the very best. If a lot of curd is particularly rebellious, it is put through the mill a second time, although this is only done occasionally on account of the extra work. In ordinary weather and with good milk, the curd is ground but once, and is put to press about half an hour afterward. Of course it is properly stirred after grinding, in order to facilitate the separation and to prevent the particles from cohering together again.

It is much more convenient to use a curd mill in a factory that has steam power than in one without it. The labor of turning the mill, although not of long duration, requires quite an expenditure of muscular power, and in hot weather is really hard work. But where steam can be brought into use, it does the work easily and evenly, and all our large factories are supplied with this power. In fact, it may be said that as a general rule our fancy factories do grind their curds, and that the process is believed to be a very beneficial one in the months of June, July, August and September.—*Utica Herald.*

Milking Qualities.

A copious flow of milk, sustained through many months, is a quality which has been produced by art in domestication. Wild cattle rarely provide more than enough milk to rear their offspring, and the flow of it is of a comparative short duration. Small in volume, the milk is rich in quality, but the lacteal organs soon dry off again. This, of course, is in harmony with the requirements of the young animals in a wild state, and is a correlation of the roving life and the haphazard feeding of the dams. More milk than the calf requires under such conditions would be a waste of material energy which nature does not encourage. It would, moreover, be an encumbrance to the mother. Wild cattle are neither good milkers nor good fatteners, and in parts of England where calves are allowed to run with their domesticated dams generation after generation, the breed of such animals is not famous for milk-giving. Like the teat of the mare and ewe, the milk is smaller in quality and of short duration. The desultory and irregular sucking of a calf or foal or lamb is not conducive to the development of a large flow of milk, and it distinctly tends to shorten the flow. Hand-milking of a similar character has the same effect. Young people are allowed to learn how to milk on cows which are going dry for calving, not on those which are still in full flow. New beginners soon dry up a cow's milk, and bad milkers do the same. Heavy milking properties, then, are artificial, in the sense that they have been developed under domestication, and by careful breeding, for a given end; yet, like many other qualities which are little more than mere germs in nature, they become hereditary by long usage. Few sorts of animals, if any, are more susceptible than cattle of being moulded into what we want; no physical quality is so easily trained and developed as that of giving milk. It is a function which, constantly varying itself, can be dwarfed or extended at will. By means of intelligent training, kind treatment, and intelligent breeding, it can be developed and made hereditary; an opposite system keeps it in a state of nature. The habits of a cow and the food she receives have a good deal to do with her milking powers; quick and silent hand-milking does the rest. The practice of hand-milking cows has all along tended greatly to the development of the lacteal glands, and this development has become hereditary in our best milking breeds. The ewes of the Larzac breed of sheep, from whose milk the famous Roquefort cheese is made in France, have been hand-milked for generations, so that their milking qualities are now considerable and inherited. By repeatedly exciting the teats it is even possible to cause an animal that had never borne offspring to yield a small quantity of milk, and a cow sometimes remains barren several years after having had a calf, giving a profitable quantity of milk all the while.—*London Live Stock Journal.*

Sheep and Goat Skins.

Few who have not especially investigated the facts have anything approaching an adequate conception of the magnitude of the trade in sheep and goat skins. The product from these skins goes into the multifarious manufactures of which morocco, kid, etc., form the basis, though by far the greater proportion is employed in the manufacture of women's and children's shoes. For most of these skins for shoemaking the United States, of course, depends upon the far East. For this there are two reasons. Very few goats are raised here; and the skins from American-bred sheep are not so close-grained and leathery as those from animals less highly bred, and reared under a more primitive system of husbandry.

Hindustan, the principal source of supply, has a yearly product of skins estimated at 40,000,000, pretty equally

divided between those from the sheep and those from the goat. The sheep alluded to is a poorly-covered animal known to the skin trade as hair sheep, and described as presenting an appearance midway between that of the sheep and the goat. Of these 40,000,000, nearly all the sheep skins are tanned in India, and a majority of the goat skins. The annual number of these skins brought to the United States—based upon the average for the past three years—is about 18,000 bales of 500 skins each—in round numbers 9,000,000 skins. It will not be far from correct to divide this importation into three classes, say 6,000 bales—3,000,000 tanned sheep skins, and 12,000 bales of goat skins, of which one-half are tanned and the remainder "raw." Thus the Indian product may be accounted for, viz:

Raw goat skins shipped to the United States.....	3,000,000
Tanned goat skins shipped to the United States.....	3,000,000
Tanned sheep skins shipped to the United States.....	3,000,000
Shipped to Europe and absorbed in India.....	31,000,000
	40,000,000

The skins brought to the United States are sold to the trade at an average price of about fifty cents, and will supply "upper" material for three to four pair of shoes each. When the above figures are considered in connection with the supply of sheep skins obtained in this country, and the large numbers imported with the wool on from Madras, Bombay, Calcutta, Cape of Good Hope and South America, some estimate may be had of the extent of consumption—reaching into every avenue of commerce and ramifying every line of luxury or necessity known to the household.

A Dairy Phenomenon Explained.

An inquiring friend asks why the last part of a milking is richer than the first; accompanying the inquiry was the remark, that he has several times made the inquiry of parties whom he thought ought to know, but the answers have not been either convincing or satisfactory. We may not succeed any better than those personally interrogated, in satisfying the inquisitiveness of our friend, but we will nevertheless give our version of the cause.

The answer most commonly made to such an inquiry is, that the cream rises to the top of the milk in the udder, just as if would if standing in an open vessel. The more saline and heavier part of the milk, naturally settling towards the lower part, or teats, is supposed to be drawn out first, and the lighter part, or cream, being in the highest part of the udder, would follow down as the milk from below was withdrawn, and would consequently be the last to be extracted. This reasoning is generally accepted, and regarded as a satisfactory explanation, but involves inconsistencies which, perhaps, have been discovered by our friend, and give rise to his repeated inquiries. An answer like the above implies that the udder, or at least each quarter of it, is an unobstructed and continuous sack, like a bladder, with nothing in it to prevent its liquid contents from flowing up or down, or in any direction, as gravity might lead them to move. If the mammary gland was provided with a reservoir of the character implied, in which the milk it contained was free to move, we should expect, when the milk was drawn from a human mammary gland, that the rule of richness would be the reverse of that with the cow—the last part of the milk drawn should be the poorest, because the heavier and poorer portion of it would be expected to settle into the lower part of the breast, below the nipple, and be the last to leave when the gland was emptied; but it is not so. The same rule applies to both cow and woman, and involves an inconsistency in the explanation.

The interior of the mammary gland of a cow, and of other animals as well, is not a continuous sack, like a bladder. There is no resemblance between the two organs. The udder is more like a sponge than a bladder. It is exceedingly vascular, and is made up of an immense number of small cavities, varying in size from hay-seed to peas, which serve as reservoirs for holding milk, and which are separated from each other by membrane and tissue of variable thickness. These little reservoirs are all connected by a system of tubes which resemble blood-vessels, and which anastomose and ramify like blood-vessels. The cavities, or reservoirs, are little else than globular enlargements of the tubes, more or less distant from each other. As all the different branches and divisions of veins in the system finally come together into a single vein at the heart, so all the tubes in each quarter of the udder come together and end in a single tube in the teat. These tubes resemble blood-vessels in another respect. Both veins and arteries are provided through their whole length with valves, at varying distances, which allow the blood to pass through them in only one direction. Through the arteries the blood can only move away from the heart. In the veins it can only move towards the heart. So the milk tubes, wherever they connect with their enlargements or reservoirs, are provided with strictures, which can be opened or closed, and which serve to prevent the milk from passing in more than one direction. Milk can only move through them towards the teat; never away from it. In one respect milk tubes differ from blood-vessels, which they so much resemble in many others. The ramifications or fine branches of both arteries and veins terminate in a still more minute passage, called a capillary, at one end of which an artery ends, and at the other a vein begins. The fine branches of the milk tubes, instead of ending, like the blood-vessels, in a hair-like passage, terminate abruptly with an enlargement, or swell, which virtually caps the extremity of every division with a minute globular sack or cavity, technically called a "follicle." In these follicles or cavities milk and cream originate and crowd out into the tubes connected with them, and thence onward toward the teat, the tubes and reservoirs growing larger as the distance to the teats shortens, while their contents are increased by additions from intersecting branches, analogous to the progress of blood from the veins. In such an arrangement of reservoirs and tubes as this with the milk always moving forward, and barred from a backward movement at the outlet of every little reservoir through which it must pass in its devious way to the teat, it must be evident that it would be impossible for the cream to get to the top of the milk. If a sponge was filled with milk, the cream would stand a better chance of rising than it would of getting to the upper part of the udder, through such a network of tubes and stoppages. One might as well expect the red globules of his blood could all rise to the top of his head, against the current and valves in his veins.

There is a plainer and more natural way of accounting for an accumulation of cream in the last part of a milking. While in the number and arrangement of its cavities a sponge somewhat resembles the interior of the udder, in one respect it is quite different. The walls of the cavities in the sponge are always distended, whether filled or not, and, if compressed, at once spring back on being released from the pressure. The walls of the milk tubes and reservoirs, and the follicles or sacks at the extremities of their branches, are always collapsed and in contact, except when kept apart by having milk in them. With this constant inclination in their

walls to be in contact, it must be evident that a liquid would work its way through them more easily than a solid. Milk, it must be remembered, is a mixture of liquid and solid matter, as much so as a mixture of brine and meal would be. The serum or liquid part of milk is water, holding sugar and cheesy matter in solution, just as the water in brine holds salt in solution, and the cream globules are particles of fat in a solid condition, and sustain the same relation to the liquid part of milk that meal does to brine, especially when mixed with a brine just strong enough to incline the meal to float.

If it was attempted to pass either of these mixtures of liquid and solid through the milk tubes, beginning at the follicles, the liquids in either case would work along through more readily than the solids. The meal in one case and the fat globules in the other, would meet with impediment from friction with the collapsing walls of the slender tubes, and would fall behind in the journey, and be dripping out in the last running of the liquid, and this is just what happens in the udder to make the last part of a milking richer in cream than the first. The larger the globules of cream, the more friction they meet with in moving along the tubes, and the more gets left behind. It is for this reason that in milk having very large globules, like that of the Channel Island cows, the difference between the first and last of a milking is greater than when they are small, as in the milk of the famous Dutch cows.—*Live Stock Journal*.

Stock Raising on Small Farms.

The owners of small farms, or farmers engaged in a system of mixed husbandry, often over-estimate the advantages for stock raising possessed by those with large farms and who make this a specialty. The latter do possess important advantages, but there are some compensations to the stockman on a small scale.

The man with a thousand acres, a herd of hundreds, etc., can have men employed who will give their whole attention to one branch of the work, and learn to do this better than the average laborer. The large farmer has advantages in selling. He can make up one to a dozen carloads of stock ready for the market; can sort them to make them sell to the best advantage; can have buyers come to his place, or can ship as he chooses. Full use at home is found for one or more stallions, bulls, etc., and the cost of keeping them counts as a little matter. But the small farmer—he with one hundred acres, for instance—has also his advantages. He can rear and feed a few colts, steers, pigs or lambs with almost no outlay for extra labor and very little perceptible cost in food. He needs horses for his farm work. Often brood mares serve his purpose equally well, and the one, two or three colts dropped each year cost comparatively little to rear. Cows for a home supply of milk and butter, of course, will be kept, and often there is abundance of grass in the pasture for a few "young things," and in the winter the stalk-fields, the straw stacks, the soft corn, etc., can be eaten by these, when it might otherwise be mainly wasted. When feed fails the large stock grower must have men whose main business it is to feed and care for the stock. The small farmer can add the little additional work as a part of the necessary "chores" and scarcely notice the extra time or labor. Of two farmers of the class we are speaking of, the one "with a little extra stock" will usually do as much and as good work during the summer in the fields as his neighbor who "only keeps a cow or two, and enough hogs for his own meat."

The small farmer has another advantage. It seems to be a law of animal life that the fewer of any sort of animals that are kept within a given area, the more healthy they are. We once asked a large and very successful swine breeder this question: "What is the greatest number of hogs that can be kept together with the highest percentage of profit on each?" To this he promptly answered: "One. The profit on each hog decreases in proportion as you increase the number." His idea was that the health and thrift of the herd decreased in proportion as the numbers were augmented. The greater economy of feeding and management which the large farmer or feeder may practice may possibly more than compensate for this loss of health and thrift, but the illustration serves to show that the advantages are not all on one side.

It is not necessary to money making and deserved success in fine stock breeding that there should be a large herd of flock. The late Mr. Sharpless, whose Jerseys had a reputation all over the country, is said to have rarely kept more than a half-dozen cows; and on the Channel Islands nearly all the herds are quite small. In horse breeding, there is no reason why the man with three or four mares may not take a high rank as a breeder.

Even for a "renter," if he can secure a lease of the land for three or five years, a fair degree of attention to stock growing will be much better than the exclusive grain growing, which is so often the rule with this class. We have known instances in which two renters each seemed "to just about make a living," but at the end of five years one would have a lot of live stock worth a few hundreds of dollars; the other have less than when he commenced.

The Theory of Generation.

The power of animals to propagate their own likeness is hereditary, and transmitted from one generation to another. The principle upon which the theory of generation is founded reaches from the inception of the colt in embryo to the delivery. The breeder, to be successful, must investigate causes that produce certain changes after the union between the sexes, as well as the effect resulting from the influence of each parent over their offspring. The sire and dam have their respective shares in propagating the form and substance of their issue. They co-operate together in generating the vital and physical powers of their produce; and the breeder must understand the influence of each partner, in order to mate progenitors so as to make congenial hits. The food of the embryo is furnished entirely by the mother. It is held by some physiologists that the health and robust constitution of the colt will depend more upon the health and physical power of the dam at the time of conception, than upon the condition of the sire. But this maternal influence is modified by other causes, such as long-lie breeding, coming down from an unbroken chain of powerful generators, and possessing the prepotent faculty of entailing their breeding on an illustrious line of successors in blood. The influence of sire and dam over their colts will depend very much upon their blood, and the constitutional superiority of one over the other. The strongest and best bred animal will have the predominating influence over their produce. The more powerful the inheritance, and the stronger the inbreeding—avoiding incest—the more certain the inheritance will be entailed, unaltered, on their colts.

Acquired qualities become hereditary from long-established acquisition. The stallion is generally the best bred, and possessed of the strongest physical powers. He is generally credited with the most influence in breeding.

If the mare runs back through a superior line of progenitors, and has a more perfect inheritance than the sire, she will entail the leading characteristics on her colts, and shape the destinies of her issue. The rule is, that the parent which has the most constitutional vigor, inherited from the most powerful progenitors, with fixed characteristics established in the breed, will transmit that line-bred inheritance, and have the most influence in breeding.

The influence that the sire has upon the dam on her first impregnation, which appears to extend to her subsequent colts, is a difficult problem to solve. There are several examples preserved in the Museum of the College of Surgeons in England, where a quagga had been bred to an English mare, and her colts ever afterwards, by English stallions, put on the marks and color of the quagga—at least for three generations.

It is important that a stallion be selected to breed with a young mare, for the first time, that is pure and unadulterated, if it has such an impression on the nervous system that she will entail the likeness of her first partner on the third generation of her colts. It has been held, upon this theory, that if you breed a young thoroughbred mare to a cold-blooded horse, her produce will be ever afterwards adulterated with common blood, from the nervous effect upon the dam from this first embrace. These experiments have been confined to the hog and the horse, and are too few and far between to establish it as a general rule that will apply to other domestic animals.

If the sire and dam have material points exactly alike, they will transmit those points to their colts with so much force that they will perpetuate them to another generation. The sire and dam should be alike to breed well together. There will be a uniformity in their stock that could never be realized from dissimilar kinds. When the sire and dam are matched in size, substance, speed, and stamina, they will have the same extra force in generation that a matched pair would have over a single horse for service. The nearer the parents are alike, the more certain they will be to transmit their likeness to their young scions. The inbred progenitors are more alike than those crossed out to strangers, and will have an hereditary force of character that those crossed out do not possess. If the sire and dam come down from a very speedy race, and both should be bred through the same fast line, they would be likely to perpetuate speed to their issue, because they come down from a common origin; and have got speed as a fixed inheritance, established in the breed.

The Devon cattle are uniformly red; you can get no other color, because red is a line-bred inheritance established in the breed from time immemorial. If the sire and dam both have fixed characteristics, they will transmit them to their colts as sure as the Devon bull entails his color on his get.

In sheep husbandry, when the breeder gets possession of a ram that is a superior stock getter, he places great value on him. As soon as he is proved, his stock brings largely increased prices. They find a ready market, and prove a source of revenue. It is related of some celebrated English breeders of sheep that in their early experience they rented out their rams for two or three dollars for the season. After they had modeled them over into their own approved type, and raised them up to a standard to meet the public approval, they could rent out their best rams for several thousand dollars annually, and there was great competition to get them at that.

This shows what skillful breeding will accomplish. It discovers the causes that produce the changes in the union of sexes, and selects congenial partners. It banishes all imperfect animals from the breeding stable, and leaves nothing but perfect parents to produce their kind.—*National Live Stock Journal*.

Dogs, the Farmer's Pest.

It is surprising that intelligent farmers will permit the existence of the droves of worthless curs which infest the country. Shepherd dogs, hounds, and well-bred field dogs are all very well, because they are useful, and when carefully bred, a source of revenue to the breeder. Of what account, however, is that large class of curs, mongrels, and half-starved creatures, which are met at every turn in the country? They must live, and to do that, they are compelled to become the enemy even of the owner. The amount of property destroyed by them in sheep alone, is annually very large, besides their destruction of poultry and game. It is to be hoped that the mania for keeping these worthless creatures will soon run its course, though the speediest mode of bringing about the desired change, is the introduction of the already named varieties. The Legislature of this State once enacted a law taxing dogs, but the law was so unpopular that it was subsequently repealed. Was there ever such an evidence of ignorance? If a man of common sense would only compute the cost of feeding one of these worthless beasts, he would find it equal to the support of at least a dozen sheep, or hogs, and as an offset, nothing gained.

Shepherd dogs make useful and excellent watch dogs, and no doubt if trained to do so would hunt rabbits and possums as well as any other breeds. Then why keep mongrels? Thoroughbred hounds never kill sheep, therefore they are harmless, and afford great sport to those who have an ear for canine music. Field dogs have a weakness for sheep and poultry, though if properly fed, and held in restraint, no harm can come from them, while their produce are in great demand, particularly when their pedigrees are above suspicion. Therefore, we conclude that the common dog should be declared a nuisance, and at once exterminated. Let the shepherd dog supplant the cur.—*Southern Industries*.

A NEW MEXICAN VOLCANO.—Near the town of Vallecitos, N. M., situated about 12 miles southeast of Jemez Hot Springs, and about three miles southwest of Vallecitos, is a volcano that is now giving the inhabitants of that town much uneasiness. This volcano is burning more or less all the time, and the fresh appearance of the lava around it shows clearly that no great period of time has elapsed since the last eruption. The people there say that this is the first time in their experience that the volcano has behaved in such an unruly manner. Frequent shocks of earthquake are felt, and loud rumblings, accompanied by gusts of smoke, issue from the crater. It is the firm belief of everyone in the neighborhood that a fearful eruption is about to take place, and many of the inhabitants of the town are moving up to Valtes for safety.

DWARFED KANGAROOS ON THE STAKED PLAINS.—There is said to be a kind of dwarfed kangaroo in the Staked Plains of Northwestern Texas. Its body is about eight inches long; its forelegs are not more than one and one-half or two inches in length, while its hind legs are all of six inches. It has a tail about eight inches long, completely bare except a tuft of long hairs at the end and a ridge of short hairs on the upper part. The animal is also a marsupial, the pouch being well developed. It is of a soft blue color. Its only mode of locomotion is by jumping, precisely like the kangaroo. It jumps eight or ten feet.—*New Orleans Picayune*.

The Fall Race Meeting—Bay District Course.

As has often been stated in this paper the fall meeting of the Pacific Coast Blood Horse Association commences to-day. For the particulars of the races, so far as the stakes, purses and entries go, the advertisement will give ample information, and to those who are conversant with the horses nothing more is necessary to acquaint them that that part of the programme is first rate. There are others though not so "well posted," and many racing enthusiasts are looking for a different class of information than the nominations and entries afford.

Well conducted racing meets with almost universal approbation. The only opposition comes from those who have no knowledge of the sport, the austere, the bigoted, the fanatic, and those who consider themselves too good to look with favor on sports of any description. Some have a stronger liking than others, but it must be conceded that there is no outdoor pastime which has such a wide range in the civilized world. That the races which have been held under the management of the Pacific Coast Blood Horse Association have been eminently satisfactory is admitted by every one who has attended the meetings and who is candid enough to acknowledge his views. There has been such a well-grounded knowledge that transgression would meet with condign punishment that those who were not kept straight by a sense of honor were compelled to honesty. Fortunately this class of owners, trainers and jockeys is now so rare in California that the rogues are the exception, and a large majority of those engaged in the pursuit would scorn the petty larceny proceedings which at one time prevailed. Of the great number of races now under the auspices of this society there was only one that had the semblance of crookedness, and punishment followed immediately. There are other duties pertaining to a Jockey Club, and these, too, have been well done. The past is always accepted as an augury of the future, and the confidence of the public so gained it is not likely will be lost. Punctuality has been a prominent feature in the management, and the assemblages have been as decorous as the most fastidious could desire. There is then the most complete guarantee, an assurance that the coming meeting will be perfect as the preceding have been, and this first and essential point firmly established.

That the racing will be first-class we predict without a shadow of doubt. This prophecy is grounded on what the horses have done, and on the breeding and form of the debutantes which will aid the third division in making every contest a fierce struggle for supremacy.

We cannot understand how any one can witness a good race without feeling a pleasure it is almost impossible to describe. There are few things in this life which will compare with it. It may be that there is an excitement in the battlefield more intense to one who has not the intensity of delight marred by craven fear. We have always imagined that to the brave a cavalry charge was the acme of enjoyment, and that the few minutes were crowded with emotions that years of ordinary life could not furnish. But fortunately the "glorious panoply of war" is a rare play, and there are horrors and devastations following in its wake.

Though the fields of turf battles in this country are not verdant lawns, "mosses green or beds of roses where you dream the rest," the brown ovals are the scene of life and animation. The "warming up" is a pleasing overture, and as the sheeted and hooded animals glide

by so gracefully, every motion is eagerly scanned by those who have a monetary interest in the coming fight. There are many changes wrought by the "preliminary gallops," and a short, constrained stride dethrones the favorite, while the sweeping easy action installs another in the place. But when the clothing is stripped and the graceful forms displayed there is interest to all. The tiny manikins in silks and satins appear to be a part of the animals, with coats almost as lustrous, and equally as eager for the fray. Under the rules of this association there cannot be long delays at the post, and the vexations waiting for a start is of rare occurrence. The red flags fall and they are off. A compact body at first, but soon there is a blending of colors, and then changes rapid and perplexing. Red is in the lead, and then the purple and gold, and then the yellow, and the green, and all the colors of the rainbow, in various combinations, have a prominent place. Past the stand for the first time, and it is only the practised eye that can catch the positions, as they flit past, drumming music from the course, and there is silence and expectation. Around the turn those on the outside are pulling back to save ground, and two or three who have the advantage of the inner part of the circle are opening a gap. The straight running on the backstretch is almost sure to develop an exciting interlude. There is a shortening of the gap, and your favorite, perhaps, has joined the leaders. It is too soon yet to predict the issue, and again the course gives the advantage to those favored with the inside. Some are already out of the race, but enough are left to make the run home the grand finale of the contest. There is little pulling now. One, maybe, with a trifle the best of it at the seven-furlong mark, is braced a bit, though the others are too close to give much relief, and a hundred yards from home every muscle and nerve of horse and rider is strained to the utmost. There is a roar of voices, a grand chorus of cheers and that one race is over.

The cards for the opening day (to-day) show four contests, likely to prove as close and exciting as can be. It is needless to give them in detail, in this place, as by turning a few leaves, all the conditions and entries will be found. As has been stated before, horsemen, generally, are cognizant of the merit of those engaged, and this opinion is nearly unanimous that there will be arduous struggles in all of the four. This is an "extra day," being an addition to the regular programme, and a very good one it is. The first "regular" day of the meeting is next Wednesday, the 15th inst., and again a reference to the advertisement will show that it will be a "gala day" to those who attend. There are features which the ad. does not show. The first race is the Ladies' Stake for two-year-old fillies, in which are twenty nominations; the distance three-quarters of a mile. In addition to the fillies that have shown so well in previous races are others that promise well and this can scarcely fail to be a merry spin.

The second race is heats of three-quarters of a mile, and in this are eleven of the flyers of the coast. The Vestal Stake is the third on the list, and in that is the Duchess of Norfolk, Precious, sister to Lottery, and several others of high breeding, and which report speaks of as being very fast. The Vestal is a dash of one and a quarter miles, and now that the Duchess has returned from the Eastern tour, the interest in it will be greatly enhanced. After the shaking up in the railroad accident, to say nothing about the long trip from Baltimore, she will have a hard task to beat those which have stayed at home. The fourth is a handicap for two-year-olds, and then comes the hurdle race. This is one and a quarter miles over five hurdles, and the three named in it are said to be famous jumpers. A race "over the sticks" is always popular, and when horses are up to the business and the riders proficient it is a pleasing addition to those where there are no obstacles to overcome.

As there will be another issue of this paper before the second and third "regular days," viz: the 18th and 23d inst., there will be a better opportunity to present the attractions. It is sufficient at present to say that there will be no flagging in the interest, and we were not surprised to hear a man relating the difficulty he had in selecting the days he would attend. By agreement with his partner each were to have a couple of days at the races, and the toss-up gave him the choice. After patient study of the programme he was still at a loss, and solicited our advice. We also "gave it up," further than that he should include "The Baldwin," as that was a dash of four miles, in which there was more than a probability of six starters.

We have not written anything about the course, etc., and it would be a grave omission to have neglected that. There is little necessity for extolling the Bay District Course, as it is recognized to be one of the best in America. It is admirable from every point of view. The track is safe and fast, the stands are commodious, and from them and the balconies of the club house and hotel

every motion of the horse can be seen. The course and appointments being all that can be desired, accessibility is the next point to be considered. Again, it would be difficult to improve on that. The cable road and the steam dummy land passengers within a short distance of the entrance, and the cars run in such close order that they are rarely overcrowded for any length of time. As the fare is only five cents and the time half an hour, it is a cheap and expeditious method of "going to the races." But to those who own horses, or who have the spare means to hire, the drive is very enjoyable. Lately we crossed the bay very early in the morning and drove to the course. Leisurely we forced the horse to jog through the park, and had it not been that we were restricted in time, the sauntering jog would have been changed to a "pottering" walk. Never before did it appear so beautiful. There was dew on the grass and the air was full of fragrance. Another day we returned when the sun was dropping into the Pacific. The gloaming had beauties as well as the morning, and at this time of the year mid-day is also lovely. There are no rough winds now as in summer time, and the sun sends warmer, cheerier rays.

We cannot see that there is anything in the way to prevent the fall meeting, 1882, of the Pacific Coast Blood Horse Association from being a complete success. The purses are well arranged, the entry list is full, the contestants are worthy of each other. The horses which have garnered honors by the Atlantic, on the "Eastern shore," in the "city by the lake," are here to participate. Thousands have cheered them to victory in that far-off country, and it can scarcely be possible that there will be any lack of numbers to give them a rousing welcome home. There should be still heartier plaudits from the shores of the Pacific, and this we confidently anticipate.

THE STANFORD STAKE AND THE ELECTIONEERS.

An error was made in the Adair article last week by stating that six of the get of Electioneer were nominated, whereas five were all. We consider that not even the very fast trotting of Wildflower, Bonita, Fred Crocker, Hinda Rose and Albert W. is better proof of the "potency" of Electioneer than the fact that of the twenty-one nominations three of these five were the only starters in the Stanford stake. This is something unparalleled in the history of the turf or track, for though all the get of one stallion have been starters in some of the running stakes and purses the circumstances were entirely different. Here was a large stake with sixteen of the get of other stallions of known merit. It closed at a time when the Electioneers had not been tested, and another singular and note-worthy circumstance was that in the selections from Palo Alto, those which proved to be the fastest were not named. Those of the right age were Wildflower, Bonita, Marlet and Bertha, either one of which it is fair to assume could have won it. People are prone to give too much credit to an isolated case of speed, and should a sire be lucky enough to get one phenomenal performer, in their minds it outranks scores which are only slightly inferior. One lucky hit has vast influence in forming their estimate, and the one example sufficient for them to base their views upon. But when the offspring of a sire shows brilliant speed, and this in many cases, and also a large number which inherit a good share of it, that is the highest position obtainable in the stud.

Only a few years ago the time made by Adair and Clay Jr. would have given them world-wide celebrity. The trotting of Startle in 2:36 sold him for \$20,000, and it is comparatively a short time ago when a three-year-old beat 2:30, so that the 2:36½ of Clay Jr. and the 2:34½ of Adair give them a very respectable place in the calendar. The other contestant, Anteco, made a very fine showing for a colt that had attack after attack of pink-eye for months, and the week previous to the race his throat was swollen so badly that the whole space between the jawbones was filled.

There is another valuable quality which was demonstrated in the Stanford Stake, and that is the capacity to stand training without injury. When so many of the get of a horse, particularly all of the same age, are trotting in races it is good proof that they are hardy as well as fast.

"TROUBLE, BUBBLE."

Now that the trouble is over, that the bubble has "busted," let all hands turn out to the races.

The jubilant victors will be in the right mood to enjoy the sport, the defeated, despondent from unlooked-for reverses, will have their spirits cheered by the excitement of the races.

The loudest cheers, at first, will come from those who were on the winning side. After a race or two the blues will vanish, and the losers will vie with the conquerors in giving the vivas as resonantly as a thousand

of men can voice. Neither party can afford to miss the opening day, and after that there will be no desire to neglect the others. Here is neutral ground for all parties to occupy. More interest will be felt in the winning of their favorites than those who have completed the political race. By the way, there is a good deal of similarity in the turf battles and the fights political, and, saving that the former is more honest, a straighter run, the resemblance is more than a sameness of outline. In both are handicaps, selling races, and jumping matches, and weighs to burden the good, and a remission of them to aid the inferior.

There is little necessity to expatiate on this as the analogy will strike every one who can make a comparison.

In the meantime let all attend, and our word for it, you politicians—at least those on the losing side—will leave the course in a more contented mood than when you went.

ADHERE TO THE LAWS.

The only safeguard the sports of the turf and track can depend upon is a rigorous adherence to the laws that are framed for the government. There may appear to be a temporary gain by violation; there may seem to be substantial benefit in going contrary to the mandates, but time will prove that every trespass brings serious injury. We have heard people argue that there should be broad interpretations, that technicalities should be ignored, and that there should be latitude in construction, if even it had to be admitted that the looseness was directly opposite to the spirit and also the "letter of the law."

We are writing now more particularly in regard to the rules that govern entries and eligibility to participate in races.

Very wisely, indeed, they have been made strict, very properly framed so that there can be no deviation without infraction.

It may appear very hard that whereas a person has been forgetful or negligent, twenty-four hours' delay should entail a rejection of an entry, but if any time is given it may as well be a week as the seventh part of that time. The trotting rules were amended at the last Congress of the National Trotting Association, so that they are now the same as the racing. That is, a letter containing the entry, plainly postmarked on the date the entry closed, the entry is valid. Preceding that time it was necessary that there should be notice by telegram, registered letter, or the entry reach the person appointed to receive it by the specified time. We will not argue at present which we regard as the best plan, but urge that whichever is in force must be obeyed.

There is another rule equally as emphatic that requires absolute compliance, although there are cases that call loudly for its abrogation. That is the one entailing disqualification of the horse on the death of the owner. While it disqualifies it also relieves from engagements. It may be that large expense has been incurred in the rearing and training, and the expected return should be an asset of the estate as well as when a crop has been planted, and that the heirs be permitted to reap the benefit. But there the law is, however, plain, precise in language, no ambiguity or chance for different construction. Where the rules are plain there is only one course to pursue, and that is, to adhere to them rigidly, technically. A great deal is said about technicalities by those who advocate an easy, slipshod way of conducting races. It is generally thought to be a term of reproach and the technical man held worthy of reprobation. But whenever the close observance of the laws is lost sight of, be it called technical, there is sure to follow disaster at some time, and the only safety is to keep to the laws as closely as possible.

WINTER SHOOTING GROUNDS.

While there is little change to be expected in the character of the shooting grounds along the bay shore south of this city, being as they are within the influence of the tides, there is more or less change among the tule islands where most of the shooting is done. At one time the water will be too deep, and another time there will be no ponds, or no feed. Then again the birds mysteriously migrate to or from particular islands from no obvious cause. Where there will be good shooting this year there will be none next.

It may interest many of our readers to know, in general terms, how the shooting is among the islands up river. In the Suisun marshes, where the Cordelia and Teal clubs have their preserves, and along on what are known as the "Hard Lands," the shooting has been good. The feed is good and the birds are plenty. Some very good bags have been made and the boys are all having good sport.

On the lower end of Sherman Island, which is usually looked upon as good shooting ground, there has been fair shooting this year, but it is very unsteady. There are

wide sheets of water there, interspersed with clumps of tule, making this a first rate place to shoot. But after a little rain the ducks leave the ponds and go off on to the high lands. After two days' rain they string out to the hills, where they stay three or four days and then move back. What ducks have been shot on Sherman are mainly small ones. The Tule Belle club have their preserve near Clark's Slough on this island.

On Brannan Island the water is very deep, averaging eight feet, and the hunters do their work sculling, which is hard work even for the professional. There are half a dozen professionals on this island.

On Andrews Island there is no cover, the country being very open. It is hard to find a blind on the island.

On Grand Island there is plenty of good feed but they are not killing very many ducks. What are killed, however, are good ones.

The well known Jersey tract on the right hand or mainland side of the San Joaquin, some distance above Antioch, there is now nothing, though it used to be a favorite hunting ground. The tract is dry as a bone. The heavy rains even did not put any water there, for what fell was absorbed as a sponge would take it up. If the rains are heavy again, now the ground is partly filled, some water will stand, but it will have to rain eight or ten days to do this. Last year there were more ducks killed on the Jersey tract than anywhere up river. They relieved it however, and mended the break in the levee, and the water was let out by floodgates. Some of the ponds last year were four feet deep so they would not drain off, but the dry weather of the summer dried them up.

Bouldin Island is all leveed and farmed now so there is no hunting.

Staten Island is pretty dry too; potatoes were raised all around the edge of the island last year, and there is only a little water on the middle.

The Sacramento river is turning out more game this year than the San Joaquin. On Monday evening there were only 20 sacks of game from the whole San Joaquin came to this city. More than half of these were geese.

One piece of ground up near Sacramento is doing very well now and is the choicest piece on the river. It has been leased by market hunters.

The lower end of Union Island is one solid swarm of geese. They fly in immense flocks and by their constant noise keep the ducks away. The ducks do not like to be near them so there are very few ducks on the island. At the head of the island at Naglee's there has been some good shooting lately, but the late rains drove the birds off to the high grounds.

The Alviso marshes ought to have plenty of ducks now after the rains. All along the shore on both sides of the bay there is more or less shooting if people can only get to places comparatively isolated. The Petaluma and Sonoma marshes are very little frequented by hunters from this city because there are no good and ready means of communication. Petaluma marshes used to be the best duck shooting station to be found.

THE EMBRYOS.

Very unfortunate was the rainfall to the Embryos. Had the downpour of last week been postponed a few days there would have been three capital races last Saturday, and now there is no telling what the effect of this let up will be. It not only necessitated the postponement but it also stopped the work of the colts, so that for the best part of two weeks the exercise has been confined to jogging on the road. With one exception, Election day the track was in condition that work could be given, though it was so soft that it did not give much opportunity for speed unless to those whose gait was suitable. There are "experts" who predict that benefit will follow this enforced idleness, and that faster time will result. This is not our belief as a majority of fast trotters require fast work once in a while to key them up to the proper pitch. Nevertheless there is a good prospect for fine sport, and it is certain that the races for yearlings, two-year-olds and three-year-olds, on the same afternoon, is a novelty in the sports of the track. It is also certain that the youngsters that remain in are a good lot, and without anticipating anything sensational, we do not hesitate to hazard the prophesy that faster time will be made in two of these races than ever has been scored by the same class previously. That is in actual races when colts met in a real engagement.

At this time of writing the probability is that Monday will be the day. From present appearances it is not likely that the track will be in condition any sooner, though good enough perhaps to "fog out" the day previous. Notwithstanding that postponed races usually do not awaken the original interest, in this case there appears to be a growing desire to witness the performances of the colts, and those who attend will be well repaid for the journey to the track. In another place we have descanted on the pleasure of a trip to the Bay District

course and the description falls far short of the reality. Equally enjoyable is the journey to the Oakland Trotting Park, and to those who live in San Francisco, the enjoyment is heightened by the contrast. The sail across the bay at this season of the year is a rare treat, and although for nearly nine years we have been making (with occasional breaks) daily trips, it is always a source of pleasure so much so that we sympathize with those who live on the wrong side, and feel surprised that Oakland has not, at least, one hundred thousand inhabitants. Since the Berkeley road was extended to the wharf, so that there is no change of cars, Shell Mound station, within a short distance of the gate of the Park, is as easily reached as Broadway, and the time is less, only thirty-five minutes from the foot of Market street. Should the matter be favorable so that the Embryos can be trotted on Monday, it will give the opportunity to those who visit and the trip alone will compensate them for the trouble the city to see the running to put in another "extra day," and outlay. But even the most ardent admirer of the "high-mettled racer" will find satisfaction in witnessing the contests of the highly-bred colts. There is a good outlook for a large attendance and with a reasonable expectation of a good entertainment.

HOME AGAIN.

The California Stable has returned from the Eastern trip, and we are pleased to learn that they have come home in good shape so far as getting back sound is concerned. We have been so busy that it was out of the question to spend the time to visit them, and again we were unfortunate in being away from the office when Mr. L. R. Martin called or we might have obtained information from him that would be of interest to our readers. The matter is only deferred, however, and we feel satisfied that a history of the tour will be good reading at any time. There are surmises that need confirmation before appearing in type, and it is useless to speculate when facts can be obtained. It adds greatly to the interest of the race meeting that they will participate.

THE THANKSGIVING DAY TROT.

Those who have horses that have a fair show to compete with the ones that are named should not fail to enter in the \$1,000 trotting purse advertised in this paper. It is a liberal purse, especially for this season of the year, and should meet with a liberal response. There being three "moneys" it gives an opportunity to others beside the winner, and there is another feature. If owners do not support the track by making entries, they cannot expect that tracks will be kept open at a loss, and any diminution in the number of courses near San Francisco will be a serious drawback to their interests.

EDITORIAL NOTES.

A New Star seems to have arisen in the turf firmament of Idaho in the two-year-old filly Hattie Harris. At the late meeting of the Idaho Pork Club at Boise City Hattie Harris made her eutree with considerable eclat. During the week she ran and won four races, one a dash of half a mile for two-year-olds in which three started, one of half-mile heats for three-year-olds and under, and a three-quarters dash for two-year-olds, and the last and best performance was on the closing day of the meeting when with fifteen pounds extra weight up she beat a field of aged horses a dash of one mile and a quarter. Hattie Harris was bred and raised in Idaho and will make her mark in the world of runners if that last effort has not sent her to the paddock permanently. She is by Marmaduke from Pirouette, Marmaduke by Enquirer, dam Catina by imported Australian; Pirouette by Harvey Villain, dam Farfaletta by imported Australian.

Next Thursday on the Bay District course Killip & Co. will offer at auction sale a consignment from the stud of W. L. Pritchard which is well worthy of the attention of purchasers of thoroughbreds. There is little question that the breeding of thoroughbreds is sure to be remunerative in California, and the day is not distant when there will be a demand greater than the breeders can supply. Notwithstanding the misfortunes that befel our horses in the East this season they made a good showing, and excellence once established is certain to bring buyers. Mr. Pritchard has many very finely bred animals and the success of the colts of his breeding is a guarantee of future well-doing. That bargains will be obtained is beyond doubt, as it is seldom the opportunity offers to obtain such high strains at "public outcry."

Killip & Co., on the same day as the Pritchard sale, will offer the trotters Rowdy Boy and Ashley. The former is one of the most promising four-year-olds on the Coast, and Ashley is too well known to require more than a notice. Rowdy Boy is by Rustic, and his dam was Louise by Belmont from Silver Cup. As the dam of Rustic was also by Belmont, there is a double influence of this valuable strain which insures him "going the route," and as he has shown 2:25 in his exercise, he has the gift of speed as well. Ashley in addition to his known track qualities is said to be a capital road horse, and with the speed he has it will take a topsawyer to beat for a brush or stay with him the "length of the road."

THE GUN.

Deer Protection.

Wednesday the close season for deer in this State began according to law, and from then until July 1st of next year it will be unlawful for any person to kill that kind of game or to have it in his possession. The law is very strict, and under it a person can readily be convicted if caught transgressing its provisions. In some counties, however, the law is avoided by a class of hunters who have been given some semi-lawful permission by Supervisors to kill deer out of season. The fact that nobody has as yet seen fit to bring these lawless shooters and equally lawless officers into court gives no justification to their acts. In Nevada county, wherein the Supervisors have taken it upon themselves to set the State law aside, there are, we believe one or more sportsmen's clubs which belong to the State Sportsmen's Association, or have declared their intention of joining that body. The latter has a standing offer of reward for information that will lead to the detection of parties guilty of infractions of the law; and therefore we shall expect to hear of arrests being made in case deer should be openly killed in Nevada county after this date. The expense offered by the Supervisors for their action (for it is only an excuse) is a very thin one, and does no credit to their intelligence as citizens nor their integrity as officials sworn to obey the laws. They were too ready to act upon the advice of lawyers who are not competent to construe the statutes, and the sooner they repeal their ordinances giving permission to kill deer out of season the sooner will they win the good opinion of all intelligent persons. Game protection is regarded too lightly altogether by those whose sworn duty it is to uphold the laws of the State. Even public opinion has not yet been fully aroused to its importance, and we only fear that the subject will be fully understood when it will be too late. Year by year the deer of California are killed by thousands out of pure wantonness (misnamed "sport") and for the value of their skins. Some men think it a great thing to boast of that they succeeded in killing a score of deer during the season, not one-fourth of which were eaten. They are simply killing the geese that lay the golden eggs, and we believe the child is already born in California who will live to see the day that deer will be entirely exterminated within her borders. This should not be, and would not be if people would only give the subject the consideration which its importance merits. We only hope that our prediction may not be realized—that the sportsmen of California will yet rise in their might and drive the poachers, hide-hunters and big-score men from the field by securing the enactment of laws that will deal effectively with them. No class should have a monopoly of the wild game of the State. It should be protected for the use of all—those who are to come after us should have a chance as well as ourselves.—*Sacramento Bee*.

Goose Herding.

The last issue of Frank Leslie's *Illustrated Weekly* contained on the first page a large illustration of a California goose-herding scene. The subject of the drawing was taken from an article which went the rounds of the California press last spring, describing the manner of killing wild geese on the Glenn ranch. The picture represents the air filled with geese, which are being fired upon by two men, attired in beads and buckskins and mounted upon spirited horses. How little those artists know about California goose-hunters! The goose-herder is generally mounted upon an old mule too lazy to move any faster than at a snail's pace, and we have even known some goose-hunters to be sent out on oxen. As a general thing the fellow who goes out to drive the geese away from growing grain is given an old Harper's Ferry gun that kicks harder than a Queen Anne musket. He moulds his own bullets, and naturally is a little careful about shooting many of them away. Goose-herding is considered the laziest job on a ranch, and one who follows it is generally looked upon with scorn. Now, while writing of goose-herding we don't mind telling of a two months' experience at that kind of work. Before coming to the Golden State, the writer of this had read of the magnificent sport to be had upon the ranches at shooting geese. In fact we had formed the same kind of an idea about it that the artist in Leslie has drawn. Being naturally fond of out door sports, upon arriving at California we went immediately to an uncle's ranch, and there accepted a position as chief herder over the broad acres. The horse given us was a little old broken-down Indian pony, and the weapon with which we were to exterminate the feathered pests had done duty in the Revolutionary War. The first day in the field was cold and foggy, and riding around over a large field, fording sloughs and going hungry, was not a very delightful turn of the bright days we had anticipated. Days merged into weeks and not a single goose had been killed, although huge quantities of powder and ball had been wasted. At about the close of the second month we put a dose of cold lead into the pony's head—accidentally—and the hard-hearted uncle didn't need us any longer. Goose-herding is not a joy to be "hankered after"—it is far from being a spirited sport. To a person unacquainted with the occupation it might appear as being one grand, big hunt, but it isn't.—*Chico Record*.

HUNTING BY MOONLIGHT.—Commissioner Giroux, A. C. McAlpin, J. K. Hopkins and G. A. Krenkle went on a hunting excursion to the Sink of Humboldt two or three days ago. J. L. Guthrie, who returned from Lovelock yesterday, says the hunters went to Emmons' lower ranch, at the head of the lake, and camped. At night the air resounded with the gabbling of geese and the squawking of ducks, and the hunters, who had gone to bed early so as to be in good trim for the morrow, decided to get up and commence the slaughter of ducks and geese by moonlight. They dressed in a hurry and commenced firing at the fowls which were continually flying at low range over their heads and kept on until they had exhausted their ammunition, and the worst of it all was that they had to eat bacon for breakfast next morning, as they had killed neither duck nor goose.—*Silver State, Winnemucca, Nev.*

It is reported that in some places the new grass has attracted flocks of wild ducks and geese, which may in a measure account for the scarcity of water fowl in the marshes. Geese, both white and gray, are said to be plentiful at Union Island. There are not many of the sportsmen that kill these birds as they are quite heavy to carry away, and some lately arrived from the north have a fishy flavor.

Mr. Haskell was down at Mallard Station last Sunday and bagged twenty-eight ducks. Sprig at this place are the most plentiful, and are in good condition. Duck have been as numerous at this, the Alameda sportsmen's preserve, as at any, and with every prospect of its good shooting holding out during the balance of the year.

Moose Hunting in Nova Scotia.

The hunting season for moose in Nova Scotia commences on the 15th of September, when calling may be carried on with success. Calling is the art of imitating the bellowing of the cow moose during the running season, and thereby attracting the bulls to within range of the hunter's rifle; this acquirement is one which necessitates a deal of practice and skill, as a false note uttered would suffice to put an end to all hope of a bull's appearance. The Mic Mac Indians are the best callers though it is only a very small proportion of them who are really proficient in the art. The noise uttered by the cow moose is imitated through a birch bark horn some fourteen inches in length.

Though an exciting sport, calling has been condemned for reason of the alarming decrease of bulls which has taken place from its practice. In all parts of Nova Scotia, the number of cows predominate to such an extent over that of the bulls that only a proportion of the former can, during the running season, ever receive the attentions of their lords; it is therefore hoped that calling may, for a time, if not permanently, be stopped, as it bids fair, as at present carried on, to do more toward accomplishing the extinction of moose in the province, than any of the other many dangers the animal has to avoid.

Creeping or still hunting commences with the first snow and lasts till the end of January; it is on this sport that I now propose to write a few lines. The ground selected for moose hunting must be one where the settler has not yet intruded, where the stillness of the forest is not disturbed by the stroke of the lumberer's ax, where the gold prospectors have not yet ventured. To reach a spot thus secluded and undisturbed many a weary mile along broken roads, over frozen lakes and through the pathless woods has to be tramped, and this too with the burden of a pack on one's shoulders containing provisions and requirements for the time intended by the hunters to be spent in the woods.

Camps exist throughout the country and it is in one of these the moose hunter makes his home—these abodes are generally wigwags, sometimes deserted lumberers' camps and often only lean-to's built against one of the large granite boulders which abound throughout many parts of the province. Let us then, reader, in this refuge release ourselves from our burdens and against this rock build our fire and commence by collecting sprigs of fir which for the next three weeks will represent our downy couches, while old Matthio, the hunter, unpacks the grub and Joe, the cook, gets water from the lake and puts life in the old camp once more. No furniture is needed to make our home comfortable—no repairs to make our house habitable—nature in her bounty provides the wherewithal to meet the wants of the hunter, and demands nothing from him but to collect and make use of her supply. But of camp and camping doubtless my readers possess experience which renders further dilution concerning them unnecessary for me; let us then turn in for the night, sleep soundly, and dream of our success for the morrow.

"What sort of day, Matthio?" is the first question which issues from what might have been mistaken for a pile of blankets.

"Fine day, to-day."

Though the wind whistles thro' the pine trees and angry clouds are drifting apace overhead and though fully two feet of snow lies on the ground 'tis a fine day withal—so up out of that blanket, wash down those slices of salt pork with a dish full of tea, fasten on your snowshoes and take Matthio for your guide.

"How many rounds shall I take, Matthio?"

"Six plenty."

Away then across the frozen lake, through the grove of backbushes which skirts yonder hardwood ridge, plunge knee deep across the swamp, into the depths of the forest where the moose still roams undisturbed by the advance of the sportsman's bitter foe—civilization.

Let us consider ourselves in the woods, with our Indian pointing to the first trail struck since our departure from camp.

"Last night track, he travlin'."

A moment's consultation and the Indian decides to leave the track and search for a better and more promising one—not long after he strikes what appears to be a much older track than the one passed—but this track though older, if of a different and better nature than the rejected one.

"In yard here" as indeed becomes obvious from the footprints crossing and re-crossing among the young birch and maple trees now; carefully noting the wind Matthio strikes off in a direction which to most of us, my dear reader, would appear to be exactly opposite to the direction in which our game was heading. Follow him, however, put your snowshoes in the tracks of his and keep as close to your hunter as you're able.

"Look, Matthio, there's another track."

"Dat same; you load your gun all right."

Though confident of having done so the fact of your opening the breech to assure yourself is at this time excusable. So blunder on again in the footprints of your Indian, who you see is once again off the track.

"My, don't you do dat, moose scare like any ting."

No, sir, you really must select some more fitting time for tumbling over windfalls and breaking sticks than when on a hot track, so withdraw your gun from its perpendicular position out of that snow heap, pick up your cap, clear your barrels, and come along. Another curve is described, and the hunter again closes on the track, and there a few yards further on is the bed in which our noble game reposed last night; another curve, and yet another is described, each curve getting smaller, and the tracks each time they are reached getting fresher.

Stealthily now creeps the Indian, picking an easy path through the maze of trees, his ears and eyes are strained to catch sound or sight of the animal whose keen senses demand the display of the hunter's utmost craft.

Now, crouching, he passes under the sprawling branches of the spruce trees; now noiselessly he bends and steps over a low bough which impedes his way; now he makes a detour to avoid a thick mass of fallen timber, through which it would be impossible to creep without noise—he stops and looks—and you, my dear sir, must really keep closer behind him. No; he sees only the brown earth on the roots of a fallen tree; a little further and the Indian commences a fresh curve, but this time back in the direction of our advance. The limit of this curve is to wit in sight of our former footprints, and then wheeling about we proceed in a direction parallel to our last movement. This maneuver means that our hunter has overshot his mark and is now working down toward his game; an injudicious step at this critical period, the breaking of a twig or other clumsy trifle, would probably end our chance of sport for the day.

"I say, Matthio, look at that pore—"

"Moose!"

"Where?"

"Where! See! see! my soul! there."

"That black thing?"—bang—

"Fire again, quick!"—bang—and a severed branch of spruce falls to the ground.

"You hit him, sure 'nuff, first time," says the Indian, as he hurries to the spot where the beast stood. "Blood thar; we smoke pipe; he lie down."

So, after a bowl of tobacco, we leisurely proceed on the tracks. "He tumble 'gainst that tree; he lie down thar;" and there indeed is the blood-stained imprint of his huge form. A little further on, and there lies the noble animal himself, straining every muscle to rise to his forelegs, which are thrown out in front of him, his eyes staring in terror at his dreaded foes. Once more the woods ring out with the crack of a rifle, and our game lies lifeless in the snow.

By the foregoing sketch of a very ordinary moose hunt it will be seen that little else than a constitution capable of enduring fatigue and hard work is required from any one desirous of killing a moose, the Indian piloting you through the woods, tracking and pointing out your game, which when found generally presents a stationary mark at a distance of from twenty to sixty yards.

The Mic Mac Indians as moose hunters are unsurpassed. In disposition they are civil and obliging to the last degree; anxious always to make their employer's life in the woods as comfortable as surrounding circumstances will admit of. By nature they are inclined to shyness in the presence of white people, and it is a matter of great difficulty to extract information from them regarding their method of hunting, or the means they adopt for finding their way through the intricacies of their forest home. The following item of conversation I once noted down—it being typical of an Indian's manner in answering questions:

"All these lakes run north and south, don't they Louis?"

Ind.: "Yes, some."

"Which way do those round the camp lie?"

Ind.: "North and south, guess."

"Then the head of this lake points north?"

Ind.: "Yes, dis lake runt east and west."

In conclusion, I may say a few words on the prospect of moose becoming extinct in the province of Nova Scotia. This prophecy is one which for years has been made by those who are always inclined to consider the present uncomparable with the past. Thinned out as moose have undoubtedly been through the use of traps and dogs for their destruction, and through the laws relative to their preservation being badly administered, there are still many localities in the province where moose are abundant, and it will be gratifying to sportsmen to learn that the game society is annually becoming more active in increasing its efforts in a proper direction, which, if continued in, will result in moose long continuing to roam and multiply throughout the vast domain of woodland which covers the province of Nova Scotia.—*American Field*.

Great Fun Bison-Hunting—for the Bison.

Lieutenant Neville Chamberlain sends to the *London Field* a vivid account of his adventure with a bison when out shooting in the woods of the Maharajah of Mysore. He says: "I had no companion, so took with me one of the local shikaris, named Kampa, and another man to carry my spare rifle. My battery consisted of a D. B. 8-bore rifle and a D. B. 12-bore rifle. I took the 8-bore myself, and, giving Kampa my 12-bore, crawled up to the herd through the grass. Out of some high grass just in front of me rose a splendid old bull. He was only about twenty yards off, and was just moving behind a clump of bamboos, when I fired at the point of his shoulder with the 8-bore. A great stampede took place. The smoke hung in the long grass—which as I knelt was nearly up to my neck—and I could not see to give him the second barrel. I ran forward, but could see nothing; so, still running, I opened the breech of the rifle; threw out the empty cartridge, and was in the act of pushing a fresh cartridge home, when from behind a small, thick clump of bamboos, some five yards from me and about thirty yards from where I had started, I heard a loud snort. Kampa gasped out, 'Karti!' (bison) and vanished; and at once the bull came charging down at me. I only had time, as he hurled himself at me, to spring behind a small tree on my left. He whizzed past like a battering-ram, cutting a large slab of bark out with one of his horns, and, turning almost in his own length, was round at me again. This occurred four or five times, but my attention was so fully taken up in dodging him that I could not get the rifle ready for use. To make a long story short, it ended by my catching my foot in a creeper. I fell over backwards, and as I rose he ran in and tossed me. One horn—I suppose his left one—fortunately went clean through my breeches and flannel shirt, tearing them to ribbons, and, as far as I can remember, I seemed to sit on his head, while the other horn passed under my right arm. He threw me a long way and I fell on my back under some bamboos, the rifle dropping out of my hand from the shock of being tossed. I was a good deal shaken and out of breath, but I think my first thought was that now he would leave me if I kept still; but he ran up again and stood over my body, shaking his huge head over my chest. I thought then that it was hopeless. I could think of nothing better to do to protect myself, so sat up and struck him four or five times with my fists on one eye, which I could just reach when his head was down. He shook his head and pushed me back with his nose. I managed then to plant several severe kicks on his muzzle with my heavy hobnailed boots, and he commenced sparring at my legs with his horns. I did my best to keep them out of the way, but got a few bruises on the shins. This began to get monotonous, and I knew another toss would not find a friendly pair of pants. He was still stamping over me when I got in a good volley of hobnails on his nose, shouted at him and sat up to hit him again; then, to my intense relief, he gave a bellow, left me and went crashing off down the hill. I never saw that bull again."

NOT A HUNTER'S PARADISE.—A lot of Reno "ramrods" a day or two since boarded a Nevada and Oregon train, and went out to the present terminus, Oneida Station. They struck out to the nearest timber, some eight miles distant, but found not even so much as a quail. That particular section was recently described as being filled with deer, grouse, sage hen, quail and all kinds of game. Now the settlers say that the storm has driven all the game up into the mountains. Storms are usually supposed to have the contrary effect. The hunting at Oneida is somewhat like the fishing at Reno. If you go there to fish when the water is low they tell you that you must wait till the river is up, if you wish to catch any fish; go when the water is high, and they tell you that any fool knows that fish never bite except when the river is low.—*Virginia (Nev.) Enterprise*.

Hunting parties at Millbrae have been having, during the last two weeks, quite a variety of luck, as the bags of quail have run from two dozen to nothing, and poor hunters having fair luck, where good shots had bad.

A STRUGGLE WITH A BEAR.—While Harry Tucker and Wellington Sprague, conductors of the Maine Central Railroad, together with Orville A. Robinson and A. Q. Leach of Portland, were on a hunting expedition at the forks of the Kennebec a few days ago, they suddenly encountered a monstrous bear, which gave a savage snarl, and then started for them. The young men had no heavy ammunition, but they made quick use of what they had, pouring hot shot into bruin's body. Quickly reloading, they all fired again. This second round enraged the bear and she howled fiercely. Finally the fighting came to close quarters, and the hunters attacked the infuriated beast with the butts of their rifles. Tucker broke the stock of his rifle short off at the first blow. This ruined him of a monster pocket-knife which he had purchased at Bingham. Taking that out, he ordered his companions to once more hold the attention of the bear while he crawled behind her. The bear now stood erect on her haunches, and the three men were engaging her attention as much as they dared to do. Tucker rushed up behind her and plunged the knife deep into her side twice, his companions in the mean time rushed for her with their guns. The moment she felt Tucker behind her she turned and made a grab for his shoulder, just catching his coat and heavy shirt in her teeth. Before she could do more the stabs in her side had done their work, and she fell dead with Tucker's clothing still in her teeth.—*Boston Journal.*

Many hunters who have been up along the narrow gauge railroad this week have had very good luck. Last Tuesday one young man left the city at 8 o'clock and returned at 5, with twelve quail, eight rabbits and other small game as the result of his day's sport.

Mr. Golcher was up last Sunday at Union Island and had better luck than any one on the island that day, bagging fifty ducks before 10 o'clock in the morning.

The sportsmen of Washington Territory are trying the experiment of stocking with the Bob White quail.

THE RIFLE.

The First and Second Regiments.

The spirit of friendly rivalry and competition seems at last to have taken hold of some of our riflemen. There is a match of some sort or other every week and the scores made by the marksmen are second best to none of the East. If the military companies were to take hold of target shooting more, private teams and marksmen would take more interest in the use of the rifle. The California Rifle Association's last shooting tournament revived the interest considerably, as was manifested by the Second regiment sending a challenge to the First Regiment to shoot a match of fifty men, five shots at the 200-yard target, Col. J. H. Dickinson of the First immediately accepted the challenge and last Sunday the match took place at Shell Mound. L. G. Perkins of the First Regiment made 24 out of a possible 25 points, which was the best score of the day. By the First Regiment the following scores were made:

G. Fredericks.....	21	Burmester.....	16
B. F. Moss.....	20	H. M. Taylor.....	23
J. C. Dunn.....	18	Corp. L. R. Townsend.....	22
C. T. Smith.....	18	Pritchard.....	20
J. Stockwell.....	20	Sergt. G. R. Burdick.....	20
J. H. Bedbury.....	13	Cummings.....	17
Capt. J. H. McMenomy.....	18	Sergt. J. Klein.....	20
F. Hanson.....	17	Corp. Hampton.....	19
G. F. Kelly.....	20	Sherman.....	18
H. Adams.....	17	Ed. Duffy.....	21
B. McKnight.....	16	Lieut. H. T. Sime.....	20
C. Thompson.....	20	Capt. H. S. Templeton.....	21
S. F. Merry.....	17	Lieut. J. E. Klein.....	21
L. G. Perkins.....	24	Henz.....	18
H. Elder.....	17	Sergt. Pool.....	19
Sergt. Thos. Carson.....	21	Sergt. Conner.....	18
A. P. Rapa.....	21	Brown.....	21
Jansen.....	16	Sergt. Thompson.....	18
Corp. L. Barriere.....	19	Roach.....	19
Corp. L. W. Knowlton.....	14	Lieut. Geo. H. Strong.....	19
Feising.....	19	Hammond.....	20
Sergt. Kelley.....	12	Col. J. H. Dickinson.....	21
F. Alton.....	22	Sergt. Wilson.....	20
Sergt. Snook.....	22	Capt. Laufenhng.....	21
Sergt. Geo. Perry.....	18	Sergt. Kneass.....	18

Total (758 per cent.).....948

The scores of the Second Regiment were:

Lieut. G. T. Peck.....	18	C. E. Fennell.....	19
Sergt. Wm. Kettleman.....	18	G. E. Clark.....	18
Sergt. J. C. Lohmeyer.....	18	J. P. Mulligan.....	13
Sergt. H. J. Wagner.....	18	Lieut. J. P. Wand.....	22
Wm. Starke.....	18	Corp. Wm. Wright.....	21
George Prescott.....	15	C. Lods.....	21
Corp. J. Wagner.....	18	Lieut. Shaunessy.....	20
Corp. F. Smith.....	13	Thos. Casey.....	20
J. O'Donnell.....	15	R. Strothers.....	20
D. Schmick.....	21	Taylor.....	18
H. Wolf.....	16	J. F. Kelly.....	19
Lieut. J. H. Becker.....	22	E. Williams.....	17

C. Gros.....	17	C. F. Casey.....	19
J. C. Hoffman.....	19	J. H. Flinn.....	14

Total (737 per cent.).....922

The Second Regiment would have made a higher score if it had not been that eight of their best marksmen were absent. No doubt now that the ball is in motion, but we will see a great many more rifle matches take place in the vicinity of San Francisco than there ever have been before on the Pacific coast.

Pistol Practice.

There never has until the last year been any interest taken in pistol practice. At the time that the California Rifle Association offered prizes to pistol teams Col. Beaver was almost the only enthusiast in this city. By the Colonel's unaided efforts he collected together and made up a team of pistol sharps and then sent a challenge to shoot a match with a team from the San Francisco police. The challenge was accepted and the match shot and won by the police. Since the first match many others for medals and trophies have been shot, beside many friendly contests. The police have as good shots as can be found but it is a rare or almost unheard-of

thing for them to issue a challenge, although they always have accepted any from the Citizens' Team which is really the only one outside of the Police Teams. The Police, though they have considerable practice, compared to the Citizens, rarely have any matches among themselves nor do they challenge anyone on the outside. They have a good range which is easy of access and as good Creedmoor targets as can be found anywhere; many friendly matches and contests might be held among themselves as teams or individual sharpshooters, or with the Citizens.

Had it not been for Col. Beaver, who is one of the best pistol shots on the coast, the Citizens' Team would to-day make a very poor showing and were it not for the Citizens Team it is doubtful whether the Police Team would exist, for like Alexander the Great of olden times, they would pine away for lack of exercise. The Citizens' Team has always been the challenging party and on account of the lack of practice they have many times been defeated; but they deserve praise for the interest they try to arouse in the shooting line and admiration for the pluck with which they meet better practiced men and get defeated; for it is only the lack of practice that has prevented them from carrying off the laurels on several occasions lately.

Matches could easily be arranged with teams in other parts of the country, and even in distant states, by both shooting on their respective ranges and sending the results to the other by mail or telegraph. It is to be hoped that the "you move first" principle will soon be dropped and that pistol practice will be raised and take its proper place among other amusements and tests of skill.

Pistol Shooting.

Although it is as a rule deemed unfair to make public the scores made by individuals or teams in private practice for a match, the following performance of Captain Douglass' team of the San Francisco police is given as an exhibit of what can be done with the pistol in skillful hands. The preparation was for the California Rifle Association trophy, shot for on the 28th of October at Shell Mound Park. The score made by the team in the match is also given for comparison. The distance was 33½ yards, target regulation Creedmoor, but the practice score was made at 30 shots and a possible 150 while the match was at 15 shots and a possible 75, which different conditions must of course be taken into account in comparing the performances.

AT ALAMEDA.—Last Sunday the California Schuetzen Club at Schuetzen Park Alameda, held their monthly medal shooting. The class medals were won by the following riflemen: First class, F. Kuhls, 416 rings. Second class, C. Rupp, 318 rings. Third class, C. Sagehorn, 334 rings.

FISH.

"Never Knewed the Scientific Name Afore."

Why is it that certain men who are ordinarily decent and temperate will get drunk on the Fourth of July? Why is it that certain men who are ordinarily truthful and reliable will lie without stint when they strike the topic of their exploits with rod and reel? I doubt all fish stories. I have never read but one that bore upon its face an indication of truthfulness, or that a candid man might say was not the mere hallucination of the story-teller's brain, or the base fabrication of a depraved mind. I refer to that graphic and vivacious account of the desperate struggle Charles Dudley Warner had with the brook trout.

It was the close of a hot August day. Now I am not going to annoy you with a fish story. I am only going to premise that it had been a hot August day; that with my nine-ounce green-heart rod, I had walked zealously all day long, and had captured but one bass; that the bass did not run off fifty yards of line at one fell swoop, making the reel to sing and smoke; that he did not tear madly through the water, leaving the usual foaming, boiling wake behind him; that he did not leap high into the air, and shaking the silver drops from his bronze armor, regard me with implacable looks of rage and hate. I am only going to premise that he was the sole result of my day's sport; that he weighed five pounds two ounces to a dot; that I had experienced no tremendous strain upon my system in landing him; that I had not even burst a suspender; and that on the porch of the village inn, at the close of the hot August day, the oldest inhabitant had contemptuously examined my rod, and had inquired with no little disdain if I caught fish "with that gad?"

The oldest inhabitant settled himself into his accustomed seat on the porch of the village inn. He tilted back his ruined hat, and turned the broad soles of his brogans towards the rising moon. And then as the sultry evening wore away, he rolled off an interminable yarn of how he had taken "a forty-pounder, by blank, sir," in Crooked Lake. Shall I tell you that fish story? I guess not. When the accusing angel finished his evening's labor he rested with weary wings; and when the recording angel noted the eighteenth entry of "carried forward," on the oldest inhabitant's account, he closed the book with a bang and a pious ejaculation that boded no good to the o. h. when his day of reckoning should come. When the oldest inhabitant passes in his checks, it will be from hemorrhage brought on in some unguarded moment by a rash attempt to tell the truth.

The moon was just rising beyond the lake when the oldest inhabitant opened up with his string of lies; but she swung high in heaven, and the lake slumbered, a burnished sheet of silver under her beams, when the story was ended and the forty-pounder brought to shore. The doctor looked long and earnestly at the oldest inhabitant, and quietly remarked:

"That's the most mendacious piscatorial prevarication ever heard of!" and the old man, taking a fresh chew of tobacco, replied in his innocent way:

"You bet your life he was, but I never knowed the scientific name afore. Round here we always call him the musky-lunge."—*Cor. Angler.*

Salmon trout fishing near Tamalpas Station has been very poor during the past two weeks.

Bay Fishing.

Bay fishing during the past week has been very poor. Many parties have been out but the catches were all small, and the fish are below the average in size. It is hardly to be expected that it would be otherwise as all experienced fisherman agree that on the last half or quarter of the moon that this is always the case. Many laugh at the idea that the moon affects the fishing, but the Portuguese and Italians, who are the best of fishermen, never count on making much profit from their pursuit during this part of the moon, at which time they say that nearly all the funny tribe stay close around their favorite hiding places. Along the Sausalito shores during this unfavorable time what few fish are out are caught either early in the morning or in the evening and even at these hours they do not stay in one locality but seem to be rushing by. But when the light of a new moon dances on the water it affects the fish as well as the tides and they come forth from the dark, unexplored caverns of the deep and make glad the heart of the fisherman by taking the hook on which temptingly dangles the sardine or shrimp. Occasionally one is fortunate enough, during this poor fishing time, to find the home or haunts where the fish are congregated, and they are usually assembled in large numbers and they bite quite lively. One of these places mentioned is on the east and north sides of Goat Island. There is good fishing at this place when there is none at all elsewhere. Many of the most experienced fisherman think that there will be some fine fishing during the winter months around the bay, and they have formed their opinions by the promises of favorable tides, as shown by the almanac.

The average catch of salmon in the rivers, before the State added to the numbers by artificial hatching, was five million pounds. This, to persons not controlled by narrow personal interest or cupidity, would be convincing evidence of the wisdom of the State laws for the promotion and increase of this industry. Yet, strange as it may seem, it is the history of the fish industry of every State in the Union, and of all other countries, that when public moneys are used to add to the numbers of fish to be caught, not only the fishermen, but the owners of large capital invested in the business are unremitting and persistent in their applications for the repeal of all that place any restriction upon unlimited fishing. The perpetuation of the salmon industry is absolutely dependent upon the fact that some of the fish must be allowed to pass the nets and reach the spawning grounds at the head waters. It is only at the sources of streams, and under the conditions there found, that the eggs will naturally develop into fish. It is only when the fish reach their spawning grounds that their eggs have become sufficiently matured so that they may be taken for artificial propagation. These facts are well known and undisputed, yet the Legislature is biennially besieged to repeal the law, or to so change it that practically there should be no limit to fishing while there is a fish to be found in the rivers.

A NATIONAL ASSOCIATION.—We learn that an effort is being made to organize a national association of anglers, under the name of "The National Rod and Reel Association." We also learn that the object of this organization shall be: First—The preservation of game fish by every possible means for those whose delight it is to take them by rod and reel. Second—The holding of an annual tournament to cultivate and compare excellence of rod and reel. The cultivation of that fraternal feeling which always exists among the lovers of the gentle art. We do not doubt that such an organization, if free from all entangling business alliances, will result in benefit to the angling interests of the Craft. We will "bide a wee"—for further knowledge of the matter—before we enthuse over it.—*Angler.*

When President Arthur was on his way from Alexandria bay to New York two little girls, aged 10 and 13 years, nieces of General Butterfield, were presented to him, they being passengers on the same car. When they told him that they, too, had been boating and fishing, he described to them the glorious sport he had on the St. Lawrence, and asked: "How would you like to catch a fifty-pound fish on a light rod like yours, with a tip almost as slender as a rye straw? That beats bass-fishing. You have to play with the fish an hour or two sometimes, and be careful not to allow him to escape or break your rod." "Why," said Miss Thirteen-year-old, "a little girl up to Carlton caught a four-pound bass and broke the pole right off!" "Ah," replied the President, "when she gets older she will soon learn to play a larger fish than that on a light rod, and land him, too.

Anglers in the Adirondacks report the discovery of a new species of fish known as the "trout pickerel," which are found at the mouth of the Au Sable River. The new fish resembles the English pike. Its color is a light bronze, and the odor of the pickerel is not perceptible. It is very palatable.

The American *Angler* says, commend us to our English brethren for the melody of their common names of fishes, viz.—the dab, the rough dab, the smear dab, the fluke, the carter, the lemon sole, the merry sole. All of which means "flounder."

Tuesday Horace D. Dunn and party were out fishing on the Sausalito shore. Most of the fishing was done in Horseshoe Bend. The catch was rather small but several of good size were taken; blue rockfish and sea trout were the most plentiful.

Capt. Douglas, warehouseman, caught several large brown rockcod while fishing near Sugar Loaf Cove near the rock. This was the best catch of Tuesday as some of them weighed three and a half pounds.

Several parties fishing in Racoon Straits recently have had very bad luck; many returning without even having a bite—except from the lunch basket.

A young gentleman who at one time aspired to be champion amateur sculler of the coast, and who was captain of the Columbia Rowing Club, made his first attempt as a yachtsman last Sunday, thinking he would like sailing. He sailed on to a mud flat first thing and having remained there three hours with nothing to eat, drink, or smoke, was rescued by a relief party which shored a skiff over the mud, then by means of planks the yachtsman was brought to the edge of the water and ferried across the creek. But he abandoned the yacht until high water when some one else took her to her moorings.

It is said that wild ducks have abandoned the meadow near Boynton and Steamboat Sloughs. An unsuccessful effort was made to sow wild rice there last spring.

THE KENNEL.

The Greyhound.

The greyhound is a long, lean animal, the giraffe of the canine race. He always seems to be in a contemplative humor; probably he is thinking of the past glories of his race. His breed has a history such as falls to the lot of no other dog and few animals except the monkey folks who fought with the gods gone by. Ovid's description of the greyhound coursing a hare in his "Metamorph," book I, told in rhyme better than has ever been told since in prose the story of the fleet footed ones:

As when the impatient greyhound, slipped from far,
Bounds o'er the glade to course the fearful hare
She in her speed does all her safety lay
And he with double speed pursues the prey.
O'erruns her at the sitting turn, but licks
His chaps in vain, yet blows upon the flax (hair),
She seeks the shelter which the neighboring covert gives
And, gaining it, she doubts if she yet lives.

The greyhound gave rare sport to the ancient Greeks, but their dogs were not a match in point of speed for the hound of the present day as ours are no match for them in point of size, strength and pluck. In spite of the slowness of their dogs the Greeks had good sport though horses, nets and as many as a dozen dogs were often used to capture one single hare. The ancients made rules for their sport not vastly dissimilar from those in vogue at the present time. Xenophon the younger ordered that a steward be appointed over the sport—to match the dogs, give orders to the field and direct when and how the competitors shall be slipped. The old Greeks were a jolly, easy-going lot. They never coursed a bagged hare nor beat a plantation for one but went out just as we do at Merced, scared up a hare and then loosed the dogs. From the sides of the mountains spectators watched the sport on adjacent plains. When Elmore was king of Mercia the greyhound grazed the royal kennels. In the time of Canute he was reckoned the highest in rank of all the dogs and no one but freeholders were allowed to keep them. Henry II, Queen Bess, Edwards I. and II, and Charles I were all devoted admirers of the greyhound. The owner of Gelert who slew the wolf to secure Llewellyn's heir lived early in the 13th century. From all that can be learned the greyhound proper is of Celtic origin and until Rome and Greece imported the pure breed from ancient Britain, their dogs were but poor animals. The first dog ever used for sport, the only one ever made a gentleman by law, the friend of kings and to-day the proudest beast of earls and dukes, is it any wonder that the greyhound holds himself aloof from other dogs and contemptively pursues the tenor of his way without fear, love, affection or obedience to any man. With pedigree going back before the time when Christ was crucified. When the Druids performed their mystic rites in British woods; before Roman, Saxon, Dane or Norman had set defiling foot on British soil; long ere the time when Phœnicians wrought for tin on Cornish Coast the greyhound was an occupant of British soil. He probably gambled around when Adam and Eve made love in Eden, and was promptly on hand when Noah first started out in the moral circus business. He certainly tended flocks when Tubal Cain loafed among the bulrushes and made pipes that prefaced the invention of instrumental music. He helped lick the sores of Lazarus, and his ancestors helped the Hebrews eat their manna when they were jogging around the wilderness trying to strike the main road for Jordan. The most prominent trait in the character of the greyhound is larceny. He is a thief from his earliest years and only lives that he may learn roguery. Instead of the dog being a wolf in a domesticated state there is good reason to believe that the wolf is simply a greyhound in a wild state. Both are surly, both are bloodthirsty, both are thieves and both can outrun and outlast any other animal although a false system of training has made the modern greyhound more fitted for a burst of speed than for a long enduring effort. But you will say the greyhound has no sense of smell. Has he not? I have one who will scent a quail or a robin as quickly almost and at as great a distance as any setter in the country and Bird's old Bummer would not only scent a quail but would come to a stannch and dead point. He is accused of lacking sense when the fact is that he is about the cleverest of all dogs only he will insist upon putting his skill to the one end and aim of his life—larceny; no ordinary look, bolt or bar can keep him out when he wants to steal. He has been known to upset the pot on the hearth and steal the meat as soon as it was cool enough to month. The highest shelf in the cupboard, the topmost hook in the larder and the ditch that hangs from the rafters all fall an easy prey to his desire to steal. He can give points to Bates and the "Artful Dodger" is a mere tyro compared to an old greyhound. As soon as he gets over his youthful eagerness for the chase he commences to show his cunning and becomes a worthless huncher and it is only by keeping him away from hares for long spells that he can be stopped from that improper habit. There is one good thing about the greyhound. He is no cur and no syeophant. He never fawns and slavers over his master and scarce wags his tail in compliment of greeting. He carries his independence far into the region of violence, and is a quarrelsome, dictatorial, faithless and irritable beast at best.

EDWIN.

That Wretched Cut.

A short time since we had occasion to severely criticize a cut of the pug dog George, published in the *American Field*. John R. Sherlock of Southport, England, wrote to the editor of the *Field* a letter on the same subject intimating that if the cut was accurate the judges erred badly in giving George a prize. The editor of the *Field* replied as follows:

We consider it unjust to criticize George from the ent which appeared in the *American Field*, as it failed to do him justice. The original drawing of the dog was made, as all of Mr. Tracy's drawings are, correct, but while in the hands of the engraver some changes were made which developed the features that have been the most severely criticized, features not possessed by the original, and for the appearance of which the engraver, and not Mr. Tracy, is responsible.

Eastern Field Trials.

The judges for the Eastern Field Trials of 1882 will consist of Col. James Gordon of Pontotoc, Miss.; Jos. J. Snellenburgh of New Brighton, Penn.; Jos. H. Dew, Columbia, Tenn., and Jno. M. Kinney, Staunton, Va. The old system of three judges will be adhered to as in previous years, each

stake being judged from end to end by the same judges. For entry blanks, running rules and particulars, all communications must be addressed to Washington A. Coster, treasurer and secretary, Flatbush, L. I. All dogs entered and in training for the trials at High Point, N. C., will be carried free when attended by owners or trainers, on presentation of a pass signed by the secretary. Dog passes furnished on application. State number of dogs and name of owner or trainer. Through the courtesy of the Pennsylvania R. R., Seaboard Air Line R. R. and associated railways of Virginia and the Carolinas, their baggage-masters have been instructed from headquarters to pass all dogs free when accompanied by owner or trainer, on presentation of a pass signed by the secretary of the Eastern Field Trials Club.

A SOCIABLE DOG.—An unheard of feat by a dog, which would seem incredible if not vouched for by several witnesses, occurred yesterday morning at 2520 Pacific street. Arthur W. Moore, the occupant of the premises, is having the house painted, and for the purpose of gaining access to the roof a ladder twenty-four feet in length was placed against the side of the dwelling. Mr. Moore is also the owner of a dog, of which he is now extremely proud. The painters had ascended the ladder yesterday, when the animal, who is of a sociable disposition, determined to seek their society. There was no way of carrying this project into execution except by taking to the ladder, which the dog at once proceeded to do. Those who witnessed the undertaking say that he dragged himself up the perilous passage by hanging on the rounds with the joints of his fore legs, supporting his weight with his hind legs against the lower rungs. Once the roof attained, the animal made his way up the steep incline to the peak, where he made his presence known by licking an unconscious painter, who was so frightened that he nearly lost his balance, and was in imminent danger of falling to the ground beneath. When the painter regained his balance of body and equanimity of mind he at once clutched the friendly brute and descended with him to the ground, where the ladder-climbing quadruped was received with spontaneous expressions of admiration. —*Chronicle*, Nov 1.

A singular and fatal accident happened to a dog on lower Mill street a day or two ago. He was on the porch of his owner's residence, which stood back from the street, when another dog passed along on the sidewalk, which seemed to irritate the residing dog and caused him to run along the porch and bark at the outsider. He was so intent upon this that he made a misstep over the side of the porch and fell to the ground, striking upon his nose and breaking his neck, and died almost instantly. —*Grass Valley Union*.

ROWING.

Peculiarities of Small Boats.

It is a curious circumstance that scarce any two localities in the world have the same description of either row or sail boats. One would be apt to suppose that a particular type of boat would be found by experience to be superior, and that in all localities where similar conditions of weather and water obtained, this style of boat would be adopted. It is not so, however. The ordinary Whitehall boat, which certainly seems as near perfection as can be imagined, will be found in very few places except our rivers. And where, except in Massachusetts, is the dory naturalized? Connecticut is the home of the sharpie, and this style does not flourish elsewhere to any appreciable extent.

Then look at the beautiful fishing boats of the St. Lawrence, evidently the outgrowth of the Indian's birch-bark canoe, the shape of which is still pretty faithfully preserved. All the tourists who have visited the Thousand Islands have seen, and probably sailed in, these beautiful craft, and a week ago President Arthur fished from one of them. They are about twenty-one feet long, three and a half feet wide at the broadest part, and fourteen inches deep. They row very easily, and their peculiar shape enables them to ride in safety over the highest waves of the broad river, and during the continuance of a northeast gale these are very formidable. They are built of Norway pine, with trimmings of cedar, and, as a rule, are left bright inside and out, the wood when oiled being very handsome. The most singular thing about them, however, is that, although without either centerboard or keel, and with a small split-sail, the mast for which is stepped well forward, these boats are sailed and worked to windward without the use of either oar or rudder, or anything which might be called a substitute for either.

In the summer time, as thousands of tourists can testify, races are gotten up, the course being to leeward and to windward, and the contestants are not allowed to carry either oar, paddle or rudder. The boatman steers his boat entirely by the sheet and by shifting his own weight forward or aft, according as he desires her to hull or bear away. When he desires to tack he hauls the sheet that aft and goes forward, and his boat goes about. If he wishes to keep off, he goes aft and gives her sheet, and off she goes. We don't think these boats can be paralleled anywhere.

A PROFESSIONAL ASSOCIATION.—The Boston *Herald* publishes the following, which we heartily indorse, and commend to every gentlemanly professional oarsman: "It is very evident that, if professional rowing is ever again to become popular, it must be through some radical revolution of methods and practices. The professionals themselves realize this fact, and profess to be willing to take any steps necessary to regain public confidence. Nearly a year ago Mr. M. F. Davis of Portland suggested a professional rowing association, governed by respectable and respectable gentlemen, with rules of the strictest kind, providing for the expulsion of any oarsman or oarsmen found guilty of disreputable practices. This year the subject has been revived by Lee, Riley, Hosmer and others, all of whom desire immediate action. The suggestion is made that all professional scullers of the first, second and third class be invited to meet at Boston, and that some well-known gentlemen, patrons of aquatic, be invited to take part in the meeting, assist in organizing the association, and offer suggestions as to rules defining the object of the association and legislation protecting the general body of oarsmen from the reproach a few men may bring upon them.

LEE AND COURTNEY.—Geo. W. Lee wants it thoroughly understood that he is not afraid to row Charles Courtney. Lee said: "I had money in the office of the Boston *Herald* for three weeks to back a challenge to Courtney, but he failed to meet me. He puts up no money with his challenge, and hence I shall pay no attention to it. At any time I am ready to accept a challenge from him if he will deposit money in New York to back it."

AN UNSATISFACTORY EXPERIMENT.—Hamm and Conley, having finished their engagement with the Halifax Rowing Association, will not row again under its auspices, or row as partners, unless challenged. The association has been under heavy expenses keeping two men and a trainer for some years, and the result has been highly unsatisfactory. Its men have been unchallenged, and their challenges have not been accepted. It feels that aquatic people abroad will have nothing to do with its men in match races, and regattas with short courses are not satisfactory. A prominent citizen of Halifax, who has faith in Hamm and Conley, and feels it would be a shame to have them retire permanently from aquatic thus early in their career, proposes that a big sweepstakes match be gotten up early next season, on some suitable waters where a four or five mile course can be had. He suggests that Hanlan, Ross, Kennedy, Courtney, Riley and Conley each deposit \$1,000 or \$500, to be divided into first and second prizes, and the third man to save his deposit. A match of this kind ought to be satisfactory to all concerned, and, if the oarsmen mentioned or others wish to go into the scheme, Hamm and Conley are ready, and the citizen referred to will back them.

ELLIOTT BEATEN.—Some time ago Elliott, the ex-champion of England beat Gaisel of New York very easily in a three-mile sculling race on Flushing Bay. Gaisel then claimed that he had been beaten by having his stake boat anchored so far out that he lost a hundred yards at the turn. A return match for \$500 a side took place on the 22d ult., at Newark, N. J. A more perfect walk-over never took place on this course before. Either party could have claimed the race, by fouling, had they so desired. An even start was effected, but Gaisel, pulling a long graceful stroke, soon forged ahead of his more jerky opponent. Elliott spurring up at the Enreka House, soon obtained a slight lead, and being out of his water, could easily have been fouled by Gaisel, if he so chose. Both men rowed well to the stake boat, when Elliott made a poor turn, Gaisel getting away in good form. From here home it was purely an exhibition race, Gaisel winning as he liked. No official time was taken, but a private timer marking it at 20.30.

THE BLUFFERS CRITICISED.—Some time ago the BREEDER AND SPORTSMAN called attention to the reprehensible practice of issuing challenges without any serious intention of rowing races. The New York *Turf, Field and Farm* has taken up the subject and comments as follows on the men to whom we called disrespectful attention:

"The humbugging practices of some amateur rowers are laid bare with an unspurring hand. The practice of issuing challenges when there is no intention to row a race or to try conclusions, is vigorously denounced. It seems that there are 'bluffers' not only among politicians, but also among amateur sportsmen, who endeavor to gain recognition and notoriety by challenging brother amateurs for large amounts of money, but who never intend that such challenges should be accepted. There is certainly a great difference between the number of challenges issued and the number of races rowed."

ATTRACTING ATTENTION.—The proposed race on Thanksgiving Day over the Long Bridge course for the BREEDER AND SPORTSMAN'S cup has attracted attention in New York. The *Turf, Field and Farm* says of the event:

"Great interest is manifested by the scullers of the Pacific slope in the four-oared race, to be rowed on Thanksgiving Day, for a valuable cup offered by the BREEDER AND SPORTSMAN. Crews from the Pioneer, Ariel and Golden Gate clubs are practicing for the event. At present the Pioneers have the call, but the other crews are working hard for success."

YACHTING.

The sloop yacht Wave, S. Y. C., Rear Commodore Barron, has gone into winter quarters at the Seawanhaka Basin, Edgewater, Staten Island. The Wave will be rigged and given a new set of sails before the opening of the next season. She may get another chance at the Madge next season and if she does she will win this time.

The Larchmont Yacht Club seriously contemplates the building of a new club house. Fleming Point, a short distance from its present quarters, is said to be the site of the proposed new structure. The marvelous growth of the Larchmont during the year just passed, both in the matter of members and boats, has brought it to a foremost position in the yachting world.

The Casco is well laid up. Her sides and covered with carpets and canvas, her bowsprit and gillboom are covered and a large awning extends fore and aft. She is well protected from the weather, but the first southeaster will walk off with the awning.

The lines of the new schooner yacht for ex-Commodore L. A. Fish, of the Atlantic Yacht Club, are being laid down by Messrs. Poillon. The model was furnished by Mr. Philip Ellsworth.

There will be one yachtsman in the Legislature, Mr. James V. Coleman, one of the owners of the Annie, having been elected to the Assembly from San Mateo.

It is reported in yachting circles that Mr. Astor, owner of the schooner yacht Ambassadors, has given orders for a large steam yacht.

Though the Nellie got on to the Southampton shoal the other day no harm was done to her.

There is talk of a new yacht seventy feet long, with lead keel and all modern improvements.

Work is progressing slowly on the new yacht of the Spreckels Brothers.

Farmer is working away on his new yacht and the deck is now laid.

The Annie is going up river on a duck hunt next week.

The Chispa is to be kept in commission all winter.

The Pacifics close the season on the 18th.

Very light winds for sailing now-a-days.

The Emerald will be laid up next week.

Very little yachting going on now-a-days.

The Rambler has been laid up.

The Frolic has not been laid up yet.

The Tulare Valley fair was a pronounced success. The gate money received left a handsome net dividend in the treasury of the society, which is as it should be. It is claimed that there were 3,500 people present on the last day.

BICYCLING.

American Wheelmen's League—Fall Meeting.

The fall meeting of the League of American Wheelmen took place Oct. 20th at Beacon Park near Boston in the presence of a small number of spectators.

The entries for the one-mile championship were Lewis T. Frye of Marlboro', Mass., the holder of the medal and title, George M. Hendee of Springfield, Mass., and V. C. Place of Greenville, Pa. The men all looked and were in prime condition, and took their places in the following order: Frye at pole, Hendee second, Place third. At the sound of the pistol all got off in good form, Frye taking the lead, his intention evidently being to keep the lead and force the pace for the others. These, however, showed their ability to take his pace and followed him in close order during the first lap, and on the second Hendee let himself out, and made a pace for himself which Frye, despite a gallant struggle, was unable to equal, and had to fall to second position, and the third quarter was entered in the following order: Hendee, Frye, Place.

Frye however was not to be easily beaten off and entered the last quarter well up with Hendee, but the latter increased his pace to such purpose that he soon left the other two a long distance behind and coming down the home stretch with a good burst of speed crossed the line the winner in 2:57. This is the gentleman who ran a close second to the English champion Moore in less than 2:55 at the recent Springfield meeting, and he promises still further improvement next season.

The next and final event was a five-mile amateur open race for two silver cups, first and second prizes, respectively. The starters were V. C. Place of Greenville, Pa., J. Wattle, Canton, Mass., and John Tacy, Lawrence, Mass.

A good start was effected, Place taking the lead, Tacy second, Wattle last, and this order was maintained throughout. Place's time was 17:39; Tacy's, 17:45; Wattle's, 19:20. The track was in fair condition, but the wind was quite strong, considering which the time was better than was expected.

Much discussion has arisen relative to the various so-called safety bicycles in which the tendency to "headers" is more or less averted by setting the saddle farther back and making the treadle connection with the crank by means of levers or in some similar manner. The results summed up appear to be that while these machines are somewhat slower and harder to drive than those of the ordinary forms, they are well adapted for elderly or timid riders, and make night riding comparatively safe for any one. The principal safety machine now before the public are the "Extraordinary," in which the front fork has a considerable rake, the saddle being set correspondingly back, and the cranks are connected with side levers which extend back so as to bring the treadles beneath the rider; and the "Facile," in which a similar arrangement of side levers is applied with a small wheel and vertical front forks. Upon this latter machine a distance of 214 miles was recently made in twenty-four hours upon the road from London to Bath.

Messrs. C. J. Holland and W. L. Jackson, of Medford, members of the Tremont Bicycle Club of Boston, made a run of one hundred and fifty-four miles Oct. 22. The start was made from Medford Center at 12:18 a. m., and the finish at 11:49 p. m. The route was to South Framingham, via Cambridge, Chestnut Hill, Newton Lower Falls, Wellesley, and Natick, returning by same road; then to Gloucester, via Malden, Saugus, Lynn, Salem, and Beverly, returning to Medford by same road, and again to South Framingham, and return to Medford as before, making a total distance of one hundred and fifty-four miles. Running time 20:30.0; time used for meals and rest, 3:10. The above is the longest run made in one day by any bicycle club in America.—*World*.

The second race for the English 20-mile professional championship was run on the Belgrave road ground, Leicester, Oct. 7, the competitors being J. Keen, London; R. Howell, Coventry; F. Wood, Leicester; R. James, Birmingham; C. R. Garrard, Coventry; B. Keen, London; F. Lees, Sheffield, and Warwick, Birmingham. The race was splendidly contested, J. Keen, James, Wood, Garrard, Lees, B. Keen and Howell leading at various times, and was finally won by Howell in 1:12:55, which beat the professional record made by Wood in July.

W. M. Woodside won the 50-mile bicycle championship of Ireland, Oct. 7, at Phoenix Park, Dublin. Time, 4:14:20. Raining, and track bad in consequence.

BASE BALL.

Olympics vs. Howards.

On Saturday last at the Olympic Grounds, Oakland, the third and final game for the Howard Trophy—a silver ball and the Olympic Club Championship for 1882—resulted in a victory for the Olympics by the following score:

OLYMPICS.											HOWARDS.										
T. B. R.	B. H. P. O. A. E.										T. B. R.	B. H. P. O. A. E.									
Neal, r. f.	5	1	0	0	1	Jacobus, l. f., c. f.	4	1	2	0	1	2	0	1							
Fitzgerald, c.	5	4	12	5	1	McCord, s. s.	4	2	1	0	4	4									
Burt, l. b.	5	2	3	8	1	Buckingham,															
Ebner, 3b.	5	1	1	3	0	2b. r. f.	4	0	0	2	2	1									
Barton, 2 b.	5	0	0	1	0	Hardie, c. f.	4	0	2	7	1	0									
Redmond, p.	5	1	0	0	13	Kane, l. f., c. f.	3	0	0	0	0	2									
Kelly, i. f.	5	1	0	2	0	Hamilton, 3b.	3	0	1	4	1	1									
Summer, c. f.	4	0	0	1	0	Ruggles, 1b.	3	0	0	8	0	3									
VanBergen, ss.	5	0	2	0	0	Dibble, p.	3	0	0	1	6	0									
						Van Court, r. f.	3	1	1	0	2	1									
Totals	44	10	9	27	19	3															
Innings							1	2	3	4	5	6	7	8	9						
Olympics							1	3	2	0	1	0	2								
Howards							1	0	0	0	0	0	0	2	—						

Two-base hits—Fitzgerald, Burt, Jacobus, Hardie. First base on error—Olympics 8, Howards 1. Struck out—Olympics 5, Howards 10. Wild pitches—Dibble 1. Passed balls—Fitzgerald 1, Hardie 5. Balls called—On Redmond 106, Dibble 42. Strikes called off—Dibble 21, Redmond 20. Struck at and missed—Olympics 18, Howards 32. Game time—two hours. Umpire—Jerry Denny of the Providence Club. Scorer M. Straus.

Haverlys vs. Niantics.

At the Recreation grounds last Saturday the above nines played eight innings with the following result, the game being brought to a close by the darkness:

Haverlys—J. Carroll, r. f., 5 runs; Lohr, l. f., 5; Levy, c. f., 3; McGann, p., 1; Fred Carroll, c., 2; McVey, 1st b., 2; Lawton, 3d b., 2; Morgan, s. s., 1; Gagus, 2d b., 2. Total, 23.

Niantics—Arnold, 2d b., 1 run; Incull, r. f., 0; Robinson, l. f., 0; Egan, 1st b., 0; Finn, s. s., 0; Hickie, c., 1; Sweeney, p., 1; Frank Carroll, c. f., 0; Hanley, 3d b., 1. Total, 4.

Left on bases—Haverlys, 3; Niantics, 1. Bases on errors—Haverlys,

3. Balls called—Niantics, 2. Strikes—Haverlys, 5; Niantics, 3. Wild pitches—Haverlys, 1, Niantics, 2. Passed balls—Haverlys, 5; Niantics, 2. Two-base hits—Haverlys, 2. Three-base hits—Haverlys, 3. Time of game—Two hours and forty minutes. Umpire, George Lake of the Reno club.

CRICKET.

Occidents vs. Merions.

A cricket match was played Saturday afternoon on the Recreation Grounds between the Occident and Merion teams. The Occidents won by the following score:

OCCIDENTS.		
Cross, b. Theobald.	10
Davenport, b. Webster.	0
J. Sanderson, b. Webster.	2
Waterman, l. b. Webster.	7
Turney, b. Mathieu Jr.	6
McGaven, c. Armatage.	5
Daley, l. b. Mathieu.	8
Stewart Sr. c. f. Mathien, b. Mathien Jr.	2
Aiken, b. c. Benjamin.	1
Stewart, Jr., c. & b. Benjamin.	0
Sanderson Jr., not out.	2
Runs.	43
Byes.	2
No balls.	1
Wides.	8
Total innings.	54
MARION.		
Hill, run out, b. Waterman.	0
Theobald, b. Waterman.	4
Miel, b. Waterman.	0
B. A. Benjamin, b. Stewart Jr.	9
E. J. Mathien, b. Stewart Jr.	1
Armatage, b. Waterman.	0
F. Mathien, c. Turner, b. Waterman.	2
Burnett, b. Stewart Jr.	0
B. Benjamin, b. Stewart Jr.	0
Finlayson, not out.	0
Webster, b. Waterman.	2
Runs.	16
Byes.	4
No balls.	1
Total innings.	21

Hippodrome cricket playing pays, as it is reported by the English papers that the Australian eleven, that left this city for home on the last steamer, netted \$7,500 from one match they played in the old country and \$5,500 in another.

POULTRY.

Little Chicks.

As soon as chickens are strong enough to follow the hen easily, I like to give them as much freedom as possible. Coops soon become filthy prisons, and the hen so longs for freedom, and can do so much in finding suitable food for her flock, that it seems cruel to confine her in a coop. On the other hand, she can't always be allowed to roam at will, and so I usually compromise the matter by putting the hen into a good-sized yard, with a lath fence, through which the chickens can go in and out as they please, and the hen kept in partial confinement. She has then plenty of room for scratching without wearing out her feathers against the sides of the coop, and she is not half as liable to hurt the chickens. She and they can generally get some grass, and if the yard is planted with currant bushes or shrubbery of some sort, there is a chance to gather insects and enjoy the shade on hot days. It is tolerably safe also against hawks and crows. These marauders don't like to venture into a yard for their prey, as it cramps their movements. Sometimes they will snap them up on the outside, but on the whole those who will try a yard for chickens will find them much more satisfactory than coops. The fence costs but little, and being put up in panels, which are wired to stakes driven in with an ax, it can easily be moved. The yard can, also, if not planted to trees or shrubbery, be plowed or spaded, and grain sown for the chickens to scratch out.

Some hens are murderously cross to other flocks of chickens, and it is a good plan to avoid this if possible. The Brahmas are generally very good in this matter, and can be more safely trusted than the smaller breeds; but to avoid this danger a little care is advisable. When a hen is sitting no young broods should have access to her, but just as she is hatching is the time to overcome her evil propensity. If there are older chickens about into whose company she may be thrown, it is well to put some of them under her at night. Of course, they must not be very large, nor is it best for her to see them when placed under her, or she may "make a fuss" about it. But she can be made amiable to the chickens then if ever, and if the chickens themselves are quiet, and do not go yelping about as soon as daylight comes, the operation may be a success. The pure-bred fowls are generally uniform in color and marking, and when a hen is acquainted with one or two of a brood, it answers for all. The union of flocks is so often necessary that some attention to this matter is really important. Some flocks are deserted by the mother at too early an age, others may be reduced to a very few, so that a union is desirable, and if the owner is a little watchful, he can avoid much trouble by getting his hens to treat all chickens with civility.

It is not well to be in a great hurry to get small chickens to go to roost on poles or trees, or the regular flock roosting place. The breast bone is soft until a certain age is attained—say about three months—and a chicken forced into roosting as soon as the hen leaves the flock, will be pretty certain to have a crooked breast-bone. It may not, possibly, affect growth, but it will certainly affect sales, if noticed, and it not unlikely affects development. Until about three months old they had better sleep on the ground, or on a floor. After that the bones are so hard as not to be endangered.

Feeding, after the first week, may be of a very miscellaneous order. There is not much danger of over-feeding, but there is great danger of waste unless care is observed. Rather frequent feeding is important—say four or five times a day if they do not run at large—but the amount should be only what they will eat clean. If some attempt is not made to estimate or note their capacities, a great deal will be wasted. There is no economy about a chicken, and no care is shown for to-morrow. If five times as much grain is thrown down as can be eaten, the surplus will be treated as indifferently as so much dirt. When it is defiled starvation even will not force a chicken to eat it. Dry grains are not so readily wasted as the mushy food often given, or milk. Into the latter they will get with their feet, if possible, and if any is left when their appetites are cloyed, it will not go far toward a second meal. For these reasons one had better feed too little than too much until he learns about how much is needed.

As an aid in the care of fowls, it is of considerable importance that they shall not be afraid of the owner or his assistants. To this end "handle with care" from the first. One of the first steps to winning their confidence is to get them to eat from your hand. Though all are shy at first, the shyness can easily be overcome with either chickens or turkeys. Call them, and lay down your hand full of grain on the ground or floor. They will be timid at first, and the hen will perhaps give numerous warnings, but if you are persistent and gentle, and they are hungry, they will soon surrender, walk over your hand with the utmost familiarity, and even up your arm to your shoulder if there is any inducement. I have even had chickens and hens to take grain from between my teeth. But to gain and keep their confidence one must never be rough with them. "Shooing" them in angry tones, throwing sticks or stones, driving them about with brooms, or chasing with dogs, are all modes of making them wild and intractable. They are easily excited and alarmed, and the feeling is contagious, and when once they fear you confidence is harder to restore than to win at first. If they get into mischief it is very natural to make a great outcry about it, to throw clubs, brooms, or other missiles, or call the dog; but it is better, after all, to go about repairing damages very quietly. The damage generally is not enough to make it pay to make the flock afraid of you, and look upon you as an object of terror. The dog, if set upon them, will often do more damage in three minutes than the fowls in three days. It is instinct which teaches them to eat what they like when they find it, and dogs, clubs, or other projectiles will never drive instinct from them. Let it remain, and use more gentle defensive means for saving the "garden sass."

Old hens are somewhat lawless in a garden or truck-patch, but small chickens are often of service there as insect hunters and consumers. They go from plant to plant and leaf to leaf in search of insects, look on both sides, and pick off the parasite with less disregard of his feelings—if he has any—than we do of the chicken when we behead him for a pot-pie or a fricassee.

The best place I know of for a coop is in the garden when insects are plenty. There it will be of some service. The chicks will travel off quite long distances in search of game, but are pretty sure to get back when there is an imperative necessity, and their services as "bug" hunters are often of considerable value.—*Breeders' Gazette*.

Jay Beach has sold the three-year-old colt Zilophone, by Altamont, to Colonel W. S. Stone of Yreka for \$1,000. Zilophone has a record of 2:57 but has trotted much faster, and Mr. Beach hoped to show low figures with him this year, but an almost fatal attack of pinkeye prevented his being trained. It is understood that Louis Huseman of Yreka, and W. J. Evans of Little Shasta are interested with Colonel Stone in this purchase and that the colt will be kept in Siskiyou county for stud service. Mr. Beach has also sold several roadsters this season for good prices, the horses being the get of Altamont from common mares. The stock at Cascade farm has been afflicted with virulent pinkeye this fall and several valuable animals have died from the disease. We trust that Mr. Beach's change of base to the Rogue river valley will prove a judicious one.

Sotoyome is the name claimed for a bay colt foaled 1881, by Pilot, his dam Avola, by Alhambra, grandam Oriole by Simpson's Blackbird, his third dam a "stray mare" taken up on the Maquoketa bottom, Jackson county, Iowa, and which had the appearance of being well bred. Pilot by a son of Belmont, Alhambra by Mambrino Chief, his dam Susan (thoroughbred) by American Eclipse.

To-night the California Coursing Club will meet for the purpose of entering and drawing dogs, electing officers, etc., for the match that will take place on the Merced plains next Wednesday and Thursday. We hope to meet Mr. Meany up there at the match and congratulate him on his recent success. Several imported dogs that have been kept dark will run at this match.

The Chinamen in the Upper San Joaquin are taking large quantities of fish by set nets, contrary to law. If the local officials are indisposed to do their duty in the premises there ought to be citizens public spirited enough to compel them to.

A SPIDER CAPTURES A SNAKE.—Recently a young cowsucker snake about a foot long got into Justice Robinson's office, in the basement of Masonic Temple, Easton, Md., and located itself under an old sofa in the back of the office, where an old spider had his headquarters. When the spider discovered his visitor he threw a web around the snake's neck and fastened it to the bottom of the sofa above the snake. He then proceeded to add another web, and another, and another, and another, until the combined webs made a strong cord, that completely fastened the snake so that it could not extricate itself. If it attempted to go forward the cord raised its head higher and higher, until his snakeship would be half off the floor. If it attempted to go backward, it ended in the same way. Such was the condition of the snake when it was found a few days afterward. In the mean time the spider was secure in his nest above, looking down upon the snake and awaiting results. Doubtless to the great disappointment of the spider, Mr. Robinson extricated the snake from its hanging position, killed it, and threw it out of the office.—*Easton (Md) Star*.

William Borst, who died in Boston, last week, was in his earlier days a driver and trainer of trotters, having received his early lessons in the art from Hiram Woodruff many years ago. About the last horses of any prominence with which Borst's name was connected was Gen. Butler, his greatest success previous to assuming charge of "the Contraband" having been with Ethan Allen and running mate. Borst always took a great pride in Butler, and it was a sight never to be forgotten when the old horse and his driver came upon the track for a race. Butler's mane and foretop would be decorated with gayly-colored ribbons, whilst Borst, attired in a velvet suit, and wearing a new pair of kid gloves, sat in a sulky that had been washed and polished until every part of it shone like a looking glass. In those days drivers of trotters were not, as a class, particular regarding their dress, and "the fashion plate," as Borst was called, never failed to attract attention. Of late years the deceased took no active interest in turf sports, being engaged in business in Boston.

Claws for Breakfast.

I put it to an old practitioner, who before his conversion must have had frequent opportunities for discussing such matters with his companions, what was the punishment most dreaded by them, and he unhesitatingly replied: "Flogging." "You would recommend it as a means for putting a stop to the many desperate burglaries that have taken place lately?" "I didn't say I'd recommend it," he replied, with an earnest shake of his head and a twitching of the muscles about his mouth as though the subject involved certain experiences he could not recall without wincing. "If anything would put a stop to it it is flogging. But no man with feelings for his fellow-creatures, no matter how bad they might be, could recommend flogging—leastways, not if he knew anything about it himself. I hardly liked to put to him the delicate question, had he ever had his back scored with the knotted thongs?—nor was it needful that I should do so. He screwed his mouth again and shrugged his shoulders shiveringly, and presently continued: "No one, except he has been through with it, can have any idea what the sufferings are. I have been through with it, and I've got the scars to prove, and I tell you this, sir, if I was so unfortunate as to slide back again to my wicked old ways and the judge was to put it to me, 'Will you have three years' penal and twenty-five lashes, or five years without 'em?' I'd take the five years and think it a light let off." It was evident to me from his manner of speaking he quite meant what he said, and that the opinion he had expressed was not hastily arrived at. I was not the less incredulous, however. "How long a time does it take to give a man twenty-five lashes?" I asked him. "Well, they don't hurry over it," he replied, with another wince at the rueful reminiscence. "They lay it on pretty well as regular as clockwork, and you can tell to a tick when the next stinger is coming. I should think twenty-five might take as many 'arf minits.'" "And rather than bear twelve minits and a half of sharp pain you would serve two years' imprisonment?" "You don't know what you're talking about," he replied, and with an offended impatience that contrasted strangely with his hitherto meek and mild demeanor. "You speak as if a fellow as soon as he's got his sentence was taken out of the dock straight and got his dose of the cat, and there was an end of it." "It can't much matter as to that," said I. "He has twenty-five lashes to receive, and they will cause him no more pain to-morrow or next week than if he was punished immediately." "Hah! that's where you're wrong," returned the converted burglar, with an energetic shake of his head; "that's where everybody is wrong who argues a thing without knowing. It is bad enough when it comes; there's no mistake about that. But waiting for it is the worst part. No day or hour is mentioned for it at the time at which a man receives his sentence when he is to have 'claws for breakfast' as it is called. It may be to-morrow, or it may be a fortnight or three weeks hence. It didn't so much matter when old Calcraft had the handling of the cat; he hadn't got strength enough to lay it on so as to hurt very much, but it's an other matter when one of those blessed six-foot Milbank warders sets about you. They cut bits out, that's what they do, as well I know and could prove to this very day if it was necessary. It must be a horrible sort of punishment or they wouldn't think it necessary to physic a man and get his body in order before they give it him. You know what, certain as death, is coming one day or other, and you go to bed every night and lay in a sweat for fear when the warder comes round at 6 next morning he'll say: 'You needn't put your shirt on this morning.' And if over-night the doctor should order you a couple of pills or a draught, you can't get a wink of sleep for finking about it, and very likely nothing comes of it that time, and you're kept three or four weeks at the same kind of torture. And at last you get it!" He closed the subject abruptly with these last words, but the shiver and the sudden close-setting of his teeth that accompanied the utterance of them told plainer than speech of the tenacity with which 'claws for breakfast' sticks in a man's memory."

—London Telegraph.

Brutal "Sport."

For over two hours yesterday the Boston bull-dogs, Pilot and Ned, fought each other. The encounter took place at a well-known sporting hostelry on the boulevard which leads to Coney Island, for \$2,000. Ten times the amount was wagered on the result. Both canines are champions, and are the heroes of many hard-fought battles in the pit. They were nearly matched in point of weight as could be desired, both turning the scale at twenty-seven pounds eight ounces. Pilot is a pure brindle, with one or two white spots on his body, one of these being over the lower jaw. Ned is nearly pure white, one or two liver-colored spots marking his skin. The pit was situated near the roof of the building, and around it was ranged seats, which rose one above the other and formed a regular amphitheatre, but they were much too light for the crowd that poured into the room. By actual count there were 450 faces around the pit, but this count did not take in a hundred or more who clamored for a sight at the conflict, and as soon as the dogs got together they clambered up the supports, which being very frail, gave way, and down tumbled the top tier. The extra weight broke down the lower seats, and in an instant there was a struggling mass of humanity in the pit in the midst of the fighting dogs. Such crowding and elbowing is seldom seen. Finally, something like order was restored, and the discomforted ones found fresh roosting places; these in turn gave way, and there was nothing left but to literally take up a fresh standpoint with front row of spectators as supports. Everything was taken in the utmost good humor, and hundred dollar bills were handed across the pit in the most reckless manner; but the host of sporting men from Boston, Hartford, New Haven, Bridgeport, New York, Philadelphia and Baltimore, knew each other thoroughly, and the simple nod of the head was sufficient to register a bet of \$500.

Everything went on swimmingly until the selection of a referee was attempted. The choosing of this functionary took up half an hour, but finally a well-known horse-racing man agreed to stand, and then the dogs were brought in for the washing and tamping process. Pilot was the first to get his bath, and after five minutes' manipulation he was pronounced presentable. Then Ned was brought out and washed in the most approved style. This took three minutes only, and the combatants were taken to their corners. Pilot in the northern end of the pit and Ned opposite. Time was called at 3:30 p. m., and no sooner had the word been given than Ned flew at Pilot's throat and turned him on his back, and the chewing and twisting process began. To equalize matters Pilot took Ned's foreleg in his mouth, and the fun began in earnest. Then it was nip for nip and gash for gash. Ned was the better wrestler and gave Pilot some ugly tosses, but he seemed to fight much better when he was under, and invariably secured a firm hold of Ned's jaw or leg as he went to the floor. After eight minutes' fighting both were covered with blood, and several times Ned howled as though he did not like the fangs that were constantly

being buried in his throat and sides; but he did not let up in the least, keeping up the gnawing process until the bones of Pilot's nose and jaw cracked loudly. There was twenty minutes of hard work before either dog showed any inclination to take a rest, and then the cessation of hostilities was mutual. Occasionally they would snap at each other, but the punishment administered was very light. After fighting twenty-eight minutes a claim was made that Pilot was fanged, and in his endeavors to take the tooth out of the lower lip Pilot's handler had his thumb bitten through. Soon after this the latter made a turn, and the animals were taken to their corners. The betting, which had been 5 to 4 on Pilot, now veered round to 6 to 4 on Ned.

After a fifteen seconds' breathing spell the canines went at it again. Ned forcing his antagonist all over the pit and fighting him to a standstill. Two or three turns were made in the hope that Pilot would not be able to come to the scratch, but he bane bravely forward every time he was sent out, only to be fought down. Frequently he fell in the middle of the pit as though about to give up, and would make an effort to get at Ned's legs; but although he held him, no punishment was given by Pilot. Ned, on the contrary, kept on chewing on his antagonist's nose, and the minutes ran into hours. Now and then one or the other would turn, but both scratched every time they were sent out. When two hours had expired several backers of Pilot made a suggestion that it would be a good thing to take Pilot away before he died in the pit. His attendant, realizing that he stood in a good way to not only lose the fight but also his dog, accepted a proposition to take \$25 and give up the fight, and in two hours and two minutes Ned was declared victor. He was very sore in the forelegs, but was not badly punished elsewhere. Pilot, on the contrary, was terribly lacerated about the head and body, and will very probably die from his injuries.—New York Star.

The Position of the Hop Crop.

As estimated by Bradstreet's, the domestic and foreign deficiency in hops is about 55,000,000 pounds, the consumption of the world being over 170,000,000 pounds. This view of the situation goes far to explain the necessity for the materially augmented prices asked during the past two months. In 1877 the quantity of hops carried over in the hop-growing countries of the world aggregated about 70,000,000 pounds, which is reflected in the quotations current at that time in the United States, three to eight cents per pound. In 1880 the world's demand was met by an even supply, in which was included stocks previously carried over. That year hops in this country averaged eighteen to twenty-five cents per pound. In 1881 it became necessary to glean carefully to avoid a squeeze in the hop market, as the falling off in the supply, as compared with the world's requirements, was about eight per cent. This year, however, the shortage unexpectedly became more pronounced, and is believed to be 33 per cent. less than what is demanded.

Growers having any of the crop in hand are holding out for seventy and seventy-eight cents, and firm at that. Large holders in cities do not care to sell. The opinion is common that prime 1882 hops will touch \$1 by Jan. 1, thus rivaling the recent prominent cry for "dollar oil" with one for "dollar hops." The largest brewers in the United States have certain supplies of hops in store, which, except in a few instances, are limited. They appear to have faith, however, that a reaction must take place in the foreign market and effect the rates here, which will enable them to purchase additional supplies at more favorable terms than it is now possible for them to do. They are fortunate, as a rule, in having stored an unusually large quantity of beer and ale, and the recent advance of from fifty cents to \$1 per barrel will, of course, react favorably upon the heavy stocks in vault, and in a large degree mitigate any loss on their season's business, owing to necessary increased outlay for hops.

The English hop crop has been characterized by various journals and by investors in American hops as "total failure." Late reports in competent agricultural publications do not bear out this assertion. The most conservative estimates of the requirements in England place the total for 1882-83 at 60,000,000 pounds and the English crop at 14,000,000 pounds. The latter total would hardly justify the appellation "a total failure," although admittedly a scant production. The English lookout for imports of hops is for about 5,000,000 pounds from the United States, about 9,500,000 pounds from Germany, 2,000,000 from Holland and Belgium, a total of 16,000,000 pounds. This, with the English production, will aggregate 30,500,000 pounds, against the 60,000,000 pounds required. Such a shortage in the English market of course means high prices. The "first pocket" of the season sold for \$2 45 per pound, which was, of course, a fancy figure, and by no means necessarily indicative of the range of prices for the season. Bulls in hops in London, however, fully expect to get eighty-five and ninety cents for their holdings, and there is little doubt that they will. In Belgium, as in England, the hops suffered severely from the aphides, mould and unfavorable weather. In France the crop is expected to be nearly the average, both in quantity and quality.

A SINGULAR LETTER. "Was Ephraim Blaine a Catholic?" "No, indeed; all the Blaines were Protestants, but all the Gillespies were strong Catholics. That's why Eph was buried beside his wife in the Catholic graveyard. No, Eph Blaine didn't belong to any church; he was too fond of his fun. I remember that when he was running for prothonotary of this county his opponents charged him with being a Catholic so as to arouse the Protestant element against him. There was a Catholic priest living here then by the name of Father McGuire. He and Eph Blaine were the best of friends, but he didn't go much on Eph's piety. To him Blaine applied for a certificate that he was not a member of his church. The priest, who was somewhat of a wag, but withal a splendid man, gave him a paper which read: 'This is to certify that Ephraim L. Blaine is not now nor never has been a member of the Catholic Church, and furthermore, in my opinion, he is not fit to be a member of any church.' This document pleased Blaine very much, and he often showed it to his friends years after it had the desired effect in his campaign for the county office. When Eph was elected prothonotary he left here and moved to Washington. I think James G. was then a good-sized boy."—Philadelphia Press.

On Oct. 13, at Newmarket, Walton, the "Plunger," won £8,000 on the victory of W. S. Crawford's two-year-old colt Energy, in the Great Challenge Stakes, and in the very next race of the day, the Newmarket Derby, landed £3,000 additional by Shrewsbury's success over Dutch Oven, the St. Leger victress being a hot favorite, the result of the race at once establishing Mr. Jardine's colt at very short odds for the Cambridgeshire. Walton's efforts on the two races therefore netted \$53,000.

Market Report.

FLOUR—We quote: Best City Extra, \$5 37½¢; \$5 50; Superfine, \$4 50¢; \$4 75; Inferior Extra, \$4 75¢; \$5 25; Inferior Superfine, \$3 75¢; \$4 1¢ bbl. WHEAT—The market is steady at present and there is a general impression that there will be better prices and an improved demand. No. 1 shipping is quoted at \$1 65¢; \$1 66½¢.

BARLEY—The market has a brighter prospect of holding more even prices than it has had for some time. Recent sales of No. 1 Feed, November, are quoted at \$1 38½¢; \$1 41; do December, \$1 41½¢; \$1 42½¢. Brewing at \$1 42½¢; \$1 45.

OATS—Quotations are, Fair Feed, \$1 20¢; \$1 75; Good, \$1 75¢; \$1 80; Choice, \$1 80¢; \$1 90¢ ctt.

RYE—Quotable at \$2 12½¢; \$2 25 for No. 1, and \$2 75¢; \$1 90 per ctt for No. 2 grade.

FEED—Ground Barley, \$91 p ton; Cracked Corn, \$38 p ton. Short, sellers are asking \$20 p ton. Oulcake meal the oil works sell to the trade at \$22 50 p ton, less the usual discount. Middlings, \$27½¢; \$28 p ton for lots at the mill.

HAY—Alfalfa, \$10¢; \$12 50; Wheat \$16¢; \$17; Wild Oat, \$15 50¢; \$16; Mixed \$12½¢; \$14 p ton.

PROVISIONS—Eastern Hams, 19½¢; 20¢; California Hams, 16½¢; 16½¢ for plain, 16½¢; 17¢ for sugar-cured canvased; Eastern Breakfast Bacon, 17½¢; 18¢; California Smoked Bacon 16½¢; 16½¢ for heavy and medium, and 17½¢; 18¢ for light and extra light; Clear Sides, 16½¢; 16½¢; Pork, \$21 50¢; \$22 for extra Prime, \$24¢; 25 for Prime Mess, \$25¢; 25 50 for Mess, \$27 for clear and \$28¢; 28 50 for extra Clear; Higs Feet, \$16¢; \$18 p bbl; Mess beef, \$14 for bbls and \$7 for hf bbls; Extra Mess Beef, \$14 50¢; \$15; Family Beef, \$16¢; 16 50 p bbl; California Smoked Beef, 14¢; 14½¢ p lb.

FRUIT—We quote: Apples, 30¢; 50¢ for common and 75¢; \$1 p box for good; Pears, 50¢; 1 25 p box; Strawberries, \$5¢; 7¢ p chest; Peaches, 60¢; 1 25 p box; Plums, 60¢; \$1 p box; Grapes, 30¢; 50¢ for common, 60¢; 75¢ for Black Hamburg, 60¢; 85¢ for Rose of Peru, 60¢; 90¢ p ton; Muscat and 50¢; 90¢ p box for Tokay; Wine Grapes, \$28¢; 33 p ton; Quinces, 75¢; 1 25 p box; Watermelons, \$5¢; \$10 per 100; Cantaloupes, 50¢; 75¢ p crate; Lemons, \$6 50¢; 50 p box for Sicily and \$3 p box for California; Limes, \$5¢; 50 p box for Mexican; Bananas, \$27¢; \$28 50 p bunch; Tahiti Oranges \$35¢; \$37 50 p thousand; Mexican do \$25¢; \$25 p thousand. New crop Western Cranberries are offering at \$15¢; \$17 p bbl.

VEGETABLES—We quote: Marrowfat Squash, \$8¢; \$10 p ton; Carrots, 30¢; 40¢; Turnips, 75¢; \$1; Cauliflower, 75¢; \$1 p dozen; Cabbage, 50¢; 75¢ p ctt; Garlic, 3¢; 4¢ p lb; Cucumbers, 40¢; 50¢ p box; Green Peas, 2½¢; 3¢ p lb; Green Peppers, 50¢; \$1 p box; Tomatoes, 25¢; 30¢ p box; Celery, 50¢ p doz; String Beans, 15¢; 25¢; Lima Beans, 5¢ p lb; Green Corn, 75¢; \$1 p box; Okra, 75¢; \$1; Egg Plant, 75¢; \$1 p box; Dried Okra, 18¢; 20¢; Dry Peppers, 15¢; 18¢ p lb.

POTATOES—River Red, 65¢; 85¢; Early Rose, \$1¢; \$1 20; Garnet Chile, \$1¢; \$1 10; Early Goodrich 90¢; \$1; Tomatoes and Petaluma, \$1¢; \$1 12½.

ONIONS—Quotable at 65¢ for choice and 25¢; 30 p sack for poor. BEANS—Bayos \$3 75¢; \$4; Butler, \$3¢; \$3 25 for small and \$3 30¢; \$3 50 for large; Lima, \$3 75¢; \$4; Pea, \$2 75¢; \$3 25; Pink, \$2 75¢; \$3; Red, \$2 75¢; \$3; small White, \$2 75¢; \$3 25; large White, \$2 50¢; \$2 75 p ctt.

BUTTER—We quote jobbing lots: Fancy, 35¢; choice, 30¢; \$2½; fair to good, 20¢; 28¢; inferior lots from country stores, 22¢; 25¢; firkin, 29¢; 30¢; good to choice, and 25¢; 27½¢ for ordinary; pickled roll, 27½¢; 30¢; Eastern, 24¢; 25¢ p lb.

EGGS—California choice, 47¢; 48¢; Interior, 40¢; 45¢; Eastern, 32½¢; 37¢; Lime, 27½¢; 30¢ p doz.

POULTRY—Live Turkeys, gobblers, 15¢; 17¢; do Hens, 15¢; 16¢; Roosters, \$5 50¢; \$6 for old and \$5¢; 60 for young; Hens \$6¢; \$7 50; Broilers, \$4¢; \$5, according to size; Ducks, 36¢; \$7 50 p dozen; Geese, 1¢; \$1 25 p pair; Goslings, \$1 50¢; \$2 p pair.

GAME—Scarce this week. Quail, \$1¢; \$1 25 p dozen; Mallard Ducks, \$4¢; \$4 50; Sprigs, 1 75¢; \$2 00; Brandt, \$1 50¢; \$1 75; Gray Geese \$2 50¢; \$2 75; White Geese, \$1 25¢; \$1 50; Teal, \$1¢; \$1 50; Wildgeese, \$1¢; \$1 25; Hare \$1 75¢; \$2 25; Rabbits, \$1 25¢; \$1 75.

WOOL—We quote spring: Humboldt and Mendocino, 24¢; 25¢ p lb; Sonoma, 22¢; 24¢; San Joaquin free, 17¢; 18¢; San Joaquin defective, 14¢; 17¢; Southern Coast, burly and seedy, 15¢; 17¢; Eastern Oregon choice, 23¢; 24¢; Eastern Oregon fair, 20¢; 22¢; Eastern Oregon poor, 18¢; 19¢; Valley Oregon, fine, 25¢; 27¢; Valley Oregon, coarse, 23¢; 24¢. We quote fall: San Joaquin and coast, 10¢; 12¢; San Joaquin and coast Lamb, good, 11¢; 13; Northern fall, free, 13¢; 17¢; Northern fall, defective, 11¢; 14; Northern fall, Lamb, 15¢; 17; Free Mountain, 13¢; 16.

HIDES AND SKINS. Dry hides, usual selection, 20¢; 21¢ p lb; culs one-third less, and Mexican Hides 1¢ p lb less. Dry Rip, 18¢; 20¢; Dry Calf, 21¢; 22¢; Salted Steers, over 55 lbs, 11¢ p lb; Steers and Cows, medium, 10¢; light do, 9¢; Salted Rip, 15 to 30 lbs, 11¢; Salted Calf, 14¢; 15¢ p lb; Dairy Calf 70¢; 80¢ each; Sheep Skins, 25¢; 30¢ for Shearlings; 30¢; 50¢ for short, 60¢; \$1 for medium, and \$1½; 50 apiece for long wool and wool skins. Butcher town Green Skins bring higher prices.

TALLOW—Quotable at 9½¢; 9½¢ p lb for rendered and 11½¢; 12½¢ for refined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 7½¢; 8¢; medium grade, 6¢; 6½¢; inferior, 5¢; 5½¢ p lb.

VEAL—Large Calves, 7½¢; 8¢; small ones, 8¢; 8½¢ p lb.

MUTTON—Wethers are quotable at 4¼¢; 4¢ and Ewes at 3½¢; 4¢ p lb, according to quality.

LAMB—Quotable at 6¢; 6½¢ p lb.

PORK—Live Hogs, 6½¢; 7¢ for hard and 6¼¢; 6½¢ for soft; dressed do 10¢; 10½¢ p lb for hard grain hogs.

 **DORR**, IMPORTED Gordon, winner in Nebraska Field Trials. Has been hunted on chickens, grouse, quail, woodcock and snipe in the New England States, North Carolina, Minnesota, Nebraska, Missouri, Iowa and Indiana. Retrieves without injury (dead or alive) anything from a snipe to a goose, from land or water. V. H. C. on the bench at Boston; also several money prizes and medals as a performing dog. Is probably the best broken dog on this Coast. On account of an attack of paralysis in my legs, which will prevent my using him this winter, I offer him for sale before returning to Massachusetts.
FRED A. TAFT, Truckee, Cal.

ENGLISH SETTERS.

 BRACE OF THOROUGH-BRED setters, well broke, for sale.
E. LEAVESLEY, Gilroy.

FOR SALE.

 A VERY FINE HAMBLETONIAN stallion, imported from Syracuse, N. Y.; nine years old; nutmeg bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over \$1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Club Stables.

Belmont—Mambrino Chief—Black-bird, for Sale.

 BAY YEARLING COLT, BY Pilot, grandson of Williamson's Belmont, his dam by Allambra (by Mambrino Chief, from Susan, by American Eclipse) grandam Oriole, by Simpson's Blackbird. Is now in Oakland at the stable of
JOS. CAIRN SIMPSON.

PAUL FRIEDHOFER,

PATHOLOGICAL HORSE-SHOER.

105 Commercial Street.

PRACTICAL IN ALL ITS VARIOUS BRANCHES.

A. WALDSTEIN,

CONSUMPTION.
I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & I. O. address. DR. A. A. SLOCUM, 181 Pearl St., N. Y.

FITS
A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.
From Am. Journal of Medicine.
Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cures of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. No advice any one wishing a cure to address Dr. AB. MESEROLE, No. 96 John St., New York.

HEAR YE DEAF.
Garmore's Ear Drum.
As invented and worn by him perfectly restoring the hearing. Entirely deaf for thirty years, he hears with them even whispers, distinctly. Are not observable, and remain in position without aid. Descriptive Circular Free. CAUTION: Do not be deceived by bogus ear drums. Mine is the only successful artificial Ear Drum manufactured.
JOHN GARMORE, Fifth & Race Sts., Cincinnati, O.

KILLIP & CO.,
LIVE STOCK & GENERAL AUCTIONEERS.
N. E. Cor. Kearny and Sutter Sts.

THURSDAY, NOV. 16TH, 1882,
at 12 o'clock, noon.

ON THE TRACK OF THE
Bay District Association
WE WILL OFFER FOR SALE AT PUBLIC auction the noted trotter

Rowdy Boy

(record 2:31½) by Rustic, dam by Belmont. Rowdy Boy is a gray gelding, four years old, and one of the most promising trotting colts in the country. Charles Marvin timed him three heats during the State Fair in 2:25.

Can be seen any time previous to sale on applying to
JAMES GARLAND,
Randlett's Hotel, near race-track, Oakland.

Also at the same time and place we will sell the well-known chestnut gelding

Ashley.

Ashley is well known throughout the State as a trotter of superior merit. Has a record of 2:24½. He is a splendid roadster and as a pole horse is unsurpassed. He was sired by Phinias, he by Werner's Rattler, his dam by George, grandam by Belmont. For further information apply to the auctioneers.

FINE THOROUGHBREDS FOR SALE.

BY DIRECTION OF MR. W. L. PRITCHARD
we will offer for sale at public auction at 12 m. at the grounds of the

Bay District Association
SAN FRANCISCO,

ON THURSDAY, NOVEMBER 16,
a choice lot of thoroughbred horses, comprising
Brood Mares—four-year-olds,
three-year-olds, two-year-olds and yearlings.

These animals are of the choicest blood and afford a rare opportunity of purchasing first-class stock. For other information or catalogues apply to
W. L. PRITCHARD, Sacramento,
or KILLIP & CO., Auctioneers.

J. A. McKERRON,
MANUFACTURER OF FINE HARNESS.

Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE
SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING
with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the

Pacific Coast.

with its beautiful Groves and delightful Drives. Trout

abundance can be obtained from the overwater streams

in the vicinity of Monterey, and the best shooting may

be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which

abound in its waters, notably Salmon, Rock Cod, Bar-

acuda, Pompano, Spanish Mackerel, and Flounder.

The above-mentioned attractions, in connection with

the low rates of fare, rapid transit, and the superior

accommodations furnished at the "HOTEL DEL

MONTE," have made Monterey a paradise for sports-

men.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING

BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER

facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known

Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. con-

nects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San

Mateo, Santa Clara, San Benito, Santa Cruz and Mon-

terey, in each of which game abounds in great variety.

Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer

and Bear.

Lakes PILARCITOS and SAN ANDREAS are

reached by this line. Stages connect with trains daily

at San Mateo for those well-known Resorts, PURIS-

SIMA, SAN GREGORIO and PESCADERO. We

would particularly call attention to the unlimited

extent of range at and about SAN BRUNO and McMA-

HON'S RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TURF AND TRACK.

P. C. B. H. A.

Fall Meeting at the Bay District Course—Favorable Weather and Fine Racing.

First Day.

There was rime on the sidewalks last Saturday morning, though it was not long before the rays of the sun melted the hoar frost, and there was every indication that the day would be favorable for the opening of the fall meeting of the Pacific Coast Blood Horse Association. But at noontime the sky was overcast and there was a chilly wind from the north. The track was in much better condition than was anticipated, as it was thoroughly soaked from the rains of Wednesday, and on Thursday the horses were wallowing through the mud in the exercising which the trainers thought imperative to be given. Work must be done with gallopers, especially those which have not run for a while, and, wet or dry, the trainer is compelled to send them along. While the track was in fair condition, it was, probably, a trifle slow. Some rated it to be two seconds to the mile behind when in the best order, and others a second from what it will be when a few days more sunshine have reduced the moisture.

This course is peculiar in many respects. When just in the right shape it is doubtful if there is a "faster track" anywhere, and whenever it is in order to run upon it is a "safe" one. The only time when it could be regarded otherwise is when it is slippery on the surface or when it is so soft that the horses' feet sink to an undue depth. The substratum of sand permits the water which does not run off, to drain through, and at the same time retains the moisture so that there is elasticity with a firm foothold above. The turns are very easy, the first being some over a quarter of a mile, the curve gradually merging into the backstretch so that the horses adapt themselves to the change gradually.

The course and appointments are first-class, and it is a great pity that the citizens of San Francisco do not show a more hearty appreciation of it and the fine racing which has always been a feature of the meetings of this association by a large attendance. We sincerely wish that we could write conscientiously that the balconies of the club house and hotel and the seats of the grand stand were crowded to the fullest, and that standing room was at a premium, but we are sorry to say that though there was a fair concourse for the opening day in this city there is scarcely a city in the United States, of one quarter the size, where the numbers would not have been quadrupled.

It was a fair crowd, however, and well satisfied with the sport as was evidenced by the hearty cheers that greeted the winners, and better yet, without a whisper of dissatisfaction at the decision of the judges, or a question as to the honesty of the racing. The P. C. B. H. A. has effected a grand change in racing in California. The highwaymen of the course have been brought under control, or it will be better to write, the majority of them banished, so that in the many races run under its auspices only one had a taint, and in that the party was summarily punished. Then the sport has been systematized and brought in accordance with modern ideas. The old and barbarous custom of heats at long distances has been superseded by dashes, and in lieu of the dragging along of wearied limbs there are life, spirit and animation. All that is necessary to make the racing here equally as enjoyable as that at the East is to see twenty thousand people on the course every day of the meeting, and twice that number of thousands when the winding-up day comes. The time is not distant when such will be the case and in the not far-off future the association will be rewarded for its labors by an attendance commensurate with its deserts.

The first race was a dash of three-quarters, for a purse of \$200; the entree fee of \$10 each going to the second in the

race. There were nine entries; three of which were drawn, leaving Premium, ridden by Patsy Duffy; Jim Douglas, with Geo. Howson up; Jim Renwick, Estabrook the jockey; Forest King, with Charlie Ross for pilot, May D, Billy Appleby having the mount, and Garfield—a late importation from the Sandwich Islands, though bred in California—under the charge of Fred Carillo. They were awarded places in the order their names are written, and in the pool sales Premium was the favorite at the odds of \$25 on her to \$20 on all the others. The six presented a fine appearance when marshaled at the starting place, the quarter pole, and though there was some trouble in getting them together, it was not long until a very good start was affected. Garfield at once sprang off with the lead, with Premium in close order, the others not far behind, and the first quarter of a mile was run in twenty-four seconds, Garfield having half a length the advantage of Premium, the others in a bunch two or three lengths behind. It was evident that this fast pace could not be kept, though the next quarter was made in twenty-five seconds, the half-mile in forty-nine seconds, Garfield still leading; Premium second, May D and Jim Douglas closing the gap perceptibly. It was certain from their positions that there would be a lively race home, and before a hundred yards of the homestretch was made Garfield dropped back, beaten, leaving Premium in the lead. Jim Douglas was coming fast, however; and May D was determined to take an active part in the struggle. At the drawgate Douglas and Premium were on even terms, but from thence out Douglas had it all his own way, winning with something to spare, a length in front of Premium, the same distance between her and May D the distance accomplished in the fast time of 1:15. The others came in in straggling order, the riders pulling up when they found that a place was beyond their reach. This is as fast as three-quarters of a mile has ever been run in California, and within one second of the best on record. Considering that the weights were according to the new schedule and the admitted slowness of the course it must be regarded as an extra good effort and gives Jim Douglas high rank among the flyers of the coast. He is a fine looking, strapping big horse, and as he made a season in the stud he is entitled to still more credit. He has a double cross of Lexington and also of Glencoe so that this great combination has lost none of its potency.

SUMMARY.

PACIFIC COAST BLOOD HORSE ASSOCIATION, FALL MEETING, BAY DISTRICT COURSE, SAN FRANCISCO NOV. 11, 1882.—Purse \$200, free to all, \$10 each. Entrance to second horse; dash of three-quarters of a mile. Geo. Howson's b h Jim Douglas, by Wildidle—by Norfolk, 4 years 118 lbs. (Howson)..... 1
J. B. Haggin's ch m Premium, by Castor—by St. Louis, aged, 115 lbs. (Duffy)..... 2
J. and H. C. Judson's ch m May D, by Wildidle—Nettie Brown, 4 years 115 lbs. (Appleby)..... 4
R. H. Green's g c Garfield, by California—Queen, 3 years, 113 lbs. (Carillo)..... 0
L. Stanford's br c Forest King, by Monday—Abbie W, 3 years 113 lbs (Hoss)..... 0
Steinler & Ayers' ch g Jim Renwick, by Joe Hooker—Big Gun, 4 years, 115 lbs, Estabrook..... 0
Time 1:15.

The second race was a purse of \$200, for "maidens," i. e., horses that had never won a race, the \$10 entrance fee going to the second horse; a dash of a mile. Of the eight entries four came to the front, viz., Joe Dion, George Howson, rider; Patrol, Billy Appleby; Judge McKinstry, Patsy Duffy; and Bob Wooding. Kennedy. The placing was as above, and the start was delayed by the fractionsness of Bob Wooding. He was a crazy horse, bounding into the air, notwithstanding there was a stalwart man hanging to his bridle, the jockey being unable to do anything with him, and in his mad efforts he broke the bridle. Replaced by another, with a safety cord on his lower jaw, even then it was almost impossible to arrange him, though after a short time a very fair start was given. Two of the horses had crossed the score when the flag fell with Crazy Bob two or three lengths behind it; though in fifty yards he had the field, and at the quarter pole he had opened a gap of many lengths, the others bunched so that it was difficult to tell which was second, though the favorite, Judge McKinstry, was in the rear. Bob keeping up his mad flight ran down the backstretch in twenty-five seconds, Joe Dion and Patrol on even terms, six lengths behind, and Judge McKinstry pegging away that much in the rear of them. He had been so great a favorite that at the opening of the pool sales he brought \$20 to \$10 on all the others, and

his supporters were despondent as his chances appeared to be of the slenderest sort. There was little change rounding the further turn until nearing the three-quarter pole, when Joe and Patrol closed on Bob, and the Judge mended his position a trifle. If he could not run fast he gave evidence of being able to keep up his lick, and at the seven furlong mark he was also past Bob, and a hundred yards further on he was even with Patrol. From there he had it all his own way and won by two lengths, Patrol second, Bob Wooding third and Joe Dion last. Time—1:46.

There was a difference of opinion in the judges, stand regarding the start in this race, one of the judges holding that as a portion of the horses were beyond the wire when the flag fell the race was void. Inasmuch as this question is considered on the editorial page it is only necessary to refer to it here.

The winner of this race is a remarkably handsome colt and though a little under size is likely to develop into a fine racehorse. He labors under the disadvantage of not having been trained when a two-year old, and was unfortunate in the commencement of two seasons. Being very "high" when put in training his legs were backskinned and for a time he was thrown out of training. He has a fine turn of speed which he did not show in any portion of the race so that when this gift returns he will be a dangerous competitor in future races. Whichever side of the paternal branch he belongs to, he has a valuable inheritance as "Old Thad" and Grinstead were "sure enough" racehorses, and his dam—well it is sufficient to say he is a son of Katie Pease.

SUMMARY.

Same day—Purse \$200; free for all maidens; \$10 each; entrance to second horse; dash of a mile.
Jas. Mee names b c Judge McKinstry, by Thad Stevens or Grinstead 1
Katie Pease, 3 yrs., 109 lbs. (Duffy)..... 1
J. and H. C. Judson name b c Patrol, by Wildidle—Nettie Brown, 3 yrs., 109 lbs. (Appleby)..... 2
Wm. Boots names b g Bob Wooding, by Bob Wooding—Gladiola, 3 yrs., 106 lbs. (Kennedy)..... 3
E. S. Paddock names b g Joe Dion, by Norfolk—Nevada, 4 yrs., 115 lbs. (Howson)..... 0
Time—1:46.

The third race was a handicap stake of \$25 each, \$250 added, a dash of one and one-eighth miles. The starters were Nathan Coombs, 100 pounds; Frank Rhoads, 108 pounds; Joe Howell, 120 pounds; Haddington, 108 pounds; Forest King, 105 pounds; Atlanta, 106 pounds, and Ella Doane, 108 pounds. At the start of the pool-selling Joe Howell was the favorite, when the speculators taking into consideration the heavy weight the old veteran was laden with, threw him up for Frank Rhoads, and just previous to the start he was only bringing \$20 in \$100-pools. Again there was a good start, and this time Haddington cut out the work. He was leading when the stand was passed for the first time, and at the quarter-pole, forty seconds from the start, he had opened a wide gap on all the others, which were running in a bunch. He was nearly as far in front at the half, the five furlongs run in 1:06½, and he still led around the turn. Ella Doane was coming on him however, and half-way from the three-quarter pole home she had him beaten, and it looked as though she had won the victory. Old Joe was also coming on the very outside of the track, having emerged from the ruck, nobody knew how, and with a rush that could not be stayed won a gallant fight—Ella Doane second, Haddington third—in 1:58. There had been cheers over the others as they crossed the score; in this there was a tumult of applause repeated when the riders returned to weigh in.

When there is more leisure time we will endeavor to give the history of this horse, and if his former owner will furnish the information it will be found to be one of the most romantic in equine annals. Notwithstanding his ten years and scores upon scores of hard-run races he is as sound as when first put in training and a horse of very high form.

SUMMARY.

Same day—Handicap stake for all ages; \$25 entrance and \$10 if declared; \$250 added; \$50 to second horse; dash of a mile and one-eighth.
Steinler & Ayers name b g Joe Howell, by Bonnie Scotland—Eva Sheppard, 120 lbs..... 1
J. and H. C. Judson name b m Ella Doane, by Wildidle—Nettie Brown, 108 lbs..... 2
P. J. Shafter names b h Haddington, by imported Haddington 3
L. Stanford names br c Forest King, by Monday—Abbie W, 105 lbs..... 0
W. Boots names br h Nathan Coombs, by Lodi—Miami, 100 lbs..... 0
Theo. Winters names ch f Atlanta, by Norfolk—Lady Jane, 106 lbs..... 0
W. L. Pritchard names b c Frank Rhoads, by Lester—Ada A, 108 lbs..... 0
Time—1:58.

The concluding game was a selling race, Belshaw carrying ninety-eight pounds, Euchre 101 pounds and Frank Rhoads 113 pounds. These weights were adjusted by the prices they were entered to be sold for. Belshaw was the favorite in the pools, Euchre being the second choice. The purse was \$200, with \$50 to the second, the distance one and a quarter miles

This brought the starting point at the three-quarter pole, and from the stand it could not be told which had the advantage when the flag fell. Belshaw led under the wire at the completion of the quarter, and when a half had been run Euchre was at his hip. Passing the half-mile pole, Belshaw had only a neck the best of it, and making the northern semi-circle it was head and head. Coming home at one time it looked as though Euchre had his opponent beaten, but Belshaw came again and won a fine race by half a length, Rhoads two lengths behind Euchre. Time, 2:14. It is seldom that four better races are seen in one afternoon, and these won encomiums on all sides.

Thus two of the get of Wildidle won races on the first day, and though Belshaw is not so well formed as the Wildidles usually are he is very speedy, especially with light weight, and as he grows older may increase in substance.

SUMMARY.

Same day—Selling Purse, \$200; a mile and a quarter; entrance free; \$50 to the second horse; the winner to be sold at auction; horses entered for \$1,500 to carry regular weight; if for \$1,000, five pounds allowed; if for \$750, ten pounds; if for \$500, seventeen pounds, and if for \$300, twenty-two pounds. Any one can claim the winner, and the excess realized beyond the amount at which the horse is entered to be divided between the association and the owner of the second horse.

J. & H. C. Judson name b g Belshaw, by Wildidle, — by Hercules, 4 years, \$500, 94 lbs. 1
J. T. Gilmer names ch h Euchre, by Leinster — Flush, 5 years, \$500, 101 lbs. 2
W. L. Pritchard names b c Frank Rhoads, by Leinster, — Ada A, 4 years, \$1,000, 113 lbs. 3
Time—2:14.

The beaten horses are worthy of more than a passing notice. The second in the first race, Premium, has run her share of races, and many of them over hard tracks, without showing any indication of weakness in any place. Had it not been for the great pace which Garfield set for the first half-mile the result might have been different, at least so far that it would have been a neck and neck affair between her and the winner. Garfield has immense speed, and as it was claimed he was not in condition; that essential factor in his favor he will be troublesome to the best. Writing, however, on the eve of the second day of the meeting, it will be extremely hazardous to venture predictions which the morrow may upset, and the safest course will be to await the "current of events."

Second Day.

At noon on Wednesday the air was as balmy as that of a June evening in the Vale of Cashmere. A ride on the outside of the Geary street dummy was enjoyable if clad in the ordinary habiliments of summer, and all were offering congratulations at the grand prospect for the racing. There could not be a better time for horses to display their powers of speed and bottom, and prognostications were rife that at least one of the contests would show remarkable time. With all of this feeling it would have been an ultra sanguine man who would have ventured a prediction that there was to be a "smashing" of the record. At this time of the year it is hardly to be expected that horses, drilled to death with the races of the whole season, could excel previous efforts, and, notwithstanding the fine day, make the crowning effort of their career. The mellifluous atmosphere was a great point in their favor; that the course would be in the best possible condition was assured, and this opinion was corroborated on arrival. The track was as fast as it is possible to be, unless some inventive genius constructs one of gutta percha with a substratum of steel springs. There was just loose dirt enough to fill the hollow of the foot, and there was no "cupping," or giving way to retard the horses in their stride. The attendance was fair. Not so numerous as there should be when such a bill was offered, although there was the usual surging crowd on the slope between the hotel and the inner fence, and on the balcony of the Club house there was more than the usual quota of ladies and their escorts. A novel feature at a race meeting was a group of the "almond-eyed" picturesquely appareled Mongolians, and from the interest with which they watched the proceedings, doubtless they shared in the enjoyment of race day.

The first race to be decided was the Ladies' stake, a dash of three-quarters of a mile for two-year-old fillies. The stake for \$50 each, \$25 forfeit, and of the twenty nominations five came to the post. There were Marion, by Hubbard; Lou Spencer, by Norfolk; Laura, by Shannon; Satanella, by Leveller, and May B, by Shannon. The positions at the start were in the same order their names are written, and in the betting the Palo Alto filly Satanella was a great favorite, though she carried 4½ pounds over weight. The youngsters behaved very well, and after a few break aways, the flag was dropped. Lou Spencer had rather the best of the send-off, and she took advantage of it by going away at a great pace; and when the half-mile pole was passed, she had a lead which appeared enough to win the race. Satanella was running easily, however, and when fairly straightened into the home run she collared the leader, and from that point she had it all her own way, and won very handily in 1:16½; Lou Spencer second, Laura third, Marion fourth, and May B, who was not driven after it was evident she could not win, last.

SUMMARY.

Nov. 15—The Ladies' Stake, for two-year-old fillies, at \$50 each, half forfeit; \$200 added; second to save stake; three-quarters of a mile. Palo Alto names ch f Satanella, by Leveller—Fron Frou (Fallon). 1
Theo. Winters names ch f Lou Spencer, by Norfolk—Ballerina, (Carter). 2
J. B. Chase names b f Laura, by Shannon—Folly, (Kelly). 3
J. B. Chase names b g Marion, by Hubbard—Electra, (Estabrook). 4
P. Robson names ch f May B, by Shannon—Jessie R, (Kennedy). 5
Time—1:16½.

The second race was heats of three-quarters of a mile and it is no exaggeration to state that it was the best field of horses that ever started in a race of this kind on the Pacific Coast. The result proved that it was as good as ever started on this continent, as the race takes precedence of all others, and the time for the three heats is the best on record. It is also the best for first and second heats, and the fastest time made by "aged" horses. There were eleven entries and seven starters. In the placing Night Hawk had the first position, and she was ridden by Fred Ross; Howell was second, with George Howson in the saddle; the third was Frank Rhoads; Ed Fallon the jockey; in the fourth place came Forest King, with Charley Ross to guide him; Premium fifth, Patsy Duffy the pilot; Garfield sixth, Fred Carillo holding the reins, and on the outskirts was May D with Billy Appleby in charge. It was not only a good field of horses, as there was an array of talent in the saddle, every one of the jockeys having the benefit of years of experience, some of them men of families, and their visages bearded and showing the lines which "wasting" is sure to produce. Shrewd, keen-looking little men, with determination in the eye, and a wiriness of frame which the tight-fitting breeches brought out in full relief. The schedule of weights adopted at the last annual meeting, being the same time as those of the American Jockey Club, Saratoga, Long Branch and Coney Island Jockey Club, permits men being employed in place of boys, and thus the horses have the benefit of experience, as well as the compari-

son being equal. Had this race been run with light weight the merit would have been overlooked and the fast time accredited to the difference. As it is, California can add another figure to the best, for though the winner was bred in Illinois, the "glorious climate" was necessary to give him the highest place in the record. With this array of craft and talent in the saddle it was not surprising that the starter had some difficulty in getting them off. In so short a race the start was everything, and these old watchful riders were thoroughly alive to the importance of getting the best of it. There was amusement to those at the starting point in getting the tactics, but to the other spectators the delay was irksome, and when the flag fell, there was a feeling of relief that the tiresome overture had come to an end. Premium had a trifle the best of it, and away she went at a tremendous pace. Howell, who had been largely the favorite in the pools, was second as they passed the quarter pole in twenty-five seconds, though at this early stage it was evident that it was not intended he should fight for this heat, and as the others drew up he was pulled back to an easy stride. Around the turn they whirled, Premium still leading, the others a neck behind. Nearing the three-quarter pole Forest King drew up, and from there all the way home he made a gallant run to reach the flying mare. She had it all her own way and won the heat with apparently something to spare in the very fast time of 1:14½. Forest King was on her hip, Frank Rhoads was close to him, Howell was cantering along fourth. May D was fifth, Night Hawk was sixth, and Garfield, who did not show any of the speed he exhibited in his former race, distanced. Joe Howell was still a prime favorite, and the result of the heat did not stagger the faith of his backers a particle. The money was rushed into the pool box as fast as the clerks could receive it, and for all Premium had shown such a wonderful flight of speed, the old veteran had supporters who claimed that he must be invincible. Fifty dollars on him, \$26 on the field, \$20 on Premium and \$17 on Night Hawk, were the rates, and the only ones oblivious of the delay that again occurred at the start were the excited throng which surrounded the pool-sellers. Premium would rush off with one or two in company, and viciously switch her tail and refuse to come back to the starting point. Night Hawk would plunge into the air, and attempt to dance a hornpipe, while the others were evorting around in a milder way. When the flag fell Premium was in motion first, and, as before, Joe Howell was keeping her company. But this time there was no pulling back, though Forest King was on her haunches as they rushed past the half-mile post in 24½ seconds. This place he surrendered to Howell on going around the turn, and then came the exciting part of the race. It was head and ears at the seven furlongs, but Howell had his ears pricked, while the mare was in trouble, and from the drawgate in he had it all his own way, crossing the score a length in advance of Premium, Frank Rhoads third, Night Hawk fourth, May D fifth, and Forest King last, the time the same as before, 1:14½.

The two fastest heats ever recorded, it was not surprising that Howell brought \$25 to \$7 on all the others, and there were more to invest on the favorite than those who were willing to take the short side, and yet there were some sanguine enough to think that Night Hawk had a show, and others who pinned their faith on May D. There was the same tiresome delay in getting them off for the third heat, and this time without the excitement of the betting to relieve the monotony. This time Night Hawk led soon after the word was given, and she had opened quite a gap at the half-mile, but rounding the turn all were in close order, though when nearly at the three-quarters, the cherry and pink on Howell was moving to the front. There was a light jacket in the throng, and when the run home was commenced it was gaining on Howell. This was borne by May D and the game filly made a grand effort to pluck the garland of victory. It was useless, however, as the favorite came under the wire a good length before her, with Night Hawk third, Premium fourth, Frank Rhoads fifth and Forest King sixth. The time was 1:15, and thus ended the best and fastest race ever run at the distance. Excepting Garfield, every horse in the race was worthy of a high place, and the gray from the dominions of King Kalakaua was evidently not at himself.

SUMMARY.

Same day—Purse \$250, free for all; \$50 to second horse; entrance free; three-quarters of a mile and repeat. Winner of dash of three-quarters in first day ten pounds extra.
Stemler & Ayres name b g Joe Howell, by Bonnie Scotland—Eva Sheppard, aged, 115 lbs. (Howson). 4 1 1
J. B. Haggin names ch m Premium, by Castor—by St. Louis, aged, 115 lbs. (Duffy). 1 2 4

L. Stanford names br c Forest King, by Monday—Abbie W, 3 years, 113 lbs. (C. Ross). 2 6 6
W. L. Pritchard names b c Frank Rhoads, by Leinster—Ada A, 4 years, 118 lbs. (Fallon). 3 3 5
P. J. Shaffer names b m Night Hawk, by imported Haddington—Napa Queen, 5 years, 125 lbs. (F. Ross). 6 4 3
R. J. Green names gr c Garfield, by California—Queen, 3 years, 113 lbs. (Courtney). dis.
Time—1:14½, 1:14½, 1:15.

The third race was the Vestal Stake for three-year-old fillies, a dash of one and one-fourth miles, and of the twelve nominations three were all that appeared. These were Precious, Duchess of Norfolk and Sister to Lottery. Howson was on the first, J. Courtney had the mount on the Duchess, and Fred Ross was on the Sister to Lottery. Precious was the favorite, as it was evident that Duchess of Norfolk was not within twenty-eight pounds of her old form, and when stripped she was deficient in muscle and had a jaded look which told of the effects of the long journey after the still longer Eastern campaign. Precious went away with the lead, running the first half-mile in 53 seconds, three-quarters in 1:20, the mile in 1:46½, and the race in 2:12½. The Duchess has evidently lost the fine turn of speed which she showed at the spring meeting, and appeared unable to extend herself on any portion of the ground. The Sister to Lottery was out-paced, giving Precious an easy thing of it from start to finish.

SUMMARY.

Same day—Vestal stake, for three-year-old fillies; \$25 each p. p.; \$300 added; second to receive \$100; third to save stake; dash of one and one-quarter miles.
Palo Alto names b f Precious, by Lever—Frolic, (Howson). 1
H. Schwartz names b f Sister to Lottery, by Monday—Virginia, (F. Ross). 2
Theo. Winters names b f Duchess of Norfolk, by Norfolk—Marion, (Courtney). 3
Time—2:12½.

The fourth race was a handicap for three-year-old fillies, the distance one mile, and the starters May B, 107 pounds, Lou Spencer, 102 pounds, and the Palo Alto Shannon-Camilia Urso filly, 100 pounds. It was dusk when the bell rang to summon the contestants, and when they were running only an occasional glimpse could be caught of the bright colors of the jockeys, and a shadowy outline of the flying steeds against the high fence of the track. It was a dreamy race—flying phantoms, indistinct as the misty steeds of Ossian—and not

until they were within a furlong of home was it apparent which was the leader. Under the wire there was no difficulty, as May B had the lead by several lengths; Lou Spencer second, the other quite a distance in the rear. Time, 1:45.

SUMMARY.

Same day—Handicap purse; for two-year-olds; \$25 each and \$10 if declared; \$250 added; second to receive \$50; dash of a mile.
P. Robson names ch f May B, by Shannon—Jessie R, 107 lbs. 1
Theo. Winters names; b f Lou Spencer, by Norfolk—Ballerina, 102 lbs. 2
Palo Alto names br f, by Shannon—Camilia Urso, 100 lbs. 3
Time—1:45.

The hurdle race was postponed until Saturday.

Spotting Ringers.

The crop of ringers has been very large in the more remote circuits east of the Rockies this year and they are reported everywhere from Maine to Salt Lake. The following story of a successful tour among the guileless turfmen of Iowa is told by the Chicago Breeders' Gazette:

"About the sickest job in that line that I ever knew to be done," remarked one of the party, "was by the crowd that had old Silversides out in Iowa this season and were trotting him in three-minute races under the name of Honest Tom." "What! not the old grey horse that got a record of 2:22 at Columbus four years ago, and was broken down so badly across the back that it used to take four men a quarter of an hour to get him on his feet in the morning?" queried another of the party.

"That's the identical horse," responded the first individual, "and the curious part of it is that the old fellow has changed so that is oldest friends would be puzzled to know him. The story of his career this season is a pretty good one. Last spring a couple of men, named Carr and Robinson, who live in Norwalk, Nebraska, concluded they would buy a trotter, and went to Ohio for that purpose. Now I don't pretend to say whether they were after a 'ringer' or not, but anyhow they secured old Silversides, and entered him all through the 'Big Six' circuit as Honest Tom. At Cedar Rapids, the first place they were engaged, people began to tell them that Honest Tom was Silversides, but the Nebraska men wouldn't have it that way at all, because half the horsemen were just as certain that Tom wasn't Silversides as the other half were that he was. Peter Johnson was at the meeting, and after looking the horse over carefully said that he could not be Silversides, because that horse used to have a couple of shoe-boils, no traces of which were to be seen. Silversides also had bad legs, while Honest Tom's underpinning was in tip-top shape. But one morning Johnson stood a long while in front of the old horse, and finally noticed the white eye that all who have seen Silversides will remember. Then he joined the Silversides party.

"When the day for Honest Tom's race arrived, the officers of the association told Robinson that his horse had been entered in a class to which he was not eligible, and under a false name. Mr. Robinson was either pretty scared, or else made an elegant bluff at being so.

"My God! gentlemen," he said, 'don't talk that way; I am no swindler, but an honest farmer. I went down to Ohio and bought this horse from a banker. I am now satisfied that he is Silversides, and that I have been grossly imposed upon. You are perfectly welcome to my entrance money (Honest Tom was entered in three slow classes), but, for the sake of my reputation at home, don't expel me.'

"Of course," continued the narrator of the story, "the judges let the matter drop, as the horse had not started in a race; but Robinson was disgusted with trotting horses, and resolved to abandon the business at once. So he sold the horse, sulky, and two suits of horse clothing for \$200, the purchasers being a couple of smart men from Cedar county, Ia. They knew more about trotters than Robinson did, and struck out on a new trail at once. Keeping for the old horse the name that Robinson had given him, they began a very successful career, trotting Silversides nine races in Iowa, and winning every one of them. Monticello, Maquoketa, Vinton, De Witt, Carthage, Tipton and Anamosa were among the places at which the grey performed, and at the last mentioned town he won a heat in 2:26½. The track was in the hands of men who were inclined to temper the record to the shorn trotter, and they volunteered the information to Honest Tom's driver that they would announce the time as 2:30½, in order to keep him in the 2:30 class. The driver thanked them profusely for their kindness, and then he went to the stable and laughed until the tears ran down his cheeks at the idea of keeping old Silversides in the 2:30 class. At Anamosa, Honest Tom struck Sucker Maid, Parkis' Abdallah, and a horse called Bay Henry, that some Iowa men bought in Chicago last winter, and have been trotting successfully. In this race Honest Tom trotted a half mile in 1:09½, showing that he had all of his old-time speed, and you can bet he has. He will be nineteen years old next spring, and, barring his weak back, is just as good as ever, as the suckers who were trotting against him last summer found out to their sorrow. When they learn that Honest Tom, the three-minute horse, was none other than Silversides, with a record of 2:22, there will be some tall swearing in Iowa, and don't you forget it."

Large Colts.

EDITOR BREEDER AND SPORTSMAN: In your issue of the 4th inst. I notice the mention of a Clydesdale stallion of two years weighing 1,110 pounds, owned by F. F. Bart of Tehama county, who thinks him the largest animal of his age and breed in the State; weight per month, 46½ pounds. I admit the above to be a good showing, but here are some figures: On the ranch of Moses Hopkins, Esq., two horses, when two years old, weighed respectively 1,418 and 1,437 pounds, making 2,855 pounds, or about 54½ pounds each per month of age. One filly fifteen months old weighed 1,015 pounds, or 67½ pounds per month; also three others same age, equally large, not weighed. Mr. Hopkins raised and sold from the same sire a stallion that weighed 1,050 pounds at twelve months old, being 87½ pounds per month. These are all from the imported French horse "Idol" and are all fine style and free movers. I give them as samples of large horses raised in Sutter county. SUBSCRIBER.

ARRIVAL OF THOROUGHBREDS.—The steamship Erin, which conveyed on its last voyage home Mr. Lorillard's latest addition to his English racing establishment, brought back for that gentleman the colt by Scottish Chief, out of Seclusion (the dam of Hermit), and Nereid, by Saxon, out of Highland Lassie. There were also three brood mares on board, and the five were taken to Mr. Stoddart's stables, Greenwich street, near Houston. Mr. Bishop, who had charge of the horses, stated to Mr. Stoddart that the reports in the English papers respecting the condition of those he had taken over to Tom Cannon's stable were gross exaggerations. They were landed in as good shape as any of the many shipments he had had charge of. At Liverpool they were met by Tom Cannon's head lad, who took them on to Stockbridge.

Overman and Helene.

The following is the New York *Spirit's* account of the race between Overman and Helene:

In this age, when the trotting turf is accused of so many "sins of omission and commission," it is pleasant to us to record a race so fairly made and honorably carried out as the match between Mr. I. Cohnfield's chestnut mare Helene and Capt. Wm. Kohl's chestnut gelding Overman, and we should like to witness more matches of a similar character.

This event excited the greatest interest, and the race was well worth going a long journey to see. It was made to take place on Saturday last, a good day and track being stipulated; but as the track was then soft from recent rains, and would not suit Overman, it was postponed until yesterday. Leadens skies and London fogs visited us in the interim, and so it was carried over until to-day. Fortunately, the morning opened with charming weather, the fog rolled away, the atmosphere was as mild as early autumn, and there was not sufficient breeze stirring to scatter the dying leaves. The patience of those who were anxious to be present at the race was severely tried as many returned home Saturday disappointed, and were not sure that it would be decided to-day until the announcement appeared on the tape at the different stations.

At the hour appointed there was a large muster of gentlemen interested in the sport, including Messrs. Wm. H. Vanderbilt, Frank Work, T. C. Eastman, Col. L. Kip Jr., Foster Dewey, Lawrence Jerome, Wm. Turnbull, W. H. Harbeck, A. J. Dam, Alex. Taylor Jr., J. S. Ferguson, George B. Alley, Edwin Thorne, J. C. De La Vergne, A. A. Bonner, W. F. Kidder, W. J. Welsh, C. S. Benham, Jason Miller, Capt. Lee Bumfreville, Frank Ferguson, I. I. Stillings, Chas. Backman, L. Lorillard, J. W. Shaw, Scott Leighton, the artist, and L. C. Chase of Boston, and hosts of others, with such old-timers as John Crooks, John Sherwood, Jake Somerindyke, John Rogers and a few others, who were "Fathers in Israel" when Flora was in her prime.

The judges selected were Messrs. David Bonner, Charles H. Raymond and W. H. Humphreys. The track was a trifle damp in places, but was put in smooth order by the Griffin road machine. The drivers thought it was about two seconds slow; but, from the speed shown by the horses, and appearance of the footing, we judge it was not more than a second slower than usual.

First heat—Helene drew the pole and Mr. Bonner dispatched them on first trial to an excellent start. The mare rushed off with the lead, and, being too anxious, trotted over herself on approaching the first turn and also at the lower entrance to the track, but her breaks were unimportant, and she led Overman a length to the quarter, in 35 seconds, gradually increasing the space to two lengths at the half, in 1:09. Hickok now began to call on Overman and he responded courageously, trotting the third quarter at a twenty gait. He reached the leader's wheel at the three-quarter pole in 1:46, but she gallantly held her own from this point. Both came down the stretch, driving with great determination, Overman's nose at the mare's quarters, and so they finished. Time, 2:23.

Second Heat—Opinions were about evenly divided, and Overman's friends asked no odds, feeling confident that the evidence he had given in the Grand Circuit of capability to fight the latter end of a heat and race would fully counterbalance Helene's terrific speed. On the other hand, the Helene division had noticed Overman on his tip toes in the homestretch, and felt assured that he could not make a break and beat her. So this heat was regarded as the turning point of the race. Helene set the pace too fast on the first score. Overman broke badly on second attempt, but on the third trial he was level and they received the word, the mare having a little the best of it which she was not slow to improve, trotting steadily to the quarter in 34½ seconds, two open lengths in advance of her formidable competitor, which distance she maintained to the half in 1:08. Hickok pursued the same tactics as in the first heat, and slowly but surely closed with her up the hill and past the point of rocks, where she made two short breaks, and he succeeded in collaring her within fifty yards of the three-quarter pole amid cries of "He's got her," but no, Murphy roused the mare and she carried him to a break and passed the three-quarter pole two lengths ahead, but Overman had now settled to his work and drew up so fast that he was on her wheel as they straightened into the homestretch; and again a desperate brush ensued, but the California gelding beat her cleverly by a neck and shoulders, and in a style that satisfied the spectators Helene had tackled the very best horse in the 2:21 class. Time 2:21.

Third Heat—Both horses promptly answered the summons of the bell, and the Overman party talked and offered to bet as if they were satisfied the race was his, bar accidents, but he had not won it yet by any means, as the sequel shows. They scored a few times, and were given an excellent send-off. Helene made the pace so hot around the first turn that Overman began to change feet, and finally went into the air; she broke simultaneously, but quickly settled. He ran half way to the quarter pole, and when he struck his gait, the mare had opened three lengths of daylight, which advantage she held to the quarter pole in 35 seconds, and to the half in 1:09. Again Overman began the closing process, making his effort to reach her on the third quarter, and looked dangerous at the three-quarter pole in 1:46½. From this point he stuck to her as close as wax, and neither had any advantage in the homestretch, until within fifty yards of the wire, the gelding made a game and gallant struggle, beating her half a length. Attention was called to his long run, but the judges thought he was entitled to the heat. Time, 2:22½.

Fourth Heat—They came up level on first trial, Helene leading lightly. Hickok nodded for the word, which was given, and the mare's wonderful speed enabled her to take the pole on first turn. She showed in front, as usual, at the quarter, in 36 seconds, and drew away a little farther to the half in 1:10½, but Overman made up a little of the difference at this point, and charged the hill two lengths behind the leader. "Now they're even," cried an excited backer of Overman, as they drew under the shadow of the point of rocks, but he was mistaken; Helene held the lead by a length. With rare patience, Hickok waited, seeming to know that the last quarter would tell its tale, and Overman with ears pricked, came down the stretch strong as a lion. Murphy did not give it up, however; he disputed every inch of the road to the wire. They were side by side at the distance stand. Overman increased the pace, and the mare received a cut of the whip, for it was do or die. She broke, and made two or three jumps, but was neatly caught by Murphy, who rallied her again, and landed her, as it seemed to us, even with Overman; but, after brief deliberation, the announcement was: "Overman wins the heat and race. Time, 2:23½."

Trotting with Running Mate.

The record for this way of going was lowered on the second and third inst. at Narragansett Park, Providence, R. I., in a race between Barnaby & Co.'s Billy D and mate, and Alexander Brothers' Yellow Dock and mate. The match was made for the second, but owing to various delays only two heats were trotted that day, both of which were won by the Alexander team. The time of the first heat was 2:16½, of which the quarter was trotted in 0:34 and the half in 1:09. The second heat was trotted in 2:18, the quarter in 0:34 and the half in 1:09½.

The match was continued on the 3d, and resulted in the success of Yellow Dock in the best time ever made by a horse with running mate, viz: 2:11. The best previous time is that made by Billy D and mate at Boston last October, 2:14½. In the pool rooms heavy odds were offered on Yellow Dock but they found no takers. The weather was favorable for fast time, although a keen northwest wind prevailed. The teams responded very promptly to the call and were exercised for some ten or fifteen minutes on the track prior to the send-off. Tommy Foster, who trained Mr. Barnaby's pair for the race, relieved Dan Mace and was placed behind Billy D and mate. It was confidently expected that the Barnaby team would force the battle more closely in the hands of their trainer; yet it was known among a few that Murphy intended to speed his pair to some remarkably low time. At the send-off the Barnaby pair had a lead of a clear length, but as they reached the quarter turn Yellow Dock and mate drew up to the fore and at this moment Billy D lost his feet, was pulled down and then made a disastrous double break. Yellow Dock and mate swept along at a rapid gait, completing the quarter in 0:32½. Murphy then let them out with careful urging, and without a skip the half was completed in 1:04½. For the three-quarters the time was given at 1:38½. Murphy gave close attention to his charge and sent them to the wire without any pulling, determined upon breaking the record. As they neared the finish, Mr. Alexander, the owner of Yellow Dock, ran up the track and swung his hat to Murphy to speed them faster. The mare responded to the urging, and amid the greatest enthusiasm she won the heat and race in 2:11, breaking the record of 2:14½ made by Billy D and mate at Beacon Park a year ago, by 3½ seconds. The time was promptly placed upon the slate, and the spectators greeted Murphy and the team with prolonged applause. The judges upon examination of their watches found that one recorded 2:10½ while the others agreed upon 2:11. When the wire was reached by the Yellow Dock pair Foster had not reached the three-quarter pole, and he did not complete the mile but drove his pair to the stable via the backstretch. Murphy was 4½ pounds over weight.

SUMMARY.

NARRAGANSETT PARK, CHANSTON, R. I., November 2 and 3, 1882.—Match trot with running mate for \$2,000; mile heats, best three in five, in harness.

Alexander Brothers' ch m Yellow Dock and mate, Gabe Case (Murphy)..... 1 1 1
J. B. Barnaby's ch g Billy D and mate, Rival (D. Mace and Foster)..... 2 2 2

TIME.

	Quarter.	Half.	Three-quarters.	Time.
First heat.....	34	1:09	1:41½	2:16½
Second heat.....	34	1:09½	1:49	2:18
Third heat.....	32½	1:04½	1:38½	2:11

Yellow Dock, the winner, made her record of 2:20½ at Utica last August, winning the 2:29 purse in three straight heats. She was brought out last fall under the name of Mohawk Maid and trotted in the slow classes at the Ohio fairs held at Columbus, Cleveland and Toledo. She never failed to get a share of the purse, and finally won two races, gaining a record of 2:29 at Cleveland. She was then owned and driven by Mr. Wm. Yeazell, who also owned the Mohawk mare Fashion, (2:23½.) Yellow Dock was got by Clark's Mohawk Jr., out of a mare of Copperbottom blood, pedigree not traced. She stands 15½ hands, a bright chestnut, of good proportions, with a slashing, open gait, and a fine turn of speed. She sometimes bucks and acts badly in starting, and requires a little holding together in getting away, but if she begins right, goes true and level for the mile. If pinched she cuts up a little soft at the finish, but comes again the next heat.

The California Race-Horses.

On Tuesday of the present week the racing stables of E. J. Baldwin and Theodore Winters passed through Chicago en route for California. The lot included the Duchess of Norfolk, Clara D, Lucky B, Gano and Sunday, and were in charge of Mr. Lou Martin, their trainer. When this lot of horses left California last spring high hopes were entertained by Pacific Slope sportsmen that those representatives of the far West would return in the fall crowned with the laurels of victory, but these hopes were not realized. Before leaving California Duchess of Norfolk and Gano had run some very creditable races indeed, the colt winning at three-quarters of a mile in 1:15, while the filly showed both speed and staying powers by running over a cup course, two miles and a quarter, in 4:56½. Clara D. had made the journey once before, having accompanied the wonderful mare Mollie McCarthy when she came to Chicago three summers ago, and won the Garden City Cup so easily from the largest and best field that ever started in this city for any race; while Lucky B and Sunday were known to be able to race a bit. When the stable reached Chicago last June, it was considered almost a certainty that Duchess of Norfolk would win the Illinois Derby at the meeting here, and as to Clara D's being beaten for the Cup, the Californians would hear of no argument. But wet weather and a heavy track were too much for the Duchess in her race, the prediction of Secretary Hall, of the Driving Park, that no filly would win the Derby, being amply verified by Gunnar and Stanton running first and second in that event; while John Davis led Clara D such a merry chase in the Cup that she was never able to get to him after the drum tapped. Going from here to Saratoga the stable fared but little better, defeat coming when the prospects of success seemed brightest; and when, at the close of the Baltimore meeting, a start was made for home, the result of the season's work was not encouraging. It is to be hoped, however, that the ill-luck of 1882 will not prevent Messrs. Baldwin & Winters from trying the venture again. They are both thorough sportsmen, taking the defeat philosophically, and wasting no time in idle regrets over what might have been, and will always receive a hearty and genuine welcome from all true lovers of sport.—*Breeders' Gazette*.

On the first day of the Newmarket Houghton meeting Mr. "Phnnger" Walton's four-year-old colt Eliacin won the All-Aged Selling Plate and was sold after the race to Mr. Robert Peck for 570 guineas. The betting before the race was 11 to 8 on Eliacin.

It is said that Ed Stokes won \$10,000 on the Overman-Helene match at Fleetwood Park.

Judge Shafter's Questionable Position.

SAN FRANCISCO, Nov. 16, 1882.

EDITOR BREEDER AND SPORTSMAN: The position taken by Judge J. McM. Shafter on the questions that came up at the races for the Embryo Stakes last Monday has provoked a great deal of comment, universally adverse to the rulings. One point in the case seems to have escaped notice, and that is the fact that members of the Board of Appeals are not allowed the privilege even of the judges' stand. (See Sec. 18, By Laws National Association). Now Mr. Shafter certainly was ignorant of this fact, or willfully transgressed. I must conclude the former, for I am unwilling to credit the latter. Aside from his erroneous ruling in the case, his failure to apply the penalty provided in Rule 48 of the National Association, he made an egregious error in this and other instances, in presenting himself in the judges' stand to decide on what he might be called hereafter to review or adjudicate upon. In other words, as a member of the Pacific Coast Board of Appeals, to decide as to whether his judgment was correct as a presiding judge.

If it is asserted that Mr. Shafter as President of the Pacific Breeders' Association was excusable (for I am certain no one will contend for it as a right) for presenting himself in the judges' stand as Presiding Judge or Judge of any capacity, I respectfully submit that, as a member of the Board of Appeals, he outranked his position as president of any society, and if he had determined to act contrary to Sec. 187 of the By Laws of the National Association, it would have been a graceful act first to have announced his resignation as a member of the Board of Appeals.

The course of the Judge and his decisions has led to severe comments, and the tender situation of turf interests in our city has received another set-back to mar the prosperity so earnestly labored for and desired by many prominent breeders and turf patrons.

L. E. X.

Trotting Stock for California.

Mr. Wm. Corbitt of San Mateo, who is now in the East, has made some important additions to his stock by purchases in Kentucky and elsewhere. He has bought from Col. R. P. Pepper, South Elkhorn Stock Farm, Frankfort, Ky., the black mare Alice Clay, by Almont, out of Rosa Clay (dam of Capoul, record 2:28) by American Clay, her dam by Downing's Bay Messenger, out of a mare by Cripple, in foal to Onward, and Woodford Queen, bay mare seven years old, by Almont, out of Virginia (dam of Woodford Chief, record 2:22½ at five years old and Confederate Chief, etc.), by Billy Townes, son of imported Fyde, in foal to Onward. From B. J. Treacy, Ashland Park Stock Farm, Lexington, Ky., the bay mare Maggie, eight years old, by Almont, dam by John Dillard, grandam by Park's Highlander, out of a mare by Grey Eagle. Maggie trotted a full mile in 2:39, and a half in 1:16 at three years old and was sold to a Chicago party as a roadster. She is in foal to George Wilkes. From Wm. Dunn, Cincinnati, Ohio, the four-year-old bay colt, by George Wilkes, dam by Mambrino Patchen out of Joe Bunker's dam by American Star. This is said to be one of the finest youngsters ever sired by the noted stallion George Wilkes, and Mr. Corbitt intends to use him for stud purposes.

Jim Rockey, one of the best trotting horse drivers of the day, worked for a man who had quite a number of trotters, and, as was usually the case with the knight of the whip and snaffle, he had anticipated his earnings and at the close of the season was several hundred dollars in debt to his employer. This was his invariable fix in the fall, but the request to square by giving a note for the amount was a new thing, as in former years, those he had been behind-hand with had known him well enough not to waste paper and ink in recording an asset of less value than the blank sheet. He readily acceded to sign the paper and while the clerk was writing it he looked through the plate glass window into Lake street. The snow was falling rapidly, and the sidewalks were coated to the depth of several inches. "What time," was the inquiry, "when shall I make this note payable?" Rockey did not hesitate for an instant, but with a flourish of his cap as though he was saluting cheers from the grand stand, he replied, "First good day and good track."

The following notices of motions have been published to be presented at the next meeting of the Jockey Club in England: There shall be not less than two races per day of a mile or upwards, nor more than three races per day confined to two-year-olds * * * * * An amendment reads: That under no circumstances shall there be more than two five-furlong races for three-year-olds and upwards advertised for each day's racing. * * * * * Mr. C. Alexander moves that no jockey be allowed to run a horse in which he has any interest, except in his own name, and that should it be brought to the notice of the Stewards that such rule had in any way been abused, his license should be immediately suspended. * * * * * Mr. Craven will move as an amendment: That the Stewards are requested to exercise in future their discretionary power of withholding licenses from all jockeys who are owners or part owners of horses, or who notoriously bet on horse races.

The breeding of trotting horses is getting to be a large industry in this country. Millions of dollars are invested in the business. The California breeders have been outdoing the breeders of other sections, especially in early development of speed in their younglings. But we doubt whether they will be allowed to retain the supremacy. The Kentucky blood has been pretty well stirred up by the wonderful achievements of the Pacific Coast colts and fillies, and Kentuckians are dead game in a fight of any kind, and will not allow the well-earned laurels they had achieved to be so ruthlessly torn from their brows. They now mean business, and are preparing to contest for the laurels won by Californians.—*Rural World*.

The London *Sportsman* of the 24th ult. says in reference to the report that Mr. Keene was not satisfied with the management of his stable and that there would be a change: "In connection with William Day's charge I may note, on the authority of the veteran, that he has not heard a single word in reference to Mr. Keene's horses being taken from his care, while Mr. Bathgate, who has the control of Mr. Keene's stud of racers, is equally ignorant of any contemplated move; so we may take it for granted that Mr. Keene does not intend to desert Mr. Day, who has done so well for the American sportsman."

Of Mr. Keene's Bolero, (the brother of Captain W. M. Conner's Glidelia) which made his debut in the race for the Criterion Stakes, the *Sportsman* says: "If good looks go for anything the colt Bolero, by Bonnie Scotland, out of Waltz, should make a name for himself and do well in the interests of the American sportsman, Mr. Keene."

The Embryo Stakes.

Four years ago the editor of this paper had a favorite young mare which, through the kindness of Governor Stanford, was in foal to Electioneer. She was by A. W. Richmond, her dam Columbia by imported Bonnie Scotland, grandam Young Fashion by imported Monarch, and the next dam the great Fashion by imported Trustee. This kind of breeding coupled with the Hambletonian and Clay in Electioneer and that "backed" by a fine "open gait" and a fair share of speed for the amount of training, gave us confidence to think that the expected foal would be good enough to warrant a challenge which was duly published. That challenge was a proffer to trot any colt of the same age as yearlings, two-year-olds and three-year-olds. The first race to be heats of a mile, the second and the third to be mile heats, best three in five.

Captain Ben. E. Harris accepted with a Brigadier-Lena Bowles colt, and L. J. Rose suggested that it should be changed into a stake with the distances reduced to a mile dash for yearlings, heats of a mile for two-year-olds, and heats of a mile best three in five when they were three years old. The suggestion was adopted and Captain Harris named it the Embryo, as at the time of closing many of the colts were still in that state. We have not time to write more than the outline at present, and will have to be contented with this meager sketch. The challenger came into the world a shapely colt but as he grew in months he developed the characteristics of his maternal grandsire Bonnie Scotland, and was obstinate to a degree rarely witnessed in a young colt. "Mr. Druid" writes that Bonnie Scotland was the most obstinately lazy horse ever trained in England and it was difficult work for his rider to get him to move. His records show, however, that he was a great race horse and as the progenitor of race horses there is scarcely a course from the Atlantic to the Pacific that will not give proof. The descendant was fortunate enough to win the yearling and two-year-old events, and gave indications before the pinky got hold of him, that he would make a good showing in the three-year-old.

Seeing what an advantage it would be to breeders the Embryo was kept up, and this year for the first time the three stakes were to be decided in one afternoon.

A finer November afternoon than that of last Saturday can hardly be imagined. The sun shone brightly and there was scarcely any breeze to retard the horses. The track was in capital condition, saving that it was somewhat rough on the backstretch from the hoof-prints of the horses driven when it was soft, making slight inequalities. The attendance was rather slim partly owing to its being "steamer day," when men are more intent on collecting and paying bills than on taking their pleasure at the races.

The first called was for foals of 1881—yearlings—and three responded to the signal. There were Dawn, by Nutwood, Antevolo, by Electioneer and Sister to Honesty, by Priam. A protest was entered against Dawn starting on account of the nomination being defective, and certainly all the evidence confirmed the claim. After that protests were filed against the others on the most frivolous grounds, and this gave the opportunity for the judges to include all in their ban.

It is seldom that three finer colts are ever seen on a track. Dawn is furnished like a four-year-old, a muscular youngster and of very high form. Sister to Honesty is a big strapping filly, "lengthy" as well as high, and there cannot be a doubt that some day she will be well worthy of her relationship to her illustrious brother. Antevolo has as yet more of the baby appearance, and is much the youngest of the trio, having been foaled May 12th, though he has a highly bred look, and in contradistinction to his brother Anteeo, alluded to in the first part of this article, his temper could not be improved. He is free and resolute without being a particle flighty, and has also the valuable quality of "level-headedness." He has never worn a shoe or tip, and the only protections needed are light scalping boots. The lottery for positions gave Dawn the inside, Sister to Honesty second and Antevolo third, and after a couple of scores a very good start was effected. Dawn made a skip soon after though he caught like an old trotter, but before the first turn was half made the filly left her feet and the mishap was disastrous. Dawn swiftly sped along, Antevolo honestly striving to overhaul him, but the leader had too much speed, and though he again broke on the further turn owing to the Berkeley train passing at the time, there was nothing lost and he won an easy victory in 2:59, the fastest time ever made by a yearling in an actual race. Antevolo made the mile in 3:02, which was also faster than the previous record in a race, the filly third.

SUMMARY.

OAKLAND TROTTING PARK, Monday, Nov. 13, 1882.—Embryo stakes, for foals of 1881, \$100 each; \$25 forfeit; \$10 declaration; dash of a mile; thirty-two nominations.

tain..... 3
Time—2:59.

The second race brought out the two-year-olds, the starters Pride, by Buccaneer, Neluska by Sultan and Lillie Nutwood, by Nutwood. Neluska, and Pride are acknowledged to be two as promising fillies of their age as there are in the whole country, and there was much interest taken in the meeting. By agreement the distance was waived, and this gave a queer complexion to the race though it does not leave much room for detailed description.

In the first heat Neluska broke badly, continuing to break so that she was three hundred yards behind when Pride crossed the score in 2:43; and Lillie Nutwood at least one hundred yards in front of her also. Without the interpolated condition the race would have been ended, and in the second heat there was a reversal. Neluska behaving better, outtrotted Pride around the first turn, and opened quite a gap, owing to a break of her opponent at the quarter pole. From there Pride steadily decreased the gap though unable to quite reach Neluska, who won in 2:35½.

The third heat was an easy one for Pride. Trotting fast and steadily she left Neluska—who pulled up lame after the first heat—and had she kept up the rate to the winning post there is scarcely a question that the race record for two-year-olds would have been beaten. She was jogged the greater portion of the way from the seven furlong pole home, finishing in 2:33½. The record which Neluska made at the Oakland Fair of 2:30½ is the fastest in the calendar for that age, when the colt was colt against colt, and the odd seconds could easily have been subtracted with a strong probability that twenties would have been reached if her owner had kept her going to the end.

SUMMARY.

Same day.—Embryo stakes for two-year-olds, \$100 each \$25 forfeit; \$10 declaration; 46 nominations; heats of a mile; distance waived by agreement of the starters.

Dr. M. W. Hicks' b f Pride, by Buccaneer, her dam by Flaxtail. 1 2 1
L. J. Rose's br f Neluska by Sultan, her dam Gretchen, by
Mambrino Pilot..... 3 1 2
Cy Arnold's bl f Lillie Nutwood, by Nutwood, her dam Lady
Grant..... 2 3 3
Time—2:43, 2:35½, 2:33½.

The third race was that for three-year-olds, heats of a mile, best three in five, and of the forty-three original nominations only three appeared. The death of nominator or horse had made a serious breach in the number as thirteen were disqualified from that cause, sixteen had signified that they paid forfeit—there was no declaration in this stake—and the contestants were Bonnie, by General Benton, her dam Americus by Rysdyk's Hambletonian, Fred Arnold, by Nephew, his dam Fanny Fern by Jack Hawkins, and Anteeo, by Electioneer, his dam Columbine by A. W. Richmond. It would be a stickler, indeed, who did not admit that there was good breeding in this trio, and it is not often that three finer looking youngsters are seen on a course. Bonnie was largely the favorite in the pools as she had shown very fast quarters in her work at Palo Alto, report crediting her with a flight of speed far better than a twenty gait. Fred Arnold had trotted a fast and game race over the mountains, and though Anteeo had also displayed capacity in his exercise, the Bonnie Scotland characteristics alluded to before rendered it very doubtful if he could be depended upon when the most needed. Then the rains had sadly interfered with the workings of Fred Arnold and Anteeo, and to crown the bad luck which had followed the latter this summer the pinky culminated by an abscess forming between the lower jaw-bones which broke and suppurated the day before the race.

The placing gave Anteeo the pole, Fred Arnold second, Bonnie on the outside, and when the signal was given for the first heat Anteeo was in a tugging break which completely nullified the advantages of the inside position. Bonnie bettered hers with a rapidity that endorsed the reports of her speed, and not contented widened the gap the whole of the way around the oval. In no part of the heat was there a contest, and when she went under the wire in 2:34 there was a long gap between her and Fred Arnold with a still larger space marking the distance that Anteeo was behind.

The second heat showed better. As before Bonnie took the lead though the colt kept closer to her, and as the quarter pole was passed she was only two lengths in front of Fred Arnold, with Anteeo at his wheel. She increased the gap on the backstretch, and the other two were head and head at the water-tank, where Fred broke, and Anteeo led. Around the turn it was "nip and tuck" between them, Bonnie ten lengths in front at the three-quarter pole, but from there both gained on her. At the distance stand Fred broke again, and Anteeo showed a burst of speed and was rapidly overhauling the mare, when the effort was too great and he broke a few lengths from the score. Bonnie finished with his nose on her wheel in 2:37.

The third heat was a memorable one, as the rehearsal will show. Very foolishly, as it proved, "rattles" were put on Anteeo, thinking that they might accelerate his pace in getting away from the score, and with that and a "good start," his second position might enable him to take the pole. Though it was evident that this was a mistake, there was no chance to remedy the blunder as the word was given on the second score Bonnie behind but coming with such a rush that she went past Anteeo before fifty yards were accomplished and Fred also gave him the go by and took second place. About midway of the turn Bonnie broke, a disastrous break as Fred left her as though she had come to a standstill and notwithstanding Anteeo had caught the rattles twice with his hind foot and nearly fell, he also passed her. Fred opened a gap, Anteeo tripping and blundering down the backstretch and Bonnie still at a lumbering gallop. Near the water-tank she regained her trot passing Anteeo before he got to the half mile, Fred from sixty to eighty yards in front trotting steadily and fast. Bonnie flew around the turn and it was evident that Fred had slackened his rate, his driver evidently thinking he had the heat safe. He was near the inside of the track Bonnie well towards the outer rail, still trotting fast. At the distance stand the spectators were shouting to the driver of Fred Arnold to go along, and he responded with the remark: "I have got her," at the same time urging his horse to renewed efforts, and crossed the score half a length in front of her, with Anteeo a few lengths inside the distance flag, the time 2:40½. Fred Arnold had trotted the mile without a skip, no one claimed that she was nearer to him than half a length, and everyone wondering what delayed the judges in awarding him the heat. If they were surprised at the delay they were astonished when the announcement was made that Bonnie had won the race, Fred Arnold second and second money, Anteeo third and third money. This was received with a storm of denunciation, and the driver of Fred Arnold, aggravated so that he lost all his self-control, was fierce and vindictive in his accusations. It was assuredly enough to raise his ire, and if there ever was an excuse for this kind of language he used he had it. But it is unfortunate that he should have given away to the ebullition of temper, and sought redress in a quiet way, and thus ended a race which was about as vexatious as any that has taken place in a long time.

One noteworthy circumstance was the fact that Fred Arnold and Anteeo are the only two of the forty-three nominations which have taken part in the yearling two-year-old and three-year-old Embryos.

SUMMARY.

Same day.—Embryo stakes for three-year-olds, foals of 1881, heats of a mile, best 3 in 5, in harness, \$100 each, \$25 forfeit, 43 nominations. Palo Alto b f Bonnie, by General Benton, her dam Americus by Rysdyk's Hambletonian..... 1 1 1
Wm. Johnson's bl c Fred Arnold, by Nephew, his dam Fanny Fern by Jack Hawkins..... 2 3 2
J. S. Cairn Simpson's br c Anteeo, by Electioneer, his dam Colum-
bine by A. W. Richmond..... 3 2 3
Time—2:34½, 2:37, 2:40½.

For seventy-six years the judge's box at Epsom has been in the family of John Francis Clark. For thirty years he has announced the winners of the Derby and Oaks, as his father and grandfather did before him, and as his son is likely to do in the future.

Castration.

In some animals there will be a deal of local inflammation after the operation. It is, perhaps, more often seen in those colts that have been difficult to halter, and which got very heated prior to its performance. There is a swelling of the parts which, commencing about the second day, will extend all about the region of the wounds, rendering the skin here shining and tense, and proceeds in a direction forwards, involving the sheath and under surface of the belly. The colt will walk very stiffly, or be disinclined to move, and in some instances is more or less feverish. Cases like these require special attention, and every care should be taken to keep the wounds well open. Fomentations of warm water will tend to soothe the pain and promote a healthy discharge; frequent gentle walking exercise should be given, and if the swelling becomes at all excessive, scarifications are of extreme benefit. The diet should be succulent and cooling.

It sometimes happens that a few hours after castration a colt that has apparently done very well will suddenly commence bleeding from the divided cords. There is, perhaps, nothing more likely to frighten a farmer than the sight of blood in cases of this sort. The hemorrhage may either be unavoidable, or it may be due to some mismanagement or carelessness in the performance of the operation; if owing to the latter, it occurs almost directly afterwards, and is, as a rule, only very partial, one of the vessels not having properly contracted within its sheath, or been wholly sealed up. Originated either from this cause or any other, there is but comparatively little reason to be alarmed or to take any desperate measures. One does not hear of horses bleeding to death after castration; there may be a few instances, it is true, but such are very rare. The blood, as a rule, flows but from one of the divided arteries, and if allowed to go on without any means whatever being taken to prevent it, would not proceed to any dangerous length. If professional aid is not forthcoming, it is best to dash cold water upon the sheath and scrotum. If it can be applied by means of a hose, so much the better, but this contrivance rarely exists on farms. Should these measures after a fair trial fail to arrest the hemorrhage, I have known the old-fashioned remedy of applying cobwebs to be most successful, causing the formation of a coagulum or clot in a very few minutes, and very soon get rid of the bleeding. Pouring cold water in addition over the loins is frequently advocated. In the most severe instances, where the above measures prove of no avail whatever, the animal must be recast, and the wounds in the scrotum plugged with fine tow or cotton wool, the plug being maintained in position by means of stitches.

Very few men who castrate horses will perform the operation without making proper examination of the parts for rupture or hernia. Should such exist, there is the special covered operation required, on which it is not now necessary to dwell, but many breeders will rather let the colt remain entire than run any risk with him. Occasionally it has happened that the hernia has been so slight, no knowledge of its existence being obtained previously, that it has gone unperceived during the operation, only becoming declared by the bowels descending through the rupture and wounds in the scrotum a few hours afterwards. Whenever instances of this unfortunately do happen, I must advise the farmer or breeder to call in professional aid without delay; and beyond recasting the animal and putting him completely on his back, so as, if possible, to prevent further exit of the bowels, nothing can be done till his arrival.

Peritonitis or inflammation of the external membrane of the bowels is one of the most serious consequences of castration, and there are but few colts which die from the results of the operation except from this cause. It is mainly brought on by the animal catching cold, or being operated on during cold, damp weather, or turned into a wet pasture; protected or aggravated inflammation in the scrotal wounds may, too, produce it, or the colt may have bruised himself severely whilst trying to escape from being caught. The patient will stand in one corner of the field or yard looking tucked up, dull and dejected; he is off his appetite, breathing with a certain amount of difficulty. Pressure to the abdomen will feel it very tense and hard, the bowels are constipated, and after a little time other symptoms, but suppressed, of abdominal pain will be present. Get him at once into a good warm loose box, and waste no time in getting proper aid to attend to the case.—Cor. London Stockkeeper.

Henry Jackson, a notorious Chicago horse sharp, whose game was to sell horses with bogus trotting pedigrees, has finally come to grief, having been convicted at Cleveland, Ohio, for obtaining money under false pretenses, and a term of imprisonment will probably follow.

The scratching of Abbotsford (late Mr. P. Lorillard's Mistake) for the Cambridgeshire after he had virtually been made second favorite was caused by lameness. It was said that he hit one of his legs in a gallop on Saturday morning, the 21st ult. Abbotsford was much fancied by the Newmarket people for the race.

People who want to see what a crowd there is that likes duck shooting want to go to the ferries on Saturday afternoon and see the crowd. There are some very funny costumes worn by the newly fledged hunters which excite the laughter of the "old hands."

Most of the ducks which are coming into the market just now come from down Merced way. That part of the country is so far off that city hunters will not be able to get much of the shooting.

Mayberry slough on Sherman Island and a little way above Antioch used to be a good place for shooters. A party has gone up there this week to try the luck at the old place.

The teal feed on what some people call teal grass which has a very fine seed and which is just now getting ripe. The birds are feeding on it heavily and are getting very fat.

There are considerable teal ducks out on Bouldin Island just now. They are pretty wild though the "scallers" and the hawks keep them moving pretty lively.

Billy Broden got ten cans, two mallards, twelve red-head, and twenty-six blue-bill up on Bouldin Island the other day. He tried the teal but they are pretty shy.

The Cordelia boys are having fine sport at their reserves, the birds staying there in a very satisfactory manner.

Several big flocks of swans have been seen up in the marshes of late. The "foreign birds" are coming in.

ATHLETICS.

Myers and George.

The first of the series of matches between the champions was decided on the 5th inst, and is thus described by the *Herald*:

Fully two thousand people visited the Polo Grounds yesterday afternoon for the purpose of witnessing the first race between the English champion, W. G. George, and the American champion, L. E. Myers. There was a poor representation of the fair sex so far as numbers were concerned, but that can easily be accounted for by the chilly weather, the northerly wind being anything but pleasant to face in the grand stands at the Polo Grounds. In order to entertain the visitors three additional athletic events were placed on the programme, but the 150 yards handicap was the only one to produce anything like racing. It was won by W. T. Stoddard, of the Manhattan Athletic Club, who had two yards start of Stafford and Derickson, the scratch men. Time, 15 3/4 seconds. W. Halpin of the American Athletic Club, with ten yards start, was second, and S. Derickson, of the Manhattan, third. The mile race was poorly contested, T. E. Delavey winning easily in the slow time of 4:53 4-5.

The next event was the center piece of the meeting, and the anxiety of the crowd was tested to its utmost by the arranging of the necessary preliminaries for the proper recording of the race. When all the timers had been stationed at their respective posts the rival athletes were called out. George was the first to appear from the old club house at the southwest corner of the grounds, and accompanied by his friend Mr. Caldicott went round to the starting point without coming near the stands. Myers was slow in getting ready, and George was kept several minutes waiting for the American champion. As Myers approached the starting point George came forward, and the pair shook hands cordially. A few moments later and they stood on the mark ready for the signal. The track being an exact third of a mile the start was made at the far corner from the grand stand, where the men had to finish. Myers was conspicuous in his all white costume, while George wore a black jersey and running trunks, the latter being tastefully embroidered with leaves in yellow silk. George had the inside position, next the curb, and, without any delay, the two stepped forward, toed the line and bent for the crack of the pistol. Mr. A. H. Curtis at once seized an opportunity, and as the men bounded from the mark a roar of "They're off!" rang out from the grand stands. Myers had no intention of running faster than he was obliged to do, hence he made a waiting race of it and allowed the Englishman to take a lead of two yards. On they sped around the lower turn and then up the straight. As they approached the stands the entire audience rose and cheered as if it were already the termination instead of only the first third of the struggle. Myers had now got within a yard of George, but going around the next turn he dropped back two yards behind again and remained content with that position till the first lap had been completed. Gradually and without any effort Myers began closing up the gap. Half-way around the lower turn he was within a yard; at 700 yards the yard had been diminished to a foot, and then a few strides further on the pair were level for the first time since they had left the starting line. It was then evident that Myers would win, and although George struggled on with indomitable gameness, he was no match at this distance for the lightstepping American, who went to the front 100 yards from the finish and won with great ease by two yards and a half. Time for Myers, 1:56 3-5; for George, 1:57. Myers was one second behind his best record, while George beat his best previous performance by one and a fifth seconds. The fractional times were as follows: George, 220 yards, 26 3/4 seconds; one-sixth of a mile, 33 seconds; quarter of a mile, 55 1-5 seconds; one-third of a mile, 1:16 4-5; 660 yards, 1:26 1/2; 700 yards, 1:31 2-5 and 800 yards, Myers, 1:45; George, 1:45 1/2. As soon as the men had passed the crowd rushed into the enclosure, and Myers' admirers attempted to shoulder the winner, but it was a poor attempt, and Myers, slipping down quietly; retired to his dressing room, while George walked back to the club-house. Myers was perfectly fresh, and George showed no sign of weakness at the finish, but simply failed in pace.

The second event, the mile race, took place last Saturday, the 11th, and was won easily by George, who had sixteen yards to spare at the finish. The winner's time was 4:25; Meyers, 4:27 1/2. Betting even. The third race will be run today at the middle distance, three-quarters of a mile.

Next Saturday, Nov. 25th, at San Jose, a professional match will be decided between Harmon, the well-known sprint runner, and Gibson, a new arrival. Distance 135 yards. Harmon is known to be very fast up to 150 yards. Gibson came out here with the avowed intention of matching himself against F. E. Davis at 440 yards. As Davis is now in England running under the name of F. E. Cameron, the match fell through. If he is really able to compete with Davis at that distance he is a pretty good man, and Harmon is also hard to beat, at 135 yards, in a square match, if we can trust the Eastern papers. As the latter has never run what can be called a race on this coast we know very little about him. He is supposed to be able to do 100 yards in even time. Perhaps he can, but there are very few admirers of a sprint race in this city, that will travel as far as San Jose and take the chances of seeing a good race. Perhaps there is more money in it there than there would be in the only city on the coast.

On election day the New York Athletic Club held their annual fall meeting, one of the events of which was a 1,000 yards handicap race with W. C. George, the English champion at scratch. When the pistol was fired George darted off like a flash, but Murphy, on the 45-yard mark, and Stonebridge, 110 yards, were just as fast, and started at a great pace that worried George somewhat. The wind, which blew from the north, militated against fast running. George caught Murphy about 220 yards from home, and though the latter responded bravely, the Englishman finally beat him three yards, never having caught Stonebridge, who finished ten yards to the fore. Stonebridge's time was 2:14 3/4, George's time being 2:17 1/4.

At the date of this writing it is positively announced that the University Field games will take place Saturday, Nov. 18th, the date of this issue of our journal, on the Olympic Club grounds, corner Fourteenth and Center streets, Oakland. Unfavorable weather has necessitated two postponements of the events, and the weather indications at present lead us to fear that another postponement will be necessary. However, we will hope for the best. The outside entries are numerous, and if the handicaps are very close the open handicap events will be very interesting. It is mysteriously and wisely hinted that there is a dark horse in the scratch mile. We hope he will be able to beat 5 minutes. R. S. Haley is sick and has not entered any of the events.

The Atlantic and Columbia Athletic clubs held a joint handicap meeting at the grounds of the Manhattan Athletic Club, New York, on election day. There was a large attendance of spectators, and fifty or sixty ladies of the hundred or so present remained until the last event on the lengthy programme was decided. An open dash of 100 yards introduced the sports. Five trial heats were run, which qualified for the final heat W. T. Stoddard, Manhattan A. C., scratch; F. S. Roumage, Columbia A. C., eight yards; H. J. Duecla, New York city, eight yards; F. G. Abbott, Manhattan A. C., three yards. Smith won the final by one yard, Stoddard second and Abbott third, the struggle being very spirited. Time, 10 1/2 seconds. A walk of one mile for members of the Atlantic Club was won by G. H. Davidson, from scratch, in 8:22 1/2; W. J. Seidenberg was second with twenty seconds start. Four started in a run of half a mile for members of the Columbia club, E. A. Richard, from scratch, winning easily in 2:24 1/2. F. Gwynn, twenty yards, was second. Five members of the Columbia club started in a 220 yards hurdle race. G. Morrison, twelve yards, won easily. F. Gwynn, twelve yards, being second. C. Proctor, scratch, fell at the first hurdle and stumbled at the third. Time, 32 1/2 seconds. Four Atlantic members started in a run of one mile from scratch and C. B. Davidson won in 5:45. Eleven went to their marks in an open run of three-quarters of a mile. T. F. Delaney, Gramercy A. C., scratch, beat E. A. Thompson, Manhattan A. C., by twenty yards, with J. Moorcraft, Gramercy A. C., 65 yards, third. Time, 3:27 1/2. A run of 100 yards for members of the Atlantic Club brought together in the final heat D. H. Babcock, scratch; C. W. Culver, 2 yards; C. H. Alliger won by a foot in 11 1/2 seconds, Davidson second and Babcock third. J. F. MacDonald New York Walking Club, 25 seconds start, won a walk of two miles in 16:04 1/2, actual time; G. D. Baird, New York city, was second. E. A. Thompson, Manhattan A. C., was the winner in an open two-mile bicycle race in 8:55 1/2. A half mile run, open to Atlantic members only, was won by C. D. Morrison from scratch in 2:36 1/2. Six started in an open 300 yards run. H. L. Jacquelin, American A. C., won from scratch, in 36 1-5; C. L. Jacquelin, Manhattan A. C., was second, and H. M. Stone, Manhattan A. C., third. An Atlantic Club 220 yards run sent six to their marks. It was a good race throughout, C. W. Culver, 2 yards, winning on the tape, with C. Morrison, 5 yards, second, a foot in front of C. H. Alliger, 9 yards. A tug of war between teams of four wound up the sport. G. Richards, J. Lyons, A. Field and W. Hunter made up the winning team.

The following programme has been arranged to take place on Thanksgiving Day at Recreation Park, corner of Twenty-Fifth and Folsom streets: One-quarter-mile race, pedestrian; one-half-mile race, pedestrian; one-mile race, pedestrian; donkey race of one mile and repeat; in this race there will be four donkeys on the grounds, the riders will draw for choice of donkeys, and the race will be go-as-you-please; this race will be very interesting. Also a hound race between five bounds, best two out of three heats. Sport to commence at 1 p. m. sharp.

In the notice of the University field day last week an error occurs in the name of one of the participants. It was given as James Gorevan whereas it should have been Joseph T. Gorevan.

The Stockton champion declines a match with Duncan McMillan, of Bodie.

BICYCLING.

Influence of Bicycling on Road Laws.

There are manifest signs that the invention of the bicycle will also produce important and permanent effects upon the legislation of the country, particularly upon the laws for the creation and regulation of common highways. That their influence upon legislation will tend to promote the general welfare is apparent.

Of all modern inventions the bicycle may most justly be styled the perfect road tester. From no other vehicle does the rider descend with so much suddenness and *aplomb*, and with such serious emotion, to investigate a defect in the surface of the highway. It is the most sensitive of all vehicles to the slightest imperfections of any sort in the construction and condition of a road surface; and it communicates its discoveries to its rider directly, and in a manner which it is impossible to either ignore or forget. One who lolls in his carriage does not appreciate the effect upon his horses of a trifle of sand over the surface of a road, an unnecessarily steep grade, the roughness of a pavement which ought to be smooth, mud, stones, ruts, dim lights, wet paving blocks, slippery clay, icy streets, and other such evils. The jars, tremors, shocks, sudden strains, abrupt jerks and pushes, which worry the spirits and exhaust the strength, and speed of his team and wear out his vehicle do not affect his own person much. He knows them only through observation. The bicycle-rider, on the contrary, experiences all these evils in his own muscular and nervous system. He feels them himself, just as the horse does; and, if horses could talk, their expressions upon this subject would probably agree with those of the bicycle-rider, and form a consensus of equine and human opinions which would revolutionize legislation in a single campaign.

In many parts of the West thirty miles a day is considered good average speed for a week's journey by a first rate horse or a span of horses, with a light traveling buggy or wagon, or 189 miles a week. With loads, a team will do well to average eighteen or twenty miles a day. With first-class macadam or gravel roads nearly double these distances may be traveled with more than double loads, and with less fatigue and wear and tear. There is no other public improvement which pays farmers, rural villages, and all country towns and dwellers so large a percentage of profit as first-class roads.—*The Wheelman*.

A writer in the *Wheel* objects to any such thing as flying starts, in bicycle races, as suggested by some. This is what he says: Suppose six men in a line ride towards the scratch. One holds back; but, on nearing the line, spurts and crosses it with the others, and having the advantage of considerable more momentum, is well under way before the others are off. Would that be fair? You could not say he crossed the line ahead of the others, as he did not; but that such a rider would have a decided advantage over his competitors is plainly to be seen. The object of a standing start is to place competitors on an equitable basis. Again, to compare our records with foreign ones, we have adopted the foreign standard of track measurement, and certainly we ought to adopt the same rules in regard to the start. A flying start may look very pretty; but records made under such circumstances are not allowed to stand.

HARVARD.—The second regular hare and hound chase of the club took place yesterday afternoon despite the high wind that was blowing, and was in all respects a thorough success. The hares—Messrs. Norton, '85, and Claffin, '86—left the steps of Matthews at precisely 3:19 1/2 o'clock. A dozen or more hounds who had assembled started seven minutes later, and from then on the race was an exciting one. The course lay through Brighton by indirect route to Watertown, thence to West Newton, on to the junction of Beacon and Washington streets, very near Newtonville. Here the hounds were encouraged by learning from the relay that joined them that the hares were hardly five minutes ahead of them. The road thence through Newton Center to Chestnut Hill Reservoir was perfect in all respects, and good riding was done by the hounds, that of Messrs. White and Maverick being especially good. At the reservoir the scent was lost, and fully three minutes were consumed before it was found again. Once more before reaching the finish the whole body of hounds were misled, and took a circuitous route before regaining the regular trail. Mr. Moffat was the first of the hounds to reach the finish, closely followed by Mr. Hemenway. The trial distance ridden was nearly nineteen miles, and the riding time of the hares was 1 hour, 26 1/2 minutes, being remarkably good considering the high west wind that blew against them all the outward course. The riding time of the first hound was 1 hour, 23 minutes, 3 seconds. The hares chose good roads and so great was the success of the run that the management of the club felt encouraged to announce another for next Thursday afternoon. All riders connected with the University are invited to participate, whether they be members of the club or not.—*Wheel*.

Races were held upon the half mile track at the Driving Park commencing with a club drill by the Capital Bicycle club. After this there was a mile race which was won by E. A. Thompson in 3:09 1/2, W. R. Pitman second by nine inches. The second event was a mile dash for novices, which was won by C. H. Chickering, upon an American Star machine, in 3:20. The third event was a two mile handicap, won by V. C. Place, from scratch, in 6:50. The five mile handicap was also won by Place, in 16:58 1/2. The half-mile race was won by Place in 1:30, and a consolation mile race was won by B. G. Sanford in 3:31. Exhibitions of fancy riding were then given by Rex Smith of the Capital Club upon an ordinary bicycle; Burt Pressey upon an American Star, and Edwin Dubois, a fourteen-year-old boy, upon an old fashioned velocipede. The prizes were gold and silver medals. The races were witnessed by about 3,000 people.

The recent Centennial celebration at Philadelphia gave the bicyclists of that city the opportunity for a celebration, of which they were not slow to avail themselves. The meet took place Oct. 26 at Fairmount Park. The run covered about ten miles up one side of the river, crossing at the falls and down upon the west side to the Belmont mansion. Four hundred and eighty-three riders were in line, the march occupying about an hour. After its completion, dinner was served, and in the evening an excursion was made by about 100 to Bryn Manor, a distance of eight miles, the lamps carried by nearly all making it a fine sight.

In the matter of class handicaps, it might answer if the entries were very numerous; but our largest race meetings have rarely more than ten starters. We rather favor time handicaps, as then all competitors ride the full distance, and it permits all to make a record; besides it aids in forming a basis for future starts. What the league needs is an official handicapper, whose duty it shall be to keep a record of every race and every racing man. Such a thing is done in athletic circles, and why not in bicycling, which promises to outdo the highest point athletics has ever reached?

The next grand meeting of bicyclists will take place in Washington, Nov. 29, on the occasion of the National exposition in aid of the Garfield monument fund. A parade over the splendid asphalt streets, a review by the President, Generals, and foreign dignitaries, fancy riding and racing, will form a part of the features of the day.

A mile bicycle handicap is upon the programme of the Olympic Athletic Club sports at their grounds in Oakland, on Thanksgiving Day. The best riders will participate and the mile record may be lowered if the day and track are fine.

The latest long distance performance by a club was that of the Lawrence (Mass) B. C., on Friday, Oct. 27. Three members started at 12:30 a. m. and finished at 11:45 p. m., doing 169 miles in a running time of 17:15, rests; 6:02.

Herbert Spencer's Views.

Herbert Spencer was tendered a complimentary dinner by over 200 gentlemen at Delmonico's on the 9th. William M. Evarts presided, and among the guests were William H. Hurlbut, Charles A. Dana and Henry Ward Beecher. Mr. Spencer, after giving thanks for his cordial reception, said; "It seems to me that in one respect Americans have diverged too widely from the savages. I do not mean to say that they are in general unduly civilized. Especially out in the West, men's dealings do not yet betray much of the sweetness and light which we are told distinguish the cultured man from the barbarians. You know that the primitive man, spurred by hunger, danger, revenge, can exert himself energetically for a time, but his energy is spasmodic, and monotonous daily toil is impossible to him. It is otherwise with the more developed man, when the discipline of social life gradually increased his aptitude for persistent industry, until, among us and still more among you, work has become with many a pastime. This contrast of nature has another aspect. The savage thinks only of present satisfactions and leaves future satisfactions uncared for. Contrariwise the American, eagerly pursuing future good, almost ignores what good the passing day offers him, and when future good is gained he neglects that while striving for some remoter good. What I have seen and heard during my stay among you has forced on me the belief that this slow change from habitual inertness to persistent activity has reached the extreme, from which there must be a counter-change, a reaction. Everywhere I have been struck with the number of faces which told in strong lines of the burdens that had to be borne. I have been struck with the large proportion of gray-haired men, and inquiries have brought out the fact that with you hair commonly begins to turn some ten years earlier than with us. Moreover, in every circle I have met men who had themselves suffered from nervous diseases, due to stress of business, or named friends who had either killed themselves by overwork or had been permanently incapacitated, or had wasted long periods in endeavors to recover health. I do but echo the opinions of all observing persons. I have spoken of the immense injury that is being done by this high-pressure life, as the physique is being undermined."

The boys go up pretty regularly to the Teal station these days.

HERD AND SWINE.

Wheat Straw.

The feeding value of straw has been a matter of special experiment, inquiry with me for several years, the results of which have been so satisfactory that although located in an economic state of the economic East, I gave unusual care to its preservation and feeding, assuming it to have a higher value than most farmers attached to it. I have fed it with the same care that I would feed hay, using none of it for bedding, excepting 10 to 15 per cent. that would be left uneaten. Often I have succeeded in getting it all eaten. In my remarks thus far I refer mostly to oat and barley straw, either of which I assume to be worth more than wheat straw, yet the little wheat straw I have had to feed convinces me that it has a feeding value of no mean importance.

If we should look into the chemistry of wheat straw, as compared with oat and barley straw, and all of these as compared to timothy hay (Phleum Pratense), we should find that their theoretic value is quite high, if in the meanwhile we allow to carbohydrates a higher importance than German physiologists have allowed, as we undoubtedly should. Excepting a few samples of oat straw, analyzed for personal feeding trials at the New Hampshire Agricultural College, only one other of this straw, one of rye and one of buckwheat had been made two or three years ago when Dr. Amesby made a compilation of American analyses of agricultural products. Therefore I shall have to use German results to show the comparative chemical composition of straws.

"Winter wheat straw: Ash, 4.6 per cent.; albuminoids, 3.0; crude fibre, 44; carbonate hydrates, 32.6; fats, 1.5; digestible albuminoids, 0.8; digestible carbonate hydrates, 31.9; digestible fats, 0.4."

"Summer barley straw: Ash, 4.1 per cent.; albuminoids, 4.0; crude fibre, 40; carbonate hydrates, 36.2; fats, 1.4; digestible albuminoids, 1.4; digestible carbonate hydrates, 36.9; digestible fats, 0.4."

"Oat straw: Ash, 4.0 per cent.; albuminoids, 3.5; crude fibre, 42; carbonate hydrates, 34.2; fats, 1.2; digestible albuminoids, 1.3; digestible carbonate hydrates, 27.4; digestible fats, 0.6."

"Timothy hay: Ash, 4.5; albuminoids, 9.7; crude fibre, 22.7; carbonate hydrates, 45.8; fats, 40; digestible albuminoids, 5.8; digestible carbonate hydrates, 43.4; digestible fats, 1.4."

I do not present this table as a basis upon which to found the practical value of foods. I refrain also from adding the feeding tables of animal physiologists, because I hold that the attempt thus far to fix the value of foods in nutrition has failed because of false reasoning upon premises also false, being founded upon theoretical deductions rather than ascertained facts. So far as chemistry as yet divides for the feeder the nutrients of foods, the essential distinctions between wheat straw and the other straws named and between straws and timothy lies in less content of albuminoids and a greater proportion of fiber. I should also add in inferior digestibility. In a ration of twenty pounds each of wheat straw or timothy the albuminoids of the straw could be made equal to that of the hay ration in digestible amounts and would exceed it in total amount and largely fill the balance of digestible materials lacking in the straw as a whole. As regarding the fiber it must be remembered that it is nearly as digestible as the carbohydrates, so called; in fact fibre is a carbohydrate and performs the same offices in nutrition.

This hasty glance of the table is only taken to show that the chemical make-up of straws is not incompatible with nutritive value. In practice I have unmistakably found that unpalatableness, rather than prominent nutritive, poverty lies at the root of the cause of the ill-fame of straw. A steer that will consume twenty-five pounds of timothy per day will scarcely eat one-half this amount of straw. This I do not lay down as a mere proposition but as a fact ascertained by thousands of weighings. The force of this fact will be better impressed by another result noticed, I find that a 1,000-pound steer will consume 18 pounds of hay daily as food of support. In other words it requires 18 pounds of hay daily to maintain existence without growth. The steer consuming 25 pounds of hay is using seven pounds of excess food for growth. The straw fed steer takes less than the food of support and often falls off in weight. If this condition of things must exist, then straw will have no practical value, whatever its theoretical value may be; and this is what farmers often believe. Can straw be handled so as to convert its nutrition into cash value? I believe so. From homage to brevity I will return to the answer at a future date if it please the editor.—J. W. Sanborn in Rural World.

There is a salient feature in the Norwegian character which ought, I think, to be recorded, viz: kindness to domestic animals, which in that country are treated as the friends rather than the slaves of man. As a result, vicious horses are unknown; foals follow their dams at work in the fields or on the road as soon as they have sufficient strength and thus gently accustom themselves to harness. I heard of a foal trying to force its head into a collar in imitation of its mother. Horses are trained to obey the voice rather than the hand, bearing-reins are not used, and the whip, if carried at all, is hardly ever made use of. Great care is taken not to overload carts, especially in the case of young horses, and consequently a broken knee is rarely seen, and the animals continue fat, in good condition and capable of work till the advanced age of twenty-five or thirty. So tame are the Norwegian horses and cows that they will allow casual passers-by to caress them while they are lying down. Even domestic cats will approach a boy with confidence, knowing that no chasing or worrying awaits them. One very hot summer's day I met a woman holding up an umbrella to carefully screen what I supposed was a little child at her side from the scorching rays of the mid-day sun, while her own head was covered only by a handkerchief. In driving by I tried to gain a glimpse of her charge and found, to my great surprise, that the object of her care was a fat, black pig. The question of humane methods of slaughtering animals has lately been prominently brought forward in England. In this the Norwegians show us a good example; they never use the knife without first stunning the animal. In the above remarks I am alluding to the country districts of Norway; in the towns the national characteristics become modified, even though under these conditions kindness to animals is still remarkable.—A. G. B. K. in London Times.

The latest cow story is the following from the *Mercury* of Saundersville, Georgia. Mr. M. H. Boyer, of our city, has a Jersey cow that gives butter and milk both. She gives such rich milk that in milking it into the bucket it churns it. Mr. B. tells us that he gives her no extra feed, only puts her in a good pasture. This is the kind of a cow to have. We examined the milk and butter after the cow was milked, and found large particles of butter in the milk.

Swine Notes.

The *Swine Breeders' Journal* gives us some short and good points in its October number; a few of which we give our readers.

Warmth, cleanliness, and regularity in feeding a little good food, are the main secrets in rearing young pigs.

An occasional application of a mixture of equal parts of kerosene, vinegar and fish oil will eradicate lice from swine.

Of the desirable qualities in a pig, a vigorous appetite is of the first importance, the next in importance is quietness in disposition.

A writer says: "Give your hogs a rubbing post, in some accessible part of their inclosure; it facilitates their keeping clean, and seems to afford them much satisfaction."

The hog cholera is prevailing in Pennsylvania and other states, as well as over the ocean in foreign lands. Owners will do well to keep a lookout for this terrible disease.

In feeding sweet milk to pigs, trials made at the Wisconsin experiment farm showed that on an average four pounds of corn meal were equal to twenty pounds of sweet skim milk, if fed separately.

Oil cake and cotton-seed meal is valuable feed for horses, cows, sheep and hogs, giving a healthy tone to the animal, fattening the lean ones and keeping them strong, healthy and vigorous. Fed with roots, the effect on animal life is astonishing.

The hog is naturally a gleaner and an economizer of the refuse and offal on the farm. Of all farm animals he is the only one that craves a variety of things. See that he gets what he wants, and the year's cash balance will foot up very satisfactory.

It is a good plan to feed store hogs regularly, but not too heavily, three times a day; give them abundance of raw material to work up into manure, and have on hand a constant supply of charcoal or wood ashes. A mixture of the latter materials, experience has proven to be excellent in correcting acidity and improving digestion in swine.

Of the 35,000,000 to 40,000,000 hogs in the United States, three-fifths are raised in ten strictly Mississippi Valley States, namely, Illinois, Iowa, Missouri, Indiana, Ohio, Kentucky, Tennessee, Kansas, Nebraska and Wisconsin. These States produce annually nearly three-fourths of the entire corn crop of the country.

A Nebraska man says hay is good for hogs. Cut the hay short and mix with bran, shorts or middlings, and feed as other food. Hogs soon learn to like it, and if soaked in swill, or slop food, is it highly relished by them. In winter, use for hogs the same hay that you feed to your horses, and you will find that it will save bran, shorts or other food; it puts on flesh as rapidly as anything that can be given them.

Epilepsy in pigs is generally due to irritation of the digestive organs, from improper food, worms, etc. For pigs under three months old, give a teaspoonful of flour of sulphur. It may be given two or three times daily during a week, in a little thin gruel, which the pigs do not object to consume voluntarily. Change of food and comfortable quarters are essential; also plenty of sour milk, ample range of liberty, and pure water.

No More Lard.

The South is to have a new industry, the manufacture of cotton seed oil. The *Southern Cultivator* says: "Refined cotton seed oil is everything that can be desired as a substitute for lard or other fats for culinary operations. For frying fish, for shortening bread, cakes or crusts, for making gravies, and so on, it is even superior to lard, imparting no unpleasant flavor or odor whatever; in a word, bringing no unsatisfactory results, dietary or otherwise; but on the other hand, making lighter and better bread, cakes and crusts than could be made with lard, and proved decidedly more digestible, to say nothing of being considerably cheaper. A pound of cotton seed oil, costing the consumer not more than twelve cents under the most unfavorable circumstances, will go fully as far in the culinary way as a pound and a half of lard. When a pan of steak has been fried with it, the oil not absorbed by the steak may be poured back into the dish and used again at another time, being just as clean and pure as it was before it was put over the fire. There is something about it which prevents a union with animal impurities. As a consequence of all this it is coming into rapid use, and the sooner it gets fully into use the better for the people, undoubtedly." A popular Southern writer treating on the same subject says: "When it has gone into general use, which is only a question of time, there will no longer exist an excuse for writing as an epitaph over the grave of departed Southern vigor: 'Died game—the frying-pan.'"

And the strange story of cotton seed, the coming wonder, cannot be permitted to stop even here. The chemist has recently converted cotton seed oil into a substitute for butter; an article far superior to the best oleomargarine ever made, and cheaper. It fills all the offices of butter, both for culinary and table use, and is coming rapidly into general favor, as it seems to give entire satisfaction wherever tested.

Shipping Cattle.

Cattle are taken on and under deck in stalls measuring two feet eight inches on vessels sailing from New York, and two feet six inches on those from all other ports of the United States. These stalls are built under the supervision of an insurance inspector. During the summer shippers prefer to ship on deck, as the cattle get more air and come out fresher at the end of the voyage. On deck the steamships carry between 160 and 175 animals, the under deck about 225 head. Drinking-water is condensed by steam process on board for their use, the ocean itself proving a never-failing source of supply. The cattle are generally put on the steamer in the stream, after it has left the dock, an old ferry-boat usually being used for the purpose. The number of cattle to be taken is regulated by the insurance inspector, and cattle exporters must pay the entire freight, according to his report, even if they do not ship the entire number. Sheep and pigs are stowed away in stalls on deck where there is not enough room for the cattle. Sometimes in the early spring, when the sea is liable to disturbance, some of the cattle get overboard, and then a very lively time ensues in getting them out. The cattle are hoisted on board usually and lowered, two at a time, by a winch, into the hold. The allowance of water is from six to ten gallons a day to each bullock. The amount of fodder averages one ton to each animal. The rates of insurance apparently vary. Some shippers give it at 3 per cent. in summer to 10 per cent. in winter. There is some risk to cattle from perils of the sea in the latter season, as a heavy storm may make it necessary to lighten the ship by throwing the entire deckload of cattle overboard. The carrying capacity of the vessels, of course, varies, but the average, as given by an old shipper, may be put safely at 200 head at the shipment, taking large and small vessels into account. On some of the large steamers the number has reached 500, and one Boston steamer has carried as many as 841 head. The largest

shipment from New York by one steamer was 650 head.—*Pittsburgh Stockman.*

Easy Mode of Improving Cattle Stock.

An easy mode, and one reasonably inexpensive, at the same time, is what many farmers wait a good many years for and to many it never comes. It fails to come, in their case because of an excessively-cultivated cautiousness. It would seem that, after marketing scrub calves for a score of years or more, at less than half the price of well-bred ones, or furnishing grass and grain till they have reached an age to sell as third or fourth-grade stock in market, any man of reasonably fair discernment would have made up his mind that this was not profitable.

To a farmer who has all his active life been a grower of grain, because he has no taste for stockraising, and, inferentially, no faith in it, as a business, it is quite likely better for him not to attempt the avocation of a breeder, as his practices would not be in keeping with the needs of young growing stock, neither of that more advanced, ready to be finished off. But we have a word to say to such as are fairly attentive to whatever they turn their hands to, and are willing to be guided by the signs of the times, indicated, in a measure, by articles published in recent numbers of the *Journal*, regarding the growing demand for meats. Nothing has occurred to weaken the arguments then used. On the other hand, the events of each day confirm them.

Turning off cattle younger than has heretofore been the custom will materially curtail the supply, because the practice strikes at the fountain head, taking to market what, under former views, would be called immature stock. Those who furnish the cattle for slaughter at a year and a half to three will find that the public demand is insatiable and annoyingly exacting as to quality. Scrubs will not fatten at the ages required, and it is quite generally dawning upon the minds of all observing farmers that a scrub steer, at three years old, has eaten all of value there is in him. He is not wanted then, is not salable, and is held and fed to maturity at a loss. At any rate, this will hold good upon any farm worth, say \$15 an acre, and in a locality where corn, taking one year with another, is worth more than twenty cents a bushel, and hay brings a price corresponding with this.

Therefore, it is of vital importance to every farmer to get out of this rut, gradually, at least, discard the animals that have encumbered his acres, and replace them with such as meet the demands of the times, and command top prices from willing buyers. We read of a farmer, of very moderate means, who bought an in-calf heifer and a young bull at a moderate figure for reputable purely bred stock. The price for the two may have been \$300; it may have been less than this. At any rate, by careful breeding for a period of ten years, he had twenty-eight descendants of the heifer upon the farm. Twelve of these were cows, four heifers, and ten heifer calves. One grown bull and one bull calf made up the full number. It is reasonable to infer, that he had at least made sales of quite a number of males. On such a basis as this, always having a purely bred bull for use upon common cows, no prudent man can do otherwise than better his condition by doing as this man did.

A comparison made between the grades upon this man's farm, and another where a scrub bull had been kept during a period of ten years, would, of course, show a very marked contrast. So great would this be, in the matter of general appearance, as well as furnishing a basis for profitable feeding, that the original investment, conceding it to have been three hundred dollars, would be found to have been entirely warranted, estimating the improvements wrought upon the common cattle upon the farm alone. The reader hardly need be reminded that the consumption of food would be about alike in the case of the grade and the scrub; the taxes would scarcely vary. Interest upon stock and farm, taxes upon the latter, and general wear and tear would be the same with one class as with the other, while the gain in early maturity, thus enabling the owner to turn his money quickly, added to the gain in growth from a given amount of feed, and the telling contrast between having the stock anxiously sought after, at six or seven cents a pound, and having to hunt unwilling buyers at half the figures given, should enable any man, not wilfully blinded, to readily see that an expenditure in the direction indicated cannot well be otherwise than profitable.

As will readily be seen, there is quite a difference between deferring the purchase of improved cattle to a future day, say ten years ahead, that you may then have a cash balance to your credit and sufficient to enable you to buy a herd of fair dimensions at the start, and commencing as did the farmer referred to above, with a pair only, finding himself the possessor, at the end of ten years, of a herd of his own breeding, that, if bought at a single purchase, would cost several thousands. What is true of cattle in the direction named is equally true of other farm stock. A beginning in this way, with entire propriety, be like the commencement in other lines of business. The pioneer, on a new timbered farm, does not wait a decade for trees to rot, but clears a small space, commencing in a small way. Some very large manufacturers commenced with a single forge or bench, at the cross-roads. They did not wait to accumulate a large surplus of capital, but planned to make a given line grow from a small beginning, be self-sustaining, eventually furnishing its own capital. If a man has not means to enable him to plant ten acres to potatoes, he can certainly plant a single eye of a potato, and from this his ability to plant ten acres from crops of his own growing is only a question of time. So, the single cow system will, with reasonably discreet management, insure to the owner a respectable herd without undue waiting. A cow bought for the boy of ten years, will, when the boy has attained his majority, furnish him a fair working capital to begin his business with.—*Live Stock Journal.*

Scotch Shorthorns.

Scotch Shorthorns are attracting much attention in this country of late. As Scottish breeders have been careful to breed more for beef than for look, and have never hesitated to kill animals not up to a high standard as breeders, they have succeeded in producing what very many excellent judges in America as well as in the old country consider the very best families of Shorthorns known. The severe climate, exposure, and the system of breeding and feeding which have given to Scotch polled breeds their rugged character and unsurpassed capacity for making the best possible beef, and enduring the worst possible weather, have also given to the Cruickshank and other Scotch Shorthorns similar characteristics. Like the polled cattle and the Herefords, these Shorthorns are short in leg, full and fine in lines, roomy in the barrel, as all good grazers must be, and carry a large amount of the most valuable beef. Maturing early, and with constitutions unharmed by unwise breeding, they give a very satisfactory return for the care and money invested in them.

The White Breeds of Swine.

All improvements in swine undoubtedly came from the domestic hog of China upon the native breeds of England. The hog of Europe, Asia, and Africa undoubtedly had a common origin, since they are fertile together, and the offspring are completely so from generation to generation. Thus the hog of all these countries has, without doubt, contributed to the improvement of our improved breeds, the hog of China and Siam probably having had a greater influence than all others whatsoever.

China has a civilization of greater antiquity than any other nation on earth. Its civilization dates back far beyond that of Egypt, for upon the monuments of ancient Egypt are Chinese inscriptions, showing that civilization probably came from the direction of China. Since when the hog came carefully to be bred is not known, but that the Chinese hog has been bred with care and attention in China from time immemorial there is no doubt, and this with special reference to early maturity and strong fattening propensities. In China, from its early civilization and the care bestowed upon the cultivation of the earth, we early find it occupied with a dense population. It still holds this pre-eminence of density of population. Thus everything there must conform itself to those conditions that will best subserve a struggle for life. They cannot afford to feed the larger animals, nor, indeed, any animal to a great size. Their systems are all artificial. Hence, we find the Chinese hog; hence, the prepotency of his blood; and for the reason that it had once attained a breed that answered the wants of the community, no further attempts were made in experimenting, but the dominant breed was kept intact.

They are a compact, rather small, chunky, white hog, of good constitution, active feeders, and with plenty of bone. It is the infusion of this blood that long since converted the semi-wild, raw-boned, strong-snouted, long-legged, bristly and hard-feeding hog of England, into the tolerably compact, deep-bodied, broad-backed and short-snouted hog of seventy years ago in England, and that by careful breeding has since given us the many admirable breeds of white swine that have successfully held the public taste. So improvement from careful breeding has from time to time appeared, and which from fineness of bone and aptitude for fattening in the smaller breeds, and for great bulk and substance, to-day are nowhere excelled, outside the mother country and America.

The wild hog is not indigenous to America. In its place appears, however, an allied animal, the peccary of the sub-tropical and tropical regions. These are two species, and were named *Dictyles*, double naveled, from a glandular opening in the back. One species (*D. tarquatus*) is the colored peccary; the other (*D. labiatus*) is the white-tipped variety, and both inhabited originally the countries of the Atlantic from Guiana and Paraguay north to the Red river. They are smaller than the common hog of the Eastern hemisphere (*sus scrofa*), and covered with stiff bristles on the back, which, like the hair of all savage animals, are erected when angry or alarmed; but, unlike the hog, they are nearly destitute of a tail.

The original of the domestic hog of Great Britain was undoubtedly white or sandy. They were of two general classes; the smaller being dusky in color, with erect or partially erect ears, arched back, half wild, and generally found in the highlands and islands of Scotland. The second class were larger, with pendulous ears, generally white, but sometimes tawny or spotted with black. They were coarse, large-hamed, arch-backed, long-legged and huge-snouted, and would not fatten until two or three years old; in fact, pretty much such a hog as used to be found wild in the Southern forests half a century ago.

Of the old modernized breeds of England we have accounts of the Hampshire hog—large, long in the neck and body, mostly white in color, but sometimes spotted black, showing infusions probably both of China and Siam blood. They were said to fatten to a great weight when mature, and to have been celebrated for the goodness of their hams and bacon.

The Shropshire is another of the old English breeds, white, sometimes brindled with black on a sandy color. They were deep, but flat-sided hogs, wiry-haired, large-eared, long-nosed and long-legged. They were, however, not delicate in what they ate, garbage and distillers' mash all being thankfully taken, and fattened to 600 pounds and upwards.

The Rugewick breed seems to have been the giant breed of England. They were considered as among the most hardy and prolific of English breeds. Their ordinary weight is given at 600 to 900 pounds, and a hog of this breed is recorded to have reached the weight of 182 stone of eight pounds each, or 1,456 pounds. The old Yorkshire is recorded to have been one of the worst of English breeds, long-legged, weak-loined, not good in constitution, and, of course, bad winter feeders, or, as the old chroniclers expressed it, "bad sty pigs in winter." They, however, are said to have had the merit of being earlier fatteners than some of the so-called superior (larger) breeds. The first improvement is said to have been from the old Berkshire cross; they were still considered inferior to the then breeds of Northwestern English stock.

The old Wiltshire breed was a low, long-bodied, hollow-backed, high-rumped hog, round-boned, light-colored, and with rather large pointed ears.

The Northamptonshire old breed seems to have been a superior hog for that day. They are said to have been a handsome, small-eared, white, deep-sided hog, of medium bone, quick feeders, and good in their "proof."

The Lincolnshire breed was originally medium-sized white, or light-colored, and resembled the Northamptonshire swine, but inclining to curled or woolly hair.

The old Gloucestershire hog was a tall, long, white, inferior hog, and was distinguished by its double wattle hanging down from the throat.

The Leicestershire breed, in its original form, was a large, deep, but flat-sided and light-spotted hog, with a rather good head and ear. It is the breed upon which Bakewell worked in his improvement of swine. This would seem to establish the fact that it was one of the best existing breeds of his day.

The Norfolks were small, short-bodied, erect-eared, thin-skinned, but easily fattened. They are reported to have been of various colors, generally white, inclining, however, to blueish, and sometimes streaked or scored with thin lines.

The Chinese hog, as originally known in England, is recorded to have been thin in hair, or almost bare as to the upper parts. The color was grey rather than white; the legs so short that the belly almost, or quite, swept the ground; short-snouted; short-tailed; the ears fine and falling over the eyes. Culley subsequently divided them into seven distinct races; but this is regarded as having been more fanciful than real.

The Berkshire originally was a tawny white, or reddish color, spotted here and there with black; the ears were large and drooped over the eyes; the body thick and close, and well made for that day; short-legged, fine-boned, kind feeders, and the flesh even then accounted as most excellent.

Even so late as forty years ago, as we knew the best of them, they inclined to be tawny colored and spotted.

A swing-tailed breed is also mentioned as being a useful, hardy, small hog, weighing well in proportion to its size.

The Highland breeds were hogs ranging in the highlands of Scotland and the Hebrides, and have been thought to have been the original breed of the country. They were small, uniformly grey in color, shaggy-haired and with long bristles. They ran perfectly wild winter and summer, subsisting by grazing and rooting, and in the autumn became fat on mast.

In the Orkney Islands were found hogs of a dark red or brown, long-haired and bristled, with woolly hair beneath.

The old Irish hog is described as having been a long-legged, thin-sided, lank unprofitable brute; probably, however, not more so than others of the semi-wild breeds, it being well known that the general improvement of swine was not attempted in Ireland until improvement had made considerable headway in England.

The Suffolks can scarcely be classed as among the older breeds of Great Britain. They are described as being white in color, small, delicate, short-haired, with pendant bellies and dish-faced. Evidently a modified white China hog.

The Essex, now the best of our small black hogs, was originally a long, flat-sided, roach-backed, long-legged hog, with prick ears, and long head and nose. The bone was rather small and the color was white or black-and-white. They had little hair, were unquiet and great feeders, but fattened quickly. Undoubtedly they were a modified Siamese, their eminent modern qualities being due to Neapolitan blood and careful selection and breeding.—*Breeders' Gazette*.

The Demand for Mohair.

During a recent walk through the largest woolen mill in the neighborhood of Philadelphia, the writer was surprised to find a large pile of bales filled with mohair. Upon inquiry the fact was elicited that already considerable machinery is running on fabrics composed of mohair, the majority of which is imported. This fact is especially interesting to those who have heard the absence of a market for mohair quoted as an argument against the profitable culture of Angora goats in the United States. This hair, though going into several other fabrics, is principally employed in the manufacture of plushes, for covering the seats of railroad cars—an industry just now attempted in this country. The proprietor of the mill above referred to admitted the superiority of the American mohair, and emphasized his conclusions by comparing samples of foreign and domestic product. With a fair market for their fleeces—as reliable as that of wool—within ready reach, there seems no reason why the culture of Angora goats should not take its place beside that of the hitherto more popular and profitable farm animals. In fact, in many localities goats can be handled without at all interfering with other stock—as they prefer those hilly and arid localities inaccessible to most other animals. The time for sneering at efforts in the direction of introducing the Angora goat into the United States seems to have gone by forever.—*Breeders' Gazette*.

QUARANTINE STATIONS FOR IMPORTED CATTLE.—The Treasury Department is informed that arrangements are nearly completed at Baltimore, Boston and Portland for providing shelter and other accommodations for imported cattle. The station for the Maine district is at Deering, Cumberland county; that for the Boston district is at Waltham, on the Fitchburg Railroad, about ten miles from Boston, and the Baltimore station will probably be on the lands of the Baltimore and Ohio Railroad at its junction with the Baltimore and Potomac. The Government will furnish shelter and water and the owners will have provide for the feeding and care of the cattle. Heretofore importers have been compelled to quarantine cattle at their own expense, and as the Canadian Government provided free accommodations, cattle which otherwise would have come directly to the United States have gone to Canada. Already, however, importers are making arrangements to bring cattle into Boston and Baltimore. There are eighty-five head of polled Angus cattle from Scotland quarantined in the Maine district. Sites for the New York and Philadelphia districts have not yet been selected.

STOCK PROSPECTS IN ARIZONA.—The Happy Valley ranch, owned by Charles Paige, and the Meadow Valley ranch, owned by Don Sanford, have passed into the hands of other owners. The consideration for the first was \$30,000 and for the latter \$80,000. Messrs. Paige and Sanford are both well known in Tombstone, and many of our citizens are familiar with the properties sold. The transfers were made through Judge Silent, who, together with his associates, is the purchaser of the Sanford ranch. The Happy Valley ranch was bought for Walter Vail, who proposes to use it for the breeding of fine blooded stock. It is situated north of Pantano and lies between mountains in the shape of an ellipse the hills converging to within a quarter of a mile of each other at one end, furnishing the only egress. The water supply is centrally located and is abundant. The Sanford ranch is well known the country over and occupies the whole of the intervening country between the Empire ranch and Tully & Ochoa's ranch at Pantano. Both are to be heavily stocked, the one with pure bloods and the other with improved cattle.—*Epitaph*.

WHAT GRADE JERSEY COWS WILL DO.—Mr. J. H. Vannuys, Johnson County, Indiana, has a herd of ten grade Jersey cows, which yielded him the following gross receipts from milk, cream and butter during the months named for 1881: January, \$63 45; February, \$70 67; March, \$52 38; April, \$60 07; May, \$68 58; June, \$58 68; July, \$61 02; August, \$82 36; September, \$63 99; October, \$65 34; November, \$93 96; December, \$73 17. Total, \$813 84; an average of \$81 38 per cow per year, besides the calves and milk. With another cow added, his receipts for the first four months of this year have averaged \$97 95 per month, from eleven cows. Grade Jersey cows thus pay splendidly in the dairy business.—*Indiana Farmer, Indianapolis*.

An exchange says: Missoula, M. T. has a cow that has seen a good deal of country. Raised in Wisconsin, she emigrated to Illinois, and after a year or so returned again to her native stable, thence following her owner's fortunes through Wisconsin, Iowa and Minnesota, along the line of the Northern Pacific as it was built west to Bismarck, through Dakota to Miles City and Billings, M. T. Then leaving the snorting locomotives behind she followed her owner's wagon on to Bozeman, Helena and Missoula. She is called Trampoline, and valued by her owner much higher than his best horse.

At a recent sale of black Polled Angus cattle, held at the Horse Bazaar, Aberdeen, Scotland, American buyers secured nearly all the best things. The average price paid was about \$250.

Parturient Apoplexy.

Parturient apoplexy, more familiarly known as puerperal, or milk fever, is a very frequent, and usually fatal disease among dairy stock. The losses which annually occur from the ravages of this malady is a great set-back to the enterprising young farmer whose means are somewhat limited, and who cannot afford to lose a valuable cow. It is therefore of the greatest importance to study this disease in its various phases, in order to be prepared to grapple with it in its incipient or primary stage, or, what appears still more sensible, to take the necessary precautions to prevent, if possible, the frequency of those attacks. The usual victims of puerperal fever, or those who are most susceptible to the disease, are dairy cows in which the secretion of milk is abundant. High feeding, want of sufficient exercise, and neglect in proper ventilation and cleanliness, are the prolific causes; which facts are suggestive of the propriety of giving more than ordinary attention to the care and management of in-calf stock during the period of gestation, and especially at the time of approaching parturition. The period of life at which the disease is most likely to occur, is at the time of the birth of the third calf, and the season of the year when the disease is most prevalent is during the months of July, August, and September. Especially is this the case with cows which have been running all summer on luxuriant pasture. The sudden change in the system of the cow at the time when the blood is well charged with the elements of nutrition, from her dangerous plethoric condition, is more than nature can endure. The blood, which a short time before was directed to the womb, for the growth of the fetus *in utero*, is now directed to the udder, for the sustenance of the young-born calf; and if at this important time the skin and udder should perchance fail to perform their important functions, we should not be surprised if a determination of blood to the brain should be the result, and either congestion of its blood-vessels or rupture of their coats, causing extravasation of blood in the brain, thus producing coma and its fatal consequences. We now come to that part of the subject which is so important to all husbandmen, especially stock raisers. We refer to the best means of preventing the disease. We should first endeavor not to encourage the secretion of milk by feeding a rich, succulent diet. Cows which have been running on rich pasture, and are in full-fat condition, should be removed three or four weeks before calving to some barren pasture, and fed on dry food. This will have a tendency to diminish the secretion of milk at or about the time of calving, which is of great importance. If the change from wet to dry food has a tendency to constipate the bowels, a mild aperient may be given. In no case should the cow be milked before calving, unless it becomes an absolute necessity, as by premature milking the secretion of the mammary glands is unduly excited, and a more copious supply of milk encouraged, which should be carefully avoided. It is a well-known fact, that cows which calve with comparative ease, and clean promptly, are the usual victims. Cattle owners should therefore be very watchful of those particular subjects.

After the cow has calved, the flow of milk should be encouraged by frequent milking. If the cow is full-fat condition, a cathartic should be administered, and nothing but a mild laxative diet should be fed. Care should also be taken not to expose her to any sudden change of temperature, or to any undue excitement, until all danger has passed by.

The treatment of a case of parturient apoplexy will very much depend on the stage of the disease in which the animal may be found. In the early or primary stage, bleeding from the jugular vein is recommended. However, our chief aim should be to equalize the circulation, and use every means to divert the blood from the brain to some remote organs, by restoring the action of the skin, bowels, kidneys, mammary glands, etc. Ice may be applied to the head, if necessary; clothing may be used to restore the action of the skin. If the legs are cold they should be rubbed with some stimulant and bandaged with red flannel. A cathartic should be administered as early as possible: 1 lb. of Epsom salts, with 3 oz each of gentian and ginger, dissolved in 1 pint of hot water, may be given at one dose; and half the quantity may be repeated every four hours until the bowels are freely evacuated. The action of the cathartic may be promoted by the frequent administration of soap-suds injections. In extreme cases, turpentine enemata have an excellent effect. The flow of milk should be encouraged by frequent manipulation of the udder. Mustard blisters may also be applied along the whole course of the spine—say every four hours. Stimulants may be given as soon as practicable—brandy, whisky, and the carbonate of ammonia, in small and frequent doses, have a very desirable effect. It is also very necessary that the patient should be well nursed. A well ventilated stall, with plenty of good bedding, is essential. It will be a good idea to bolster up the head to prevent her from injuring her horns, and at the same time facilitate the flow of blood from the brain.—*Live Stock Journal*.

MANAGEMENT OF HEIFERS.—Pregnant animals should be fed and watered regularly; they should have the best of food and purest of water; snow water, as well as stagnant water, and also icy water, should be entirely avoided. The care in the stable, as well as out of doors, should have particular attention. Thus a too narrow stall, slippery floor, narrow stable doors, improper ventilation, and drafts of cold air, should be avoided or guarded against. As to the quantity of food, so much should be given that both the organism of the mother can be sustained sufficiently to insure the healthy development of the fetus, and also allow a surplus for the production of milk. A too large quantity of nutritive food should not be given; for, as a general rule, fat cows will produce lean and weak calves. Musty, rusty and dusty hay, brewer's grain, swill, and much oil cake, turnips and beets should be avoided. The heifer, when nearing her time, may be placed in a roomy box-stall, well littered, and so arranged that the view of her companions is not entirely obscured; and when about to calve she should be watched, but not unnecessarily interfered with. When the afterbirth is dropped it should be removed immediately and buried.

Sheep need protecting from rain. A fleece of wool after it has become saturated with water is a cold blanket for the animal to wear, and it takes a long time to dry it. An amount of food which would be sufficient to keep a sheep with dry fleece in a thrifty condition would scarcely be sufficient to enable one with wet fleece to "hold its own." Besides, the sheep with a wet fleece is liable to take cold. It does not pay to allow sheep to become wet.

Fattening hogs—Do not forget to give charcoal liberally. Pigs are apt to suffer from a disordered stomach, which is relieved by charcoal. An occasional handful of wood ashes and sulphur will also be found beneficial.

ADVERTISING RATES.—Displayed \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, November 18, 1882.

Mr. M. J. Henley is a duly authorized traveling agent and correspondent for the "Breeder and Sportsman."

FALL RACE MEETING.

The Pacific Coast Blood-Horse Association, as heretofore, is successful in giving satisfaction with the two days races which have taken place. In all our acquaintance with turf sports we never knew so many meetings to be held, and so many races run with as little carping and fault-finding as has been the case. To assist in this the Association have had the valuable aid of owners, trainers and jockeys. We know of only one instance where there has been a deviation from a straightforward course. This has been mainly due to a high sense of honor among those who have the horses in charge, and those who are not guided by the only true principle are well aware that transgression will be followed by exemplary punishment. While every officer and every member of the association has labored assiduously for the welfare of the association, the President is entitled to the highest praise for his exertions. He has been extremely liberal in a pecuniary sense, he has been more than liberal in leaving his business at any time and traveling long distances to attend the meetings. From the locality of Messrs. Finigan and Schwartz, of the Board of Trustees, these gentlemen have been called upon to perform a great deal of hard work, and this has been done so thoroughly and cheerfully, that it may be that some do not appreciate the services rendered. The assistant Secretary has done all the work of the office from the time he took possession, and previously was always ready and willing to lend a helping hand. As it now stands there is a bright prospect for the association, and it only requires the spirit which has prevailed in the past to render it all that the most sanguine could desire in the near future.

There is little necessity for writing much, in addition to the full reports of the races decided.

There is not a dissenting voice among those who attended in pronouncing eulogies and there has been praise from every tongue.

The races at all distances have been good, with few exceptions, that on Wednesday last at heats of three-quarters of a mile is by far the best ever run in the United States. Previous to that race the best on record was that of Knight Templar at Louisville, May 24th, 1880, when, with 92 pounds, he being three years old, ran in 1:15, 1:17. The only approach in an aged horse is when Egypt ran at the same place, carrying 118 pounds in 1:16, 1:17. Even among the dashes there is nothing that will take any great precedence, as there has been no animal over three years which has run faster than 1:15, and 1:14 is the "top notch." The two-year-old Barrett, by the same horse as Joe Howell, occupies the first place inasmuch as he ran in 1:14 with 110 pounds up, and Knight Templar who shares the honor of the same figures, only carried 77 pounds though a year older. The race which will afford the best comparison is that run by Governor at Sheephead Bay, Sept. 23th, 1880. He was two years old and carried 98 pounds. He ran a dead heat with Ada in 1:14½, and in the "run off" scored 1:14½. But in accordance with the rules a dead heat in a dash gives an interval of rest, all the races for the day being interpolated, so that makes quite a difference. We do not intend, however, to write about the horses until the racing is finished, as there may be changes startling enough to upset previous calculations. A race run may be all that was needed to perfect the condition, and the colt which was inferior in the races past be an entirely different animal in those to come.

There is a grand bill for to-day, and with many indications that the weather will be all that can be desired.

In the first place the hurdle race, postponed from last Wednesday will probably take the place of the one set for to-day, and that carried over until the last day.

The first race is for a purse of \$100; a dash of seven-eighths of a mile, \$50 to the second horse; entrance free; the winner of the three-quarter dash or three-quarters and repeat to carry ten pounds extra; winner of both events to carry fifteen pounds extra.

Night Hawk, Garfield, Premium, Duke of Monday, Joe G, Forest King, Bob, May D, Ella Doane, Haddington, Jim Douglas, Jim Renwick, Fred Collier, Joe Howell, Atlanta, Lizzie P.

Here is a problem for the aceto to solve, a "nut to crack" that will take strong jaws to crack and shell and get at the meat. The fanatics must be considered and then look at the list of names, but have not the least desire to venture a prediction.

The second is a purse of \$250; heats of a mile and an eighth; entrance free; \$50 to second horse; maiden three-year-olds allowed seven pounds; four-year-olds twelve pounds; maidens five years old and over twenty pounds; the winner of the dash at this distance on the first day to carry five pounds extra. Duke of Monday, Joe Dion, Lizzie Martin Colt, Geo. Bender, Nathan Combs, Belshaw, Precious, Fred Collier, Joe Howell, Capt. Kidd, Judge McKinstrey.

Here again is a puzzle, the allowances coming into the calculation, and the race that follows.

Handicap purse of \$250 for all three-year-olds; a dash of a mile and a quarter; \$25 each and \$15 if declared; the second horse to receive \$50. Garfield, Maria F, Forest King, Inauguration, Birdcatcher, Hattie B, Atlanta, Lizzie P, Joe G.

As will be seen all of these races are departures from the regular schedule of weights and this always complicates matters, adding to the "glorious uncertainty" and increasing the interest. As there is only one heat race to take up the time, there is no question of there being plenty of daylight for the hurdle race, in which there are named claimed by those who have seen them exercise to be the best jumpers on the coast.

There is some probability of the four-mile race being postponed from Thursday until Saturday. To do this it is necessary to obtain the consent of all the parties interested. Should this be done due notice will be given in the daily papers, and it will also afford us the opportunity to discuss it in a manner commensurate with the programme.

The advertisement in this paper, however, is sufficient to convince the most exacting that it will be a great day, though for that matter every day has been good, and as the races progress there has been an improvement on the preceding and this is sure to continue to the end.

No one who has the least friendship for the "royal sport" can afford to miss one day.

DECISIONS IN THE EMBRYO STAKES.

It is always an unpleasant task to us to write words of condemnation, though there are cases where it becomes a duty that cannot be avoided. There is no phase of journalism which makes that duty so irksome as a turf paper presents, and those who are in a position so onerous, and at the same time so important, are called upon to castigate when they fain would applaud.

The turf and track have many enemies. Bitter foes, who eagerly seize every opportunity to denounce, and who gloat over anything which brings the sport into discredit. But an editor who seeks to apologize for wrong-doing is out of place. He must be fearless as the surgeon who cuts deeply to remove the cause of disease, and with courage enough to probe the wound to the bottom. No matter whether the offender is in high station or low, punishment must follow. When there is a deviation from that course he loses the respect of men whose good opinion is beyond price. Though "thrift may follow fawning" there is merited disdain for the menial who self-encircles his neck with the collar of servility, after having inscribed it with a mark which denotes his thralldom.

We have promised our readers that this journal would be a faithful guardian of the interests it represents. That so far as we have the ability we would do all in our power to elevate the sports which are the main feature, and believing that great injustice was done in the decision rendered in the third heat of the three-year-old race by the judges we cannot pass it without recording our opinion, sincerely trusting that it may be a warning to those who occupy the station in the future. As we are directly and personally interested in the decision which permitted Dawn to start in the yearling race, we will not take that into consideration at present, the argument coming more appropriately hereafter. There was, however, a legitimate subject of criticism in the proceedings after the filing of the protest, and that was the shyster trick of seeking to counteract the protest founded on a substantial basis with others which had not even a shadow to build upon. The announcement from the stand that there were protests against all of the starters in the race was the flimsiest sort of a veil to convey a wrong impression to those in attendance that all were in error, and was as despicable as it was false.

There is another point in this part of the proceedings. Hon. J. McM. Shafer was the presiding judge. When

the evidence, or rather before the evidence was presented, in place of hearing it, he at once became an advocate for Dawn starting, and showed that as an attorney he had studied the case and was fortified in his position by previous councils. More than that, he upbraided us with "being a great stickler for rules, and yet violated the rules more than anyone." On being asked to instance one violation he referred to the concurrence of opinion with his associate judges in the case of the starting in the "Maiden race," which is treated in another place, that opinion having been solicited as to the meaning and intent of the rule.

From having a colt in each of the races under discussion this personal matter forces itself into consideration, and we wish our readers to distinctly understand that in the yearling race the sustaining of the protest will give us first and third money; in the three-year-old there was the slightest show to better the position awarded if the ruling had been otherwise.

A full and complete description of the race will be found in the appropriate place so that there is no necessity for a recapitulation. The reason given for taking the heat away from Fred Arnold was that his driver shouted. That the rules do not grant the judges the power to make such a decision can be shown so plainly as to be easily comprehended by those who are the least conversant with them, though that there was any breach of this kind the driver emphatically denies, and this denial is supported by our own knowledge. Rule 47 reads:

Rule 47—Loud Shouting—See. 1. Any rider or driver guilty of loud shouting, or making other improper noise, or of making improper use of the whip during the pendency of a heat, shall be punished by a fine not to exceed \$25, or by suspension during the meeting. [See also Rule 48.]

In collating and publishing the rules the secretary of the National Trotting Association saw fit to add references in brackets to the other rules which, in his opinion, had a bearing on the subject and rule 48 is as follows:

Rule 48—"Fouls"—See. 1. If any act or thing shall be done by any owner, rider, driver, or their horse or horses, during any race or in connection therewith, which these rules define or warrant the judges in deciding to be fraudulent or foul, and if no special provision is made in these rules to meet the case, the judges shall have power to punish the offender by fine not to exceed \$100, or by suspension or expulsion. And in any case of foul riding or driving they shall distance the offending horse, unless they believe such a decision will favor a fraud.

Sec. 2. The penalty imposed herein for "fouls" shall apply to any act of a fraudulent nature, and to any unprincipled conduct such as tends to debase the character of the trotting turf in the estimation of the public. [See Rule 28, Sections 4 and 5; Rule 29, Section 11; See also Rules 35, 46 and 47.]

While these references might mislead a person not familiar with construing written language, a lawyer trained to the business could scarcely miscomprehend the connection. Rule 47 is explicit, defining the penalty of loud shouting to be a fine not to exceed \$25, or by suspension during the meeting. Rule 48 distinctly states "and if no special provision is made in these rules to meet the case, the judges shall have the power to punish, etc." Here is a special provision so definite that it cannot be misunderstood by any one that has sense enough to read.

We must apologize for offering other arguments than a transcript of the rules, as it appears like underrating the intelligence of our readers to do more. The references in brackets at the close of Section 2, Rule 48, have reference to rules in which there is not a clause bearing on this point and it is useless waste of space to copy any part of them.

By referring to the account of the heat it will be seen that Fred Arnold got the lead before two hundred yards had been trotted, that he rapidly drew away from the other horses so that when Bonnie passed the half-mile he was sixty yards, or more, in the lead; that at the time the shouting is stated to have occurred the filly was gaining on him, and that she did not break or even "wabble" after she entered the homestretch. There was a wide space between them, and any noise that the driver of Fred Arnold made could not interfere with her. It was claimed that in the second heat in the close contest between Anteco and Fred Arnold down the stretch Hinds shouted fully as loud as in the third heat. In this case we have the fullest knowledge and know that the only "shouting" was words of encouragement to his colt in tones that could not come within the meaning of the rule, or be twisted into a violation. We have been in many races and never saw one where we thought the drivers drove more fairly. There was no getting in each other's way, and when Bonnie made the break Hinds at once pulled away so as to give her driver every opportunity to get her back to her trot. He did not "take the track" until he was many lengths in the lead, and when he was so far in advance that even "loud shouting" could work no injury, he kept up the same words of encouragement to his colt, proving that his only object was to accelerate his movement. But this is also a superfluous statement, as taking it for granted that he did shout loudly the rules expressly

stipulate what the penalty shall be, and no amount of erratic quibbling can give any other construction. The mandate is clear. A fine, not exceeding \$25, or suspension during the meeting, awaits the offender. That Judge Shafter is not capable of rightly construing such plain language will scarcely be conceded by those who know him. We understand that one of his associates, Hon. A. P. Whitney, did not agree with him; we have ample testimony to that effect. To get a majority it was necessary that one should coincide, and Dr. Tisdale, a resident of the Sandwich Islands, was that one. As he was selected by Judge Shafter himself it may be that the choice was made for the purpose of having a coadjutor, inasmuch as he was overruled by being in a minority in the case that arose on the Bay District course last Saturday. Apart from the direct effect on the race in question, there are reasons to fear that it will be seriously detrimental in the future. A palpable wrong committed in the stand is far worse than the misdoings of the drivers. It takes away the confidence of owners and drivers, and thoroughly disgusts the spectators. In this case there was universal condemnation, and the winners as well as the losers joined in fervid denunciations of the verdict. There is not the slightest question but that the Board of Review would set the verdict aside. We mention the Board of Review as in this district Judge Shafter is a member of the Board of Appeals in which there is a vacancy so that it could not be decided. As we understand that measures have been taken to fill the vacancy this state of affairs will soon be remedied, and the questions can be adjudicated, virtually barred at present.

BEEF AND STOCK CATTLE.

In the first issues of this paper we referred in several articles to the prospects of the cattle business and also invited correspondence from the different stockmen on the coast regarding prices, increase, and condition of their herds. We did this in order to give the various cattle men a general idea of the prices ruling over the coast. We invite you again. It is for your benefit and we will be happy to receive whatever information you can send us. Prices as a rule this fall have been very good. On a general average they are from fifty to sixty per cent. better than they were last season and at the present time beef of any description commands extra prices while A 1 is hard to be had at prices above our quotations. The weather has been most favorable for grass in some localities, but we do not look for any fat cattle from the southern coast before the middle of March. In the meantime Nevada must be our source of supply, and from the firmness which the cattle are held by the parties who are feeding, beef must be still higher before spring and we are greatly mistaken if next year will not be a most profitable one for stockmen. All over the country to-day the eyes of capitalists are looking with envy upon the business which during the last three or four years upon a small capital has paid such large profits, and all who are fortunate enough to still hold their herds from the grasp of the large corporations, which during the last year have been buying all that were purchasable, have reason to be thankful, for the outlook to-day is most encouraging. Our next issue will contain a few of the large sales that have been made this fall, and also of the movements of certain large buyers.

WHEN HEAT IS VOID.

Rule 50—If the start takes place on the wrong side of the starting post, or if no person officially appointed occupies the Judges' stand, the heat or race is void and must be run again—in twenty minutes, if the distance to be run is two miles or less, and in thirty minutes, if over two miles.

In the "Maiden Race" last Saturday were four starters. One of them, Bob Wooding, was extremely fractions, and it was rare good fortune that he did not injure the man who was managing him or the jockey, and also good luck to get as good a start as was effected. The horses were turned the proper distance back of the starting post. The starter shouted go before either was at the score, but owing to his anxiety in watching Bob he was slow in dropping the flag. When that fell two of the horses might have been past the line, the third behind, the fourth two or three lengths in the rear. With such a horse as Bob in, it was one of the best starts we ever saw. The meaning of the rule is too plain to waste time in argument, and again we will not imply that our readers have so little common sense as to require further elucidation, than to say that the distance was run, and that the start did not "take place on the wrong side of the starting point."

EDITORIAL NOTES.

Another Richmond.—Nick Covarrubias of Los Angeles sold another Richmond colt a few days since, the purchaser being Raymundo Olivas of Ventura county. The colt is a three-year-old of the true Richmond shade of iron grey

and was transferred for a consideration of \$1,000. He took the first premium in the roadster class at the Los Angeles fair. Since the performances of Romero have given an inkling of the qualities of Richmond as a sire there is a great desire among breeders to get an infusion of the blood.

The Supreme Court has been kind enough to give its august affirmation to the old principle that a horse is not a mare but a mare may be a horse. This great question was presented to the court for determination in the case of the People vs Pico, on appeal from the Superior Court of Santa Clara County. The defendant was convicted of stealing a horse and his counsel asked that the judgement of guilty be set aside because the animal was a mare. The Court declined to take that view of the matter and held that the term "horse" applied to the whole equine race without regard to sex. So that question is settled. Whether a man who surreptitiously abstracts a mule may be properly called a horse-thief is yet to be judicially determined.

The late importations by Gov. Stanford to the Palo Alto breeding farm includes Lula, b m, record 2:15, 18 years old, by Alexander's Norman, dam Kate Crockett by imported Hooton; brown yearling filly by Governor Sprague, dam Lula; weanling black filly by George Wilkes, dam Lula; Brunette, br m, 23 years old, by Rysdyk's Hambletonian, dam Kate by Bellair; May Queen, record 2:20, b m, 14 years old, by Alexander's Norman, dam Jennie by Crockett's Arabian; Gazelle, record 2:21, b m, 17 years old, by Rysdyk's Hambletonian, dam Hattie Wood by Sayre's Harry Clay; bay filly, 4 years old, by Hambletonian Prince, dam Gazelle, and a brown yearling filly by Gov. Sprague, dam Gazelle.

Another chance for the colts to trot before the year 1882 comes to a close is contemplated. It is proposed to open a stake for three-year-olds, heats of two miles, \$250 each, and a stake or purse for two-year-olds. The owner of Anteo has signified his acceptance, and should the stake fail in getting three nominations, he will match him against any three-year-old for the same amount. Dr. Hicks will engage Pride, and it certainly seems that both should meet the approval of the owners.

Orrin Hickok is on his way west with St. Julian and Overman and report says he will challenge Romero for a match with Overman. Probably he will be accommodated and if such a match is made it will result in a hot and exciting contest. There has been no race on this coast for years that will attract such general public attention and we hope the report of Hickok's intention is true.

The chestnut gelding Ashley, record 2:25½ was sold at auction by Killip & Co., at the Bay District track last Thursday. R. F. Morrow was the purchaser at \$1500. At the same sale the gray stallion Silverthroats by the Moor was disposed of to Henry White for \$335. Ten head of brood mares and colts from the Connts farm were sold for fair prices to various buyers.

L. U. Shippee of Stockton has purchased in the East a car load of Daniel Lambert mares and they are now on the way here. They will be taken to Mr. Shippee's ranch in the San Joaquin valley and California will thus keep pace with the fashion, for Daniel Lambert mares are in active demand with the eastern breeders nowadays.

The brown stallion Buccaneer, by Iowa Chief, now the property of Mr. G. Valensin, is quartered at the Bay District track where he has been placed in charge of J. A. Goldsmith to be trained. Buccaneer has shown a trial in 2:19½, and if he can escape a recurrence of an unfortunate lameness will speedily take rank with the fast trotters.

In the report of the race of three quarter-mile heats at the Blood Horse meeting, which appears on the second page, by a typographical error Night Hawk is given as carrying 125 pounds. It should read 115 pounds. The forms containing that portion of the paper were printed before the mistake was discovered.

We are informed by a private letter from New York that the mare Yellow Dock which made a mile with running mate at Providence, R. I., last week in 2:11 will probably be wintered in California and will be in the field for matches with Overman, Romero, and others of that class.

Charlie D.—John Hope of Santa Barbara has become the owner of the trotter Charlie D, having purchased him of N. A. Covarrubias of Los Angeles last week for \$1,250. Charlie D has a record of 2:36 and won the race for the 2:30 class at the Los Angeles fair this fall.

The Auction Sale of thoroughbred stock belonging to W. L. Pritchard announced for last Thursday was postponed on account of the sickness of Mr. Pritchard. It will take place next Tuesday, the 21st inst., in front of the Club Stables, Taylor street near Geary.

Sale of a Richmond Colt.—N. A. Covarrubias of Los Angeles has sold to T. R. More of Santa Barbara a grey gelding two years old, sired by A. W. Richmond and giving promise of making a fine horse. The price paid was \$600.

THE BREEDER AND SPORTSMAN.—We have received in exchange the new California sporting paper with the above title. It is a handsome paper ably edited and will doubtless prove very popular. It is edited by Joseph Cairn Simpson, and is issued weekly from 508 Montgomery St., San Francisco, at \$5.00 per annum.—*Maine Horse Breeders' Monthly*.

The largest combined butter and cheese factory in the world, it is said, is located at Tremont, Nebraska.

Merino Sheep.

This variety of sheep were imported originally into France and Spain. They were placed upon the government farm at Rambouillet, where every care was given them, and the greatest attention paid to increasing their produce of fleece. After years of experimenting, the animals were increased in size and weight nearly one hundred per cent., and the wool from twenty to twenty-five. The fiber did not improve as was desired, but the attempt to combine in the same animal meat qualities as well as wool-bearing ones was assigned as the reason. During these experiments the sheep grew very large, were enormous feeders, but they lost those characteristics of wool bearers, and they were no longer as robust. Subsequent breeding has, however, not only restored them to their original excellence, but improved their wool growth on the ram about seventy-five per cent., and the ewes sixty-six. It required good management and about ninety years to accomplish this feat. The French were the first to produce a Merino combing wool, though subsequently they found rivals in America, Germany and Australia. The only difference between the breeds in the several countries is that the French ones still have larger carcasses.

D. C. Collins of Connecticut was the pioneer importer of Merino sheep in America. Stock breeders eagerly sought the new variety, hoping to improve their flocks, but were in most cases disappointed on account of the imported stocks being selected from those flocks which had been bred to increase their weight and carcass, and not those where that policy had not been followed. Later importations disproved any prejudice that the first one might have created against the breed. Numbers of them have found their way to California, where their success has been unparalleled. A Mr. Robert Blackard of Calaveras county clipped from one of his sixteen-months fleeces which weighed fifty-one and a half pounds; the same animal clipped a forty-six-pound fleece at two years old. It is only just to say, however, in this connection that the climate of California being so dry, the wool retains a greater amount of oil than in other countries where the rainfall is large.

Mr. J. B. Ray, in an address to the New York Merino Sheep Breeders' Association, had the following to say on the points of Merino sheep:

"But few persons would prefer a staple of more than two and one-half inches for a ram, while many would be contented with a two-inch staple of highly crimped wool, provided the maximum density of fleece had been reached. Comparative evenness of fleece with as little glare as possible is an important point reached by our western breeders. Experience has fully demonstrated that great weight of fleece can be combined with the highest physical development, constitutional vigor and other points of perfection as indicated above. As to the point of oil, or yolk, the greatest amount that can be secreted without impairing the vitality of the animal is admissible in a ram. Most breeders prefer a coloring bordering on a buff, while thin, sticky oil of a greenish cast is highly objectionable. As to folds or wrinkles, which is a distinctive feature of the American Merino type, there might be a diversity of opinion as to size, location and number. Still it would be difficult to find a ram of such heavy pendulous neck, tail and flank as would disqualify him as a stock animal in any flock, while many would prefer that with the above he should have a large fold extending across the point of the shoulder, a considerable number on the sides extending in massive proportions well under and nearly across the belly, yet diminishing well in size and lost to view in full fleece before reaching the back, with numerous large folds lengthwise across the hips and stifles."

Those who fancy the delaine type are aiming in the main to secure the same points of American Merinos, while at the same time securing a longer staple of high quality of wool. As to folds or wrinkles, a good neck, tail and flanks are about all that is desirable, with little or none on the body. Thus we have before us a pen sketch of our ideal rams of the American and delaine Merino types.

ELECTRIC LIGHT IN THE CARS.—Persons in the rear car of a local train leaving Jersey City at 7:38 o'clock p. m. recently, on the Pennsylvania Railroad, were surprised at the ease with which they read their evening papers, and discovered with manifest pleasure that it was lighted by electricity. In the car were several guests, invited by Colonel J. R. Hosmer of the Light and Force Company of this city to inspect the new light, a trip being made to Newark. The car was lighted by seven incandescent lamps of the Edison make, fed from thirty Faure accumulators, which were placed in two boxes underneath the car, one on each side. The cells were a part of the number brought over from Europe on the steamship Labrador, and which were fully described in the *Times* of May 13, 1882, together with the method of their working. Each cell is 11½ inches in length and 5½ inches in breadth, and 11 inches in depth. They are connected in a series, the main circuit to the lamps leaving the battery at the extreme ends. The boxes in which they were placed are seven feet six inches in length and sixteen inches wide. From a switch in the closet of the cars the lights can be turned on or extinguished, while each lamp is provided with a switch socket, so that it can be used independently of the other lamps. The wires pass from the batteries along the sides of the cars crossing over to each other where the lamps are placed.

The lamps in the cars give a steady, powerful light of twelve-candle power, and when the train was going at full speed did not flicker in the least. When half the lights were turned out there was no appreciable difference in the total light of the car, except that it was softer and more pleasant to read by. The heat from the lamps was about one-fifth the amount produced by gas. The electricity stored in the accumulators under the car is sufficient to keep all the lights running for sixteen hours without recharging. The car on the Pennsylvania road is the first that has been lighted in this country, and the light has been in use but two weeks, and has proved satisfactory. It is lighted on the same principle as the London limited express between London and Brighton, England, where it has been in use for several months.—*New York Times*.

The story of F. F. Burt's two-year-old Clydesdale, that weighs 1,110 pounds, is quite eclipsed by a correspondent in another column, who tells of some lusty youngsters bred and raised on the ranch of Moses Hopkins in Sutter county. Of these, two, aged two years and three months, weighed respectively, 1,418 and 1,437 pounds, or at the rate of 54½ pounds per month; a third, a filly at fifteen months, tipped the beam at 1,015 pounds, or 67½ pounds per month, and a stallion twelve months old weighed 1,050 pounds, or 87½ pounds per month. These colts were Percherons, and up to date are the greatest specimens of their kind on record here.

Dr. Voelcker reports that sixty-five Shorthorn cows averaged a milk yield of 642 gallons or 2568 quarts per annum, the food being grass and hay, with roots and straw in winter.

THE GUN.

"Did You Meet an Injun?"

Such is frequently the phrase used by certain persons on the Pacific Slope when they see an acquaintance returning to town laden down with grouse and other game birds, or "toting" a deer on his shoulders. To sensitive sportsmen it sounds so exceedingly sarcastic that they resent it by saying: "No; but I've just met a fool who belongs to an Old Maid's Club and asks silly questions," whilst others take it good naturedly and answer promptly in the affirmative, adding at the same time, that they had to kill the Siwash to get the birds.

The phrase has really a reason for existence, aside from its sarcasm, as the following incident will show: Two temporary residents of Olympia, W. T., one of whom was an author, and the other a public singer, decided one day to supply the Tacoma Hotel, at which they were stopping, with all the grouse the guests would need for a month. With this laudable object in view they engaged an Indian for the sum of one dollar to paddle them two miles down Puget Sound, and land them on a wooded promontory which was said to be "chock full" of grouse.

On stepping ashore they made preparations for an immediate slaughter of the feathered denizens of the forest, but as the day was very hot the birds had sought refuge in the highest trees, where it was almost impossible to see them, owing to the harmony of hue existing between their plumage and the foliage of the huge conifers. After tramping about for an hour and failing to find anything worth shooting, except squirrels, the singer, who was no other than the comedian, Charles Vivian, now dead, suggested that they separate and work toward the town, to see if they would have any better luck.

The author, suspecting his motive in making the suggestion, assented to it immediately, so each took his own route homeward. Vivian made tracks for town as fast as his legs cared to carry him, while the author strolled about in the dense shrubbery, carefully peering into every clump for the sign of a grouse or a deer. Finding his efforts unavailing, he walked slowly homewards until he reached the long bridge that crosses Puget Sound opposite the town, and there he entered an Indian village to study the home life of the savages.

While he was looking around a smoke-filled wigwam of mats, he saw a large string of grouse lying on a bear robe in a corner.

Knowing that his companion would buy birds from any Indian he met rather than return with an empty bag, the author decided to play the same game, so he asked the wizened hag who was smoking a pipe in the middle of the hut how much she wanted for the lot. "Laketolla," was the answer, "Cosh," exclaimed the author as he landed her the money; then shouldered fifteen brace of birds and hurriedly started out into the fresh air. He looked very important as he trudged through the main street of the town, and to all persons who asked: "Did you meet an Injun?" he smilingly responded: "You bet, and a good one too."

On approaching the hotel he met an Indian who had often seen him and Vivian together, and who therefore presumed to ask him if the comedian was good pay. "What is the matter?" asked the addressed, in a very suspicious tone, the Siwash then told him that Vivian had bought a string of grouse from him, but had not paid for them, he being short of change. He had told him, however, to call at the hotel for his money. "You'll get it beyond doubt," observed the author, as his face beamed with the anticipated fun he would have in exposing his companion's nefarious mode of securing birds, and thus deceiving his innocent friends and acquaintances.

"Come along with me," said he to the Indian in classic Chinook, as he led the way to the hotel. He entered it through the back door, gave his birds to the cook, and told him to keep them concealed until they were wanted. He then requested the Indian to go to the front of the house, and wait there until called for. Leaving the savage to obey orders, the plotter walked into the bar-room and there saw the comedian, surrounded by a group of admiring loungers, who were listening with apparently intense interest to his description of how he had shot every bird of the nine brace of grouse that lay on the counter. The cause of this interest in his tale was soon made evident by his asking them to "pizen" themselves, an invitation which was promptly accepted by all.

After "pizenning" themselves, which they did with great relish and the sensuous lip smacking of veteran "pizeners," Vivian resumed a description of his shooting exploits, telling how he had knocked those grouse down with a "right and left," and bagged two on the top of a fir tree at least two hundred feet high. Exclamations of wonder and delight greeted this statement, and increased as he, with a seriousness peculiarly his own, told of his doughty deeds. The author, who stood close beside him, although his presence was not known, asked him, after all the wonderful shots had been described, what he had killed the birds with.

This unexpected question, and from such a source, disconcerted him very much for a few moments, but he soon recovered his wits, and promptly answered: "With powder and shot."

"How many eartridges did you take out?" asked the pen driver.

"Thirty," was the answer.

"Then, allowing that you killed the nine brace in ten shots, you have twenty shells left."

"I've only got fifteen left."

Seeing his cartridge-box lying on the table, the author requested one of the *bon vivants* to see what number it contained, and by that means decide how many shots it required to kill the birds. The comedian objected strongly to this, but the crowd, seeing a chance for more drinks in the matter, overruled his objections, and one of them counted the cartridges in a most deliberate manner. When he finished he announced that there were twenty-nine shells left, and, therefore that Mr. Vivian had either killed eighteen birds with one shot, which was simply pot-hunting, and, ergo, a crime against true sport; or that he had stolen them, which was a crime against morality; or that he had bought them from a Siwash, which was a crime against all the statutes of the Territory, because such conduct was liable to deceive innocent whites; and, finally, that his celebrated shots were fibs, so that he was a criminal in any case. He then asked what ought to be done to such a man.

"Fine him the drinks," exclaimed half a dozen simultaneously. The comedian objected to this summary fine unless they could prove their charges.

"Can any one bring direct proof against him?" asked the self-appointed judge.

The author said he could, and stepping outside the door, he led the red vendor of grouse before the court. On seeing the comedian he extended his hand, and, with a scowl on

his face said: "Nika tickey moxt tolla" ("I want three dollars").

This elicited roars of laughter from the crowd, and without even waiting to be invited they waltzed up to the counter and asked for what fluids they wanted. The comedian paid the Indian in a hurry, threw down five dollars for the fluids, and balanced out of the house as rapidly as if he had been fired from a catapult. His guests cheered him as he disappeared, then blandly informed the landlord that they would "use up" that five dollars on "tarantula juice," before they left the place.

They then congratulated the author on the able manner in which he had exposed the nefarious plot of his companion and invited him to share in their refreshments.—*Turf, Field and Farm.*

A Challenge.

The Sacramento Bee has the following to say of the challenge recently sent to the Forester Gun Club of that city: The O'Neill Gun Club of San Joaquin county has challenged the Forester Club of this city to a \$500 pigeon match. We understand that the challenging club has recently been organized by consolidation with the Stockton Gun Club, and if so the members cannot reasonably expect the Foresters to accept the challenge. Both the O'Neills and Stocktons had a number of first-class trap-shots, and by consolidating they are enabled to select a team of fifteen fit to shoot against any team of a like number in the United States. They are all in practice, also, while the Foresters are not. The latter club is not, we understand, averse to shooting a match with either of the old clubs, but do not think it quite an even thing when the latter join forces. They should at least allow the challenged team to select a team from the county, as they have done. It is not an easy matter for a club with a membership of twenty-five or thirty to put a team of fifteen good trapshooters in the field. The Foresters might select a team of six or eight men who could hold their own in any company, but unless allowed to recruit from another club they would not be wise in accepting the challenge sent them. Besides, the stakes are too high. Five hundred dollars is too much money to be involved in the result of a match which ought to be of the most friendly character. It smacks too much of gambling. At most the sum should not exceed \$100 or \$150, or say enough to cover the expenses of the affair and provide a banquet for all concerned. If our Stockton friends will modify the terms of their challenge, we have no doubt the Foresters would take the chances of a match.

Ducks.—We are occasionally led into wondering why more ducks are not bred and marketed among our poultry breeders in America. We have now in this country three or four varieties of imported ducks, at the head of which the Pekins stand to-day, without question, for size, early maturity, hardness and thrift. The Aylesbury (pure white, like the Pekin), and the Cayuga (black), are notable and of good quality. Each of these varieties, within our knowledge, has been successfully bred in New England, upon a country place where there was neither pond nor rivulet for their amusement on the farm. The ducklings were hatched under hens, and the ducks were raised with the other poultry and fowls on the estate, with similar feed and care, the owner claiming that for marketing purposes ducks can be reared, like any other fowls, upon dry land, and he has found no perceptible difference in their proportionate thrift during the season, though in his experiments in the last two years his ducks never had access to any body of water. A pleasanter kind of poultry to keep we do not know of.—*American Poultry Yard.*

Archery is again being revived in this city and vicinity. For a long time the bow and arrows have remained unused and unused, but on next Thanksgiving Day there will be a match shot in which five or six teams will participate and where the superiority of marksmanship of the eastern or western bowmen will be decided. There will be at least two teams of California shots, four men to each team. The California teams are from the Pacific Archery Club and the Oakland Bow Club; there may be another team entered but it is not a fact as yet. The above mentioned archers are to shoot against the Highland Park Club and the Northside Archers of Chicago, weather permitting. The last is an important proviso in the terms of the match as the weather in the east is very unreliable about Thanksgiving Day. The match is simply a friendly contest. The scores will be forwarded by mail or telegraph to each club and compared to decide who is the winner.

Big Shot.—Wednesday of last week four of the Davis crowd of hunters fired a volley into a flock of geese they caught in the act of rising from a pond. They only fired one shot each. As a result they gathered sixty-three dead birds and lost eight that were slightly wounded. That would be a good squad to hunt "moonshiners."—*Griffey Herald.*

At Jobstown, in Burlington county, New Jersey, lie the extensive game preserves of Mr. Pierre Lorrillard, the famous turfman, who finds the sports of the field as attractive as the performances of his thoroughbreds. The preserves cover an area of several hundred acres, and a number of ponds, well stocked with game fish, are interspersed. The varieties of game are numerous, and include several foreign species, notably English pheasants. The pinnated grouse or prairie chicken, not perhaps, to be found elsewhere in the Eastern States, lives and thrives on the large estate. Quail, ruffed grouse and wild fowl are abundant. As a model game preserve the place compares favorably with some of the finest in Great Britain.

It may be well for sportsmen and others to know that the seemingly senseless phrase ending with "the goose hangs high," is a corruption of an old axiom, viz: "The goose honks high," and has reference to the sounding clangor of the wild goose squadrons winging their way northward in serene springtime, or southward in ripe autumn, when "everything is lovely."

Mr. F. Ladd at Alviso bagged fifteen ducks last Sunday. Two gentlemen in the same locality got thirty-one English snipe. At the same place and time Fred Johnson and a friend bagged seventy-five ducks. Though a good many hunters were at Alviso the shooting was exceptionally good, fifteen birds being the average of ducks killed.

At the regular meeting of the Gilroy Rod and Gun Club on the 8th the following gentlemen were proposed and unanimously elected members: Messrs. Sam Rea, Henry Reeves, Louis Loupe, T. R. Thomas, A. D. Tryon, Jas. F. Dunne, G. E. Hersey, P. B. Wilmarth and Charles Easley.

Geese are very plentiful in the vicinity of Denverton, and upon the plains of Suisun.

The Gun.

No longer have our hunters any cause for complaining. If they go out hunting now and return without any game it is because they don't know how to shoot and have left their purses at home. The rains that fell on the hills at the first of the month drew thousands of ducks from the marshes and coast away to feed on the young grass that sprung up on the hillsides, leaving the would-be sportsman with plenty of cartridges and no game. But during the last week or ten days the severe frosts have made it so uncomfortable as to drive the feathered wanderers from hills back to the marshes and bay. Since the cold snap the hunting has been better by far than it has been before this season. More game has been brought into the market this week than there has been before this year; between 350 and 400 sacks of ducks, averaging 40 birds to the sack, have been received by the commission merchants.

Last Sunday every early boat or train was loaded with hunters bound for the different hunting grounds that lay within a few hours' ride of the city; a great many started out the evening before, Saturday, in order to be on the grounds the first thing in the morning. Nearly all met with good success and the return trains and boats brought back satisfied crowds of hunters, dirty guns, quarrelling dogs and well-filled bags. The stories told by the hunters on the trains of their day's exploits would make one think "truth is stranger than fiction"—at least, that is, a stranger to the narrators. The reports from all parts of the country are the most encouraging, and at the present it promises to continue so to be during the remainder of the season.

Up the River.

Fourteen members of the Union Island Club were at their preserve at Union Island last Sunday. The ducks are quite plentiful but they fly rather high. Canvasbacks are just beginning to come in earnest. Ramon Wilson bagged four. Captain Goodall and Howard Black bagged one hundred and ten small ducks between them besides several mallards. The party, fourteen in number, bagged over three hundred ducks; the birds are all in the very best condition. The feed on the marshes and around the ponds is excellent, and the cold weather promises to drive the ducks from the hills back again to the marshes.

One rather amusing occurrence took place, which, though at another's discomfort, caused a general laugh. Mr. C. Kaeding was shooting from a very small boat. Maybe the boat was too small for Mr. Kaeding or else Mr. Kaeding was too large for the boat; at any rate Mr. Kaeding arose to get a shot at a pair of widgeon that were flying overhead, when in his excitement he lost his equilibrium, and after performing a war dance on the seats of the rocking cockle-shell, grasping wildly at nothing with one hand and flourishing his gun like a dilapidated windmill, he and the boat parted company. The boat shot backward like a race shell, while the gunner did a grand summersault and plunge at into the water which was a decided infringement on Dr. Boynton's original high water leap. For all this mishap Mr. Kaeding had the satisfaction of killing more snipe than any others of the party.

The marshes at Petaluma every Sunday are covered with hunters from San Francisco as well as from the adjoining country towns. There is excellent hunting, ducks of all kinds are flying all the time and good bags made by all who have the least idea of how a gun should be handled.

Capt. Stackpool, M. Wright and Mr. Putzman last Sunday were over at Warm Springs and bagged 68 quail. The shooting is very good in this vicinity as hunters have not been over the hunting grounds as much recently as they did on the opening of the season.

Last Tuesday evening 225 sacks of game, most of which were ducks from the Sacramento and San Joaquin rivers. This is the largest day's receipts of this year or in fact of many years.

There were at least one hundred hunters at the wharf at Bird's point last Sunday, all of whom got a few ducks as a remuneration for the amount of ammunition wasted.

One gentleman at Mallard Station recently bagged four dozen English snipe. There is better hunting at this preserve than there has been at any time this year.

The snipe shooting at Alvarado last Sunday was very good. Mr. Gillette, president of the California Club, returned with the largest bag of the day.

Geese are said to be plentiful on Point Reyes, and canvasback ducks are coming in good numbers to the mouth of Salmon creek, near Olema.

There is good shooting to be had at San Pablo. Mr. Wilson and friend returned with twelve ducks, the result of a few hours' hunting.

Mr. A. Adams on the Brooklyn marshes last Sunday bagged fifteen ducks and several canvasbacks, all over-flying birds.

Mr. E. T. Benta and Mr. Stickney last Sunday were at the Cordelia Club's preserve and killed 55 ducks.

Reports from Ventura county are to the effect that game of all kinds is very abundant.

English snipe are plentiful in the Sonoma marsh below the Embarcadero.

Last Sunday Mr. W. Golcher was at Alviso and killed thirty ducks.

PICTURES AFFECTED BY BLACKLEG.—The Dayton, Nev., Times says: "The cattle disease, blackleg, is caused by a cane-shaped parasite which enters the blood usually through the digestive organs. This animalcule was not at first supposed dangerous to man; but it is of a very low order and changes its habits of life readily: A few cases have occurred in the East, where men became victims of the disease, either through eating the meat of diseased animals or by accidental contact. The disease has been prevalent among the cattle in the eastern part of the State, and a number of Indians in the agricultural valleys are suffering from something which greatly resembles blackleg. The anthrax parasite was discovered in the blood of a man who died with symptoms similar to blackleg, and there is scarcely a doubt that what is now affecting the Indians is the same malady, as they have been eating freely of the meat of cattle which were infected."

The ammonia exhaled from stables tends to make harness brittle. A little glycerine added to the grease with which harness is oiled will keep the leather soft and pliable.

THE RIFLE.

The International Rifle Match, 1883.

The Sub-Committee on the return International Rifle Match, and the Executive Committee of the National Rifle Association of America, at the joint meeting of Oct. 17, decided to request the British Rifle Association to so modify the terms of the International rifle contest that an American team would have some slight chance of winning the contest at Wimbledon in July, 1883. The following is the text of this letter, which was forwarded to the British N. R. A. on Wednesday, Nov. 1:

NEW YORK, Oct. 21, 1882.

TO THE COUNCIL OF THE NATIONAL RIFLE ASSOCIATION OF GREAT BRITAIN. *Gentlemen:* In accepting the original conditions of your association in order to make the International match possible, especially the pledging of a return match by us, which you were unwilling to undertake, it is needless to disguise the fact that concessions were made by the National Rifle Association of America that were at variance and incompatible with American conceptions of progress in military arms; but in order to infuse new life into rifle practice, and a stimulus into the proposed competition, a large majority of the Board of Directors of our association surrendered what they considered valuable modern mechanical appliances, which are calculated to ensure greater accuracy in military rifles.

The first stage of the match has been completed by your achieving a splendid victory at Creedmoor—every condition in the contest was assured to your advantage. This uneven match has a dual object: First—that of creating a friendly rivalry between two great nations. Second—The bringing to a greater degree of perfection modern breech-loading military weapons. On the latter important subject please refer to enclosed copy of a paper read by Col. Bodine.

Our victories in former competitions of an international character were achieved with fine sporting or small bore match rifles, with quite perfect front and rear sights; with these special weapons we have invariably been successful, and, indeed, thoroughly believe that it would be a difficult undertaking for any nation to wrest from us our honorably-won laurels.

Military weapons with primitive open sights have not, with us, received the same attention from scientific or expert gun-makers as our fine match rifles; your own special military breech-loader is unquestionably superior to any military rifle in our country at present; the same observation refers to ammunition. Our defeat will undoubtedly lead to the production of an excellent weapon in the course of time. If we failed in this it would certainly be the first instance in our national history that we acknowledged ourselves unequal to a fair task in mechanics. At all events what we now ask is, that the return match be shot under more equal terms. By adopting the wind-gauge your team are accorded equal privileges. We are co-partners in any change of terms. We require the enlistments to be extended to Jan. 1, 1883, which rule is as much your property as ours. We ask for a modified barley-corn front sight because we know that it is an improvement on your own sight (and you have practically admitted this by notifying us that it will not be allowed at Wimbledon). Therefore, it must be apparent to you that what you demand in the return match is essentially an advance on the terms of the preliminary competition; besides, taking the suggestions as an entirety, they represent improvements in military rifles.

The most powerful reasons, however, for this change are also summed up in the statement that you have some three thousand (3,000) marksmen from which to select a team of twelve or fourteen, whilst we (who are in our infancy at the longest ranges, where we never had practice before with military guns until a few months before the actual match took place) have no more than one hundred (100) who could possibly use a military weapon at all the distances enumerated.

Therefore, we reiterate, in order to pledge ourselves to a return match, we made concessions that were disadvantageous to our marksmen, and in return we now urgently and respectfully request that you, in the interest of rifle practice, improved weapons, and future contests, grant us the following modifications and alterations as a recompense for our unqualified defeat:

First—The use of the wind-gauge.

Second—The use of the barley-corn sight, of practical strength, thin at the base, as approved by the War Department in 1879, in use in the United States Army, and as approved by the National Guard of various States.

Third—Enlistments on or before Jan. 1, 1883, to make National Guardsmen eligible.

An early reply will be appreciated, as our time is limited. Yours,

GEORGE J. SEABURY, Sec'y.

The Rifle.

This week our local riflemen have been very quiet. Last Sunday some of the boys of the Second Regiment were at Shell Mound practicing but no matches of any consequence were shot.

Quite a number of men of Companies A, C, D, and E of the Second Regiment are practicing at the 500-yard targets.

The Inspector of Rifle Practice on the first Sunday of every month will have one or two targets open to anyone of the Second Regiment who is anxious to improve as a marksman.

It is understood that a friendly shooting match is to come off at a near day between Corporal Townsend of Company B and Lieut. McElhinney. The Corporal's good score at the last regimental shoot gives him high hopes of victory. Lieut. McElhinney is not a bad shot either.

In the First and Second Regiments a move is being made to create an interest in shooting among the younger members and those who do not belong to the teams. It is proposed that the riflemen be divided into two or three classes, and the men in order to remain in their respective classes must make a certain per cent. Those making the required per cent. will wear a medal or badge during the time that they make the required scores. As soon as one loses his interest and drops below the standard his medal or badge is taken away from him and given to one who will make the per cent. Some of the companies of the Second Regiment propose to give a medal to the person who shall hold the highest scores for a certain length of time. The glory of wearing an ornamented button or red, white and blue badge will be sufficient to bring to the front a large number of men who, though at present ignorant of the handling of the rifle, may nevertheless, in time, develop into first-class riflemen. Probably from now on the sand hills at Shell Mound will be plowed with flying lead of embryo sharpshooters guns, but then it is practice that is the making of the boys. For a week or two the First Regiment will take hold of this matter in earnest.

The members of the California Rifle Association are still agitating the idea of getting a range of their own. It is proposed that a stock company be formed and shares sold to obtain sufficient capital to carry out the project. This important matter should receive the attention and co-operation of riflemen and teams. In fact it will succeed, for anything that Colonel Dickinson undertakes never turns out to be a failure.

ARMY RIFLE CONTEST.—The army rifle-contest at Fort Leavenworth, Kansas, closed Oct. 27, the Atlantic Division taking the first medal. Generals Sherman and Sheridan, Senator and Mrs. Logan, and Major-General Pope were present. The following is the total score for the three days: Sergeant Barrett, Atlantic, 257; Sergeant Clark, Pacific, 256; Sergeant Daly, Atlantic, 248; Private Harrington, Pacific, 240; Lieut. Homer, Atlantic, 238; Sergeant James, Missouri, 236; Sergeant Stanton, Maine, 235; Sergeant Ship, Missouri, 234; Lieut. Meriam, Missouri, 229; Sergeant Bentley, Missouri, 229; Private Weagraff, Missouri, 228; Private O'Keefe, Pacific, 222. The medals were presented to the winners by General Sherman on the parade ground before all the troops in the garrison.

The Pacific Coast Trophy won by the Nevada team at the California Rifle Association's last tournament is on exhibition in Carson City. It is admired by all, and there is considerable local pride felt in the team that won it.

Ostrich Farming.

The New York World has discovered a man who is about to try the experiment of ostrich farming in the United States. In its issue of the 7th inst. it reports an interview with him:

Twenty-two ostriches, ten male and twelve female, were taken to Central Park yesterday by Dr. Prothre, who will keep them there until he has selected a suitable place for an ostrich farm in America. The price of ostrich feathers—all of which are imported and pay 20 per cent. duty—is very high, and in order to supply the trade a farm was started about four years ago at Hoboken by Mr. Charles Reiche. There were only six birds on the farm and for awhile they thrived very well, but suddenly the birds began to fall sick and in a short time all of them were dead. They were dissected and it was found that they had gained fat rapidly but not strength.

Dr. Prothre was found yesterday aboard the steamship Horrox, now lying in the East River, and was asked by the reporter about his birds. "We arrived from Buenos Ayres Wednesday," said Dr. Prothre, "having the twenty-two ostriches on board. These birds are part of a large cargo recently shipped by me from the southern part of Africa to Buenos Ayres. They are all about eight years old. Some of them have bred and the others are now ready to breed, but the cold weather will stop them from doing so. You probably want to know why I have brought the birds to this country. I will tell you. I have a large farm in Buenos Ayres and have been extensively exporting ostrich feathers from there. The birds there are all brought from Africa. The idea now is to start a similar farm here in the United States. I will shortly go through the Southern States and select a place for a farm. The birds can live here in any place where the temperature does not fall five degrees below the freezing point. Feathers are now sent from Africa and after 20 per cent. tariff is paid there is still a good profit, so you can see what a profit there will be if we can raise birds here. I think, too, that the birds will multiply faster here than in South Africa, for there a drought frequently kills three-quarters of one's stock. I have known years there when not one drop of rain has fallen during the entire twelve months. Food is also very scarce in South Africa. Mr. Baker, the United States Consul at Buenos Ayres, was the first person who gave me the idea of starting an American ostrich farm. If I am successful I will start extensive farms and will guarantee cheaper prices and much more elegant feathers than are now seen on ladies' hats on Broadway."

"What is one of your ostriches worth?" asked the reporter.

"I value them at \$1,400 each. They are very dear, but their feathers are of a much finer kind than any in New York. Feathers in general use here come from Barbary birds, in the northern part of Africa."

"How often do you pluck the bird's feathers?"

"Every seven months we cut the feathers and allow the quills to grow for about a month longer. White feathers are worth \$175 a pound."

"What do you feed the birds on?"

"Generally we give them grain and grass. If the weather is not too cold I see no reason why farms should not be started here. All the birds want is a place to run in and some bones, small stones and grass to feed on. The cost of keeping them is little or nothing."

Dr Prothre further said that he would start a farm in New York State, but that he expected in a few years there would be many farms in the South, and that on account of the high prices of rent here he would be unable to compete with them.

AN EXPERT WANTED.—There is one important industry in Detroit which, in the general sweep of protection, has yet remained unprotected. The subject agitating the official breast is the classification of frogs. The demand for them has increased, and the "pauper frogs" of Canada are impudent enough to attempt to compete with our own American marsh poultry. Under the treaty of Washington fish are admitted free, and the Canadians insist that frogs are fish. But the patriotic custom-house officer is not so easily deceived. He is a diligent student of natural history, has been to Barnum's great moral show, and knows that fish have no legs. The tadpole might, possibly, sneak in as a fish, and cheat the American Government out of its revenue by cunningly and knavishly growing into a frog after he had eluded the vigilance of the authorities; but a frog of full growth and sound mind is entitled to no such exemption. The Canadians ask, What is he then? He certainly cannot come under the head of cattle, even if he has four legs; he is not a bird; he swims and lives in the water, coming out only for purposes of recreation and for attending the dinners and suppers of his admirers. Secretary Folger, for fear of alienating the French voter at this election, declines giving an opinion. The frog, as all who like him know, is a very delicate subject.—*Detroit Free Press.*

HAY AND CATTLE.—The scarcity of cattle in the East and the subsequent rise in the price of beef has aroused the cattle dealers to activity, and all the cattle are being fed that hay can be found for. There are more feeding at present in Honey Lake Valley than has ever been known before. There was an unusually large crop of hay raised there this year and it is now all sold, going readily at the first for five dollars and fifty cents and soon increasing to six dollars per ton. Over 4,000 head of beef cattle are being fattened in the Tule district alone.—*Greenville Bulletin.*

THE PADDOCK.

How to Improve the Horse's Pace.

We will take, to begin with, a horse of the slowest walking pace, say about three miles per hour. To improve this, put him alongside of a horse, either led or in harness, whose walk is about three and a half miles per hour, and when the three-miler has come to this, then put him alongside of a four-miler, and so go on increasing until he has reached the utmost limits of pace it is possible to get out of him. After this, in riding or driving, keep him steadily up to his best pace, and in process of time it may become almost natural and easy to him.

The reason (says an American contemporary) it is best to begin with the attempt to only increase his pace half a mile per hour is, if we tried at first to do it faster than this the horse would be constantly breaking into a trot, to keep up with his companion, and in consequence this walk could not be improved. The object is to keep him steadily to walk, and not permit him to break it. Trotting horses are improved in the same manner; they are kept as strictly to this pace as possible whenever exercised or used, and not allowed to gallop. If they break into a gallop any time, on being urged to do their utmost on the trot, they are instantly checked and brought back to a trot. But if a horse is naturally a slow walker, it will require considerable time and a little patience to much increase his speed at this gait.

A reliable fast walker must be born so, and the best, quickest, and in fact the cheapest way to get at this is to breed him. For this purpose select the fastest walking stallion to be found, and breed him to the fastest walking mare obtainable. As a general rule, these will drop fast-walking colts. The fastest of these when grown should be selected for breeding, and so go on rearing and selecting till the breed is as well established for fast walking as those of fast trotters or racers now are.

Some may think that special breeding to obtain fast walkers is not necessary, and that any sort of a horse can be trained to it. Such doubters have only to carefully compare the anatomy of a fast walking horse alongside that of a slow walker, to be convinced of the necessity of breeding for this special purpose, for the difference between the two in various nice points will be found considerable in bone, muscle, tendon, cord, and, to sum up, in general structure. Place a heavy farm or cart horse alongside of a fast trotter or racer, and see how very different they are in make-up; and how impossible it would be to increase the pace of the former, either in a trot or run, to that of the two latter. The thing is out of the question—all the teaching and training of the world would not do it. Now, as a general rule, like begets like; and if you want fast walkers, in order to obtain them of a natural, easy, reliable gait, they must be bred from fast walking parents.—*London Live Stock Journal.*

Arrival of Rayon d'Or.

The steamship Queen from London, with the French-bred stallion Rayon d'Or and a dozen or more brood mares on board, arrived at New York, on Saturday, the 4th. Rayon d'Or, who won the St. Leger in 1879, was purchased at the recent sale of Count Lagrange's stud in France, through the American Horse Exchange of this city, at a cost of \$50,000, for Mr. W. L. Scott, of Erie, Pa. Of the lot shipped it is understood that those belonging to Mr. Scott are in perfect condition, especially Rayon d'Or. Of three mares shipped by Mr. Tattersall to the Exchange two died. One of them was unfortunately a mare by Stockwell. As to the trip, Mr. Bishop, who came over in charge of Mr. Scott's lot, said that he has rarely seen worse weather than that experienced during the first half of the trip and it was during that period Mr. Tattersall's two mares received such injuries that they died. In connection with the storm, it may be said that the insurance company in which Mr. Scott's horses were insured cabled Mr. Easton in the matter of extra risk, which was not at all surprising considering that the weather was so bad three days after their departure from London that the race for the Cambridgeshire Handicap at Newmarket had to be postponed, something almost unparalleled in the history of the English turf.

Stonewall Jackson's army horse, called "Little Sorrel," is twenty-six years of age and is still kindly cared for by General Jackson's father-in-law, Dr. Morrison, of Lincoln county, N. C. It is the horse on which General Jackson received his death wound.

Horses slobber from eating clover. This is annoying, especially in the driving horse, but the remedy is very simple and easy at hand, consisting of a head of cabbage fed to the horse just before using him for work or driving. It is cheap and effective.

CRICKET.

Merions vs. Occidents.

Following is the score of the match game played by the Merion and Occident elevens at the Recreation Grounds last Sunday:

MERIONS.	
Meil, s b Waterman.....	12
Hill, l b Stewart.....	0
Burnett, b Waterman.....	0
Benjamin, c Stewart Sr., b Stewart Jr.....	3
F. Mathieu, h w b Stewart.....	0

THE KENNEL.

HOUNDS AND HARES.

Meeting of the California Coursing club at Merced.

Last Saturday night the California Coursing Club met and completed arrangements for their fall meeting. Twenty-four old dogs and eight puppies were entered and drawn as follows:

Old dogs—J. Perrigo's f and hd d Longfellow against J. C. Murphy's b d Chinchilla.

J. C. Murphy's b and w b Lady Don against J. Franklin's b and w b Lady Franklin.

J. F. Carroll's hd and w d Paul Jones against W. Ryan's w b Lady Warwick.

P. Riley's b d Whipple against A. Jackson's b d Stonewall Jackson.

A. Jackson's b b Australian Maid against J. M. Keating's b d Fides.

H. Hart's b d Black Cloud against J. M. Keating's f b Lady Mary.

J. Perrigo's r g Cherokee against M. Mercedite's b d Limerick Boy.

J. Franklin's w d Dakota against E. Rodgers' w and b d b Lady Douglas.

A. Jackson's b and w d Orphan Boy against J. F. Carroll's w d Monarch.

J. Franklin's w and b d b Belfast Maid against M. Mercedite's b d Parnell.

S. Brinkerhoff's b and w d Blue Jacket against J. Franklin's b d Speculation, Jr.

W. Lane's r and w b Pride of the Village against J. Franklin's b b Speranza.

Puppy stake—J. F. Carroll's b d and w d Connaught Ranger against A. Jackson's b b Zealandia.

John O'Donnell's h d d American Boy against J. J. Murphy's w and b d Simcoe.

M. Mercedite's b b Irish Girl against E. Rodgers' h d Sullivan.

J. L. Meare's h d Modoc against Dr. J. M. Sharkey's b d Bunch.

For officers of the match, R. Warwick was chosen judge, W. Lane Slipper, J. Farrelly of San Francisco and J. O'Donnell and P. Harrington of Merced Field Stewards. The members of the club and friends to the number of forty-five left town Tuesday at 4 p. m., and after a cold, though pleasant ride arrived in Merced about 10:30 p. m. to find frost on the ground and snow on the mountain tops which, though miles away from the city, look to be only a few hundred yards distant, so rare and clear is the atmosphere. About 9 a. m. Wednesday all hands were on the plains where the match was to be run off. The weather was slightly chilly but so exhilarating it made one's blood literally surge through his veins and sent the spirits up to fever pitch. A finer lot of dogs than were assembled never appeared on the Merced plains and better promise of a pleasant, successful match was never given, but like many another promise, it was never fulfilled and all day long the sport was marred by vexatious accidents which finally culminated in a downright unpleasantness.

The chapter of accidents commenced as soon as J. C. Murphy's Chinchilla and J. Perrigo's Longfellow were slipped. The miserable disgrace to the equine race mis-called a horse upon which Warwick had been mounted by a sore-eyed stable keeper was utterly unable to keep up with the dogs. Warwick never saw a point in the race and the course had to be given as undecided, entailing enough extra work upon the dog that eventually won, to put his chances of a prize at a very low figure. As soon as the dogs were caught they were slipped again and a good course ensued. Chinchilla was badly thrown out at the turns and proved a poor walker. Longfellow won with points to spare.

J. C. Murphy's Lady Don and J. F. Franklin's Lady Franklin gave the spectators an excellent view of a rather one-sided race. Franklin led from the slips and after Don had made a turn put in a go bye on the outer circle turned and served herself. Another "go bye" showed the boys that Lady Franklin had few superiors in this State in point of speed and the way in which she guarded a hare proved her to be fully as good a worker. She won the course with many points in her favor.

J. F. Carroll's Paul Jones and W. Ryan's Lady Warwick made a pretty race for a few turns but the latter soon tired away and Jones had to finish almost alone. P. Riley's Whipple and A. Jackson's Stonewall Jackson had a long tiring course in which Jackson made more than two points to his opponent's one after the first turn, which he took in good style.

A. Jackson's imported Australian Maid and J. M. Keating's Fides were then handed over to the slipper. In some way Fides managed to get loose and after running a few yards started a hare. There was no other dog to assist him, the hare was fast and cunning, and poor Fides had to go fully two miles before he finally killed. All this was useless work and ruined his chance for a prize which up to that accident had been very good. After an interval the pair were slipped again. Fides showed great speed from the slips, made the first turn and killed, but the race was given a "no course." Before Australian Maid was taken up she found a fresh hare and equalized matters by taking a long course all alone. After taking a short rest this unfortunate pair of dogs were again slipped and ran a rattling course over a small piece of ground. Again their owners were doomed to disappointment. When the race was over it was found that the field steward had ordered the dogs to be slipped in the absence of the judge. Few men had ridden after the dogs and were competent to decide the match but Mr. Jackson insisted on his right to have the course decided by the regular judge and the work went for nothing. This was especially unfortunate for Fides, who had done far more work than the other dog. After lunch they were slipped again. Fides showed speed but soon tired and Australian Maid won by work at the end of a moderately long course. The victory was valueless for the amount of useless work done made it impossible for her to win another race. Hart's Black Cloud and Lady Mary proved

ed to be a rather poor pair. The bitch was sick and could not run. Black Cloud opened a wide gap but never once "turned" before the hare reached cover. His lead entitled him to the race.

Dakota and Lady Douglas were both withdrawn.

J. Franklin's Belfast Maid and Mr. Mercedite's Parnell were no even match. Parnell has a good turn of speed but is a very awkward dog at the turns. The Maid is a close worker and would score two points right along before he got straightened out. She also had the most bottom and won easily.

J. Franklin's Speculation Jr. and S. Brinkerhoff's Blue Jacket made an even race for some distance but either through an accident or by lack of bottom Blue Jacket went lame and was of no assistance to Speculation in the end of the race, which the latter won.

W. Lane's Pride of the Village gave J. Franklin's Speranza a handsome beating, making "go bye" after "go bye" and doing all the work in the match.

The second ties were run off after lunch without trouble or accident.

Longfellow who had run two courses was completely out-matched by Lady Franklin at every point.

Paul Jones and Stonewall Jackson had a hard, close race. The hare favored Jackson a trifle at the start. He scored a point for speed and another for the first turn. Then Paul took the hare, made a turn and a wrench and let Jackson in. The balance of the work was even up to the finish, where Paul Jones won the course by a handy kill.

Australian Maid, who was worn out by her bad luck in the first ties, was handily beaten by Black Cloud.

Monarch and Cherokee had a long race, the latter stopping before the finish. He did good work at the start and while in sight of the spectators but turned back before the race was over. Belfast Maid and Speculation coming together and both being the bona fide property of J. Franklin, that gentleman claimed the rule to guard and the Maid was matched against Pride of the Village, who broke her leg in the race before three points had been scored.

Speculation being an odd dog on the card ran a bye.

Paul Jones and Lady Franklin were then paired for the third ties. Lady Franklin took the hare from the start and many of the spectators thought that she had won but the judge decided otherwise.

Under the rule that dogs owned by the same member shall be guarded right through the match Black Cloud, which came naturally against Monarch, should have been matched against Franklin's Belfast Maid and Monarch should have been paired with Franklin's Speculation. President Sharkey had ordered Black Cloud and Monarch in slips but his attention was called to this rule by Mr. Carroll, the owner of Monarch. He then ordered the mistake to be rectified at once. The slipper was told to stop but by some misunderstanding he let the dogs loose after a hare which jumped up at that moment. The race was won by Monarch. A claim was at once made by Franklin that this race went for nothing and that the two dogs being improperly paired could neither win nor lose. By rule Franklin was, undoubtedly, right, but the President ordered the decision of the course to stand and gave the race to Monarch. After some discussion Franklin withdrew his dogs Belfast Maid and Speculation from the field. The President awarded first and second prizes to Paul Jones and Monarch, and put the third prize at Franklin's disposal.

On Thursday the Puppy Stake was run off as follows:

A. Jackson's Zealandia beat J. F. Carroll's Connaught Ranger.

J. J. Murphy's Simcoe beat John O'Donnell's American Boy.

S. Rodgers' Sullivan beat M. Meredith's Irish Girl.

After an undecided course J. M. Sharkey's Bunch ran a bye, in the absence of Dr. Meares' Modoc.

In the second ties Simcoe beat Zealandia and Sullivan beat Bunch.

Rodgers' Sullivan won the first prize by beating Simcoe in the final race.

A consolation race for beaten dogs closed the day's sport.

J. C. Murphy's Chinchilla and J. Franklin's Speculation each won all their respective matches.

On account of darkness they did not run off the last race. Murphy and Franklin divided the first and second prizes.

The Coming Field Trials.

GILROY, Nov. 14.
EDITOR BREEDER AND SPORTSMAN: At the last meeting of the Rod and Gun Club, preliminary steps were taken in the coming field trials. Committees were appointed to secure the prizes for the different classes of entries; also to canvas the grounds and locate the berries which will claim special attention on the days set apart for the trials. It is but fair to state here that ground will be secured which has not been hunted upon this season by anyone, and those men who have allowed themselves to even think that our dogs will be acquainted with the ground by being trained or hunted upon it, and thereby be better able to contend for the prizes, will be happily disappointed, for such is not the case. Everything looks favorable for a successful field trial, as many entries are promised and many will conclude to enter yet as there are two weeks more. With fair weather, a few good flocks of quail, and a goodly number of entries of good and well trained dogs, our next trials will be of noteworthy importance. Our friends Leavesly, Farmer and Bartlett, are doing manfully, and all interested in the sports and the breeding of fine dogs in this State should step forward and reward them for their diligent labor and study by putting their dogs in the field.

Mammitis.

Mammitis or inflammation of the milk gland is by no means an uncommon complaint in canine practice.

Causes—External injury, as blows, bruises, or wounds, exposure to cold and damp, retention of milk, etc.

Symptoms—The part affected is red, hot, somewhat hard, and excessively tender; the lacteal secretion is changed in character; at first the milk has a curdled appearance; subsequently it is mingled with blood, and ultimately pus, the natural secretion becoming then totally arrested. Matter having formed, may gradually approach the surface of the gland, and point there, but it rarely becomes thus located, the whole gland being involved. Considerable febrile disturbance is present throughout.

In the early stage leeches may be applied to the part, and hot fomentations; a saline aperient should be administered, and perfect quietude on a soft bed enjoined. If the complaint results from retention of milk, owing to the removal or death of whelps, the sooner sucking is allowed the better; whether the secretion be altered or not, even to pus, its direction to the channel of the teat for evacuation is strongly advisable, and much preferable to permitting abscesses to form, and point at the surface, and thus destroy a considerable portion of the gland.

When matter has formed, and is approaching the surface,

the sooner it is evacuated the better; otherwise, sinuses are liable to form, and render the case tedious and difficult.

Chronic mammitis is denoted by an indurated and enlarged condition of the gland, and may be the result of lingering subacute inflammation, or proceed from the acute form. It is attended with but little pain or constitutional disturbance; but unless early measures are taken for its removal, it becomes a permanent induration, and may ultimately, if excited, assume a cancerous condition.

The daily application of iodine ointment, or the tincture, to the affected parts, and the iodine of potassium in one or two scruples daily internally, are the most effectual agents in this complaint. Repeated friction with the hand is also of service, and where the enlargement is considerable and weighty, it may be conveniently and with benefit suspended, by means of a handkerchief tied over the back, or a net made for the purpose and fastened in the same way with tapes.

Lacteal tumors—The milk ducts are liable to become obstructed when not sufficiently drained of their contents, or from some malformation. Any such obstruction to the outflow of milk is calculated to produce much mischief. Lacteal tumors, perhaps the least hurtful that can arise, are thus frequently caused.

Symptoms—The mammary gland so affected is knotty, the irregularities being even, movable and painless. In the early stages these bodies have a fluctuating feel, which disappears as their period of existence lengthens.

Inflammatory action may be excited in them by injury, and suppuration result.

If the hitch is still in milk, the daily withdrawal of the secretion should be observed—by natural means if possible.

Milk is frequently secreted, independent of the animal parturition, more especially if connection has taken place. Its removal, if abundant, is advisable, which may be done with the fingers. A smart dose of aperient medicine, and for a few days short commons, is also of service in dispersing it.

Where the animal is comparatively, or quite dry, and we have the tumors only to deal with, it becomes a question whether, so far as their direct treatment is concerned, we shall rely on external application or a surgical operation. If the tumors are of recent date and fluctuating, they may be punctured with some amount of success; if hardened and of long existence, their removal with the knife can be adopted with safety and success.

Individually, I should give the iodine a fair chance before resorting to either.—Stock Keeper.

GILROY ROD AND GUN CLUB.—At the regular meeting on the 8th, a communication from Senator W. W. Traylor was read offering a special prize to be contested for at the trials, which was thankfully accepted. We hope to have to record more of them, and that every encouragement will be given by our wealthy and leading sportsmen to this annual fall trial of the Gilroy Club. Nine new members were proposed and elected, consisting of some of the largest land owners in the county, and other prominent and wealthy citizens. The trials will commence on Nov. 27.

YACHTING.

Work is going steadily on with the Spreckels yacht and it will not be very long now before she will be in order to be tried. This will give us a chance to see what the keel boats will do with the centerboards. So far we have had no very startling results from keel boats in this bay. They thought that the old Consus was going to beat all the other yachts but she did not do it. The Casco has never been tried in a race and we do not know exactly what she will do with the light draft vessels.

The main interest to yachting men just now is the recent race in New York to test sloops and cutters. The races were arranged by the Seawanhaka yacht club and there was a great deal of interest in them. Several good boats were brought but not so many as was expected. The sloops stand in as winning four times and the cutter twice. In the first class the sloop won twice and cutter once. In the second two different sloops each won a race, and the cutter one.

They have taken the Emerald over to Stone's to be laid up for the winter. She will be hauled out on the ways, which is always the best way to do when it is possible, for the yacht is then out of all harm. The sails, etc., will be stored ashore.

A lot of jolly yachtsmen went to work shooting the other day in the preserve of the Teal shooting club, but the keeper, Jim Payne, soon showed them that they were in the wrong part of the country.

The Elia is going up river in a few days on a duck hunting expedition. She went up Suisun Creek last winter and had pretty good luck. If they do not get much game they always have a good time on the Elia.

The New York Yacht Club is at last to have a clubhouse beside the water. The club is the largest in the United States but has now only rooms in the city, having no proper clubhouse.

The Rambler has had her sails unbent and has been moored off South San Francisco. It does not look like a very good place in a norther.

Farmer has sold his sailing skiff which has shown so much speed to the frequenters of Oakland creek to a boatman. He will build another soon.

The Azalea has gone up river with quite a party of people on a duck hunting expedition. She is gone to try the luck up about Antioch.

The Seawanhaka yacht club is going to build a clubhouse at the water's edge, where they should have had one long ago.

There is very little yachting news of a local nature these days as so many of the boats are laid up.

We do not hear of any small yachts being built here at present or of any planned.

The Annie is off on a duck cruise up river with quite a party. She went yesterday.

The Lively and Chiquita are lying side by side on the beach in Oakland.

The Virgin and Mist are lying near each other in Oakland Creek.

The Pacific yacht club close the season formally to-day.

Stone will soon start work on a big schooner.

There has been pretty heavy shooting on Grand Island of late so the boys must be having good sport.

FISH.

Sport in an Emptied Pond.

A description in the *London Graphic* says: By this time the ditch through the middle was extending fast, water pouring off and the landing-net at work stopping fish like shoals of sprats from going toward the wire-protected drain, and these were scooped out, placed in buckets, and from thence carried to the tubs. The men worked furiously, evidently as delighted with the task as so many schoolboys, though extremely careful about getting in the mud. But we soon changed all that, for the water was now low enough for the great carp to be reached, and the smaller fry of roach and bream were left for the present, while the men laid down planks upon the mud, and approached the holes beneath the willows where it was known that the carp now lay. "Take care! Don't hurt them! Scoop 'em out w' the trug." Order after order, as the wooden buckets were handled; one was plunged in and shoved out a great carp with a quarter of a pailful of liquid mud. No calm sedateness now. The monarchs of the pond had felt their latent majesty touched and there was a tremendous splashing and plunging; the man who had scooped out the great fish was splattered with mud from head to foot; there was a plunge and the carp was gone. The mud was forgotten now in the excitement, as fresh efforts were made; the carp were scooped out and held down by main force as they gave displays of their tremendous muscular power, and were passed up the side—great golden fellows, thick, short, and fat, clothed in a scale armor that seemed to be composed of well-worn half-sovereigns, and panting and gaping with surprise as they were safely landed. Shouts and laughter greeted each of the great fellows, only one of which was as small as two pounds weight, the others running from three to five, and exhibiting a power that was marvelous in creatures of their size. Sometimes a great fellow eluded capture again and again, gliding between the hands, leaping out of the basket and making furious efforts to escape, but only to be caught again till the last was secured, and attention turned to the eels. This proved a task, indeed. The mud was entirely forgotten now, and as the big landing-net was brought into use, and the great fellows that glided over the mud like serpents were chased, they showed that they could travel tail first as fast as head first, and with the greatest ease. The landing net was held before them, and efforts made to drive them in; but generally without result, or if they were driven in, it was only for them to glide out more quickly. Hands were useless, shovels impotent, and the chase grew exciting in the extreme, as the men plunged in their bare arms to the shoulder, and drew from the mud again, looking as if they had gone in like Mrs. Boffin, for fashion, and were wearing twenty-four button gloves of a gloomy hue. But little and strong as they were, the eels had to succumb, great two and three pound fellows, and were safely thrown out on the grass; the last of the small fish was secured, the whole of the water drained off, and nothing remained but three feet of mud. Nothing? Nothing but the eels that had dived in like worms. These were now attacked. The mud was stirred with poles or shovels till the lurking-place of one was found, when after a long fight, he would be secured, twisting, twining, and fighting for liberty; needing delicate handling, too, for these monsters of the pond bite hard and sharp. Deep down in the mud some forced themselves, but many were dug out and thrown or driven into places where they could be secured, and at last wet, muddy, and weary, the owner cried: "Quantum suff." beer for the second time was handed round, and the empty pond was left in peace till daybreak next morning, when the remaining eels were found to have come to the surface and were caught in the pools, where a little water had drained.

Fishermen's Superstitions.

The "Fishermen's Own Book" contains an interesting chapter on the above subject, from the pen of Captain J. W. Collins, who says that the fact that fishermen seem to be more dependent upon luck than any other class of men, and that they are constantly meeting with events calculated to excite superstitions, may account to some extent for their being credulous. Among the fishermen's superstitions of which he treats are a belief in lucky and unlucky sailing days; a belief in Jonahs; the superstitions concerning dropping a hatch in the hold, breaking a looking-glass, driving a nail on Sunday, etc.; and instances are cited where such superstitions seem to have been well founded, and others in which they are shown to be without any foundation. Mr. Scudder, in his interesting report on the Greenland halibut fishery, treats briefly on the same subject. "The only difference between Sunday and any other day of the week," he says, "was that no nail must be driven on that day, for they said that would 'nail the trip.' Their superstitions are a little curious. The old notion that any enterprise commenced on Friday would be unlucky has, in a great measure, disappeared on account of the fishermen having read in the papers a long list of great events that had happened on Friday. The objection to hammering on Sunday was so strong that the captain delayed fixing a part of the rigging from Sunday to Monday on this account. There is one superstition about which they are exceedingly particular. They will never heave a hatch upside down. I was in the cabin fixing the fire, and had taken up the hatch in the floor to get at the coal, which was kept in the bottom of the vessel, beneath the cabin floor. The hatch I had placed in such a manner against the side of the cabin that, if it had fallen down, it would have been bottom side up. One of the fishermen whom I had always regarded as very sensible, seeing the hatch in that position, said to me: 'Mr. Scudder, don't leave the hatch that way,' and when I asked him why, he explained that if it should slip down it would be upside down which would bring ill-luck upon the whole trip. I replied: 'Let's try it,' and knocked the hatch down on the floor bottom up. I do not remember of ever having been more surprised than I was to see him jump and turn the hatch over. He then said: 'I don't know what the captain would say if he saw that.' One of the fishermen told of a captain he was with who swore terribly at him because he pushed a dory off from the vessel with the dory toward the sun. I found, however, some difficulty in getting the men to acknowledge their belief in many superstitions, and I should not have found out those I have mentioned, had not the incident spoken of called them into action. I think as a whole, they were, for sea-going men, remarkably free from superstition."

A great many boats were fishing off the Saucelito shores last Sunday but the catches were very slim. Many did not get a nibble, while two or three was considered remarkably good luck.

A party of sixteen persons last Sunday were fishing in the tide waters near Tamalpais, averaging one-half of a fish each.

The fishing in Lake Tahoe last summer was better than ever before, and probably never has the wanton destruction of fish been so great. In June and July many visitors caught one hundred and two hundred and fifty fish a day. Many of them kept up the sport—if sport it can be called—during all of a long summer day, until then had caught from two hundred to two hundred and fifty fish. Of course no skill was really called for in this sort of fishing, as in salmon fly fishing. A large line and solid hook are used and baited, and when a trout is hooked, he is hauled in hand over hand, without skill or delay. In this way the destruction of fish was simply enormous. The proprietor of the stage line between Truckee and Tahoe City informed me that the down stage last summer frequently carried one thousand pounds of fish. That weight represented at least an equal number of fish, for the average weight is not, I judge, over a pound. Those who thus wantonly slaughtered such hecatombs of trout senselessly, if not brutally, specially recorded their names and exploits on the hotel registers. I fail to see any thing to boast of, but much to be ashamed of in such fishing. The good fishing will not, I suppose, last long, if such slaughter is kept up. The same is true of deer hunting. Professional game-law breakers now organize in June from Georgetown and other places, and go out and kill deer by the dozen, for their hides alone, three months before the deer shooting season opens. Two men thus fitted out at Georgetown killed seventy-five deer for their hides in last June, July and August. Another man had a special platform fitted over a deer lick where he could slaughter them unerringly and steadily with buckshot. Some of these deer murderers are as low and filthy a set of fellows in their appearance and habits as one could possibly meet anywhere. They are in painful contrast with the beautiful animals they slaughter, and the impressive mountain surroundings in which they carry on their destructive work.—*Bulletin*.

ANGLING AS A MEDICINE.—In his charming book, entitled "Pleasures of Angling," Mr. George Dawson very aptly remarks: I concur with those who speak of the pastime of angling as a medicine, not only from my own experience, although that may count for something, but from the great number of strong men with whom I have been brought in intimate contact during my more than thirty years of outdoor life, and who, from their youth up, have found nothing so invigorating as the pure air of the mountains; nothing so soothing, after the toil and worry and fret of business, as the silence of the woods; nothing so pervading in its mellowing influence upon nerve and brain and spirit as the pleasant murmur of the flowing river; nothing so health-giving as the aroma of nature's grand forest laboratory; and nothing so exhilarating as the rise and swirl and rush of trout or salmon. Those whom I have thus known, with scarcely an exception, have preserved the vigor of lusty youth longer and more uniformly than their contemporaries, who have sought other means of enjoyment, from which I infer that but those who are blest with robust constitutions ever acquire a passion for angling, or that the pastime itself creates the healthful vitality which ensures a vigorous old age. But whether the pastime is merely preservative, or is really curative in its medicinal effects, it is certainly beneficial, and deserves the high place it holds in the affections of its happy, healthy and enthusiastic votaries.

THE FISHING SEASON.—The fish law shut out the anglers on Wednesday, and the trout will have a rest until the 1st day of April, 1883. The law is entirely wrong as far as Plumas is concerned, and a move should be made to have the time changed. As it now stands the open season commences just about the time the fish are spawning, and just when they should be protected. There is no reason for stopping the catching of fish in Plumas until the 1st of January, or even February, and then the close season should last until the 1st of June. April and May are the spawning months, varying a little, of course, in different seasons. If the fishermen would make the effort the change in the law, as regards our county, could be easily effected.—*Plumas National*.

LARGE CATFISH.—The *Gridley Herald* reports that John Thompson, a ranch hand working on a place near Shaeffer's Point, about twelve miles northwest of Gridley, Butte Co., while fishing in the Sacramento river, Sunday, landed a catfish weighing sixty-nine pounds, nine ounces. He killed it by hitting it in the head with an ax. This is the largest fish of its species we have heard of being caught in the State. Parties who ate of it tell us the meat was as palatable as that of the smaller catties so plentiful in Butte creek.

The past week has been a very poor one for those who delight in taking the finny tribe from its natural element. Angling in the tide waters for salmon trout has been very poor; several parties who have been out have returned without having had a bite. Around the bay, owing to the unfavorable condition of the tides, there have been no catches to speak of, and fishermen have come back with pretty much the same luck as their brothers of the limber rod. Yesterday and the day before owing to the unusually high tides were days favorable for good fishing; but very few took advantage of the tides, so the denizens of the deep suffered but a small loss. The next two weeks promise good fishing in the bay and those who find pleasure in holding a line over the side of a boat, or can sit all day with their legs dangling over the edge of a wharf grasping a bambo pole, will no doubt be rewarded for their patience by good strings of fish.

In April, 1881, German carp about two inches long were placed in water at the Kansas Agricultural College farm. Just one year after ten of them were seined out, each of which measured thirteen inches and weighed one and one-half pounds, upon which favorable results the college paper remarks: "In view of the facts that these fishes have lived in a square hole filled with water, the 'hole' being more like a house-cellar without the wall than a 'fish pond,' and have been fed only once a week, and oftener once a month, we are disposed to consider these carp the most profitable 'yard fowls' that have yet been introduced into this country."

The codfish, when at home rambling through the submarine forests, does not wear his vest unbuttoned, as he does while loafing around the grocery stores of the United States.—*Bill Nye*.

About 1,500,000 shad have been placed in the waters of Arkansas and Texas during the past season by the Fish Commissioners.

In Arizona the penalty for using giant powder to kill fish is a fine of three hundred dollars or three months' imprisonment.

Mexican oysters and fish are now shipped into Arizona by rail direct from Guaymas.

BASE BALL.

Haverlys vs. Renos.

The game at the Recreation Grounds last Sunday occupied two hours. Denny and Irwin of the Providence nine played with the Renos. The score was as follows:

HAVERLYS.													RENOS.												
T. B. R. B. H. P. O. A. E.													T. B. R. B. H. P. O. A. E.												
J. Carroll, s. s.	5	2	1	1	2	0							Barnes, 1b.	5	1	0	1	0	3						
Levy, 1 f.	5	2	1	2	0	0							Denny, 3b.	5	2	1	1	3	3						
Meegan, p.	5	1	0	1	7	0							Riordan, c.	4	1	1	0	7	1						
McDonald, 3b.	4	1	1	2	4	1							Irwin, c.	4	0	1	7	2	0						
F. Carroll, c.	4	1	1	4	5	2							Lake, 1 f.	4	1	1	0	0	0						
McVey, 1b.	4	1	0	14	0	0							Swanton, r. f.	4	0	1	2	0	0						
Sweeney, c. f.	4	0	2	1	0	0							Start, s. s.	4	1	1	2	2	3						
Lawton, r. f.	4	0	0	1	0	0							Sheridan, 2b.	4	1	1	2	2	0						
Gagus, 2b.	4	2	1	1	1	2							Creegan, c. f.	4	0	1	0	0	1						
Totals.	39	10	7	27	19	5							Totals.	38	7	8	27	16	8						
Innings.				1	2	3	4	5	6	7	8	9													
Haverlys.				1	0	1	0	2	0	5	1	0—10													
Renos.				1	0	2	1	0	0	1	1	7													

Earned runs—Haverlys 2, Renos 2. Three-base hits—F. Carroll, Swanton, Sheridan. Two-base hits—McDonald, Gagus, Denny. Bases on called balls—Haverlys 5, Renos 5. Passed ball—Irwin. Double play—Carroll and McVey. Wild pitches—Meegan 1.

The base ball match at Recreation Park to-morrow (Sunday), Denny and Irwin of the Providence Club, Taylor of the Atlantics of New York, and T. Brown of the Baltimore Club, will play with the Niantic and Reno clubs of this city; on this occasion the diamond will be changed back to the old position.

Reproduction of the Dam in the Produce.

It is wonderful how minutely, in nervous temperament, the produce is apt to be a reproduction of the dam. The most trivial eccentricity is apt to be inherited. For instance: The writer owned a road mare that had a peculiar habit of brushing the flies from her front limbs in summer-time, by crossing them and rubbing them together with almost human intelligence. No other horse in the pasture practiced the same effective plan till her own colt, that was left motherless at ten days old, grew up, and then she resorted to precisely the same means to rid herself of the same annoyance.

Another instance is a fine illustration in point: Quite a celebrated road mare had a habit of working with the bit over the paved streets of the city on her way to the driving avenues in the suburbs. She would straighten out her head and neck; she would pull and haul and snatch at the reins till she would almost drag the driver over the dash-board, or suddenly snatch the lines from his hands. On the road the habit ceased. There she was a pleasant driver; but on the streets this practice made her an exceedingly provoking and difficult animal to handle. After she was retired from harness for several years, she foaled a handsome colt, that in no portion of its outward formation resembled her. But when it was broken, and taught to speed to harness, it developed precisely the same nervous, eager hunching upon the bit that made her dam so disagreeable in a walk or jog on the pavements. The temperament of the dam, therefore, should be a matter of special inquiry. In a majority of instances, a dull, sluggish, nerveless mare, without ambition for speed, will produce a colt that demands the inspiration of the lash to develop his speed. The more cheerful and courageous the dam—provided it is not carried to the verge of unsteadiness, flightiness or hysterics, the more certain will the produce have game and courage and spirit to excel.—*Live-Stock Journal*.

Observation of Stock.

Treatises upon stock breeding and management may be written—and even read—lectures given and attended, rules and directions laid down with the most careful exactness, and committed to memory with the most determined perseverance, but success, after all, will depend much upon just this one condition—the use of the eyes. Has the master or manager of the stock ever cultivated his precious eyesight? and does he make use of it? There are men who, having eyes, see not, and there are men whose quick sight nothing can escape. The latter may be, the former never can become (by their own unassisted endeavors), successful in their special business.

One way in which imperfect trained or untrained eyesight is often to be detected, is in the owner's want of knowledge of his animals. This affects his chances of success as a breeder rather than as a manager. He may be, to a certain extent, a good judge, that is to say, able to pick out good from bad or indifferent animals, but the preceptive faculty is evidently defective. He cannot appreciate the finer differences between animals, and so fails to acquire much that a keener and more comprehensive sight alone can give; unless, indeed, the fault be in what may be termed "sight-memory." Some persons can see and distinguish between, but cannot remember the objects of sight. The object is clear upon the mind, as upon the organs of vision, but the mind has no power of retention. The brain receives no lasting impression, yet the memory may, in general, be good. Persons who forget the distinguishing peculiarities, if not the very forms and colors of animals, almost as quickly as the animals pass out of sight, and fail to recognize to-day the cow or horse seen and particularly noticed only yesterday, may have good memories for dates, numbers, names and hosts of other things their knowledge of which is not specially connected with the sense of sight; and, on the other hand, persons who can vividly recall whatever they have seen, may have the worst of memories for other matters. One may know an animal's pedigree by rote, and not know the animal when he repeatedly sees it; another, who would know the animal, once seen, if he met it at the antipodes, might not be able, by the strongest effort, to recollect its generations. A good memory in both lines of knowledge is of great service to the breeder, and should be cultivated by all present or intending breeders whose faculties are young enough to admit of improvement.—*National Live Stock Journal, Chicago*.

A DAIRY IN BLUE CHINA.—At the left wing of Sir Henry Peck's nearly completed house at Rousdon, Devon, is situated the dairy, which for beauty, solidity and originality of design has never been surpassed, and cannot be matched in all England. The floors and shelves and central tables are all formed of slabs of the purest marble, and in the center there is a fountain, the spray of which lends a delightful coolness to the air and Arcadian beauty to the scene. There is depicted on blue china tiles, arranged in a continuous chain all round the apartment, scenes from every phase of rural life. There is also a magnificent marble fountain in the large yard beyond.—*London Live Stock Journal*.

Starting Tree Seeds.

In these days of timber culture, when so much interest is being taken in the subject by many owners of treeless tracts of land, it becomes an important question to decide how to treat the seeds as well as seedlings. Only nurse them through the first two or three years, and but little care will be necessary in the future. Some species of seed-tree, as the oaks and maples, grow too readily, and occasionally the little radical or first root in these may, during moist weather, be noticed peeping out of the seed before dropping from the parent tree. Then again such seeds as the holly, juniper and yew will generally lie dormant in the ground for two and even three years. The proper treatment for the first is to dry them very slightly before committing them to their winter quarters; and for the latter class, place them in damp sand as quickly as possible after removal from the tree.

It is an excellent plan to wash off all the fleshy covering from pulpy seeds, as this acts more as a preservative than as an incentive to germination. A proper care of the tender young seedlings justifies us in protecting them from the direct rays of the sun and from the trying effect of high winds. This may be best effected by making frames of common, cheap boards, so as to form beds, say about six feet wide and of any length necessary. These are covered with lath racks or "shelters," four or six feet in size, with ordinary plastering lath tacked across them, leaving three-quarters of an inch between. Here may be started all seeds of difficult germination, as well as the rare species that we desire especially to grow. Many kinds, depending greatly on the size of the seed, must be covered very slightly with sand; in fact merely hiding them from sight would be desirable. Others again of larger size require more soil over them, and those of larger dimensions, as the walnut, must be placed beneath the surface for three or four inches.

An excellent rule to observe, however, is to cover too little rather than too much, as seeds during germination decay very easily. Sharp, gritty sand or light sandy soil are about the best for covering seeds, although when peat and leaf-mold are readily procured, they will be found very serviceable for the purpose. When the young seedlings are two years old they must be transplanted, or if very close in the beds, they may be pricked out into other beds at one year old. Pinch off the tips of all long taproots and dip in thin mud before dibbling in their new homes. Again, cover the lath shades and mulch with moss if very valuable. Should dry weather set in, water thoroughly with a coarse hose or sprinkler, but toward autumn take off the racks to hasten the ripening process by means of the sun's rays.—*Josiah Hoopes.*

The Rise in India Rubber.

The price of india rubber has taken another rocky jump upward, and five Para grades are now held at \$1 17, against 95¢ 97½¢ a month ago, \$2 84¢ in October, 1881, and 49¢ 50¢ in 1878. The advance within the past ten days has been 10¢ 12¢ per pound, and has taken nearly everybody by surprise. Some of the largest manufacturers freely admit that they recently refused to buy rubber for delivery this month at 55¢, and that they cannot purchase the same grade to-day below \$1 15. This last advance has not been accompanied by large transactions, but is principally due to the sanguine anticipations of speculative holders.

That there has been an enormous increase in the consumption of this material not only for boots and shoes but for clothing and other goods during the past few years is now well known. The use of gossamer cloaks by ladies has become very general and the highest grade of rubber is invariably employed in their manufacture. Figures previously published in the *Bulletin* showed that the total consumption of rubber in the United States and Canada in each of the following years was as follows:

	Pounds	Pounds
1881.....	19,380,000 1877.....	22,148,000
1880.....	16,086,000 1876.....	9,903,000
1879.....	16,081,000 1875.....	10,100,000
1878.....	12,160,000 1874.....	13,242,000

It will be seen that the years 1877, 1879 and 1881 each witnessed a marked increase in the rubber manufacturing facilities of the country. In 1881, with a consumption of 19,380,000 pounds, the net receipts of rubber in the United States and Canada were but 18,047,000 pounds, and hence our supplies were reduced 1,333,000 pounds! That rubber should have gone up to \$1 15 last spring, therefore, is now considered to have been very natural.

But since that time the production of india rubber in all quarters of the world has increased. The "bulls" in rubber always theorize that the native of Brazil is only inclined to cure as much rubber as will enable him to secure a bare existence, and that he consequently only produces half as much when the price goes up to \$1 per pound as he would have produced at 50 cents. This theory is true in a measure, but the population of the rubber producing regions of South America is increasing pretty rapidly, and while each individual inhabitant may limit his earnings according to his daily wants, yet the number of producers is being augmented to such an extent that the actual receipts of rubber from Para are twice as large now as they were in 1870. There has been an average annual increase of 10 per cent. per annum in the receipts of Para rubber, and this year the increase is believed to have been fully 20 per cent. In Central America and Africa there has been a still greater enhancement of production. There are said to be fully 2,000,000 pounds of African rubber on the English market at the present time, and perhaps some American manufacturers may find that they can work in more or less African rubber where they have heretofore used the Para.

With all this increase in production which has occurred in these various quarters of the world, we find that the receipts of India rubber and gutta percha in the United States a one from January 1 to August 1, 1882, were 15,162,189 pounds, against 10,952,490 pounds during the corresponding seven months of 1881. This is an increase of nearly 50 per cent. If all the material has been absorbed, and consumption is being maintained at a rate sufficient to put this year's enhanced crop of rubber up to \$1 17 a pound, then the manufacture of rubber goods in the United States during the past year must have increased beyond all knowledge and belief.—*Boston Commercial Bulletin.*

The London *World* says: "I have been much amused this week by reading that 'Marnion,' after possessing for years an unblemished reputation, has been discovered to be an immoral production. The funny part of the business is that the discovery has been made in the United States, the pure home of, etc." Certainly. Toronto is in Canada, which is not a British colony, but part of the United States—in fact, one of the counties of Chicago, a State destined, as the London *Times* lately said, to be "one of the greatest grain-growing States of the Union."

A Javanese Rampoken.

Yesterday took place the announced clearance among the tigers belonging to His Highness the Sultan, in order to make room for a fresh supply when the new tiger-pens will be built. At about 10 a. m. the Sultan, the Resident Military Commander, Assistant Resident and other spectators appeared behind the Kraton and seated themselves in a grand stand constructed for the purpose. Thousands of Javanese flocked to the spot to see the combats. Soon a fight between a royal tiger and a buffalo together in a pen was commenced. The tiger was several times tossed into the air and then gored to death by the buffalo, which had been made as furious as possible by peppered water, burning nettles and red-hot iron bars. This combat lasted fully two hours. Afterwards began the rampoken or tiger fight. On the plain alongside the Kraton stood Javanese armed with stout spears fifteen to eighteen feet long, drawn up in rows, one behind the other, forming altogether an extraordinarily large square. The two foremost rows lay kneeling, the two hind-most stood erect. In the center of this open space were thirteen straw-roofed wooden pens, in each of which was a tiger. At a given signal a musical instrument called the gamelan began playing a martial air to slow measure. Three tiger-keepers then step out of the ranks and approach the cage. Two of them bear each a burning torch, with which they set fire to the straw. The tiger, frightened by the shower of sparks, is then forced out into the open space, but knows not whither to turn. It rounds round and seeks whether it can find an outlet, until it endeavors either by a desperate spring to get away over the human wall which keeps it enclosed or tries to creep through underneath. But it falls pierced by the many spears which have struck it. It utters a savage cry, which is drowned by the applause and shouts of the multitude. In silent agony it strikes around furiously with its mighty paws. The shafts of the spears often break like glass. In such cases a single blow might cost the life of any unfortunate within reach of its claws. It is afterwards killed in due form. This scene took place in the same way thirteen times successively with as many tigers, the festivity closing at 2 p. m. Only a few accidents occurred. One soldier by ill-luck received a spear thrust while combating with a tiger and was severely wounded in the leg. A native received a bite when one of the tigers broke through the square and was killed outside it, after causing great commotion among the spectators.—*Jara Bode.*

The Story of a Steamer.

"Speaking about fast-running steamboats," said Thomas Hartshorn, recently, rolling his quid into his larboard jaw, and giving his Tuckapaw trousers a hitch (Mr. H. served on the ram Queen of the West), I suppose you never heard of the old Elephant that used to run between Cincinnati and New Orleans. She was a beauty. I suppose that when she was tied to the bank with a stern-line and bow-line she was one of the fastest boats on the rivers. She made one celebrated trip from New Orleans, I think in '49. Her time was made a matter of record. It was seven days, six hours and three weeks. Coming up from New Orleans once the Captain was sitting at a table, and he noticed several big hulks of fellows serving as cabin boys. He called the steward to him, and says he: 'Don't you think it would look better to have boys waiting on the table? I don't like to see men filling the place of cabin boys. Let 'em go and get some young chaps.' 'Why, blast it, Captain,' said the steward, 'them fellows were boys when we left New Orleans.'

"The Elephant," continued Mr. Hartshorn, clinging to his nautical reminiscences, "was pulling out from Memphis one day, on a down trip, and somehow she got mixed up with a raft of saw logs. She broke one of the logs loose, and it floated out into the stream. The Elephant headed down the river and finally got alongside the log. Then commenced one of the nicest races you ever saw. There was a good stage of water, and the log boomed along right lively. For about a week they held together pretty well, but the Elephant had to land at the mouth of the White river, and the log beat her into New Orleans about 20 minutes. There was something wrong about the Elephant's boilers, and she couldn't make steam properly. That's what the captain said. She was a nice boat to ship green fruit on.—*Memphis Avalanche.*

THE LUCKY HORSE-SHOE.—The superstitious notions concerning the good luck attending the horse-shoe that have been handed down to us by tradition undoubtedly originated when horse-shoeing was in its infancy. History informs us that the vulcanian art was practiced by priests and ancient times. The sacred smith not only fashioned the weapons, but shod the horses of heroes. The Druid priests are said to have been skillful workers in iron, and practiced the vulcanian art in great secrecy. The Anglo-Saxon monks are said to have been skillful workers in iron. The smith's art was so highly prized in the days of King Edgar that he enacted that the priests should learn and practice it. St. Dustin, who acquired great fame for being a cunning worker in iron, lived in the tenth century, and gave himself up to a solitary existence, practicing the art in secret. The mystery connected with this saint caused the simple people of his day to venerate him. St. Eloy was Bishop of Noyon, France, in the seventh century, and as a worker in metal (for he was a great goldsmith), became saint of horse-shoers and metal workers in nearly every country in Europe.

AN IOWA BOY'S HEROISM.—Necessity often proves the value of a man, but we never read or heard of a better nerve than that displayed by the little night operator at Melrose, Ia., who was injured by the ears at that place. His name is Engler, and we are told his age is not much beyond 15 years. Wednesday night he got on No. 18 to ride down the road a short distance to close a switch. Just how or where it was we do not know, but the boy, while hanging on the car, was struck against a post, by which he had a thigh broken. The blow threw the boy between the cars and in falling he caught his arms around the draw-bars and in that position he was dragged some distance. He finally recovered himself sufficiently, climbed up on the draw-bars, then by the side ladder on top of the car, where he remained till the train reached Tyrone. There, with his thigh broken and bleeding, he was discovered by the trainmen. He never whimpered in the least and only remarked: "Boys, I believe I have had one of my legs broken; I wish you would help me down."—*Ottumwa Courier.*

KEEPING APPLES.—The essential requisites may be summed up thus: Pick without bruising; store without heating; winter without frosting; use one or more thermometers; preserve an unchanged temperature; guard against air currents; give needed ventilation; remove ripe specimens before decaying; separate the fruit room from all other apartments. With these precautions and care, such apples as the Baldwin, Red Canada, Swaar, Fameuse and Northern Spy may be kept fresh into June and July, as we have had an opportunity for testing.—*Country Gentleman.*

The Cat.

The cat is frankly, undisguisedly selfish; there is no denying that. It lives for self, and compasses its end without scruple, patient to wait, skillful to feign and scheme, and utterly pitiless and unrelenting. But should sportsmen be very severe on the creature that evidently enjoys with a gusto keen as their own pursuits of the helpless prey which it hunts and toys with, often as much for diversion as for hunger? One hopes, for the sake of the sportive birds and heedless mice, which it fascinates with its basilisk eyes and captures with its cruel paws, that there may be some occult provision of nature to disarm their fate of its terror. Perhaps the theory propounded by Dr. Livingston when he records his feelings while in the lion's clutch—that the sensations of the prey are rather pleasing than otherwise—may be true. We hope so, but it must be confessed that appearances are not its favor. In early youth cat nature appears at its best. Once having emerged from the purring, sightless stage of its first nine days, the kitten becomes a winsome and attractive creature. "Cat-like" is a reproachable epithet aptly applied to women of the Becky Sharp type; but it is not considered derogatory to the most fascinating girl to be credited with kitten-like ways—for the kitten is the embodiment of playfulness and grace. The cruel instincts of its tribe are not, however, slow to assert themselves, and it is comical to hear the mimic growl of puny thunder with which the tiny creature glows over its first mouse. In the pages of fable, puss has ever figured largely, but rarely after a flattering manner. His guile and subtlety form the salient points in the representations, and his character is painted akin to that of Master Reynard, the master of the craft. He is depicted as a demure hypocrite, a false hermit, a deceitful counselor, the ensnarer of the nuwary, and the ally of witches and wizards. Rats in council debate how to baffle him. It is hopeless, they find, to dream of "belling the cat." Noiseless himself on his gloved feet, his keen ear is not to be caught napping.

SIKH HORSEMANSHIP.—The Anglo-Indian cavalry went into the Tel-el-Kelbir fight with nothing on but a turban and a piece of cloth around the loins. The Arabs were greatly astonished at the apparition, and still more astonished to find their consummate masters in the use of cold steel. The Sikh horsemen (who, it is well known, worship their swords, according to the teachings of their scripture, the Adi-Granth) refused to reload their revolvers. A French eye-witness of the scene says that the sabering was peculiarly terrible. These Eastern swordsmen never thrust, and seldom strike save at the arms and head, in almost every instance inflicting fatal wounds. Since the Indian mutiny, the English are careful to keep only a small number of these dangerous mercenaries under arms. They use no reins, guiding their horses only by a pressure of the knee, like the South American gauchos.

In the pinewoods of Mississippi, Georgia, and Alabama, when hogs are compelled to labor hard and root deep for a scanty living, the best breeds will degenerate into the long-nose, spindle-leg, razor-back beasts that are found there.

Market Report.

FLOUR—We quote: Best City Extra, \$5 37½¢ 50; Superfine, \$4 50¢, \$4 75¢; Interior Extra, \$4 75¢ 25; Interior Superfine \$3 65¢ 34 1/4 lb. WHEAT—For poorer classes there is but little demand while there is a good inquiry for good shipping grades. Millers ask for nothing but the best qualities and are willing to give \$1 71¼¢ 72½¢ for desirable lots.

BARLEY—During the past week the market has been very lively. Sales of December have been recorded at \$1 50. Recent sales are No. 1, 1 47½¢; November, \$1 48. There is little demand for No. 2 description, quoted at \$1 45½¢ 46. Brewing \$1 52¢ 51 52½¢.

THE CHARLES A. VOGELER CO.
The New Partnership in the House
of A. Vogeler & Co.

A most important change in one of the largest enterprises of the city took place yesterday, and inquiry was busy in gathering the facts.

Immediately following the death of Charles A. Vogeler the surviving partners of the house, of which he had been the moving spirit, issued a circular to the trade and press, which appeared in the columns of this paper. It made public an arrangement which in the exigencies of the moment was deemed necessary, and announced that it was the desire of all concerned to continue its affairs as they had been previously conducted.

It was learned, late last evening, that certain changes affecting the permanent establishment of the business has been resolved upon, and a reporter of the Herald was dispatched to Colonel Charles Marshall, attorney for the estate of the late Charles A. Vogeler, where it was ascertained that negotiations had been concluded, as follows:

That the interests of the surviving partners had been purchased by Mr. Christian Devries, a member of the old and substantial house of William Davries & Co., and President of the National Bank of Baltimore, and that a new firm was about to be formed under the firm name of The Charles A. Vogeler Co., this name being in honor and perpetuation of the memory of the late Charles A. Vogeler. It was further ascertained that the new firm will be composed of the widow of the late Mr. Vogeler, (she retaining her late husband's full interest), Mr. Christian Devries, as executive partner and financial head, and Mr. H. D. Umbstaetter, who, from the first step in the initial venture of the house of A. Vogeler & Co., was the manager of the advertising department and confidential adviser of Mr. Chas. A. Vogeler.

By this arrangement it has been fully determined that all the plans and business purposes of the late Charles A. Vogeler, the founder and executive manager of the late firm, shall be developed to their full fruition, and that the popular preparations of the house, prominent among which are St. Jacob's Oil and Dr. August Koenig's Hamburg Family Medicines, shall hold their high rank under new auspices and the new management.

There is one feature of this commercial episode which appeals strongly to the kindest feeling and points a touching moral. Mrs. Vogeler holds her relation in the firm with a wifely courage. Her whole future is centered in the resolve that the fruits of so valuable a life as that of her husband's, which was freely sacrificed in his zeal for the welfare of his native city, and that the aims and projects he pursued, shall not be permitted to languish,

but shall be revived and strengthened to its credit and to its honor and fame, and that she will strive to build for him an enduring monument in the enterprise of his own founding. *Baltimore Herald, Oct. 14.*

P. POTTTER,
MANUFACTURER OF AND DEALER IN
Harness, Saddles,

WHIPS, SPURS, ETC. NEW work made to order and repairing done. Orders from the country will receive prompt attention. All goods sold for cash at bottom prices. 202 K St., bet. 2d and 3d, Sacramento.

FOR SALE.
A VERY FINE HAMBLETONIAN stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over \$1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Club Stables.

Belmont—Mambrino Chief—Blackbird, for Sale.

BAY YEARLING COLT, BY Pilot, grandson of Williamson's Belmont, his dam by Alhambra (by Mambrino Chief, from Susan, by American Eclipse) grandam Oriole, by Simpson's Blackbird. Is now in Oakland at the stable of JOS. CAIRN SIMPSON.

FOR SALE.
DORR, IMPORTED from Nebraska Field Trials. Has been hunted on chickens, grouse, quail, woodcock and snipe in the New England States, North Carolina, Minnesota, Nebraska, Missouri, Iowa and Indiana. Retrieves without injury (dead or alive) anything from a snipe to a goose, from land or water. V. H. C. on the bench at Boston; also several money prizes and medals as a performing dog. Is probably the best broken dog on this Coast. On account of an attack of paralysis in my legs, which will prevent my using him this winter, I offer him for sale before returning to Massachusetts.
FRED A. TAFT, Truckee, Cal.

INTERESTING.
THE SEMI-WEEKLY EAST OREGONIAN with pictures of Pendleton, Centerville, Weston, Umatilla City, Echo City, Pilot Rock and Heppner, to any address three months, \$1; six months, \$1 75; twelve months, \$3. Sample copy of paper and picture, 25 cents. The best and truest description of Umatilla—the great wheat and sheep country—ever written. Address EAST OREGONIAN PUBLISHING COMPANY, Pendleton, Umatilla county, Oregon.

CONSUMPTION.
I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-hands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J, in combination with the elastic connecting-strip I, substantially as described, and for the purpose set forth.
5. The close-fitting hood J, having the elastic band I, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

FITS
A Leading London Physician establishes an Office in New York for the Cure of
EPILEPTIC FITS.
From Am. Journal of Medicine.
Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. AB. MESEROLE, No. 96 John St., New York.

*Sundays excepted. †Sundays only.

Stage connections are made daily with the 10:10 A. M. Train, except Pescadero Stages via San Mateo, which connect with 8:30 A. M. Train.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

San Francisco Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE
SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING A with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the

Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known

Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE. These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel. A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. and Tkt. Agt.

San Francisco Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street, at 9:30 A. M.

FIVE DOLLARS A YEAR.

THE PADDOCK.

An Equine Epizooty.

A disease of the nature of pinkeye is prevalent among the horses in the northern and southern parts of the county. John McNeill, a farmer on Old River near Tracy, has lost two valuable animals within a week, and he has three others that will not recover. Another farmer in the northern part of the county lost five and had to kill the sixth a few days ago. The horses refuse to eat, and stand around growing thinner and thinner until they die. The animals live less than a week from the time the symptoms first appear. It is said that while they become emaciated in body, their legs swell to a great size. As yet no remedy has been discovered that will cure the disease.—*Daily Evening Herald, Stockton.*

There is scarcely a question that the above is an aggravated type of the disease that has prevailed for the past season. Though it has been popularly termed "pink-eye," it is very different from that which was so named forty years ago, and the only analogy is the injection of the membrane lining the eyelids and nostrils.

It has been a baffling disease to us, and very different from anything we have previously known.

Of eight horses in our stable, only one escaped, viz.: Too Soon, a mare fifteen years old. The next oldest, X X, ten years old, had it quite severely, and has not yet entirely recovered after a duration of five months. Anteeo, three years old, attacked at the same time as X X, has been very peculiarly afflicted. For a long time he appeared to feel well, and never refused a feed until a few days before the race for the Stanford Stake, but he "lost his speed," and a brush of a quarter of a mile would tire him more than two miles at the same rate before he was attacked. His limbs would swell, perhaps a hind leg one morning, the next a fore. Though his testes are naturally small, with the power of drawing them up when in motion, at times they were swollen to an immense size, and the faculty of contraction lost. There would be sudden swelling of the neck at the junction with the head, and the day before the Embryo Stakes were trotted, an abscess between the jaws became ripe and broke. There was not much of a discharge of pus at first, though by the latter part of the week the suppuration was free, and at this time of writing the opening is beginning to heal by granulation. The discharge from the nostrils was always slight, a sort of white mucus, though at times the coughing was so severe that there seemed to be danger of strangulation.

A two-year-old, Lady Viva, had it in a modified form, and when apparently entirely recovered she was sent to Sacramento to be trained in Mr. Winter's stable. She had been broken to harness and driven during the summer but never had a saddle on until she was sent to Sacramento the latter part of September. She had a relapse, more severe than at first, as she went off her feed, and had to be thrown out of training.

There were three yearlings, every one of them showing entirely different phases of disease. Antevolo, a brother to Anteeo, had been broken to harness and driven a short time before he was attacked. There was only a slight cough, and he never lost his spirits, and ate well with the exception of a day or two. One morning we found him with a swelling between the forelegs, and so sore and stiff that he had to be threatened with punishment to make him walk. So rapidly the swelling increased that it could almost be seen to progress, until it reached his sheath and enveloped the whole of his abdomen.

This state only lasted a short time, however, and though he was not harnessed for two or three weeks, in a week's time he had apparently recovered, and has been hearty and well ever since.

Sotoyome, a remarkably strongly-built colt, came from Mendocino county in August and had been taken with the disease during the journey. There was a distinct change in

his case. Though his legs swelled, and there was a slight running at the nose, the peculiarity was in his eyes. At first the charge of thick pus was from the left eye, and was so copious and acrid that it removed the hair from his cheek. Thinking that there might be some foreign substance in the eye, perhaps like a wild oat, a careful examination was made, but nothing could be discovered, and to prove that it came from the disease, after a lapse of several weeks, the other eye discharged the same kind of matter though much decreased in volume. While in this state he was broken to harness, and was somewhat dull; now that he has recovered he is as free and sprightly as can be desired. Sir Thad was similarly affected too, accompanied Lady Viva to Sacramento, and as in her case had a relapse.

Cito, the suckling, was the first in the stable to show the disease. He ran in a small lot with his mother and as the horses were driven on the abutting street, he would rush across for an interview. He ran freely at the nose, coughed some, but kept growing and doing as well as a colt could. Of course, he and his dam were liberally fed with hay and oats, twelve quarts of oats a day, which he ate his full share of. He was foaled the 6th of April and permitted to suck until the 14th inst., when we expected he might fall away. Such has not been the case, and, with the exception of Prince of Norfolk, we never saw a weanling that can compare with him for muscular development.

We instance these cases as showing what the pink-eye has been in our personal experience, and must conclude by saying that it is a mystery beyond our power to explain. In all probability the disease that is playing such havoc in San Joaquin is the same disease aggravated by the climatic changes which have taken place in the last six weeks. It may be that the horses have been exposed to rain or cold drafts, or that a change has been made from idleness to severe labor or the reverse. We will be greatly obliged to our correspondents if they will favor us with their views, and those of them who had horses attacked, their method of treatment and results. All that we did was to give Dixon's condition powders, and in the case of Cito nothing was done.

Rayon D'Or.

The following capital description of this celebrated horse is taken from the *New York Spirit of the Times*, and is so complete that there is no necessity for adding anything further. All of the New York papers join in eulogies and write in high praise of his form. The whole country will benefit by his importation, and in a few years, should there be no mishaps, his blood will be disseminated all over the whole country. It is supererogatory to descant on the value of the blood of the "late importations," as there are few indeed who will not concede the advantages.

There can scarcely be a question that the subject of the sketch will prove of the very highest class as a progenitor:

The celebrated French race-horse and stallion Rayon d'Or arrived at this port on the steamer Queen, of the National Line, on Saturday evening last, the 4th inst., after a passage of nearly fifteen days, having left Liverpool on the 21st ult. As is well known, Rayon d'Or was purchased on behalf of Mr. W. L. Scott of Erie, Pa., by Mr. William Easton, of the American Horse Exchange, at the sale at Danqu Stad in France, which took place early in September, the price paid being \$30,000, which is the highest figure ever paid for an imported horse. Rayon d'Or was not removed from the vessel until Monday morning, and when he entered the Exchange Building, heavily blanketed, about half-past twelve, as Mr. Eaton was selling the Lorillard lot, the crowd recognized him by his commanding presence, and there was a rush to get a look. He was walked straight to the box prepared for him, and at the conclusion of the sale was led out for inspection by Mr. John Davis, who brought him over, and deserves the most unstinted praise for the blooming condition

in which he landed him. There was some applause when the St. Leger winner was led into the ring looking like silk, and when he halted a murmur of admiration ran through the assemblage, and such expressions, as: "What a grand horse!" and "Such splendid shoulders!" and "What wonderful length!" were frequent. He was led about the ring for some time being posed in several attitudes, and was then returned to his box, where we afterwards visited him in company with Mr. Stull.

Rayon d'Or was bred by Mr. C. J. Lefevre, at the Chamant Stud, in France, in 1876. In color he is dark red chestnut of an exceeding rich hue, his flanks reflecting a golden sheen in the sunlight (hence his name, which, translated, means a ray of gold), and, beyond a roan star in his forehead, he has no marks. He is probably the tallest thoroughbred in America, standing 16:3. His head is rather small, but shapely, and somewhat dished in the face; the eye is not particularly large, but placed high. His nostrils are large, but he is none too wide between the jaws for a horse of his undeniable clear wind. His cheeks are high, and the neck, at its setting on to the head, is deep. He has great reach in the neck, which is rather ewed than crested, and though horsemen are wont to dilate upon the beauty of the crested neck, it may be worth while calling their attention to the fact that the ewe-neck has been one of the characteristics of some of the greatest stayers. He does not mount up at the withers like his countryman, Mortemer, but his shoulders are the most superb imaginable, lying low and oblique, and of great length, and he has the "lean shoulder," over which old-time English critics rave. More beautifully placed shoulders we have never seen, and, added to this, he has great depth through the heart and girth. His whole forehead indicates great length of bridle, with his legs well under him, the arm at the swell being large and beautifully developed. His back is a model, being very short and broad over the loin, and the croup prominent. Behind the croup he cuts away somewhat, and the tail, which is set on rather high, has a curious rise at the root. His barrel is very round, with broad foreribs, which arch in their curve from the spine making him more leggy in appearance than if his ribs were less curved and deeper. He couples well, and, though he might have more depth of quarters, nothing can exceed his enormous breadth and stifle power, and his gaskin or second thigh is massive. Rayon d'Or is what would be termed a "cat-hampered" horse, but there is a great sweep from the hip bone to the hocks, which are ever so slightly capped, but are models of size and bony formation, and well let down, while his legs are broad and flat. He fills in nicely behind the elbows, and, while he is a very short-backed horse, he covers a prodigious amount of ground. His feet are of good size, high and concave, but his pasterns are rather short and not clearly defined. This and an inclination to be rather flat-sided just at the flank are his principal defects, though we should rather have him a little less narrow in the chest. Otherwise, he is the most glorious horse the sun ever shone upon. His proportions are of the heroic mould, and he has by far greater length than any of the native strains to which our eye has become accustomed. His disposition is perfect, which speaks well for his handling, there being none of that wild-eyed viciousness seen in many of our stallions. As we stroked him in his box, Monday, his eye was as mild as a summer's morning, and he made no effort to resent the familiarity. We never saw a horse stand a voyage so well. The stalwart son of Flageolet was as blooming in his coat, which shone like satin, as Mr. Davis stripped him, and which in itself speaks volumes for the care bestowed upon horses imported through the agency of the American Horse Exchange, which has in its employ a corps of horsemen who would serve as models in many of our racing establishments.

Hinda Rose Does a Fast Half-Mile.

NEW YORK, Nov. 23, 1882.

The *Herald* says: Governor Stanford's California filly, Hinda Rose, two years old, trotted half a mile over the track of the Gentlemen's Driving Park yesterday afternoon in 1:10. The track was not quite fast, owing to a frost in the morning and the sun of the afternoon. She was timed by John Murphy and others and was driven by Marvin.

This is a wonderful performance though to many Californians there is a phase of it which they will not understand. That is the effect of the frost. The surface freezes, solid perhaps, to a depth of two or more inches. The sun comes out and thaws a portion of it and that is as slippery as so much mortar. Should it be warm enough to penetrate further the foot sinks through, and in either case it is a "slow track." It is very different from when the mud arises from rain and far more detrimental to speed.

TURF AND TRACK.

The Plunger and Jockey.

Walton is a godsend to the English knights of the equine reportorial pencil. There is scarcely a number of the turf papers of that country that has not something to relate about him as long as he is in that country; one of them relates the following anecdote:

It is the pleasing habit of Luke the jockey (pleasing to backers of horses he does not ride, that is to say) to look round when he gets near the judge, divert his attention from his own horse and the winning post and take a friendly interest in the efforts of the other competitors. The result usually is that in a very few seconds he can see one or two of them without giving himself the trouble of turning his head just as the box is passed. Luke rode Saheem in the Cambridgeshire, and, as is known, the "American Plunger" backed the colt to win him some £60,000 or £70,000—in his calculations £10,000 more or less goes for nothing, though I confidently expect to see the day when Mr. Walton will consider such a wretched little sum as £10,000 of some importance. Knowing Luke's habit, therefore, Mr. Keene's master of the horse, Mr. Bathgate, a shrewd judge of riding and a keen observer, gave Mr. Walton a valuable tip before the race. "You go to Luke," he said, "and tell him that if he wins the race without looking round you'll give him £500." I do not know whether Mr. Walton knows much about racing, but he knows enough to be aware that a jockey is less likely to win if he turns round when he ought to be finishing and critically examines the rest of the field, and the Plunger went to Luke and promised him the money on the conditions named. As Luke was never far enough forward to look behind him for the probable winners he did not earn his reward.

And talking of "plungers" there have been others in America before the advent of Walton. During the war there lived in St. Louis a man who made a great deal of money in government contracts. He was one of the best judges and handlers of mules in the country and was fortunate enough to be in with "the ring" that then controlled that business for the whole Northwest. As his bank account grew in size and assumed proportions in accordance with his desires he developed a fondness for turf and track sports, and in addition to owning racehorses and trotters he acquired wide-spread notoriety for the magnitude of his wagers. Though a liberal investor in the pools he was more partial toward "out-of-hand" betting as that attracted more attention and drew the eyes of the assemblage to his doings. He was a large, time-looking man with a swarthy complexion and stentorian voice, and he had also a great fondness for showing off in the presence of the fair occupants of the ladies' stand. There was a trotting race in which he had a horse engaged, and in which was one belonging to Jim—. The plunger had taken a prominent seat in the club stand, boasting of his horse and the money he would wager on him winning the victory, when it was at least ten to one the other way.

Some Mary or Margaret managed to "carry the news" to Jim, and he was not long in taking a position in front of it. "Mr. G—," he said, "I understand that you offer to bet \$5,000 that your horse will be better than mine in this race."

"I do," was the prompt reply.

"Doubt," responds Jim, "I will make it again."

"All right, \$10,000 that Billy beats Quaker," came from the plunger.

Pencil the bets in a memorandum book, Jim walked a few steps away and turning on his heel remarked: "We may as well go another \$5,000, it is not much money for us you know." This was coming a little too hot for the big speculator, as there was a good prospect that Jim would keep badgering him as long as he had the advantage, and his tawny visage grew purple at the mortification of having to "back down" in the presence of hundreds of the belles of St. Louis.

"Hold on a minute," he exclaimed, and in a semitone loud enough for those in the vicinity to hear, continued: "I will bet him a \$100,000," made his way to the quarter stretch. When he met Jim there was a change, and in a subdued voice he thus accosted him:

"It is all right Jim, though you took me at an advantage and I will let the first \$5,000 go, but you must let me off for the other."

"Very well," said Jim, "only be a little more careful how you shoot your mouth off again."

On another occasion there was a big race meeting in St. Louis and one of the big events was a purse of \$5,000, heats of a mile, best three in five. Among the starters was Sue Lewis, a sister to Asteroid, and one of the first of the get of Lexington to show what a wonderful progenitor he was to become. She was owned by Joe Harper, and "eend to eend" running was his favorite instructions to his jockeys. She was ridden by "Old Abe," the most celebrated of the negro riders, who was just the one to get out the last link of the great speed which the mare was known to possess.

John M. Clay had Skeddaddle in, Gil Patrick up, and there was another Yorkshire mare called Ann Travis with John Ford in the saddle. Writing entirely from recollection we are not positive about the other starters though as nearly as we can remember, Ed Thompson, George Cadwallader, and Tom Clark had mounts. The first heat Sue Lewis won quite handily but in the second these crafty old jocks got her pocketed, and held her back while Gil Patrick on Skeddaddle opened a "fearful gap." The Abbey track had been a half mile and the only chance to extend it to a mile was to carry the same width which made the stretches over six hundred yards. They were forced to let her out at the head of the homestretch, though Skeddaddle was so far in the lead that it appeared impossible for any horse to overtake her.

But Abe pulled her to the outside in order to obtain the firmer footing of the "walking path" and she came at a pace which would have tried the mettle of the fastest of the short horses to equal. It was a flash of chestnut with a black demon in the saddle, fairly writhing in contortions to increase the already marvelous speed. A maniac rider, eyes flashing in excitement, and the foam seething through the clenched teeth, and the working of the muscles plainly visible under the light silken jacket. He was gaining at every stride, and at the four-mile distance—one hundred and twenty yards in those days—there was only an open length between them. A quick, nervous touch of the spurs, a rapid and wicked cut of the whip, some spasmodic movements of the reins and the chestnut mare and ebony rider arc at the score a good length in front.

In company with R. A. Alexander we witnessed the race from the four-mile-distance stand. We never saw him nearly so much excited when his own horses were running, and when it became evident that Sue would win he exclaimed: "I have seen all the best jockeys of England ride, and not one of them is the peer of that old dandy." It could not be gainsaid that it was a wonderful victory, but it was also evident that after such superequine exertion it could not be expected that it would be repeated within the short time the rules gave between heats.

"Old John" led the mare in the "cooling out," tempting her to pick a few blades of grass he held in his hand. She scarcely nibbled at them, however, and the distended nostril, quivering limbs and heaving flanks, with the long shuddering inhalations told what a fearful struggle it had been. There were splashes of blood on the white breeches of Abe and the fair leather tops of his boots, and the long shanks of the spurs were crimson. His white teeth were yet firmly clenched, and his intensely black eye still shone with the fierce excitement of the run home.

To any one who possessed a modicum of racing knowledge it was apparent that her chances for another heat were slim, indeed, but G— was vociferating long odds that she would gain the victory.

"Five thousand to one," he shouted, "ten thousand to two thousand that Sue Lewis wins the race."

"Make it fifteen thousand to two and I will take it," responded a quiet looking man who spoke with an Irish accent.

"Thirteen to two," was the reply, flourishing a handful of greenbacks of large denominations in his hand.

"I'll take it," the money was counted, placed in the stakeholder's hands and the wager consummated.

It is almost needless to state that the "short end" won and the profits of a few earloads of mules were transferred to the British dominions.

It may not be out of place to "point a moral," with this short, undorned tale, and that is the manifest injustice of this kind of racing. Singly, Sue Lewis could have easily beaten every one of her competitors, and even, without being caught in the pocket, she would, in all probability, have gained the victory. Not only unjust in causing her to lose that particular race, as it was a strain she never fully recovered from, and that fearful run after the exertion of the previous heat such a severe ordeal as to be a tax on her future career.

Temper in American Horses in England.

There are comparatively few American bred horses in English training stables, and it is strange to note, says Rapier in the *Illustrated Sporting and Dramatic News*, how many of these have bad tempers. Foxhall and Iroquois are exceptions. The former has a tendency to nibble at visitors; and the unwary who went too near him carelessly might mistake the act for biting if he had hold of a bit of their arm; but this is done with perfect good temper, and Iroquois is likewise amiable. Romeo, however, passed the first mouth of his residence in Wiltshire, I am told, almost on his hind legs, and with the best hands in the country on his mouth, he played the fool at the start for the Leger. Seminole, in one of his few essays, bolted at Kempton last year, jumped the rails and came near to killing his jockey. Comanche, in the first October Meeting at Newmarket, ran viciously against the palings of the enclosures and bucked Webb, saddle and all, off his back. Wenhall showed temper and bolted twice when at the post at the same meeting. Golden Gate, in the Beaufort Handicap at Stockbridge, conducted himself vilely and had to be led to the post. General Scott emulated his misdeeds. Passaic, Wallenstein and Abbotford wear the rogue's hood. Lord Murphy, one of Mr. Keene's, became as savage as a dog, and Gerald long since earned for himself at Newmarket the title of the mad horse. The question is whether the fault lies in the blood or the breaking. It is difficult to see how horses bred from some of our best strains of blood could be affected by the fact of being born in America, and the evil probably springs from the scant care bestowed on the breaking of the young ones. Two of the horses named above, however—Romeo and Golden Gate—were broken at Newmarket, though I do not know by whom or in what proportions the *suaviter in modo* and the *fortiter in re* were applied.

We have always been under the impression that a large proportion of vicious and unruly horses was caused by improper treatment, though there are strains of blood which are prone to become unmanageable. That so many of the American exportations have acquired the bad habits noted above can hardly be explained on this hypothesis, and it is difficult to account for the prevalence. Bad actions at the starting post are occasioned by several things. "Soreness" will give a colt a violent dislike to the course, though it often arises from severe punishment when running in a race. More races have been lost by an unmerciful use of the whip and spurs than have been won, and the severe flagellations that some jockeys give have an extremely pernicious effect. Public opinion is in a measure to blame for this unwarrantable treatment. If the rider does not thrash and spur the charge is made that he is "throwing" the race. In self-defense he inflicts punishment that he knows is wrong, and the animal has intelligence enough to know that it is unmerited, and fears a repetition when he is brought to face the starter. Very few horses require more than a touch of the spur or a sharp cut of the whip, and where they are fully extended even this punishment may work injury. A slight motion of the bit, a cheering word, is oftentimes more potent, and at all times far better than a torrent of blows.

MALI AND STANFORD STAKES.

The National Association of Trotting Horse Breeders.

NEW YORK, Nov. 4, 1882.

EDITOR BREEDER AND SPORTSMAN: You have several times lately referred to the "Stanford Stakes" as "the largest colt stakes ever trotted for." Permit me to say that this I believe is a mistake.

The Mali Stakes for foals of 1879, opened by this association and trotted for at its late annual meeting, amounted to \$4,150, and was won by the California-bred filly Wildflower.

I would in this connection call your attention among the other events of this association yet to be trotted for to the "Wilson Stakes," for foals of 1880, (to be trotted as four-year-olds) which with the subscription of the sires named and the sixty-three of their get originally nominated, on fifty of which scound payments have already been made, now amounts to \$10,000 cash paid in, which with \$50 each yet due from starters, it is reasonable to suppose will at maturity be increased to about \$12,000.

This stake will probably be renewed the coming season upon conditions which will probably render it even more popular than before.

L. D. PACKER, Secy.

Mr. Packer misunderstood us, as the claim was that for the number of colts engaged the Stanford was the largest trotting-colt stake ever decided.

Some years ago there was a stake for three-year-olds trotted on Shell Park, San Mateo county, that aggregated more money, as well as the Mali Stakes, but both of those had a larger number of nominations, with a greater number to start. We are pleased to hear that the Eastern Stakes for trotting colts are to be kept up, as there is not a State in the Union more interested in their perpetuation than California. There has been a grand beginning by Wildflower and Hinda Rose, and this will stimulate our wealthy breeders to make nominations. None of them can object to naming in the "Wilson Stakes," and every stallion of note on this coast should be represented. The position which we took long ago that trotting colt stakes were henceforth to be the events is becoming rapidly verified. Racing would lose the greater part of the interest if the contests were restricted to the old campaigners, and though the time classification obviates some of the difficulties, that has objectionable features which are a great drawback. We are much obliged to Mr. Packer for the letter and trust that he will keep us fully versed in regard to the doings of the association.

English Racing.

LONDON, November 14, 1882.

The Shrewsbury November meeting began to-day, the principal race being the Great Shropshire Handicap over the New Mile. It had eleven starters and was won by Mr. Jardine's Experiment by fully six lengths; with the odds at 16 to 1 against her. The favorite was Lord Ellesmere's Lowland Chief with the odds at 4 to 1, but he failed to get a place, Mr. R. S. Evans' Falkirk running second and Mr. P. H. Cooper's George Mansfield third. The conditions were as follows:

SUMMARY.

The Great Shropshire Handicap, for three-year-olds and upwards, at £20 each, £10 forfeit, with £500 added, the second to save its stake; entrance £3 each, the only liability if forfeit is declared by Tuesday, October 31; winners after the declaration of the weights (selling stakes excepted), to carry 5 lbs. extra; twice, or once of £300, 10 lbs. extra; closed with 71 subscribers, of which 45 declared forfeit; New Straight Mile.
Mr. R. Jardine names b m Experiment, 5, by Friponnier, dam Wild Aggie, 102 lbs.
Mr. R. S. Evans names b c Falkirk, 4, by Scottish Chief, dam Little Jemima, 92 lbs.
Mr. P. H. Cooper names b o r c George Mansfield, 4, by George Frederick, dam Agnes de Mansfield, 88 lbs.
Eight others ran, including the four-year-old colt Lowland Chief, at 126 lbs.

The result of the Shropshire Handicap as above is a full proof of what has been repeatedly said, that the "back-end" handicaps in England are but little better than gambling affairs between a lot of "broken-down-no-account" horses and an occasional good one saved for certain races, for not one of the three horses placed had won a race this year up to the end of September. As a two and three-year-old, the winner Experiment was very promising. In his first race, as a two-year-old he ran a dead heat with Brown Dick for the Great Yorkshire Foal Stakes, after which he won six races out of ten starts, while as a three-year-old he took seven out of eleven starts, including the Great Northern Leger of Stockton and the Park Hill Stakes at Doncaster. As a four-year-old he seemed to have gone to pieces. He ran eight times, of which he won only the Heaton Park Welter Cup Handicap at the Manchester autumn meeting, carrying 134 pounds. He subsequently ran fourth for the Lancashire Cup at the Manchester November meeting, which was his last appearance until the Western meeting at Ayr (Scotland) last September, when under Mr. Jardine's "blue and silver" he was third for the Ayr Gold Cup, which was probably his only race this year until the Shropshire Handicap, as above.—*New York World*.

Burt Scully, the well-known trainer of thoroughbred horses residing near Paris, Ky., was shot and instantly killed on the evening of the 31st ult., by Hooker Stivers, in Paris. The parties live on adjoining farms and the women of the two families quarreled about some turkeys. Sherman Stivers, aged seventeen years, a brother of Hooker, shot the turkeys which were chained by Scully's housekeeper. Scully returned from the Memphis races soon after, and hearing of the case, and meeting young Stivers in a spring wagon, he took him out and boxed his ears. When Hooker Stivers heard of this, he placed a shot-gun in his buggy and drove to town to meet Scully. Upon seeing Scully, he called out to him and Scully started toward him, but when he got within a few feet of Stivers the latter deliberately shot him dead. Scully, according to the testimony of his nephew, was unarmed. Scully has been identified with the turf since he was eight years old, and has trained several winners. He was not regarded as a quarrelsome person.

Brighton Beach is to have an opposition. The Rockaway Jockey Club of Rockaway Beach, with a capital of \$300,000, has obtained articles of incorporation. It is understood that the club will build a race-track at Rockaway and by offering large purses endeavor to secure some of the patronage now bestowed on Brighton Beach.

THE TROTTING COLTS OF 1882.

The Strains United in the Youngsters who have Achieved Prominence.

The following from the *Turf, Field and Farm* of Nov. 11th is a very interesting description of the doings of the trotting colts in that section of the country. There is little to add at this time as when the year comes to an end we will have something to say about the California colts. There have been so many startling performances on this slope that the Eastern folks are prone to give attention only to those of that character, and when under the standard of the "top notch," under-rate the effort. The colts here have done well, and Adrian, Adair, Clay Jr., and Bonnie among the three-year-olds, Pride, Ruby and Neluska in the two-year-old division, and Dawn, Mockingbird, Bedouin and Antevolo in the baby class merit more than a passing word.

Albert W, with all due regard for the champion four-year-old, Jay-eye-see, has claims for the first place, as we cannot agree that 2:22 in a last heat is his best performance, holding that a second heat of two miles on a soggy track compelling a wide detour on the turns, on account of the softness, in 4:51½ is the superior. It may be that he will be trotted to beat the 2:19 of the great son of Dictator, and with a fair prospect of accomplishing the task. The value of the thoroughbred blood in the trotter is becoming so apparent that only the obstinately stubborn now dispute it. The allusion in the closing paragraph is very happy:

When the leaves fall before the frosts and winds of November the trotting season is about over, especially here in the North, and we can learn something from a glance at the records. The prominent two-year-olds are Fugue and Hinda Rose, one Kentucky and the other California bred. The meeting of these two was looked forward to with much interest at Lexington in October. Hinda Rose had gained great renown by trotting in 2:36½ as a yearling, but it was argued that the long journey from the Pacific to the Atlantic coast, and from New York to Kentucky, would place her at a disadvantage with Fugue. Unfortunately Fugue had been weakened by epizootic, and ten days prior to the day appointed for the race at Lexington, Oct. 11, her driver had become fatally ill, and she was short of work. At the last moment Brassfield was secured to pilot her. The track was heavy but the day was fine. Hinda Rose had never appeared in company before, and she was nervous. She got off in a pace, and Fugue showed the way around the first turn and went under the wire in the lead in 2:36½, distancing two of the field. In the second heat Hinda Rose acted as well as Marvin could ask, and she won in 2:32, with three in the field behind the flag. In the third heat the pace was too fast for Fugue, and Hinda Rose won in 2:32. Had the track been firm and elastic, 2:30 would have been beaten. Hinda Rose was got by Electioneer, out of Beautiful Bells, by The Moor, son of Clay Pilot; second dam Minnehaha (dam of Sweetheart and Eva), by Bald Chief, and third dam Nettie Clay, by C. M. Clay Jr. The dam of Green Mountain Maid, the dam of Electioneer, was a mare, judging from her form, three-quarters thoroughbred; but the stallion has produced colts with pure trotting action out of all kinds of dams—pacing, trotting and running. Clay Pilot was a son of Neaves' C. M. Clay Jr., and his dam was by Pilot Jr., son of a pacing and trotting horse and of a mare nearly thoroughbred. Bald Chief was a combination of trotting and running blood. His sire, Bay Chief, was a son of Mambrino Chief and a running bred mare, and his dam was by Hunt's Commodore, running stock. The first dam of C. M. Clay Jr. was by Abdallah, and the second dam by Lawrence's Eclipse. In Hinda Rose we find the trotting crosses on top, backed in every instance by thoroughbred strains. Her breeding, according to the judgment of some critics, is perfection. Fugue was got by King Rene, out of Fuga, by George Wilkes; second dam Betsy Trotwood by Clark Chief; third dam by Ericsson, and fourth dam by Sir William. Clark Chief was by Mambrino Chief, out of Little Nora, by Downing's Bay Messenger, and he met with great success in the stud, being the sire among others of Croix and Woodford Chief. King Rene is by Belmont out of Blandina, a great brood mare by Mambrino Chief; second dam the Burch mare (dam of Rosalind), by Brown Pilot, the third dam said to be thoroughbred. Fugue is equally as well bred as Hinda Rose; the trotting crosses are on top supported by pacing and running strains; and many incline to the opinion that she will defeat in her three-year-old form the California filly.

The commanding three-year-olds of 1882 are Algate, Alroy, Wildflower, Code, Eva, Endymion and Butterfly. Algate, bred at Glenview, won a race at Louisville and then went to Chicago and reduced her record to 2:25½. She is rapid and has a level head, and it is claimed that she would have beaten 2:25 had the day been favorable. In the race she had to fight a raw, chilling wind. Her sire, Cuyler, was got by Rysdyk's Hambletonian out of Gray Rose, by Harris' Hambletonian, and her dam, Haroldine, was by Harold, out of Missouri, by Mambrino Chief, and she out of a mare by Woodford, thoroughbred son of Kosciusko. Woodbine, the dam of Woodford Mambrino and Wedgewood, as is generally known, was a daughter of the same thoroughbred Woodford. In Algate we find a welding of Hambletonian, Mambrino Chief and running strains. In the middle of October her owners were ready and willing to ship her from Louisville to New York and trot her against the pick of the three-year-olds of the country. Alroy was bred at Marshland in Tioga county, New York, and he trotted three races at the meeting of the National Association of Trotting-Horse Breeders, held at the Gentlemen's Driving Park in September and October, and won all with ease. In the second heat of the Nursery Stakes he made a record of 2:27½, which is the best ever placed to the credit of an Eastern-bred colt. Peacemaker, the sire of Alroy, was got by Rysdyk's Hambletonian, out of Sallie Feagles, by Smith's Clay, and she was out of a mare by Hickory. Mason Girl, the dam of Alroy, is a daughter of Arabian Chief and Lady Mason, by Seely's American Star, grandam by Commodore; and Arabian Chief was by Toronto Chief, out of a mare highly bred and represented as having come from Arabia. Lady Mason was one of the gamest mares ever driven on the roads of Brooklyn, and her sire was largely running bred, as also was her dam. The Peacemaker blood is flashy, but the breeder of Alroy wisely backed it up with plastic running crosses, and thus gave us the fastest three-year-old ever foaled East of the Alleghenies. Butterfly was defeated in the three-year-old race at Chicago, but she had shown her owner 2:25 at Lexington before she was shipped North. Young Jim, the sire of Butterfly, was got by George Wilkes out of dam of Jim Irving, a mare by Lear's Sir William, a running-bred horse. The dam of Butterfly

was by George Wilkes, but the filly has inherited the finish and nervous temperament of Young Jim. Eva is the sister of Sweetheart. Her sire was Sultan, a son of The Moor, and her dam Minnehaha. She was beaten in the three-year-old purse at Chicago by Code, having been demoralized by a collision with Butterfly; but in October she showed a mile in 2:26, and was anxious for a race with Wildflower, Algate and Alroy. Although not in the best of form, Code won the three-year-old purse at Chicago in July in 2:31½, 2:33, 2:31. In September, at Maysville, he trotted against time and made a record of 2:30, and at the Fall Meeting of the Kentucky Trotting-Horse Breeders' Association, Oct. 12, he won the Kentucky stakes after a contest of five heats with Endymion and Jephtha D. He lost the first and second heats in 2:33½, 2:33½, but won the third, fourth and fifth heats in 2:31½, 2:30½, 2:31. Code is a young horse of great resolution. His sire, Dictator, brother of Dexter, was got by Rysdyk's Hambletonian, out of Clara, by Seely's American Star, and his dam, Crop (dam of Blanch Amory), was by Pilot Jr. Seely's American Star was three-quarters running bred, and his blood gave fire and repeating capacity to Dexter. Pilot Jr. was got by old pacing and trotting Pilot, out of Nancy Hope, by thoroughbred Havoc, and she out of Nancy Taylor, by Craig's Alfred, son of imported Medley. The running crosses are close up to the trotting crosses in Code, and it would be difficult to find a steadier performer in harness. Endymion, a black colt, won the Stallion Produce stakes at Lexington, Sept. 2, and made a record of 2:39½, and he won two heats, although out of form, from Code, in October, as stated above. He is by Dictator, out of Annie, by Morgan Rattler, and she out of a mare by Mambrino Chief. He has a great deal of the snap of Dexter. Wildflower trotted in 2:21 as a two-year-old, and after a long journey from California defeated, in her three-year-old form, at Gentlemen's Driving Park, in October, Meander, Senator Sprague, Lucy Walter and Earnest Maltravers. Her time was 2:32, 2:27½. She had no other engagement this side of the Rocky Mountains, although she was shipped from New York to Kentucky and back. She was bred at Palo Alto, and she was got by Electioneer, out of Mayflower, by St. Clair. At Sacramento, May 7, 1872, Mayflower made a record in a third heat of 2:30½, wearing shoes weighing two pounds each on her fore feet, in addition to a roll around each pastern filled with two pounds of shot. Her performance, rigged in this way, was simply wonderful. She is a mare of small stature, but is lengthy. The blood of St. Clair is not known, but all the circumstances lead to the belief that it was a mixture of pacing and thoroughbred strains.

The four-year-olds next invite attention. In the fore part of the season it was thought that Phil Thompson would have no rival. He had trotted in 2:21 as a three-year-old, had shown a trial in June of 2:21 on a track four seconds slow, and his owner challenged in vain for a match. He was taken to Chicago in July, where he got off, went to Buffalo and was placed in the hospital, where he came nearly dying, and now is in winter quarters at the Gentlemen's Driving Park, New York. Red Wilkes, the sire of Phil Thompson, was got by George Wilkes, out of Queen Dido, by Mambrino Chief; second dam by Red Jacket, and third dam believed to be thoroughbred. The dam of Phil Thompson was got by John Dillard, out of a mare by Gill's Vermont, and she was out of a mare by Herr's Bellfounder Jr. John Dillard was by Indian Chief, out of Lady Jackson, by Mack, by Hampton's Whip, by Blackburn's Whip; and Indian Chief was by imported Chief, out of a mare by Kirkland. Gill's Vermont was by Downing's Vermont, and Herr's Bellfounder Jr. was by Brown's Bellfounder, out of a mare by Shakespeare. All the bottom crosses of Phil Thompson's dam, a mare of great stamina, are thoroughbred. Farce showed a mile at Woodlake in 2:23, but she got off and did not start. She is by Princeps, out of Roma, by Goldlust, and she out of a mare by Pilot Jr. Princeps is a son of Woodford Mambrino, son of Mambrino Chief and Woodbine, daughter of thoroughbred Woodford. Jay-eye-see stands out conspicuously as the great four-year-old trotter of 1882. At Chicago, in July, he trotted a great race in the four-year-old class. No special effort was made to win with him until in the fifth heat, which he captured in the fast time of 2:22½. He also won the sixth heat in 2:23½. In the seventh heat he was sent away in a tangle, and Doble lost his temper and did not succeed in settling him until he was virtually out of the race. The heat was won by Waiting in the slow time of 2:30. Great as this performance was it was thrown into the shade by the four-year-old race at Chicago in September. Jay-eye-see lost the first heat to Bronze in 2:22½, but won the second, third and fourth heats in 2:29½, 2:19, 2:19. He was shipped to Lexington in October, where he trotted a trial in 2:18½ before he fell lame from bad shoeing, and was turned out. The feet of the Dictators have the Star defects, and they require scientific treatment in the blacksmith shop. Jay-eye-see is the fastest horse of his age and inches ever foaled. He is under 15 hands, and yet he has the speed of the whirlwind. He was got by Dictator, out of Midnight, by Pilot Jr., and she out of Twilight, thoroughbred daughter of Lexington. He is bred very much like Mand S, and the blood of the running horse predominates in him. Bronze was got by Morgan Messenger, a pacing horse, and her dam was a mare of fine breeding. In California, Saturday, Sept. 23, the bay stallion Albert W, four years old, won the 2:22 class, trotting the third heat in 2:22, the fourth in 2:22½, and the fifth heat in 2:24. He has trotted in several other races, but this is his best performance. Albert W was got by Electioneer, out of the sister of Aurora, by John Nelson, and John Nelson was by imported Trustee, out of the Redmond mare, by Abdallah. The great California four-year-old, like Jay-eye-see, has plenty of running blood in his veins, and the crosses are close up.

The lesson to be drawn from the story so briefly told is this: The man who sets up the dogma that a mixture of trotting and running strains will destroy the fast and light harness horse, mouths words in the face of facts. A judicious blending of plastic thoroughbred with cold trotting blood gives us finish, an outline in harmony with speed and the will or nerve force to strive to be first at the winning post. If we are wise we will draw our conclusions from the results of the great battles on the track, and not from theories born of prejudice in the unhealthy air of a garret, and which fly in the face of demonstrated truths.

Racing Reminiscences.

We see in the last number of Mr. J. C. Simpson's paper, the BREEDER AND SPORTSMAN, of Oct. 28th, an article with the above captioned for a communication of T. B. M. in the Portland Oregonian. As a usual thing we do not notice the erroneous statements in the papers not specially devoted to turf matters, because if we did we would have no time or space to devote to anything else, but T. B. M.'s errors in turf matters are so glaring and some of his reflections so unjust on the living and dead that in deference to the truth of history we notice them. Certainly T. B. M. must have a fertile imagination, for he states many things in the wrong

year, and some that never did happen. We will take up some of his statements and show their unreliability. He says: "It was well along in the fall of 1852 when I reached Lexington, Ky., and saw for the first time a race 'run for blood.' Five horses started, the favorite being Mr. John Clay's Star Davis. The race was mile heats, three in five, and the Star won in three straight heats. He banged in all heats below 1:46, and could have run any one of them in 1:43 had he been sent for it. In the same stable with Star Davis was a beautiful chestnut filly, likewise a three-year-old. I allude to Madeline, grandam of Iroquois. She won a two-mile stake for colts and fillies, at the same meeting, with most ridiculous ease.

Now the truth is Star Davis did not run at Lexington, Ky., the fall of 1852. He won the Association Stakes, mile heats, May 24th, 1852, beating four others in 1:47, 1:46½. So it will be seen that T. B. M.'s report is a myth, as well as the time. Madeline did not run at the fall meeting, but ran May 27th, 1852, for a \$150 purse, for all ages, mile heats, best three in five, which was won by Mr. Webb Ross' b c, 4 years, by Boston, dam Blinky, 5 2 4 2 1 1; Big Indian, 4 years, 4 3 1 3 1 ds. Big Indian came in first for sixth heat, but was discarded for foul riding. Madeline, 3 years, 1 1 3 4 dr; Hexamiter, 4 years, 3 4 2 2 ds; Gulnare, 2 ds. Time—2:05½, 2:00½, 2:03½, 1:59, 1:59, 1:59. So this is incorrect also. Madeline was not brought back to Kentucky by Col. S. D. Bruce as T. B. M. says but was bought by the late Hon. James B. Clay of Gen. E. N. Wilcox of Detroit, Mich.

In the same connection he gives a mythical statement about Princeton and a horse called Blue Ruin. Mr. Clay never owned a horse called Blue Ruin, nor was ever Princeton entered in or won a post stake, two mile heats. He won a sweepstakes for three-year-olds, two-mile heats, at Lexington, Ky., in 1855, beating a bay filly by Yorkshire, dam Dick Doty's dam, a c h e by Yorkshire, dam Minstrel, in 4:01, 3:43½, and the statement of T. B. M. about beating Die Clapperton in the second heat is untrue for the two never met in a race.

He gives a description of the celebrated John Ford and describes a race of four-mile heats that he says took place at Smithfield, Ky., between Denmark, Jerry Lancaster and Mary Waller, of sixteen miles, won by Denmark. No such race ever took place. He also speaks of John Ford saying he wanted to see one Derby and then die. "He saw one, too, won by Thormanby with Dundee on three legs at his throatlatch, Umpire by Lecompte beaten away off yonder. Ford's money was all on Dundee, and he stood to win about \$1,400 with \$1.50 had Dundee won." Thormanby won the Derby in 1860, with the Wizard second, Horror third, Dangu fourth, Umpire finished seventh. Thirty horses started and the writer witnessed the race; Dundee was a two-year-old in 1860 and ran for the Derby in 1861, won by Kettledrum, Dundee beaten a length, second. So this statement is incorrect. Starke as he says won the Goodwood Stakes in 1859, but he did not win the Goodwood Cup the following year, 1860, but in 1861. He introduces the late Mr. Thos. Patterson into the article and represents him as speaking more ungrammatically than a corn-field negro. While Mr. Patterson was not a man of much education, he used good language. He gives a race at Mobile, Ala., between Charmer and Wade Hampton; the latter won the first heat and Patterson wanted to draw Charmer, but the judges would not permit it. Wade Hampton sulked in the second heat and was distanced. No such race ever took place. These two met at Mobile in 1853, and Wade Hampton beat Charmer in straight heats in 3:50, 3:49. They met again the same week at the same place, three-mile heats, and Charmer distanced him the first heat. We think that T. B. M. has got mixed a race between Wade Hampton and Didie or Maid of Orleans, two-mile heats, that was run at New Orleans in 1854. Wade Hampton won the first heat, sulked in the second and was distanced.

He also introduces Mr. J. B. Pryor, and makes him, a very intelligent gentleman, talk in negro gibberish. Mr. Pryor went to England to train for Mr. Ten Broeck in 1860, and did not return to America the next year as stated by T. B. M., but trained for Mr. Ten Broeck until he gave up his stable in 1867; then Mr. Pryor trained for Baron Schickler in France until he came to train for Hon. A. Belmont in 1872. He tells a very amusing anecdote of a horse he says once owned by Mr. Ten Broeck, called London, who kicked off an Irishman's hat. It is a pity to destroy so good a story, but the truth must be told. Mr. Ten Broeck never owned a horse by the name of London.

T. B. M. has written a very amusing and readable article, and it seems a pity to destroy it. As a conglomeration of erroneous turf statements we have never seen its equal.—*Kentucky Live Stock Record*.

We publish the above in order that the errors may be corrected, though in justice to T. B. M. it is proper to state that the article in which the blunders were made was written where the author was without references, and writing entirely from memory they worked their way in. Again if it had been written for a turf paper more care would have been taken in the "reminiscences" and his memory stimulated to return the correct answer. We all know what a treacherous thing memory is after the lapse of so many years, especially to those who have witnessed a great deal of racing. Occurrences become blended and races "consumed" mixed. The only safety for a turf writer is to go to the records whenever it is necessary to give dates, etc., and not having these, and the object being to write a "readable" article for the Sunday edition of a daily paper, the lapses came in. Paradoxical as it may appear, men who have the faculty of a good memory are the most likely to fall in error. Depending upon that they are prone to avoid the labor of hunting up the proofs and this confidence is almost sure to lead to mistakes.

Had T. B. M. foreseen that his article would meet the eye of so competent a critic as the editor of the *Kentucky Live Stock Record* more pains would have been taken. Written in the far-off (from Kentucky) Northwest, and for readers who could not otherwise than be pleased with the story, it effected its purpose. Captivated by the style our assistant copied it so that we did not see it until the paper came out or we would have corrected some of the mistakes. From having owned a daughter of Charmer we are somewhat familiar with the races run by her illustrious dam, and we are thus well aware that Mr. Pryor and Tom Patterson were placed in a false light. The allusion to John Ford probably arose from a statement made by him previous to his trip to England. Ford at one time trained for us, and the first work given the horses was on a private course on "Bird Farm" in Iowa. John would rehearse the scenes he witnessed and took part in in England with great gusto, and his stories had snap enough to interest his auditors, no matter how slight their inclination was horsewards. By the way, taking all things into consideration we regarded Ford as occupying the topmost round as a jockey, and, though at times somewhat erratic, a first-class trainer. We will not be positive, and if wrong Mr. Bruce will please correct; he was the only American jockey who won for Ten Broeck in England. Gil Patrick made such a blunder with Princess that he was sent home, though, perhaps, there were others who were successful.

P. C. BLOOD HORSE ASSOCIATION.

The Fall Meeting at the Bay District Course—Third Day.

The third day of the fall meeting of the Pacific Coast Blood Horse Association, was brought to a close on Saturday last. It ranks as second on the programme, though the racing on the "extra day" which marked the opening was too good to be ignored, and hence we number from that. It was a beautiful afternoon, for though there was "an eager and nipping air" as the sun drew near the horizon, and it became actually cold when old Sol became wrapped in the shining blanket of the Pacific, that was probably owing to the streets being somewhat damp and the absence of an electrical warming-ran to make them more comfortable. Those who went early enough, especially those who drove through the park, were well repaid for their promptness. There was scarcely the semblance of a breeze and the shrubbery and flowers were bright in the noonday sun. There were groups of happy people sauntering about, and the benches by the music stand were filled with occupants. A trio of cats were sunning themselves on the warm side of a pine tree, but the rustle of a bevy of quails awoke them into animation, and the grimalkins aroused from their languid position, and in an instant the sweet repose was transformed into activity. Crouching, gliding along, each took a different direction in order to surround the clump from which came the twittering of the birds, and halting to see what the result of the well-executed movement would be there was gratification that it was futile. A whirr of the wings, a rapid flight to another shelter, and three disappointed felines, showing plainly in their downcast looks and dejected demeanor their feelings of dejection, were the upshot. They will try again, however, and like a game horse coming again and again persevere until they have made a quail supper, though the accessories of toast may be wanting, and there will be a lack of brimming "beakers" of champagne to wash it down. If they would confine themselves to a raid on the gophers which are rearing the dark mounds on the lawns and stand guard against the squirrels obtaining an entrance it will be all right, but we must acknowledge that we would rather see the handsome birds among the copses than pretentious ornamentation of another character.

The course was in the best possible condition. Some pronounced it too hard, but as the three days' racing has taken place without a single horse, so far as we know, "pulling up lame" that criticism is not deserved.

The attendance was much larger than on the previous days, and though the racing was well worthy of a far larger crowd, it was not bad for San Francisco. The great drawback is the opportunity which the racing ground in the park gives for a free sight, and more aggravating than that are the beer-houses on the corner. These have balconies almost abutting on the track fence, and these were crowded as close as they could be packed with a dense mass of people. Between the races they could sit at their ease and drink beer and when the horses were running as fine a view can be obtained as from any portion of the grounds, excepting when there is a close finish. Some plan will have to be hit upon to prevent these "deadheads" from occupying such an advantageous position, and though the view from the balconies of the beer-houses can be obstructed the spectators in the park will be able to see until the trees and shrubbery are dense enough to furnish a natural veil.

The first race was a dash of seven-eighths of a mile, with seventeen entries, seven of which came to the post. These were Jim Douglas, Joe Howell, Premium, Ella Doane, May D, Bolis, and Bob. At the first opening of the pool sales on the ground, Jim Douglas was a great favorite, selling for \$50, Joe Howell \$25, and the others grouped as the field, \$20. There were changes before the start for the race, Jim Douglas, Joe Howell and "the field" selling for the same amounts. Bob was as crazy as in the race of a week ago. He did his best to unseat his rider, and after a false start, in which he ran 200 yards, it took some time to get him back to the score. It was a very difficult lot to handle, and the official who held the flag was unable to bring them into subjection. They danced for some time, and when the signal was given it was to about as bad a send-off as is ever seen. The two favorites were left away behind, so that there was a long gap between them and the leaders, and the race was virtually ended so far as they were concerned. At the outset, Premium was away with the first division, and she increased the lead to quite a gap as they passed the half-mile pole. When she went by the three-quarter mark Bolis and May D were the nearest, and Jim Douglas had closed a large portion of the immense gap, but he was still too far behind to have any hopes of victory. From that point home Premium had comparatively an easy task, winning with something to spare; May D was second, Jim Douglas, notwithstanding the ground he had lost on the start, third. The rider of Howell wisely did not make a run for a victory, which was as nearly impossible as could be beyond his reach, and Bob, the horse which had made most of the trouble, reached the post last. There was no official time, though outsiders made it 1:29.

SUMMARY.

BAY DISTRICT COURSE, Saturday, November 18, 1882.—Purse \$200, \$50 to second; dash of seven-eighths of a mile; winners of three-mile dash or heats of three-quarters of a mile on previous days—to carry ten pounds extra; of both events fifteen pounds extra.

J. B. Haggin's ch m Premium, aged, by Castro—by St. Louis (Patsy Duffy).....	1
J. & H. C. Judson's ch m May D, 4 years, by Wildidle—Nettle Brown (Billy Appleby).....	2
Geo. Howson's br c Jim Douglas, 4 years, by Wildidle—by Norfolk (10 lbs penalty) (H. Howson).....	3

Joe Howell, Ella Doane, Bolis and Bob ran unplaced. No time.

The second race was heats of 1½ miles, the starters Fred Collier, Jo Dion, Nathan Coombs and Belshaw. Collier was a big favorite, bringing \$60, while all the others were rated at \$20, and the result of the race fully warranted this estimate. Though the favorite was pulled back to the last position when first passing the stand, and never made a run until fairly into the stretch, he led the others at the finish without having felt the tickling of whip or touch of spur. The heats were won so easily that there is no necessity for further de-

scription than to say that the first was made in 1:58½, the second in 1:59½.

SUMMARY.

Same Day—Purse \$250; second horse to receive \$50; entrance free; heats of a mile and an eighth; maiden three-year-olds allowed seven pounds; four-year-olds, twelve pounds; and maidens five years old and over, twenty pounds; the winner of the dash at this distance on first day to carry five pounds extra.

Time—1:58½, 1:59½.

The next race proved to be lively in more ways than one. The betting was brisk, and though at the opening Forest King was a great favorite, just before the start, the field brought nearly as much money, and Maria F had admirers who rushed their money in at short odds. In the first race there were many pools sold, Douglas being a strong favorite at the opening, though a short time before the start it was even betting all around, Jim Douglas, Joe Howell and the field being the manner they were sold and the prices the same. It was so generally conceded that Fred Collier must win that in his race he was held at \$60 to \$20 against all the others before the first heat, and after winning that, the odds were so long that there were neither layers or takers. While Forest King kept the first place the men from the mountains stuck pertinaciously to the home-bred colt and their faith, as the sequel will show, ended in fruition.

It was a handicap for three-year-olds, and there were six starters, viz., Maria F, 106 pounds; Garfield, Forest King, Atlanta and Jocko, each with 100 pounds, and Lizzie P, 9 pounds. The distance was one and a quarter miles, and a better start was never given than that number of horses. There was scarcely half a length difference when the flag fell and all were moving finely. It was a beautiful race. The six were in a bunch when they passed the stand, saving that Forest King had a lead of a length, though soon after he was pulled back and Lizzie P was first at the quarter-pole, the half-mile having been run in fifty-four seconds. She still led when the half-mile mark was reached, and at that point Jocko was second, the others so close together that it was difficult to separate them. About midway up the upper turn Jocko came up, and on entering the homestretch it was evident that there would be a merry run home. Garfield was on the outer side of the course, Jocko in the center, and behind them Forest King was coming, and the three had an exciting tussle as to which would reach the wire first. Neither of the others, however, could get to the Montana-bred colt, and he finished first, Forest King second, Garfield third, with the others not far behind; the time, 2:11.

The winner was bred in Helena, Montana, and is assuredly a very promising colt. He is by Cariboo, his dam Reply by Enquirer, and she from Colleen Bawn by Endorser, one of the late H. P. McGrath's favorite mares. Cariboo was by Lexington, his dam Alice Jones by imported Hedgeford, and she one of the "old blue hen's" chickens, being a daughter of Blue Bonnet by imported Hedgeford. This is a rare pedigree, Lexington on the sides of sire and dam, and that backed by a glorious galaxy of notable performers. Gano is a grand-daughter of Alice Jones, who was a sister to the dam of Sue Lewis and Asteroid, and from Blue Bonnet came Thunder, Lightning, Loadstone, Lancaster, etc. Cariboo gained distinction on the flat and over hurdles and at nearly all the distances. The following is the

Time—2:11.

The hurdle race brought out two starters, Hattie B, by Norfolk, and Mollie H, by Wildidle. The race was one and one-quarter miles, over five hurdles, Hattie B the favorite. The first jockey who essayed to ride Mollie H, cantering her by the stretch, endeavored to make her jump the hurdle, when she tripped and he rolled off and for some time lay as though he were insensible. He was not hurt, and another being substituted they were soon off. Again Mollie H caught the first hurdle and turned it over, leaving almost a clear space for Hattie. Mollie was a long way in the lead when she passed the stand, and the second hurdle, a little further on, was handsomely accomplished. Hattie B also made a clean jump, though her competitor was at least fifty yards in front, and the third obstacle was handsomely overcome by both. Hattie B was only a few lengths behind at the fourth hurdle, near the half-mile pole, and as Mollie knocked it down in the leap the other did not have to waste her strength in vaulting. She took the lead before reaching the starting point. The first hurdle, according to the laws governing this kind of sport, could not be replaced, and from there it was a test of speed, which it fell to the lot of the favorite to place to her credit, Hattie B winning in 2:43.

And thus ended the sport of the afternoon, the only thing to mar the harmony being one of those unfortunate circumstances that once in a while occur. With such a horse as Bob there is always a liability, and, as the rule gives the power, the only course for the starter to pursue is to place such an animal in the rear of all the others, and at a distance that will not interfere.

Thursday.

The first race was the Fresh Stakes, a sweepstake of \$25, each, p. p., with \$250 added, \$75 to second horse, dash of half a mile. A very speedy field came to the post, and in the pool sales there was a lively competition, and in a majority of them only a trifle of difference. The average rate was \$20 on Premium, \$20 on Jim Douglas, \$20 on the field, containing Garfield, Lou Spencer and Jim Renwick. These were the starters, the positions being as follows: Garfield had the pole, Jim Douglas second, Premium third, Lou Spencer fourth and Jim Renwick on the outside. After a few breakaways a very good start was obtained, though from the mud being the deepest on the inside, the favorite position was on the extreme outside. They ran fast around the turn, Premium in the lead, with Lou Spencer second and close on the haunches of the leader, the others in a bunch and not

far behind. There was little change until about half way down the homestretch, where all were so close that it was difficult to separate them, though the orange jacket and cap, which were carried by Douglas, were rapidly coming to the front. Whips were whistling over all of them at the seven furlongs, but at the drawgate Douglas came along quite handily, and won with comparative ease in the very fast time, for the state of the track, of 50½ seconds. Garfield and Jim Renwick were two lengths behind the leader, and were so close together that only those who had a position to look over the wire could decide which won. The judges awarded the place to Renwick, Premium fourth and Lou Spencer, who was not persevered with, fifth.

SUMMARY.

BAY DISTRICT COURSE, Monday, November 23, 1882.—Flash stake, \$25 p. p.; 150 added; \$75 to second horse; free for all; dash of half a mile.

Time—50½.

The second race was the Finigan stakes, for two-year-olds, and of the twenty-nine nominations four only appeared. These were E. J. Baldwin's Gano and Lucky B, Palo Alto's Satanela and J. B. Chase's Marian. The distance was a dash of a mile, and the Baldwin colts having shown such high form in the East were largely the favorites, especially as the muddy course was held to be greatly to the disadvantage of Satanela. The rates were \$60 on the "Baldwin stable" to \$33 on the others, and there was a deal of speculation on the race. A better start was never witnessed. The quartet passed under the wire so nearly parallel that the eye failed to detect the difference, though soon after Lucky B shot to the front, with Satanela second, Marian third, and Gano jogging along at his leisure in the rear. In this order they passed the quarter pole, and on the backstretch Satanela closed the gap, so at the half-mile she was only a neck behind, and at the three-quarters it was a head-and-head affair between the two. Coming home the rider gave Gano his head, and he rushed past the others so easily that the truth of the Eastern panegyrics was verified, and he came to the wire an easy winner, with his stable companion, Lucky B, half a length in front of Satanela, Marian some distance behind, the time 1:47½. This was a duplicate of the race here at the spring meeting, when the same colts ran first and second in the Connor stakes, which changed the title to that of Gano, as he beat the time made by Connor in his famous race at Carson.

SUMMARY.

Same day—Finigan Stake, \$50 each, \$25 forfeit, \$250 added; second to save stake; for two-year-olds. Dash of a mile, twenty-nine nominations.

E. J. Baldwin names b c Gano, by Grinstead—Santa Anita (Williams).....	1

Palo Alto names ch f Satanela, by Leveillé—Frou Frou (Carler).....	3
J. B. Chase names b f Marian, by Hubbard—Electric (Kelly).....	0

Time—1:47½.

The third race was the Fame stake, a dash of two miles for three-year-olds. The stakes were \$100 each, \$25 forfeit, \$500 added, and there were eighteen nominations. Three of these paid up the full amount, viz: Fostress from Palo Alto, Judge McKinstry and Forest King. Fostress was the favorite with the betters, and just before the start the pools showed \$130 on her, \$60 on Judge McKinstry and \$20 on Forest King. Again there was a good start, and when the flag fell Forest King cut out the work. The Judge was going short and stumpy, as though he were sore, and the pace was slow, as it took the leader 3½ seconds to reach the quarter. The favorite was galloping along easily in the rear, a position which was evidently in accordance with instructions, and at the half mile in 1:01, there was little change. At the finish of the first mile, 2:01, Judge McKinstry was in the lead, with Fostress in close attendance, and then the two contestants had as close a race as is generally seen, Forest King out of it entirely. They were right together as they passed the quarter pole for the second time in 2:29, and until half way down the stretch there was no perceptible advantage to either. Then Fostress showed a head in front, at the half-mile it was a neck, and there were still hopes for the colt. But, rounding the turn, he "gave it up," and from from thence the Palo Alto had it all her own way, galloping in six lengths in the lead of the judge in 3:51, Forest King a long way behind. Owing to the state of the track, which would have made the hurdle race extremely perilous, it was postponed until next Saturday.

SUMMARY.

Same day—Fame Stake, \$100 each, \$25 forfeit, \$500 added; second to receive \$150; third to save stake. For three-year-olds. Dash of two miles, eighteen nominations.

Palo Alto names ch f Fostress, by Foster—Planeta (Fallon).....	1

Peter Coutts names b c Forest King, by Monday—Abbie W (White).....	3

Time—3:57.

A Mistake Corrected.

SAN FRANCISCO, Nov. 21, 1881.

EDITOR BREEDER AND SPORTSMAN: I desire a little space in which to do justice to two very worthy and popular horsemen, Messrs. Stemler and Ayers, of Oregon. Through an unfortunate misapprehension these gentlemen were reported to the National Trotting Association for the non-payment of entrance on Joe Howell in the selling race run at the Golden Gate Fair, September last.

Mr. Ayers called on me as Secretary, before leaving, and promptly settled his indebtedness to the association, with the exception of this entrance, and this was left open for inquiry at my request. He called again the same day, but being very busy and still being in doubt on the matter, he left, requesting me to notify him at Sacramento if he should be found indebted in any further sum. I subsequently wrote such a letter which Mr. Ayers says he failed to receive, and by reason of my report he was not allowed to start at Reno until the amount was paid. I am more than ready to say that Mr. Ayers is not, as appears from the above, a delinquent, and the reported suspension places him in a false light, which I very sincerely regret.

I am not surprised that Mr. Ayers should have felt surprised and indignant, and disposed to protest until the necessary explanations and apologies were made, when they were at once accepted in the spirit in which they were offered. It is too important that there should be a good understanding between all honorable horsemen, and the various associations, to let pass in silence these little sources of friction and causes of misunderstanding, which if let alone might grow into a large rupture, hence this statement is cheerfully made in the interest of harmony and good will as well as exact justice. Yours truly,

L. WALKER,
Secretary Golden Gate Fair Association.

THE EMBRYO DISCUSSED.

Letter from J. McM. Shafter on the Criticisms Published Last Week.

EDITOR BREEDER AND SPORTSMAN: The result of a few minutes' conversation with you this morning has induced me to destroy an article I had written in answer to your attack last week. This I do as proper under a proposed retraction hereafter adverted to. You further informed me that you intend to refer the matters connected with your article to the District Board of the National Trotting Association. As I am a member of that Board I shall confine this to matters merely personal.

It is impossible to conceal that after the retraction there still remains enough in your article to constitute a direct attack upon me, and attributing to me dishonorable conduct. I do not know what has been said to you about what transpired in the stand and you will as to all disputable points learn nothing from me. The general exclusion of the public from the stand is for the purpose of securing to the judges entire independence in the expression of their views, and in no material question, whether it does or does not relieve me from personal responsibility, will the rule of secrecy be violated by me on any material question. If others so violate it, I may defend myself. This, of course, relates to the position of judge alone.

As you assume to be the "faithful guardian of racing interests upon this coast," I have to request that when you find it necessary to allude to me, you will do so by direct statement, and not by insinuations which suggest what you know is not true.

You not only insinuate but directly imply that I went into the stand on the Embryo race and called in Dr. Tisdale for the purpose of assisting Mr. Whitney, the treasurer of your association, in the perpetration of a fraud, and that I acted as the attorney to carry out this fraud in accordance to the conclusions of previous "councils" held with him.

You must have known if you stopped to reflect a moment that this charge was destitute of even the color of probability. As to the appointment of the judges, I had not the slightest idea of being one until you said to me "you must go into the stand." I asked you to point out some two gentlemen who would act with me. You replied that Mr. Howes would act in the first race, Mr. Whitney being excluded by having a colt in it, but would take Mr. Howes' place in the succeeding races. You not naming another and not returning to me, and finding no one I knew that I could properly appoint, I called Dr. Tisdale, to whom I had been introduced that morning and who seemed conversant with the rules, to go into the stand.

I had never seen or known Dr. Tisdale until that morning. He seemed, and I believe is, an intelligent, honorable gentleman. I had never had a word of communication with Mr. Whitney as to his colt nor did I have any intimation from any human being, that there was any question about the eligibility of the colt to start. When about ready to start, Mr. Whitney having paid up his \$100, you interposed an objection to Mr. Whitney's driver. Your objection was found to be unfounded, and you then abandoned it. You then objected to Mr. Whitney's entry on the ground that by the books of the Secretary it appeared that the colt Dawn was entered only for the race of 1884. Surprised that Mr. Whitney should present a colt for a race two years too soon, I called for the original entry. It was found, and by all the judges considered sufficient. During the discussion it was asked why you had not informed Mr. Whitney of the alleged mistake and of your intended protest. This you did not answer, but insisted the book must govern in the decision, although you at the same time claimed that the entry itself was defective. At this point, you insist that my state of preparation was demonstrative of previous study, and fraudulent collusion, and that my expressions justify the belief you express. Not considering your failure to have given Mr. Whitney full information of your point, in season for him to save the expense of preparing his colt, and enabling him to keep his \$100 in his pocket, as proper in a "faithful guardian" of honorable racing, I doubtless expressed my disapprobation in terms which I am pleased to know have not been misunderstood. It would certainly have been very singular if after forty-two years at the bar I had been ignorant of the multitudes of legal decisions which hold that when a man has done all he is required to do in order to obtain a privilege or right he cannot be deprived of it by any merely clerical mistake of a public officer. If Mr. Whitney's entry was valid originally no statement of the Secretary or his book could invalidate it; if bad it could not vitalize it. The book and the entry was all the evidence exhibited to which you allude, and was stated before I had anything to say regarding the validity of the entry. You further say that the announcement from the stand that all the horses were protested but would be allowed to start, "was despicable as it was false." Your language, of course, signifies that the "announcement" was false.

This you withdraw, saying that you referred to the protest against your horse. I think upon reflection you will withdraw that also. Mr. Whitney acted upon direct information that you had never filed with the Secretary any written entry. The budget of papers in the hands of the Secretary did not contain your entry. I do not say but you made a proper entry, but Mr. Whitney acted upon a positive statement that you had not. Under such circumstances, you will hardly be willing to apply the words "despicable and false" to Mr. Whitney's action.

As to the decision in the third trot I propose to report it as well as other matters to the District Board. If any mistake occurred as to that race, I shall be as ready to correct it as though I had not been in the stand. A communication signed Lex, which I suppose was by some legal gentleman, requires reply. As to the general propriety of a member of the District Board going into the stand, from manifest considerations I agree with Lex.

He however makes the point that I am excluded from the stand under Art. vii, Sec. 18, by which members of the "Board of Appeals" are after February, 1880, excluded from the judges' stand. Lex mistakes the terms he uses. Sec. 4 of the same article defines the Board of Appeals. The District Board is not such Board of Appeals.

While appeals are allowed to a District Board they are nowhere called Board of Appeals. Secs. 15, 16, 17, 18, Art. vii, speak of these several boards by their special name, and the term "Board of Appeals" is confined to the Board of Appeals, not exceeding fifteen in number, mentioned in Sec. 4.

Art. vii, Sec. 20, by directing the appointment of supervisors and giving members of the Board of Appeals the right to supervise races, must by any fair construction give the right of presence in the stand. Sec. 8 makes the District

Board one of original as well as appellate jurisdiction. Practically the question is of very little consequence.

I am glad you have taken the occasion to refer to the decision at the Blood Horse meeting. In giving your opinion upon that matter you admit that the "starting post" is the "score" or the wire. That matter is then fixed. Your conclusion, I think, is incorrect, whether it is an imputation of want of "common sense" or not. You treat the start as being complete when the flag is dropped. The cry of "go" of the starter is in no way permissible. You seem to consider the dropping of the starter's flag as the start and undertake to state the position of the horses at that time. This is directly in conflict with two rules.

Sec. 8 of the duties of officers says the assistant starter "shall hold his flag in plain sight" where he can be distinctly seen by the jockeys. The lowering of the flag of the assistant starter "is the final signal that the horses have been started." Rule 43 says: "The horses shall be started by a flag (not by a 'go') unless otherwise ordered by the judges; and there shall be no start until, and no recall after, the assistant starter drops the flag in response to the signal from his chief."

Now in this race according to my observation two horses were over the score, one at least two lengths, the third in the act of crossing, the other a little behind, when the starter's flag dropped, and all of them over in full flight when the assistant starter's flag fell. If this was not a "start on the wrong side of the starting post" will you tell me who is wanting in what you call common sense, what is. If this is not a void, start and heat will you tell us in a field of, say ten, how many may be over the score, and how far? and how far off may the rest be down the quarter stretch, to make it "one of the best starts you ever saw." No one doubts the integrity of the starter. The refractory horse Bob occasioned just such a start at San Jose, Night Hawk was left, her head down the stretch, and was full fifty yards behind and beaten out a short length. All so that Bob could get a fair start. The same error occurred in the races in question and another still worse on Saturday last. I beg to suggest that this rule be changed and that the start be fixed when the BOB of the field is ready to go.

Look at the question of time. False time is severely punished. In a field one or two horses are two or three lengths over the score; the flag drops and the leading horse comes in. The timers stop the minute his nose touches the wire. The time is from a half to a whole second too short. Is this true or false time? The horse has actually run say 317 or 18 rods, instead of a full mile. Is this anything else but palming off a short track, and false time? Take the Jennie B stake race at Sacramento. Night Hawk and Red Boy were on the outside and behind the score when started. Supposing they had been on the inside with a couple of lengths advantage, with a full start, I think that heat would have been as low as 1:41. Supposing Night Hawk had got thirty feet over the score before the start was given, she would have come through in about 1:41; if she had twenty feet the advantage she would have won, notwithstanding it actually took her 1:43 to run the mile, and would have obtained, not won, \$200 extra—the name of the stake—and put up her mark nearly a second too high.

If these considerations do not convince your readers of common sense that horses must be approaching, or at the starting post, and not over it when the start is given, then I am for releasing gentlemen from the unpleasant task of starter, and turning it over to BOB.

Thirty minutes are now allowed in which to start horses. Where there is a refractory animal, if the time was shortened to twenty minutes, with a discretion in the starter as to the last ten minutes, the rule would be much improved; as it is the rule is inflexible and ought to be observed. I dissented from the decision alluded to, because it substituted the nerves or discretion of the starter for the rule. I am not and do not assume to be so "distinguished" as to be free from just criticism, nor do I feel the slightest reluctance in receding from an erroneous position, but I desire that criticism should be soberly conducted and that truth and not malice should dictate attack.

I have only here to say that I shall report the races in question to the District Board for its action. The president and myself have been endeavoring for nearly six months to get the vacancy filled in that board. When that is done you and others will have a fair hearing and just decision, without any regard to the judges from whom appeals are taken.

J. McM. SHAFTER.

A Russian River Home.

A five-acre apple orchard, twenty years old, at John N. Bailhache's ranch, southeast of town, yielded this year one thousand dollar's worth of shipping fruit, ordinary varieties.

Mr. Bailhache has an elegant home place. The residence is no doubt the finest in Northern Sonoma, built on the bank of Russian River, near the base of Mt. Sotoyome, at the site of the first house constructed in the valley, by the founder of the Sotoyome grant in 1844. The adobe walls of the original building are still part of the new residence built by Mr. Bailhache a few years ago, and make the rooms cool in summer and warm in winter. Here Mr. Bailhache was married in 1856 to the eldest daughter of the proprietor of the grant, Mr. Henry D. Fitch, and here he now lives, surrounded by a large and interesting family.

The ranch consists of about 500 acres, of which five, as we have stated above, are occupied by a twenty-year-old apple orchard; five more by a three-year-old orchard of peaches and plums which will yield, when five years old, at present prices, \$300 an acre, and from which he this year reaped a large corn crop from between the rows, fifteen are in alfalfa, one of the best paying crops in the valley; sixty-five are in foreign vines two years old next spring, and which will yield when five years old at present prices full \$150 an acre, and more as they grow older, and from which he has reaped large crops of corn and beans from between the rows. There is some hay land and four hundred acres of pasture on which roam 300 head of graded sheep, besides snudry head of horses and cows. The sheep never require feeding, and pay about \$2 net per head per annum. Nearly all the work of this place this year was done by Mr. Bailhache and three of his sons.—*Russian River Flag*.

The following peculiar case is told the *Chico Record* by a gentleman just from the mountains of Modoc county: "A stockman had a stack of hay containing nearly two hundred tons, which was cut a little green. Shortly after it had been stacked a heavy rain fell upon it and a few days afterwards the hay commenced issuing smoke. It attracted considerable attention, and people traveled many miles to see the strange transactions. Sparks and smoke would belch out the top of the stack as though it was a volcano in an active state of eruption. Fire and smoke continued to issue from the stack for over ten days, when the whole thing suddenly burst out in flames one day and was quickly consumed."

Why a Kerosene Lamp Bursts.

Girls, as well as boys, need to understand about kerosene explosions. A great many fatal accidents occur from trying to pour a little kerosene on the fire to make it kindle better, also by pouring oil into a lamp while it is lighted. Most persons suppose that it is the kerosene itself which explodes, and that if they are very careful to keep the oil itself from being touched by the fire or the light there will be no danger. But this is not so. If a can or a lamp is left almost half full of kerosene oil the oil will dry up—that is, "evaporate"—a little and will form, by mingling with the air in the upper part, a very explosive gas. You cannot see this gas any more than you can see air. But if it is disturbed and driven out, and a blaze reaches it, there will be a terrible explosion, although the blaze did not touch the oil. There are several other liquids used in houses and work-shops which will produce an explosive vapor in this way. Benzene is one; burning fluid is another, and naphtha, alcohol, ether, chloroform may do the same thing.

In a New York workshop lately, there was a can of benzene or gasoline on the floor. A boy sixteen years old lighted a cigarette and threw the burning match on the floor close to the can. He did not dream there was any danger because the liquid was corked up in the can. But there was a great explosion and he was badly hurt. This seems very mysterious. The probability is that the can had been standing there a good while and a good deal of vapor had formed, some of which had leaked out around the stopper and was hanging in a sort of invisible cloud over and around the can; and this cloud, when the match struck it, exploded.

Suppose a girl tries to fill a kerosene lamp without first blowing it out. Of course the lamp is nearly empty or she would not care to fill it. This empty space is filled with a cloud of explosive vapor arising from the oil in the lamp. When she pushes the nozzle of the can into the lamp at the top, and begins to pour, the oil, running into the lamp, fills the empty space and pushes the cloud of explosive vapor up; the vapor is obliged to pour out over the edges of the lamp, at the top, into the room outside. Of course it strikes against the blazing wick which the girl is holding down by one side. The blaze of the wick sets the invisible cloud of vapor on fire, and there is an explosion which ignites the oil and scatters it over her clothes and over the furniture of the room. This is the way in which a kerosene lamp bursts. The same thing may happen when a girl pours the oil over the fire in the range or stove, if there is a cloud of explosive vapor in the upper part of the can, or if the stove is hot enough to vaporize quickly some of the oil as it falls. Remember that it is not the oil but the invisible vapor which explodes. Taking care of the oil will not protect you. There is no safety except in the rule: Never pour oil on a lighted fire or into a lighted lamp.—*Christian Union*.

A CURIOUS FACT IN EVOLUTION.—All animal life is not subject to death, according to the American *Journal of Science*. Examining through a microscope one of those minute single-cell creatures known as a protozoan, the *Journal* remarks that we see it expanding into an ellipsoidal figure, which becomes for a time longer and longer. It then begins to contract about what we may, for the sake of popular intelligibility, call its equator. It assumes the form of two nearly globular bodies, connected, dumb-bell-like, by a narrow neck. This neck becomes narrower, and at last the two globes are set free, and appear as two individuals in place of one. What are the relations of these two beings to the antecedent form and to each other? We examine them with care; they are equal in size, alike in complexity, or rather simplicity, of structure. We cannot say that either of them is more mature or more rudimentary than the other. We can find in their separation from each other no analogy to the separation of the young animal or the egg from its mother, or to the liberation of a seed from a plant. Neither of them is parent, and neither offspring. Neither of them is older or younger than the other. The process of reproduction, or rather of multiplication, must, so far as we can see, be repeated in the same manner forever. Accidents excepted, they are immortal, and frequent as such accidents must be, the individuals whom they strike might, or rather would, like the rest of their community, have gone on living and splitting themselves up forever. It is strange, when examining certain infusoria under the microscope, to consider that these frail and tiny beings were living, not potentially in their ancestors, but really in their own person, perhaps in the Laurentian epoch.

A Michigan lumbering company are making sheet barrels by cutting a log into barrel lengths, softening them by a steaming process and then shaving each piece into a long sheet, unrolled like a carpet. Each sheet is then crosscut into such a length that when the two ends are brought together it is given the size and form of a barrel, without heads, the whole being done by machinery. This has proved a great improvement over the stave barrel in the cost of manufacturing as well as in the merits for use. The only drawback is that clear timber is required, all the knotty timber being rejected.

OF POLLED CATTLE.—An exchange published at Edinburg, Scotland, publishes the following two items in reference to Polled animals: The Earl of Santhesk has purchased at a high price from Mr. Taylor of Rothiemay a very promising bull calf, full brother to Lord Chancellor (1782), which won for Mr. Reid of Clintery first prize at the recent Highland Society's show, and was sold at \$500 to Mr. Hume, Barrowell, for exportation. We are glad to learn that among the herds of Polled cattle which will date from 1882 is a herd just started by Mr. Farquhar, auctioneer and farmer, Old Echt, Aberdeenshire. He has purchased several handsome pedigreed cows ranging from \$270 to \$500.

At the sale of thoroughbreds of W. L. Pritchard at the Bay District Course Thursday, there were few buyers, and consequently low prices. Irene Harding, an old-time celebrity and capital brood mare, was bought by Theodore Winters for \$370—less than one-half her value. Frank Rhoads was struck off to Wm. Ayres for \$510. Captain Kidd, a brother to Lena Dnnbar, sold for \$255; a bay filly by Sumpter, \$180; a thoroughbred saddlehorse, \$125, and a daughter of Jenny Hull, \$80.

HERD AND SWINE.

The Future Meat Supply.

Just where the future meat supply for this section of country is coming from is not apparent. Heretofore, Washington Territory has been the market to which buyers came, who supplied the shops in eastern markets. To-day, it begins to look as though we shall have to go out of the territory for our own meat supply for another season. From the Palouse region comes the report "the calves are dying of the diphtheria by the hundreds." From the Crab creek and Big Bend region comes word that "our section is a vast slaughter pen; the grass plains are strewn with carcasses of calves." The diseases have penetrated to the Spokane country, and the meat supply of one and two seasons hence is dying of blackleg or diphtheria. The same report comes from many of our farmers in our immediate vicinity, and really the matter begins to look rather serious, especially to those whose purses are not at all weighty except on Saturday evenings about six o'clock, and then only for a couple of hours. Beef will be very scarce in this region before many more months, and the price will certainly advance. Writing of the question of fat beef cattle, and the necessities that must naturally arise, an exchange says:

"The cities of the near future will demand better beef than those of any other pastures can furnish through the winter and spring, and how to provide good, marketable meats, for a fastidious market, is an important question. Of course, beef cattle must be stall-fed. The time has come when we must resort to all the best methods of older states in these respects. How to keep cattle thriving at least expense, and so make them profitable, is no light question to answer. Here again, ensilage comes in as a specific, for those who have experimented at the East, during the past winter, unanimously agree that ensilage furnishes the best and cheapest fodder for dairy use, or to make winter beef, and it has further been established that silos, or pits to preserve this fodder in, can be constructed at a very small cost, and that ensilage can be put up, cut in half-inch lengths, and then tramped down by stock, and afterward weighted with stone, at not to exceed \$1 per ton, and three tons of it is said to equal one ton of dry hay. At the east, where both corn and sorghum thrive, and are used to fill silos, capable men assert that rye, wheat, oats, clover or orchard grass can be grown and put up as cheaply as corn, and answer much better; so that we have here the means to put up as good ensilage as can be made in the world, and therefore can as easily adopt the new system as they can at the East.—*Walla Walla Statesman*.

Anthrax or Blackleg in Cattle.

This disease threatens the destruction of a large proportion of the cattle in this section of country, and we take it that any intelligent description of it and remedies proposed will be of interest and importance to our readers, especially to the farming community. Professor Law has made a full investigation of the disease and says:

There are two varieties of the disease, both depending on the presence of minute vegetable organisms (bacteria) which have acquired the dangerous facility of living and increasing in the blood and tissues of the animal body. One form of the malady is the malignant anthrax proper—the malignant pustule of man—caused by an organism which exists in the blood and vital fluids in the form of microscopic staff-shaped bodies, as well as spherical ones. This type is readily communicable to all species of warm blooded animals unless they have already been rendered insusceptible by an earlier attack. The second form is associated with a microscopic organism which is found in the spherical form only in the blood and animal fluids, and which has not been found to attack readily other animals than cattle.

Both are equally dangerous to cattle; the first is quite as dangerous to man and other warm-blooded animals. Whether the germs in both diseases are but varieties of the same organism remains to be seen; what is more immediately to the point is that both appear to follow the same law of development and to depend upon the same general conditions for the maintenance of their virulence. This is most inveterate if excluded from air, but is gradually lost in the presence of fresh air and moisture. To check the progress of the malady, therefore, and prevent new attacks, the exposed cattle should at once be moved to soil which is thoroughly drained and pervious to moisture.

The carcasses of the dead and all the products of the sick should be burned, or if buried it should be in a dry, porous soil with a covering of quick lime to favor speedy decomposition, and securely fenced in so that no other cattle can approach the place, nor eat the grass upon it for several years. If damp or impervious soil only is attainable for burial, then burning the carcasses is far to be preferred. When a pasture has once had an outbreak of blackleg, it cannot be considered safe for several years to come. The purification of such pastures may be expedited by placing them under a rotation of crops and stirring the soil as frequently as possible.

Then for the remedies which will check the development of any germs that may be present on the mouth, throat, stomach or bowels. For this purpose one drachm carbolic acid and three drachms sulphate of iron may be dissolved daily in the drinking water of each adult animal, or sprinkled on its food. One drachm of potassium and one ounce chlorate of potassa may be used in the same way. Glycerine salts should be used where there is a tendency to constipation. Young animals should be kept apart from the other cattle. Feed well and do not allow young cattle to get into a low condition of flesh.

DAIRYMAN'S PROTECTIVE ASSOCIATION.—A society of this name has been formed in this county, composed of our leading dairymen, who are aroused to the harm that will be caused to the butter market by the unscrupulous manipulations of oleomargarine, or what is vulgarly known as "bull butter." At their last meeting they passed a resolution pledging themselves not to consign any butter or cheese to firms that deal in oleomargarine. They also have issued a call to all the dairy counties in this State to meet on the 25th inst., to elect three delegates to meet in San Francisco on Dec. 12th, 1882, for the purpose of organizing a State association.—*Santa Cruz Courier-Item*.

It is stated by English papers that the "Short-horn Dairy Company," for the supply of milk to London, which is under the presidency of the Earl of Dunmore, now sends 160,000 quarts of milk to London each week, having 1,120 head of cattle, 500 sheep, with pigs and poultry, and using 140 horses in distributing the milk. The farms occupied by the company aggregate 2,200 acres. The stables seem to be arranged with reference to convenience rather than low cost of construction. The managers are confident of a good profit.

Sale of Polled Cattle.

The enterprising breeders and ranchmen of the United States are evidently intent on having the best breeding stock to be had in any part of the world, and having once determined on that do not allow the matter of a few paltry hundreds of dollars to balk them in carrying out their purpose. Whilst therefore a very fine Shorthorn bull may be had at from one to three hundred dollars, we find men ready and willing to pay from five hundred to a thousand dollars for something else so long as it has the novelty of newness.

Witness the following from the *Live Stock Indicator*, of Kansas City, in reference to a sale of Polled cattle.

"On Thursday last was afforded the first opportunity to test at public sale the measure of favor with which the Scotch Polled cattle are regarded by the beef-producers of the new West. Here on that day Mr. Matthews offered for their inspection and bids a larger number of "blackskins" than had ever before been brought together on any similar occasion on this continent, and many thoughtful men were in much doubt as to how the experiment—and it was an experiment—would result. They queried among themselves if a considerable number of men would come here and pay prices as large or larger for these strange foreigners than would be necessary to procure the most approved and desirable Shorthorns or Herefords, whose qualities, characteristics and values have in our own climate been demonstrated beyond question.

How these queries were answered, and that too by men who understand the worth and power of a dollar as thoroughly as any others living, is shown by our detailed report of the sale.

The *Indicator* regards the sale as a good one; fairly good for the seller, and very good on the whole for the buyers. The cattle did not sell so low as to deter the importation and offering of others, nor did they sell so high as to discourage the dissemination of them among men of even moderate means; that they went low enough is evidenced by the probable fact that as a lot they could not be duplicated in quality for the same money at the present time by any importer. Further proof of this may be found in the fact that at the recent sale in Scotland of Lord Airlie's herd, four Angus females of the Erica family, one a calf, one a yearling, one a four-year-old, and one eleven years old, brought an average of 500 guineas, or about \$2,600 each, while at Mr. Matthews's sale seven head from the same family and probably just as well bred, and as good individually, viz: Fanny Fair, Young Maud of Tillygamont, Sonnet, Knight of Aberdeen, Cembie, Black Watch and Sir Luloe, sold for an average of \$801 42 per head. We believe, as stated last week, that the dispersion of this collection of Polls marks a new era in the cattle breeding of the West; three years hence, Polled black steers that are now regarded as curiosities will come to our markets every day, and here, as on the range, in pasture or feed-lot, they will occupy a front rank. While by no means prepared to say they are better than any other breeds, we think there is good in them, and that there is ample room for all the Angus and Galloways to be had, especially when nine-tenths of the cattle of the country are the veriest scrubs. One notable feature of this sale is that a large proportion of the animals disposed of were bought by parties who will use them as crosses on the more common stock rather than to found or increase herds of thoroughbreds; they will at once be used for beef-raising purposes rather than speculation.

England's Embargo on American Cattle.

England is without doubt a free trade country and her policy in that regard is not only fixed but apparently unalterably so. She has, however, a very clever way of taking care of her own industries whenever the occasion calls for it, and of making a very thin excuse for her conduct. From the time that the shipment of beef cattle to that country became a fixed fact by the indomitable energy of American enterprise, the English government has not hesitated to do what it could to throw every obstacle in its way that, under semblance of law, could be conceived of.

Under the rules now in force every beef from the United States must be slaughtered within a few hours after landing. This compels the owner to sell without regard to the condition of the market, and frequently brings heavy losses where, by a delay of a few days, a fair profit might be made. Those best acquainted with the business say that the loss on each beef animal from this cause is fully \$15. This is as absolutely lost to the American producer and the British consumer as it would be if thrown into the Atlantic.

This is in effect the same as a direct tax levied upon those who breed and who feed the class of cattle wanted for the English market.

This it must be understood is pretentiously done for the purpose of preventing the introduction of pleuro-pneumonia from the United States and this, notwithstanding the fact that that country is the very hot-bed of the disease.

It is reported that since the year 1842 England, with all her efforts to guard against this insidious foe, has lost over \$10,000,000 annually by means of it. Professor Law, of the United States Treasury Cattle Commission, says: "England, with her 6,000,000 cattle, has lost in deaths alone from lung fever in the course of forty years over \$500,000,000."

But who ever heard of such a disease among the herds of the large breeding ranches in this country? Nor are there any two sides to this question as some would have us believe, for there is no possibility of our Western cattle carrying such a disease whilst yet it does not exist. It is a clear case of protection on the part of "Johnny Bull," and that aged sinner ought to be ashamed of it.

It illustrates, however, the facility a free trade government has of protecting its own where occasion requires it; hence, should the United States ever seek to retaliate it would be the easiest matter in the world for our own government to exact the same for all cattle landed on our shores from the pleuro-pneumonia infested "Tight Little Isle."—*Colman's Rural World*.

Hereford cattle are a distinct and pure breed of great antiquity. Their early history is uncertain, but it is generally allowed in England that there has been a breed of cattle, red and mostly with white face and markings, for at least 200 years in the county of Hereford and the neighboring counties. It is asserted that Lord Seadmore, who died in 1671, introduced cows of the red with white-faced breed from Flanders. There was also a breed of cattle known in Herefordshire that were white with red ears, and so far back as the tenth century it is recorded that there was a law of fixed compensation to be paid for injury done by one prince to another at 100 white cows with red ears and a bull of the same color. It is fairly proved that the Herefords to-day have sprung directly from the old breeds of the district, the old gray Hereford coming from the white cattle with red ears, an occasional white Hereford cropping up as an additional proof of this statement.

Among the Jerseys.

Respecting the large butter yields of Jersey and some other cattle an exchange has this to say:

"My great objection to the average Jersey record is based on the fact that men of good character put forward figures wholly upon the evidence of the herdsman, and the temptation to make a large showing is extraordinary. He adds that upon periodicals should rest somewhat the responsibility of presenting to the public only such records as are well substantiated by disinterested eye-witnesses."

And this is probably the idea entertained by the world at large because the temptation is great and apparent—discovery impossible. That some Jersey cows have made twenty-own pounds of butter a week we have no doubt; nay, we will go further, we will place on record our conviction that this can be easily established in several cases. Of this we think there is not a shadow of a doubt, for the owners are men of character, and of such character as they would not peril for all the Jerseys in America. We have met the breeders at home in very many of the breeding States, have talked with the herdsman, seen their mode of operation and of keeping accounts, but have yet to see cause to question the accuracy of their reports. Of course such animals are rare and found only here and there, and then perhaps only in the hands of those who know how best to develop their qualities. But Jersey cows, Holstein cows and even Shorthorns can be found in comparative abundance that will make from seven to fourteen pounds of butter per week, and why not the Jersey, with whom butter is a specialty, make in exceptional cases 50 per cent. better? This questioning every man's veracity but one's own is a favorite of the old Stoic philosophy of always treating a friend in such a way as that should he ever become your enemy he could do you no harm, and your enemy in like manner that he might at any time become your friend; or in other words have confidence in nobody but yourself. It will not do—is not possible! Other men are as honest as we are and oftentimes doubtless much more so.—*Colman's Rural World*.

Too Much Tallow.

Sensible people of course know that great masses of fat and tallow do not fill the requirements of first-class butcher's stock, and it would seem as though the great feeders of the country would discontinue a practice that not only ruins their stock, but actually detracts from their value upon the block. The intrinsic merit of a beef animal must be measured and determined solely upon the basis of the greatest proportion of good, choice meat, to gross weight, and the lessons of the fat stock show will be learned in vain unless the standard of excellence is finally placed upon that basis, as between the exhibitors of beef cattle. Animals fattened until they cannot get about without the greatest effort, and when once down in their stalls, can with the utmost difficulty regain their feet, are not the cattle sought by the meat cutter, who calculates upon a reasonable profit. It is all well enough to class cattle of this character as "Christmas beef," but the fact remains that their gigantic proportions really render them unprofitable to the average butcher. Many shrewd feeders have long been of the opinion that the premium list of the show should not include anything that would induce exhibitors to continue the evils of overfeeding, but as the Smithfield cattle club of London, at their annual shows, keep up and endorse the practice, there will probably be no cessation on this side of the water.

Many of the animals exhibited at fairs are simply overfed specimens of the bovine race, and the quality of the beef killed every year clearly shows that there is no profit in this method of feeding.

The subject is a very important one to the cattle interests of the entire country, and deserves the thoughtful attention of all breeders and feeders.—*Prairie Farmer*.

Shorthorns vs. Other Breeds.

The English cling tenaciously to their dearly-loved Shorthorn cattle; and with good reason, as they have had better success with that breed than with any other. In the *Agricultural Gazette's* report of the dairy show at Islington, the Shorthorns, Jerseys, Ayrshires, and Keries, all native cattle, are claimed to be much superior to foreign breeds. It says:

No better evidence of this country having got an enormous start of every other in its breeds of dairy can be wished for than the opportunity to contrast the dairymen's Shorthorns with either the Dutch cattle, which have got such a footing in English sheds, or the Swiss, which are now recommended as a possible improvement. These Shorthorns and the Channel islands cattle of Mr. C. Simpson, Mr. J. Cardus, or Mr. J. James, or the Ayrshires of Messrs. Drew and Fernie, or the Keries of Mr. B. Good are not only unsurpassed, but unsurpassable. Even the Dutch, good milkers as they are, will not bear comparison with the unpedigreed Shorthorns, which have as good udders and far finer carcasses; whilst the Swiss, for size at age, will not bear comparison with the English cross-breeds between the Jersey and Shorthorns which are not at all likely to be behind in quantity or quality of milk. These Swiss heifers are a good illustration of the way in which a man's recollections play him false. We see what we admire, mainly perhaps because the circumstances under which we see are favorable. The novelty makes us disparage older favorites. But when the new comes to be put side with the old, it takes more than mere enthusiasm and the wish to be the pioneer of a something fresh, to enable us to withstand the evidence of our senses. Neither eye nor hand could ascertain any point in which Swiss cows are likely to surpass what we have already; nor suggest any reason why we should give up our own breeds and go in for Swiss.

CLASSIFYING WOOLS.—A wool growers' convention was held at Sedalia, Mo., recently, and among the papers read was one by Mr. Henry Brown on the classification of wools. Classification, as he remarked, consists in sorting the fleeces as they come from the sacks into their proper classes. This has become a necessity, and is a benefit both to the seller and buyer. Different mills require different wools, and a mill using fine wools cannot use coarse wools. The direction of public requirements for goods is shown by the fact that a New England mill, which has been equipped only for the using of coarse wools, had its stock worth three times its par value a few years back; now that same stock is below par. The prosperity of the country demands fine clothes, and it takes fine wool to make them.

Mr. Brown is a wool expert. He gave the different classes into which wool is divided, illustrating his words by several samples of wool. He urged the breeding of pure sheep, especially of fine wool rams, saying that fine wool was more profitable than coarse.—*Prairie Farmer*.

The Beef Market.

Last July we gave our readers the best views then obtainable as to the future of the beef market. There were some who at that time claimed that we overrated and held our views entirely too high, but the price at which beef is held to-day fully verifies our statements, and once more proves that knowledge of the supply is most necessary in order to make statements months in advance; this in a measure we have from a pretty fair source, and hope that in the future our correspondents will keep us fully posted as regards their localities and in return we will give them all the information obtainable from other districts. This week, beef of all descriptions is held at a considerable advance over last, extra prime being held from 10 to 11 cts. and other grades range from 6½ to 9.

The only large purchase of which we have information during the week was the sale of the well-known Santa Margarita ranch in San Diego county—one of the first ranches on the Pacific coast, both farming and grazing, and owned by the heirs of the late Don Juan Foster—the purchaser being the head man of the Nevada Bank and the price \$450,000. The intention we believe is to stock it with improved cattle.

Quite good fishing is to be had off Bay View; the catches are principally rockcod and bluefish.

POULTRY.

Game Fowl as Food.

In an editorial article full of advice to a person who wishes to breed poultry, based on his personal experience as a hen-farmer, the editor of the "Sun" yesterday said that "game fowls have little flesh on their slender and steely bones." This remark would cause a casual observer to imagine that the game-cock and pullet must be little else than useless as an article of diet. That this is exactly the reverse of the fact is attested by the statements of several persons who, as epicures and sportsmen, were interviewed on the subject yesterday by the reporter of the "World." Vigilant, a well-known writer for the "Spirit of the Times," whose poem "Cockiana" has often been read with deep interest by those who delight in contests between game-cocks, was asked by a reporter of the "World": "Is the game chicken good eating?"

"Why, of course it is. Who says it is not?"

He was told that the editor of the "Sun" had said that while the fowl was good eating there was not much of it to be eaten.

"Well!" said he, "In England the game-chicken is bred as much for its edible as its fighting qualities, and Druid, in his 'Saddle and Sirlin,' tells how, away back when Dr. Syntax was famous on the Chester course, Dr. Bullise was accustomed to entertain the racing celebrities of the day at a game-chicken dinner, and how, once when he was dining with Lord Derby, the grandfather of the present Earl, Lord Sefton, Mr. Leigh of Lyme, and other famous gentlemen, at the close of the Chester meeting in, I think, 1830, he exclaimed as a well-done cock of a breed famous for its fighting qualities that had been the especial pride of his father's was served up: 'My Lord, if my father knew that the cock had met such a fate he would be wild.' As for myself, I don't know what I would sooner have for dinner to-day than a broiled game pullet that had been hatched in March. I have many 'weeds' in my flock of game chickens that I use for eating purposes; by 'weeds' I mean cocks who have not the size to win a battle, and I am not the only one who pursues such a course. I can name many men well-known as statesmen and epicures to whom the gamy flavor of a well-turned pullet or cock is hailed as a toothsome viand second to none.

"But if you want undoubted authorities to contradict the inferences of the article in question, why just quote 'Wright's Illustrated Book of Poultry,' or Tegetmeier's work on game fowls. They will tell you as I do that the game cock, from its pure blood, gets white, delicate flesh, which when properly done makes the mouth of even a well-fed man water. Next to the game fowl in edible qualities are the Dorking and the Houdan in the order named. The latter breed is a cross between the Dorking and Poland and usually is a deep black flecked with white, with a large top-not, those having white legs being most in demand with poulterers. Any of those that I have mentioned are far in advance of the Plymouth Rocks or Brahmas, which the editor of the 'Sun' advised the proposed raiser of fowls to invest in. But I tell you who will give you much information about the good qualities of the game chicken, and that is Dr. John M. Carnochan."

Dr. Carnochan was called upon at his residence, No. 14 East Sixteenth street, and was asked whether the "Sun" was right in denying that the game chicken was good eating.

"Well! I do declare," said the doctor, "that's the first time I ever heard of such a thing. I keep game fowls at my place in the country because their eggs are so much better than those of the chickens usually known as barnyard fowls. And their flesh is so much better, too. Why, it stands to reason that if their blood and flesh were not improved by the breeding of them in a scientific manner, the trouble of the breeder would go for nothing, a fact that is not substantiated by the difference in prices between birds of good breeding and those whose pedigrees are not known. Of course they get to be a little tough after they get to be a year old, but so do those of any breed, and therein is the secret why the person who respects his stomach insists upon being served with spring chicken. Game fowls are of a finer temperament their fibers are more closely knit. I suppose the editor of the 'Sun' thought it must naturally follow that they get tough on that account. But for my part I must have game-chicken broth, game-chicken pot-pie, game-chicken broil, roast, and in fact in every style in which a chicken can be served."

"But, Doctor, do you consider that the flesh of the game fowl, besides being more toothsome than the under bred fowl, is more nutritious?"

"Yes; is there any one whose soul is so dead as not to recognize the fact? Why, the cock-fighters of Kentucky and New York and elsewhere when they have a bird maimed in battle take him home, fatten him up and eat him, and, though he is not a spring chicken, he is more toothsome than a Brahma, Cochin or Plymouth Rock of the same age or even younger. There are many of our best citizens, whose names I could give you, who breed and raise game chickens, not for their fighting qualities, but because they are sufficiently intelligent to recognize the fact that the game-cock, despite his bad name, is a most pleasing subject of discussion when trimmed with all the 'fixings.' An authority on poultry-growing in New York city who was asked for information on the subject said in substance: 'The article about poultry in yesterday's "Sun" contained some excellent advice, but it lacked, in my opinion, the true ring. It read to me like the theoretical letters of gentlemen farmers who indulge in agricultural luxuries not dreamed about even by our practical men, and estimate their products at figures to correspond with the cost incurred in producing the same rather than at standard prices. Chickens that live in glass houses are usually valued at fancy prices, you know, and the owner never realizes that they are not quite worth the price set upon them because there has been no attempt made to sell them. A practical farmer who had succeeded the first year in raising 1,000 white Brahmas, every one 'first-class,' would never in an article of advice to an anxious inquirer have dismissed this nearly worthless breed without a word or two of commendation. The practical farmer would have dwelt with grateful feeling on the fact that of all fowls the Brahmas are the best mothers. Their abundant fluff and feathering is of inestimable advantage to the young chicks, while their gentle disposition makes them submissive and patient. Then, too, the Brahma mother rarely treads on her little ones as do some of the more clumsy hens of other breeds. Depend upon it, had the breed been Cochin there would have remained fewer pullets for the Long Island tramps to spirit it away; for many a chick would have fallen a sacrifice, at the first, under the uncertain backward movements of a devoted but awkward mother. My own experience leads me to say that while Brahmas are not my first preference, both light and dark varieties produce not only exemplary mothers but pullets that with judicious care and feeding drop from thirty to forty eggs before they seek to hatch—a trait the value of which experienced poultry-growers understand and appreciate.

"The charge brought against the egg-bearing Leghorns, that these fowls do not lay their eggs when most needed, is, it appears to me, unjust to the fowl and derogatory to the knowledge of the writer. Leghorns are not only proverbially hardy but real marvels in the matter of egg-production, averaging sometimes 200 eggs per annum. With fowls of such capacity intelligent farmers regulate, almost at will, by proper care, shelter and food, the seasons at which this golden fruit shall drop, verifying the saying that the same intellectual gifts which make a man a great statesman or a great poet will also make him a great poultry-breeder.

"As regards the Plymouth Rocks advised by the writer, I am free to admit the advice is safe. If one may believe all Mr. F. H. Corbin, of Newington, Conn., has to say, especially with reference to the improved strain, there is no better breed for either home consumption or market purposes, but we must never place too much dependence on what fanciers claim for the fowl they are most interested in. Fortunately for the popularity of the Plymouth Rocks, however, the general verdict is in their favor, and there is, perhaps, no better fowls for those who desire both eggs and chickens. One standing in the position of a guide to confiding but ignorant seekers of the shortest road to greatest prosperity in the chicken business cannot give trustworthy directions without other knowledge of the prospective poulterers' desires than the bald statement of wanting money. Let each honest inquirer state, first—Is his aim for eggs or for chicks, or for both; for a fancy market or a general one? Let him also give the locality of the market. There are fashions in poultry as well as in women's bonnets, and the fancier must provide birds of a feather to suit the caprices of his patrons.

"The paragraph devoted to the feeding of poultry is an important one and contains several important truths, among which appears the following: 'The main thing in a gallinaceous diet is undoubtedly grain.' Now, to insure a wise dispensation of this grain the adviser ought to have added—feed ground or soft food in the morning or whole grain at night. Amateurs always express surprise when told that fowls eat meat, while in point of fact there is no relish they enjoy more than a scrap of pork unless it be a leaf of lettuce or a crisp stalk of celery. Hens are also exceedingly fond of onions and have been known to eat hay when there was not a supply of fresh grass.

"Do I believe in glass houses for domestic fowls? Certainly. I advise, then, for all who have time and money at their command to experiment with fancy breeds of handsome plumage and delicate constitutions, and do not care whether the eggs they break in their plates at breakfast cost twenty-five cents per dozen or \$5. These experiments do a world of good; they teach men too poor to experiment in these directions for themselves the needlessness of elaborate houses and the unprofitableness of any but standard breeds for ordinary farm and marketing purposes. A thoroughly good house for birds to roost and lay in means to the wide-awake farmer who coins money out of his poultry yard a shelter from rain and from wind—only this and nothing more. With clean, well-ventilated water-proof houses, suitable runs, hardy breeds and judicious care, there is no reason why any man or woman who desires it should not obtain in the poultry business a fair interest on their money and pay for services rendered if there is a market within a reasonable distance."—*New York World*.

The Bronze Turkey.

The *American Cultivator* has a very handsome sketch of a pair of bronze turkeys, and the following article in relation to the advantages they offer the poultry breeder. To an eastern farmer there appears to be a strange lack here in neglecting this part of rural husbandry. In such a climate as this with eggs at sixty cents a dozen and poultry at the present prices, it is not surprising that new comers should be astonished. The trouble is that the rearing of poultry for the market is ignored by many farmers, and the "chicken or duck ranchers" have the business in their hands. Large flocks cannot be kept so healthy as where the numbers are limited, and hence what will bring a profit as an incidental fails when it is the whole business:

The bronze turkey is perhaps no larger than the Narragansett or some other sorts from Rhode Island and eastern Connecticut, the section that largely supplies the Boston market, but for fine carriage and beauty of plumage it has no rival. Flocks carefully bred and well fed from the nest to the block, at Christmas, will dress, cocks eighteen to twenty pounds, and hens twelve to fourteen pounds. Yearling gobblers have been known to weigh thirty to thirty-two pounds, and the hens fourteen to eighteen pounds, live weight. Adult birds sometimes reach forty pounds and upwards for the cocks, and twenty pounds and upwards for the hens, though such birds are rare specimens, and can only be had by breeding persistently from large stock and from mature birds, and by full feeding through the whole period of growth.

The common practice of breeding only from second-brood turkeys, and those that are not fit to kill at New Year's, is a very short-sighted policy. In nothing will a good selection pay better than in breeding this noble bird. In the wild state where "the survival of the fittest" is the rule, gobblers weighing forty pounds are not infrequent, and some are upon record weighing even fifty pounds. The prevailing custom of breeding from the smallest and cheapest keeps our markets full of birds that do not weigh more than eight or ten pounds dressed. The birds that are known in the Boston and Providence markets as Rhode Island turkeys run at least one-third larger, and lots of dressed gobblers averaging twenty pounds can be furnished by the dealers at New Year's or later, on very short notice. We know of one breeder and dealer who killed four adult gobblers one year that weighed, dressed, 126 pounds, or thirty-one and one-half pounds each.

In all the districts from which these supplies are drawn, the farmers have found that it pays to take extra pains with the turkey crop. There has been a steady gain in the average weight of the flocks sent to market at the three great festivals for the last twenty years, and the limit of perfection with this bird has by no means been reached. A large bronze gobbler, the offspring of a pair weighing sixty-two pounds, that took the premium at the New York State Poultry Show, was brought into eastern Connecticut ten years ago. Three large flocks were raised from him, and nearly all of them were sold for breeding stock. The unanimous testimony of breeders, even in that district where large turkeys are common, is that their flocks have been greatly increased in size by this stock. Suppose there is only a gain of two pounds in the average size of a flock of one hundred birds, it makes a difference of 200 pounds, worth \$40 at the average price of poultry in the Eastern markets. This is nearly all profit, for the turkeys get the most of their growth in the pastures and woods, and are only fed freely six weeks before marketing. Why, then, do not farmers generally buy better stock? The chief reason, probably, is the cost of such birds. It seems a large price to pay \$5, \$10 or \$20 for a gobbler of extra weight, or for a hen weighing fifteen to twenty pounds, though such a pair of birds would leave their mark upon the broods of a whole neighborhood, and add hundreds of dollars to the value of annual sales for years to come.

The breeder of fine stock graduates the price of his birds, principally, according to their rapid development and weight. They will vary in weight considerably, even in the purest bred flocks. Gobblers weighing eighteen to nineteen pounds in December are common; a quarter of the flock may reach twenty to twenty-one pounds, and a few may add a pound or two to these figures. The extra price asked for the bird which carries the last two or three pounds seems unreasonable to a novice in breeding, yet it is the cheapest part of the bird, for it is this which shows his superior constitution and aptness to take on flesh and fatten. It is the same principle, applied to poultry, which has given such wonderful results in the breeding of Shorthorn cattle. The large, well-shaped gobbler, beautifully marked and bred to hens of similar quality, will produce birds of good, strong constitution, and which will develop rapidly, and make the most flesh out of a given amount of food. A seven months' bird of three or four pounds extra weight is quite sure to make a thirty-pound yearling, and such a yearling gobbler is worth a large price in any intelligent breeder's flock. There is no bird among all our fowls more susceptible of improvement than the turkey.

Sex in Eggs.

A correspondent of the *London Journal of Horticulture* says in reference to this question: "Last winter an old poultry-keeper told me he could distinguish the sex in eggs. I laughed at him and was none the less skeptical when he told me the following secret: Eggs with the air bladder in the center of the egg, will produce cockerels; those with the bladder on one side will produce pullets. The old man was so confident that I decided to make experiments upon it this year. I have done so, carefully registering the egg-bladder vertically or bladder on the side, rejecting every one that was not absolutely one or the other, as in some it was very slightly out of the center. The following is the result: Fifty-eight chickens are hatched; three are dead and eleven are too young to decide upon the sex; of the remaining forty-four every one has turned out true to the old man's theory. This of course may be an accidental coincidence, but I shall certainly try the experiment again."

The above is valuable information, and the truth of it so easily tested that the experiments of one season will either verify or disprove it. To have the knowledge of governing sexes and be able to tell what the progeny will be, or even to forecast with reasonable probability, will be valuable indeed. That there may be some chance to determine what the sex will be while in embryo in eggs appears plausible, and as it is easily tested those interested can try the experiment.

THE Breeder and Sportsman.

No extra rate charged for cuts or cutting of columns, rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, November 25, 1882.

Mr. M. J. Henley is a duly authorized traveling agent and correspondent for the "Breeder and Sportsman."

WELCOME HOME.

Something over three years ago the trotting world was startled with the intelligence that a mile had been made in 2.12½ on a California track. The wires that transported the news were scarcely cold and the clicking of the instrument had hardly ceased until measures were taken to discredit the statement. For the second time in the history of trotting California had taken the first place in the calendar, and after a lapse of seven years had again rushed to the front. The length of the course, the "timing," the money consideration were all called in question, and a "newspaper war" inaugurated at times fierce and bitter. To a quiet looker-on the situation was inexplicable. A man unacquainted with the trotting arena would have been led to believe that something of great moment had occurred, and that such a turmoil over the fraction of a second was both absurd and ludicrous. To the initiated the meaning was palpable. It was the dethroning of a king, the hurling of one monarch from the throne, the crowning of a rival. The scepter was torn from the grasp of the Oriental to be transferred to the champion of the Setting Sun, and the hurrahs on the shore of the Pacific reverberated in a grand sonorous pean, to the western boundary of the Atlantic.

It was a glorious triumph. The great chieftain with the plaudits of the whole world still ringing in his ears was a delighted spectator. Eagerly watching the flying steed, and closely scanning the delicate line which was marking the flight of time on the dial, he signified his approbation by joining in the choros of cheers when the time was announced. Although the detractors were silenced by the overwhelming proof of the correctness of everything pertaining to the feat, it was the silence of sullenness, and there were innuendoes and whispers, and gesticulations and doubts. The king went East and lowered his California performance by subtracting one and a half seconds therefrom.

But he who so valiantly struggled on the shores of the bay, and still more swiftly sped where the graceful elms have given a name to a city, was doomed to defeat, and the diadem gallantly won, was worn by a queen. An empress, for assuredly the higher title was well deserved when the character of the contest is taken into consideration.

Home again, and it was thought that a winter time passed on the Golden Coast would so strengthen our champion that the odd second and something more would be taken off and that the interregnum would be of short duration. A short time before he started on the second crusade we saw him exercise on the tree-protected course at San Mateo. He went with the rush of a racehorse and although we had seen him trot a quarter at the Oakland track in thirty and one-quarter seconds, that flight of speed was surely excelled.

The second trip was disastrous. Potent as the spell with which Armida chained Rinaldo, there must have been some sorceress in league with the Empress to protect her crown. Maud S unquestioned held the sway, 2:10½ emblazoned on her victorious banners which flaunted in the breeze, proudly defiant.

Anno Domini 1881 became a history of the past, 1882 it was trusted would tell a different tale. With that came unfulfilled hopes, and St. Julien was doomed to a whole season of inactivity. Epizooty had held him in thralldom before and he had to succumb to its enervating and baneful influence. This time it was an injury to his hock, and though he was never lame there was a protuberance that warned against the perils of violent exercise. The

enlargement was at the lower part of the joint where the enboides and upper part of the metatarsals join. Not exactly where the curb appear but a little inside. He was placed in the hand of Dr. Ormond of Milwaukee, as skilful a veterinarian as there is in the country, and following his advice he was turned out, though still remaining in the doctor's care. That this advice was sound there is the proof of a leg as clean as the day he was first harnessed, without a trace of enlargement left.

We saw him Saturday evening at the Fashion stable, and if he had worn a short sweat-hood could not have believed that it was St. Julien. A big lusty horse, but apparently not within two inches as high as the quondam king, with immense quarters, shoulders covered with muscle, and a "middle piece" rivaling a hoghead in size. If Hickok had not been there we might have imagined that the head and neck of St. Julien had been put on a coach horse. This is the first real "let up" he has had since he has been in training, and should there be no further mishaps there is a good chance for him to regain his former place.

There came with St. Julien two "native Californians," one of them having achieved greatness since his departure, the other already celebrated before she left this coast. The big chestnut is Overman, a son of Elmo, and a more taking horse to the eye of a fancier is seldom seen.

A grand, majestic horse is Overman, and notwithstanding his large size is highly finished and with all "speed angles" which the late Dr. Weldon so highly extolled. That he is a trotter, his races the past summer have fully demonstrated, and that he is of the hardy, enduring sort is evident from his appearance. The races he has trotted and the long journey home have had no visibly injurious effect, as he has a good coating of flesh, and his legs are without puff or blemish. He has an immense turn of speed when fairly settled in his gait, and in the races at Buffalo came from the half-mile pole, in two heats, in 1:07½ and 1:07. When he acquires the knack of "getting away from the score" as readily as he "comes home," it will take a top-sawyer to beat him.

There is some talk of a match between him and Romero, and should it be consummated it will be the great trotting event of the California year. There are those who think that Romero can come very near scoring the fastest time in the stallion record, and it is nearly certain that he will beat the best for a five-year-old. Overman is just the fellow to make him show his capacity, as it will never do for the grey to wait for the brush home, and it will take a great flight of speed to "stall him off" when he makes his final rush. With a continuance of good weather a match between these two noted flyers will draw an immense concourse to witness it, and we trust that not many days will elapse before it is announced. We did not see Eva and had only a glance at two of the importations of Mr. Corbitt which accompanied the celebrities across the continent. Intending to visit Mr. Corbitt's breeding farm in a short time we will defer remarks until the opportunity offers for closer examination.

THE RIFLE.

Now that the turmoil of the election is over, and elation and regrets replaced by more equable feelings, Doctor Pardee favors us with the continuation of his admirable treatise. It is the purpose of the doctor to make it a full and exhaustive essay, and certain it is that there is no one more competent.

We have always held that a man must be an "enthusiast," more or less, to properly handle any of the departments of sport. There must be a fondness, approaching to a passion, to enter into the spirit of it with zest, and the "Breeder and Sportsman" is fortunate in its correspondents being strongly imbued with this feeling, while the members of the regular staff have such strong predilections for their specialties that they cannot listen to discussions of other topics with any equanimity.

The "dog man" will be fidgeting in his chair when the "horse talk" is prolonged, and in order to get even with some one who has been expatiating on a marvelous performance of his favorite horse, break in with the history of a bull terrier killing ever so many barrels of rats. The yachting chief, oblivious to horses, dogs or rats, will be poring over the exchanges, searching for items of interest on the wave, and he who handles the rowing is in a deep study in the attempt to figure out the winners of the "Breeder and Sportsman" Cup. In stalks the bicycle man, stalwart and "Strong," the floor trembling as he brings his feet down with a vigor which the huge development of muscle on thigh and calf gives, and at every stride the feet come down as though propelling a "fifty-four inch" at racehorse pace. The athletic quill-driver is his antithesis. Small, wiry and nervous he is "drawn as fine" as a racehorse "pointed" for a hard contest, and there is scarcely a pound of adipose tissue in his whole frame.

It is safe to assert that Dr. Pardee has as full knowledge of all pertaining to the rifle as any man that lives, and as it is his intention to make the treatise an exhaustive exposition of the art, it will be of immense benefit to our readers.

THE REPLY OF HON. J. McM. SHAFTER.

Elsewhere will be found the reply of Hon. J. McM. Shafter to the strictures of last week, and to which we call the attention of our readers. In the first place we must say that Judge Shafter read to us the communication, and either we did not comprehend it entirely from hearing it, or else some of the paragraphs escaped his eye so that a perusal gives different impressions than we obtained aurally. Probably the former, and in one respect we are gratified, inasmuch as it gives the opportunity for explanations and counter charges which will afford a better understanding of the disputed points.

The only retraction we spoke of making was in regard to the construction of one sentence, in which the actual meaning was that the "announcement was despicable and false," when the intention was to carry the idea that the protest against Antevolo was "despicable and false." That is the only retraction or change we thought of, or will admit until different evidence is offered from any we have yet seen or heard. That the entry of Antevolo was made in proper shape and in accordance with the trotting rules and the conditions of the advertisement we will be prepared to prove before the District Board on Monday next. That the entry of Dawn was not we will show so clearly that every doubt will be removed.

As the question is to be decided in so short a time there is no necessity for anticipating, and we pass it by. The only "insinuation" is in regard to the selection of Dr. Tisdale as an associate judge being made with a view to Mr. Shafter having a coadjutor, and subsequent events would have justified a direct statement in place of "may be." A "coadjutor" can be obtained without a direct understanding and a few minute's conversation determine what would be the result. But Judge Shafter does not state correctly the facts about the selection of the judge. We met him some little time before the race was to be called. He inquired if he was to go in the stand and our reply was: "Certainly." "Who else?" he responded, looking around at the few people present. All who had any knowledge of trotting rules being men who are in the practice of betting, we inquired if he did not know of some one. Then he mentioned the Doctor from the Sandwich Islands; he did not give his name, and then we informed him that after the first race, Mr. Whitney would act. Subsequent to this conversation we saw Mr. Howes and a good deal of solicitation prevailed upon him to fill the place, during the pendency of the yearling trot.

The charge against Steven Crandall, Mr. Whitney's driver, was entirely different from what Judge Shafter makes it appear. Mr. Crandall was suspended for non-payment of entrance money, and no notice had been given of the suspension having been removed. We did not make the charge but told Captain Harris, the secretary, and that holding membership in the National Trotting Association, we must enforce the rules. Mr. Whitney on being informed made the statement that he, Mr. Whitney, had settled the indebtedness, sent the penalty to the National Association, which of course, was held sufficient. The charge therefore though never made was not "unfounded."

The occurrences in the stand are misrepresented throughout. Until we went to the track shortly after 12 m., and for some time after, we were not aware that Dawn had put in an appearance. Driving Antevolo from the house only in time to "warn him up" before the race, which we did before alighting from the sulky, it was half past twelve ere we learned of his arrival an hour or so previous. No one at the Oakland Trotting Park had the slightest knowledge that he had left Petaluma and there was a general surprise. Had we been aware of it in time a much stronger case would have been presented, and now we will have to hark back to give a clear account. Some time in July, the date we are not sure of but it was since this office was occupied by us, we met Mr. Whitney, who asked whether the published statement or the books would govern an entry? Supposing he meant a newspaper publication the answer was promptly given, the book. A short time before the race was to come off Mr. Culver assisted us in looking over the lists in the endeavor to form some estimate what the sums would amount to. The first examined was the "Spirit of the Times" of March 5th, 1881, in which was a published list of the nominations received, 98, and the 94th was a colt, then foaled, by Nutwood from Countess, and a blank left in lieu of the stakes he was named in. Searching further on we found an "official list of nominations in the Embryo Trotting Stakes for foals of 1881" with Ben E. Harris' name attached as Secretary. Number ninety-four in this was Mr. Whitney's colt and in place of "in stakes of —" appeared "in stake 1881." As there was a receipt appended bearing the date of March 11th, 1881, it must have been after this date the list was published. In the first publication the nominations of P. A. Finigan and E. H. Pardee were left blank in the same way; in the "official" they were filled in "in stakes of 1882, 1883, 1884."

On seeing this we at once said to Culver: "Whit-

ney's colt is not in," as we had him marked in the computation, and that amount was stricken out of the calculation. Mr. Rose being in town was desirous that the stakes should be trotted on election day. He was in the office Saturday, and on the following Monday we saw Mr. Whitney in front of his store on California street. There was only a few moments for conversation, being desirous to cross on the 12 o'clock boat. On speaking to Mr. Whitney in regard to Mr. Rose's proposition, he said that it would be short notice to get his colt down. We answered: "You are not in the stake," and he said that he was and that the books would show it. We replied that in the situation the original entry would be necessary, when he said that if it was going to cause trouble he would leave the colt at home. Our reply was, that if he was entitled to start, he had the right to, and in that case to bring him.

The colt not making his appearance, and no one even having any knowledge that he was anywhere in the neighborhood until an hour and a half before the time for starting, we had not the least idea but that Mr. Whitney had found that he was not in the race. We were in a quandary what to do. It was a state of affairs which we sincerely regretted, and had come to the conclusion to let it go. Jogging up and down the stretch, John Williams, the driver of the sister to Honesty, inquired if Dawn had a right to start. On being answered in the negative, he stopped in front of the judges' stand and entered a verbal protest. Our coat was hanging in the stand, and while seated in the sulky we told the judges that they would find the official list in a pocket-book in the breast pocket.

As there were other papers in it we concluded it would expedite matters if we aided in the search, and went into the stand. The official list was produced and Judge Shafter, without deigning to look at it, immediately commenced a tirade of arbitrary talk. We asked Harris for the books and the original entry, which he had entrusted to another man to bring from home. After a short time he returned, and a paper was submitted as the original. That this was faulty was evident at a glance, but satisfied that it would be decided as it was, a written protest was prepared and left in the hands of the Secretary to be filed if the decision was adverse and we left the stand.

Soon after that Judge Shafter summoned Mr. Whitney and after waiting a long time, the announcement was made that there were protests against all three. Judging from the hostile demeanor of the presiding judge, we at once came to the conclusion that he had suggested this course and it was a "shyster trick," "dispicable and mean." The question was never asked why we had not acquainted Mr. Whitney before, so there was no opportunity to answer. Again, Mr. Shafter implies that had their decision been otherwise, Mr. Whitney would have lost his \$100. Even forty-two years of legal practice has failed to afford the proper education to construe racing and trotting rules, as had it been decided that Dawn was ineligible, the stake money would have been returned.

We are very much pleased to learn that Judge Shafter denies previous consultation, and also that Mr. Whitney was misled by a false statement when he entered the protest. In that case there was nothing wrong in entering the protest, and with the assurance, which I have not the least reason to dispute.

Judge Shafter does not quote correctly in writing: "faithful guardian of racing interests on this coast," as the words used were slightly different, and in his request that "when we find it necessary to allude to him we shall do it by direct statement," as he repeats the phrase it seems to have had a disturbing effect. Though it may appear to be an assumption which we are not entitled to, nevertheless we shall certainly do the best in our power to elevate the sports of the turf. If we have failed in the duty heretofore it has been on the side of leniency, and hereafter we will endeavor to profit by past experience.

We agree with Mr. Shafter in the matter pertaining to a member of the Board being in the Judges' stand. His views are undoubtedly correct and those of "Lex" what the rules ought to be in place of what they are. That part of the communication which has reference to the starting in a running race we will discuss hereafter. It may be as well to state that the trotting and running rules have been conglomerated to furnish an argument and that the paragraph that treats of "false time" is based on the former.

With all due respect to the legal profession, we have long been impressed with the idea that the training necessary to constitute a good lawyer is inimical to "judging a horse race." Even "forty-two years at the bar" may intensify a proneness to look at only one side of the question, and the practice of turning every legal point, perhaps quibble, in the interests of a client interfere with a candid view of all phases of the question. Praiseworthy in a legal practitioner, when underhand advantages are not resorted to, it is out of place on the turf, and in lieu of a "faithful guardian" there is an advocate of the side to which his feelings lean.

THE FOUR-MILE RACE TO-DAY.

This is bound to be a "grand gala day," as the best bill is offered that has been given in many years in California. Besides the hurdle race, a handicap of one and a quarter miles, and the Consolation purse, a dash of a mile, there is the Baldwin stake to be decided. This is a post stake of \$250 each, pay or play, with \$1,000 added, four miles. There are six subscribers which will give six starters. Although the horses were not in time to publish there is little question that the following will start: E. J. Baldwin's Clara D, Stemler & Ayres' Fred Collier, Wm. Boots' Nathan Coombs. Palo Alto has secured the subscription of George Hearst, and will run either Precious or Fostress, probably Precious. The subscription of J. T. Gilmore will be filled by Jocko, and Stemler & Ayres having secured the subscription of W. L. Pritchard, Joe Howell will fill that vacancy.

It is doubtful if a superior lot has ever started in a race at this distance since Wildidle, Grinstead and Rutherford ran in the same kind of a stake, and for the first time in the history of racing on this coast two three-year-olds will participate in a race at this distance. There are good reasons to warrant the prediction that the youngsters will make a good showing, if even they have the worst of it in the opinion of those who consider that more maturity is requisite to give the necessary stamina. Many of that age have distinguished themselves at the distance, and the breeding of the Palo Alto fillies and Jocko is of the real true blue sort. Precious is by Lever from Frolic by Lightning, and Fostress by Foster from Planet by Planet. Lever and Foster are both by Lexington, and Lightning was also by Lexington. Planet, Lightning and Foster were all great performers over a distance of ground, and the blood on all sides is noted for endurance as well as speed. Jocko can show fully as good a "set of papers." His sire, Carriboo, was by Lexington, his dam Alice Jones by imported Glencoe, and her dam the noted Blue Bonnet by imported Hedgeford, the dam of Lightning, Loadstone, Lancaster, Thunder, etc. Then the dam of Jocko was Reply by Enquirer, from Colleen Bawn by Endorser, and her dam the noted Roxana. On the score of breeding it would be hard to excel, as those who are posted can testify, and the old adage that "an ounce of blood is worth more than a pound of bone," is peculiarly applicable when long distances are to be compassed.

Still there is a great lot to meet. Clara D, one of the best mares ever saddled for all kinds of races, with a fast three miles to her credit; and there is Fred Collier, the gallant white-legged son of Joe Hooker, who has also shown capacity for a distance; and the old veteran, Nathan Coombs, who won the cup at Sacramento, two and a quarter miles in 4:00; and also that equine enigma, Joe Howell, which, like good wine, improves with age, and which seems likely to emulate the fame of some of the old-time worthies by running on until the teens come very nearly merging into the twenties.

There is every prospect that the track will be in the best order. The splattering through it yesterday will facilitate the drying, and so soon as the harrow can be used the superfluous moisture will rapidly evaporate. It will be in condition to harrow by noon to-day, and not a moment will be lost which can profitably be employed toward perfecting it for the grand contest. This will be the first four-mile race for many years, and from the great interest taken the course will be crowded with people. Some estimate the probable attendance at twenty thousand, and from such a brilliant prospect there should be a multitude of lookers-on.

MEETING OF THE DISTRICT BOARD.

As will be learned from the following letter of the Chairman of the District Board, Pacific Division, a meeting has been called to adjust the difficulties which arose in the Embryo stake.

It is extremely gratifying to us to record this prompt action, and will give satisfaction to all interested. Much credit is due the chairman for the course taken.

SAN FRANCISCO, Nov. 21, 1882.

MR. JOS. CAIRN SIMPSON, EDITOR BREEDER AND SPORTSMAN, Dear Sir: Dissatisfaction having been expressed as to the decisions in the Embryo Stakes trotted at Oakland on Monday, Nov. 14, if the parties complaining will bring the matter before the District Board the matter will be investigated.

For this purpose any and all parties interested are hereby invited and expected to appear before the board on Monday, Nov. 27, at 11 o'clock a. m., at the office of the BREEDER AND SPORTSMAN, 508 Montgomery street, and show cause against said decisions. Respectfully, N. T. SMITH, Chairman of Pacific District Board.

FALL RACE MEETING.

To-day will bring to a close the fall meeting of the Pacific Coast Blood Horse Association. So far the meeting has been very successful and the promise for to-day is such that there cannot be a question that there will be a brilliant finish. Until the races of to-day are run it

would be premature to write a review, which will be more appropriate for next week.

It is not out of place, however, to state that the Association has lost none of its prestige, and those officers who have taken an active part in the management receive warm encomiums from all.

Patagonian Horses.

Commander Musters, one of the royal navy, one of the family of famous Nottinghamshire squires of that name, wrote his "Travels in Patagonia;" and although he lived with the natives, and apparently made a matrimonial alliance with a she savage, he never describes the horses that form so essential a part of Patagonian life. Lady Florence Dixie is the sister of the Marquis of Queensberry, well known in the boxing and steeplechase world. She is only 25 years of age; five years married to a Leicestershire baronet; and without phrase, as the French say, one of the hardest, if not the hardest huntress in the pasture counties round Leicester.

Having apparently found civilization dull, a party was made up to hunt guanacos, (the wild llama) and ostriches in Patagonia, consisting of Lady Florence, her husband, her two brothers, the Marquis of Queensberry and Lord James Douglas—who cut such an unpleasant figure in a dispute with a fisherman on the Thames—and their friend, the author of "Wanderings in Patagonia," the book that was the origin of this expedition.

The result is "Across Patagonia," in which, looking at the ordinary dull or flimsy character of "Travels of Ladies of Quality," one is agreeably surprised by its brightness and simplicity. There are only 250 pages, with a dozen illustrations, and only incidentally there any description of the Patagonian horse.

The Indians, who have been represented as giants, were found by Alexander Dixie, "who stands six feet two inches high," to not exceed six feet. The first one seen on horseback, was a "very unimpressive object—an unfavorable specimen; his burly body enveloped in a greasy guanaco cap, his feet bare, one of his heels armed with a curious and ingeniously made wooden spur." It turned out that he was looking for some horses. "He galloped away, and we admired the easy grace with which he sat on his well-bred little horse, which seemed able to do him good service, although considerably below his weight."

Lady Florence evidently wore breeches and boots, and rode like a man, although she never says so or refers to her dress at all, but she speaks of the horse she "bestrides," of "putting spurs," not spur, to her horse, and when she finds the lost horses of the whole party grazing quietly after hours of anxiety, she coaxes one until it allows her to put a scarf round its neck and mounts it bareback, without bridle and of course astride, and drives the troop back to the camp. In one of the illustrations a faint sketch of a young person riding like a boy must be meant for Lady Florence, who leaps on and off her horse as easily, apparently, as a whipper-in, or her brother the little marquis.

"Looking up the valley, we saw a dark mass moving slowly towards us. Presently it came nearer, and Gregoria cried out excitedly: 'That's not Indians, but a herd of wild horses; if we don't mind we shall lose our own.' Our animals were moving to and fro in a state of great excitement. One of the wild horses detached itself from the main troop, and galloped at full speed toward our horses. 'Quick! quick! your rifles, or we shall lose our tropilla,' said Gregoria. 'The wild stallion if not stopped will drive away our troop.'

"But the stallion flew like the wind. Bang went our three rifles, but he sped on unscathed, and was within twenty yards of our terrified animals, all huddled together in a corner of the valley far in front of us. 'We are lost,' cried the guides, filled with dismay at the thought of being without horses 300 miles from our port.

"At this moment, Gregoria's big bay stallion, the master of our troop, rushed out to meet the enemy, both halting when they met. Then the two enemies, after pawing the air for a second or two, made a dash and engaged in fierce combat, chiefly with their teeth, but occasionally rearing and striking with their fore feet. Our tame horses were frightened, not daring to stir, while the wild horses trotted close up to the scene of battle looking on apparently much interested."

At the critical moment it was found that the party had no ammunition.

"The wild stallion was much the larger of the two. The tame one was beaten. The victor, with vicious bites and kicks, began to drive the tame troop of mares away."

Thus it is seen that wild animals are much larger than the Indian ponies of Texas and Mexico.

"We strained every nerve to get between the two troops. Our efforts would have been defeated had not our stallion suddenly re-appeared to fight for his wives. The combat was fiercer than the last. We got up to our horses, drove them towards the camp; but before we could reach it the wild stallion, having proved victor, again came swooping down, neighing proudly. We shouted, waved our hands as he approached. Within forty yards he stopped, circled round us, stamped, pawed, neighed angrily. We shouted to Asia. He brought us ammunition. At the first shot the stallion fled so rapidly that two or three bangs we had at him missed him. He made straight for his own troop. The moment he reached them they all started off at a gallop. They disappeared like lightning over the brow of a deep ravine, to emerge again in our view after a couple of seconds, scampering like goats up its opposite side, which rose almost perpendicularly six or seven hundred feet. In a twinkling they reached its crest at full gallop, and disappeared, leaving us marveling at their wonderful agility."

"I have been told," said Mr. Dubious, watching the great steam hammer in the rolling mill, "that a good hammerman can break the crystal of a watch with that thirty-ton hammer." "Yes, sir," said the hammerman, "it can be done." "I should like to see it," said Mr. Dubious, eagerly, feeling in his watch pocket. "I can do it, sir," replied the man. "And will you?" replied Mr. Dubious, drawing out his watch. "Come, I am anxious to see it tried." He laid his watch on the great anvil plate. The hammer rose up to its full height, and the next instant all its ponderous weight, with a crushing force that shook the ground for an acre round, came down on the watch. "There, sir," said the hammerman quietly, "if you don't believe that crystal is broken, just stoop down and you can see it sticking to the hammer." Mr. Dubious swallowed a whole procession of lumps and gasps before he could speak. "But I forgot to say," he exclaimed, "that it was to break the crystal without injuring the watch." "Oh, yes," said the hammerman, "yes, I know; I have heard that rubbish myself, but it's all gammon. I don't believe it can be done. But you can break the crystal every time.—Burlington Hawkeye.

ANCIENT AND MODERN ARMS.

Propellant and Explosive Force—A Testing Machine that Tests Nothing.

BY DR. E. H. PARDEE.

(Continued from page 108.)

Common sense is a good commodity for one to possess, and when applied to the ordinary surroundings of life, will act as a safeguard in tracing the hidden mysteries of theory, from cause to effect.

A little engineering skill will prove to any one who will give the matter the attention it deserves that according to the density and weight of matter to be projected for a certain distance, the nature and power of the propellant force must be taken in consideration. The accumulative force must be gradual until the body at rest is put in motion, and then the accelerative until it has imparted to it its greatest point of velocity that it is capable of imparting, while, on the other hand, if it fails to do this, science has failed in taking from it the full horse power it possesses; which demonstrates this important fact, that we are using a superabundance of force, and making unnecessary wear and tear on our machinery and an inferior pressure on the other. The human mind is capable, by a little study, of applying properly the distribution of the forces, so that the safety and durability of the gun is insured and a great percentage of projectile force obtained from an equal quantity of powder, taking into consideration, of course, the granulation of the powder and its strength to the caliber and area of the gun.

Those who have given the subject any considerable thought must admit, that the use of granulated powder to meet the requirements of the caliber and length of the barrel will obviate the sharp recoil that must necessarily follow the use of fine, quick powder; and as steadiness of weapon is a fixed principle in the accuracy of range, the subject of granulation of gunpowder is an important factor for the sportsman to take into consideration. The advocates of fine grain powder will say: "Oh! it shoots stronger and as close as the coarse, for long distances," to which I reply that neither theory nor science will support their proposition, and my deductions are arrived at from the simple fact that the fine powder is more of a propulsive, and the large grain, as I have in some previous communication stated, is an expellant; this is maintained by a simple fact in philosophy, that in accordance with the law of resistance in aeriform fluids, the one is sooner reduced to medium velocity than the other which exerts its action more steadily and evenly. And then again the coarse grain is more safe; and to more fully illustrate my position I will state: Take a rifle-barrel thirty-four inches long, and half-inch caliber, and charge it with one hundred grains of fine gunpowder, and the ignition takes place so rapidly that the whole force of the gas takes place in the breech end of the gun, while coarse powder ignition takes place more slowly and distributes the force on the whole length of the gun barrel. Now, supposing this force to be five thousand pounds in the gun barrel when the powder is all burned, the fine ignites so rapidly that the whole five thousand pounds is exerted on the first half of the barrel, and that of the coarse, igniting more slowly, distributes its force of five thousand pounds on the whole length of the barrel; and as a consequence the danger of fracture or bursting the gun is only one-half as great with the use of the slow powder. Time must be given for every particle of matter to be put in motion from a state of rest, for it is impossible that the whole mass be started instantaneously, for instantly means one and the same time. To illustrate my position I will take a piece of wool as large as my arm, and lay it upon a block and have an axman sever it at one blow; now in the general acceptance of the term "instantly" one would say that the division of the piece of wood was instantaneous. But such is not the case, the ax falling by the vigor and force of the man's arm, it first came in contact with the first grain of wood, and one by one was severed, until the last one was separated. Now it follows that there was a conceivable length of time between the division of the first and the last grain of wood severed by the ax. And again, there is a law in natural philosophy that forbids one substance occupying more than one space at the same time, making it impossible for the edge of the ax in the above illustration to be on the top and the bottom of the piece of wood at the same time.

Thus it is that the perfection of projectile science is to make the projectile take on its greatest velocity at the instant of leaving the muzzle of the gun; and I can only see one way to accomplish this important point, viz., to fit the granulation of the gun powder so that it will correspond to the length and caliber of the gun. And in order to more fully establish my position, I will take one hundred grains of Huzard's Sea Shooting powder, and load a rifle of fifty one-hundredths caliber and the barrel being thirty-four inches long; I will now place upon this charge of powder a cylindro-conical bullet weighing 550 grains and will fire the gun, and by a certain process of reasoning I find the powder to be all ignited just as the bullet leaves the muzzle; therefore, my deductions are, that the bullet has taken its greatest initial velocity at the most opportune time.

Now I will load the same rifle with one-half of the same kind (50 grains) of powder and it must necessarily follow, with the same parity of reasoning, that the last grains of powder will be ignited when the bullet has traversed one-half the length of the barrel, and as a natural consequence, then and there acquires its greatest initial velocity. Then if my position be true, and from years of experiments I know it is, it follows that the bullet must travel the latter half of the barrel at a diminished velocity, and its velocity must continue to diminish, from the middle to the very muzzle of the barrel; for the following good reasons: First—The column of air in front of the bullet is more condensed, as particle after particle is continually compressed, rendering continually an increased resistance to the passage of the bullet.

Secondly—The velocity is continually diminished by the increased friction against the barrel.

In short, the perfection of projectile science is to make the projectile to acquire its greatest velocity at the very instant of its leaving the muzzle; and if by increasing the size of the grain of gunpowder, we can diminish the rapidity of its explosion, thus causing it to burn, and generate fresh gas up to the very muzzle of the gun, the projectile will then acquire the greatest velocity, and leave the gun with the satisfaction that the manipulation has been well done. The construction of the gun being perfect the vital question is, can the expellant force from gunpowder be made to conform to the condition of the gun, and approximate an equal perfection? From an experience of a quarter of a century, I contend that it can be done; and in some future article, relating to the rifle, I will endeavor to prove, from a series of demonstrations, how to do it.

When attending the National Exhibition at Philadelphia in 1876, a Canadian had on exhibition an instrument, gotten up for the purpose of testing to a dot the strength of different kinds of gunpowder. The inventor claimed much for it, and

to those unacquainted with the theory of propellant force took in much that the fellow got off in his flippant and gassy way, but after a little I found I began to chafe the man who had the machine in charge, and was told that he was not the inventor, but only a kind of supernumerary, and pleasantly invited me to call the next day, when the inventor would be present, and would be glad to answer all questions. During the night time this powder testing machine preyed like a nightmare upon my mind; and the following morning I found myself winding my way, through the vast multitude of people, to this (to me) wonderful machine. It was located near the spot where Krupp's wonderful and monster cannon was located, which, by the way, attracted more of my attention than all else on exhibition. I will first give an explanation of the machine and then my opinion regarding its merits. It consisted of a chamber closed by a spring, and loaded and fired like any common pistol. When the powder is ignited the spring moves forward, and moves a pointer or index round a graduated circle, resulting in this simple fact, the quicker the powder the greater the force, as it was more of the explosive, then the propellant. And to me it was wholly unsatisfactory, and before I left my quondam friend, my questions had so pressed him for satisfactory answers that he declared there was no difference between the terms explosive and propellant forces.

As a matter of fact the thing was not meritorious, and was not worth the paper on which this article is written.

Much credit is due Dr. Hutton, an English mathematician, who died about one hundred years ago, for his scholastic achievements in sweeping away the mysterious cobwebs that overhung and left a dark shadow on the science and laws of gunnery. And to him is due by the elucidation, by a systematic course of deductions that now govern our present and modern system of gunnery.

"When in a state of explosion, the volume," says Dr. Hutton, "is at least increased eight times, and hence its immense power. The pressure exerted, if in a state of confinement, will depend on the dimensions of the vessel containing it; so that it would be no difficult undertaking to obtain any pressure above that of the atmosphere up, we may fearlessly say, to the enormously amount of four thousand pounds to the inch." In concluding this article, Mr. Editor, I will state that the fixed ammunition prepared with great care by the manufacturers of our recent breech-loading guns has sent a flag of truce upon this important subject; although I find a great defect in the fitting of ammunition to the condition of some of our best breech-loading long range target rifles, of which I will have occasion to speak in some future communication when dealing with American muzzle and breech loading target guns.

FISH.

Fishing in 1796.

From time immemorial the world has been flooded and swept with tidal waves of fish stories and it ever will be as long as humanity can make the elements of fact and fancy amalgamate, as no doubt they always can, and form a third piece of composition called a "fish story." From the time that a few small fishes supplied a hungry multitude or Jonah swallowed the whale, or vice versa, suffering humanity has been obliged to swallow fish stories—heads, tails, fins and hooks. Being afraid to draw on our own imagination for a fish yarn, for fear that it might be too large a one for our readers to absorb at one time, we take an extract from the memoirs of an old German gentleman who lived and was a young man in the time of our first president, George Washington. The year in which the following anecdote took place was 1796. The principal actor and narrator was Peter Adolph Grotjan, a young, well educated German, and a pioneer to our infant republic; he was at the time mentioned on his first voyage across the Atlantic to the United States. In his own language he tells the following story of his experience fishing in the mid-Atlantic:

During a continued and tiresome calm, whilst conversing with Captain Johnson on deck, I observed him, from time to time, attentively looking westward. Suddenly he called for his spy-glass, with which he seemed carefully to regard some object for a considerable time. At length he ordered the mate and steward to bring all the fishing-tackle on deck, observing with a smile, "There is great sport ahead." During all this time I saw nothing but sky and smooth water. However, after a while it became apparent that some object was floating in the water, around which for a considerable distance there appeared to be a strong ripple or roughness of the surface. The sight was still several miles ahead of us; and whilst we were very slowly approaching it, and all our fishing lines, hooks, grains and harpoons were getting made ready for use, Captain Johnson explained to me that some piece of old wreck or mast was floating in the sea, and that the large rippling circle we perceived was caused by thousands of dolphins and other fish sporting and gamboling about it. The nearer we approached, the more astonishing and remarkable became the scene; and when we reached the object, which was an old mast of a ship covered with barnacles and shells, which we fastened to the side of our vessel, we ourselves became the center of this truly astonishing sport. Picture to yourself the sea as smooth as a mirror, our ship lying almost as still as if at anchor in a pond, surrounded on every side by many thousands of fishes of various sizes and shapes, more than a third of them being dolphins, sporting and leaping on the surface of the water. Picture, too, nearly thirty persons intoxicated by this sight, and eager to catch the precious prizes, employed on every part of the deck. Some of them had probably never fished, at least not at sea, and their awkward efforts proved not very dangerous to the finny tribe. Such, however, was the rapacity of the fish, that he who could well fasten a piece of pork to a hook would instantly get a bite, and it was owing to his own want of skill if he did not secure his prize. I was fishing near the aft rail railing, and over the cabin windows, and had already secured two middle-sized dolphins, when one of the largest I ever saw, more than six feet long, swallowed my hook and ran with inconceivable swiftness. Captain Johnson halloed: "Play him, Grotjan, play him!" And play him I did, until the skin was nearly chafed from my hands by the friction of the line. I did not, however, let go altogether, but when my dolphin got tired I would gently haul him in, until a new freak would make him take another rapid start. In this manner I amused him until, at length, I got him close under the cabin window, where the captain had stationed himself, grain in hand, and now struck him through the body, and had him hoisted into the cabin window. We never could have got that fish in any other manner, as my dolphin line was not near strong enough to have supported his weight. Our sport lasted for several hours, and the result of it was twenty-seven dolphins of various sizes, besides a large quantity of smaller fish.

Large flounders are being caught from the Oakland Creek. The best bait to use for these fish is shrimp.

The California Trout.

There are several varieties which go by the name of the California trout. The differences between them are not radical, and arise, probably, from the influences of locality rather than from natural variation. The fish of highest development are found in the McCloud river, from which they take their distinctive name. They are the true rainbow trout, having a band of bright red, like the iris, along the whole extent of the lateral line. The mountain trout have the same marking but in fainter tint. In some specimens it is hardly perceptible. It has been noticed that in wild waters this tint is much more strongly brought out than in fish confined to artificial ponds. Occasionally, fish escape from the Caledonia pond to the open stream below. The influence of the wider range and of the change to natural food, largely crustaceous, is observed not only in the brighter colors, but in the greater vigor and more rapid development of the fish.

In producing and raising from helpless infancy some of the fish tribe, art may surpass nature; but only by a return to the ways of nature at the period when helplessness succeeds helplessness can the best development come.

The early history of our stock of California trout was given in the commissioner's last report; but the circumstances are of such interest that the story will bear reproduction and continuation.

In 1876 the commissioners received from a friendly correspondent 500 eggs of the California mountain trout. In due time these produced 300 fry. They lived and grew to be spawners.

At the age of three years, and when they had reached the average of a pound weight, they cast their first spawn. The product was 64,000 eggs. The usual percentage of these hatched, and with the exception of 17,000, kept for breeders, were distributed throughout the State. In the spring of 1879 there were still living of the original stock 260 fish. Having increased in age and size, they gave a larger yield of spawn than in the year previous. Their production in the last-named year was 94,000. Three thousand four hundred of these were retained in the hatchery. The remainder went out for distribution in orders. Our stock of breeding fish of this variety is now 3,000,000 to 4,000,000, all of which are already covered by orders, and the cry is still for more.

The spawning season commences about the first of March and continues till June. They, therefore, afford what the brook trout does not, good autumn fishing.

The California trout is, in its structure, pretty much the counterpart of our brook trout. It has not the carmine spots which distinguish the latter, but has the same dorsal markings, a slightly more forked tail, and the same color and texture of flesh. The general external color is a silvery green or olive, mottled with irregular spots of a black or darkish color. Along the lateral line is, as has been already stated, a marking of red of varying distinctness according to habit and habitat.

The fish is one of remarkable vigor and hardiness. It will thrive in water which to salmon and brook trout would be certain death. It will bear rough handling with comparative impunity, and bruises on its skin which in other fish would be followed by fungus and death make apparently no harmful impression. It is an active fish, and though it will thrive in either lake or river, loves best a swift running stream, and the most thoroughly aired water. It is a voracious feeder but its tastes are as delicate as others of the trout family. It loves best to take its food alive, and cannot resist the temptation of a struggling grasshopper or miller, no matter how full its maw may be already. No fish known is so certain as this to be attracted by the artificial fly. It does not matter much what the form or color may be, so that a motion is given to resemble life. In its greed for insect food it takes no account of seasons, and will rise as readily in January to a red fly when it is hardly possible for a natural fly to exist, as in July when the surface of the water swarms with insect life. It grows with nearly double the rapidity of the brook trout in the same water, and is, of all fish whose habitat is exclusively in fresh water, the most suitable for the large streams of the State of New York, like the upper Hudson, the Genesee, Mohawk, the East and West Canada creeks, the Moose, Black and Beaver rivers, and all other streams which over-much fishing, dams, saw-mills and other destructive agencies of human contriving have spoiled for good trout fishing. Whether it can endure the poison of tanneries has not been yet tested. If it shall be found to stand this last desperate test, to which all others of the trout family have succumbed, it will deserve to take rank with the immortals.

The only unfavorable criticism which has been made on this fish is that they are not good keepers; that they rapidly soften after killing, and do not bear transportation well. This may be a disadvantage or an advantage, according to the standpoint from which it is considered. The residents in the neighborhood of trout streams do not care to have all the stock shipped to market; they want some for their own use; and if California trout will not bear transportation, there will be all the more to eat at home. No fish anywhere or at any time is as good as when fresh caught. The complaint of softness, we think, does not apply to all California trout, but to such as are caught out of season or in very mild waters. The quality of all trout is very much affected by the character of the water in which they live and by what they feed on. Speckled trout caught within a few weeks of spawning time, and after spawning, till they recover vigor, will be slimy and soft and tend quickly to putrefaction, and those that live in shallow water with muddy bottom, and feed on leeches and lizards, are never good keepers. Everyone who has done much trout fishing will have observed that fish caught in a running stream, especially if the stream be one much subject to rainfalls, soften much more quickly than those taken in lakes. Even on a good spring stream the angler will sometimes observe the ribs of the first trout protruding before the last has been put in the basket. On the other hand, the whole day's fishing on the lake will be firm and hard. California trout, in this respect, will not differ materially from any other trout.—Report of New York Fish Commission.

Sunday last there was excellent fishing on the Saucelito shore. Mr. W. T. Bogard, Mr. W. Lockhardt and F. Denning caught 70 pounds of black rock cod, many of which weighed two pounds apiece. The same party, with the addition of Mr. J. H. W. Riley, were at Goat Island the Friday before and caught all the fish, rock cod and tom cod, that they could carry home.

Mr. Jos. E. Shain on last Sunday had fine luck fishing along the Saucelito shore to Point Diablo. He fished in twenty-five or thirty feet of water and with a short rod and reel and caught a great many sea trout and rockcod.

Last Sunday Mr. Scott Tidball and party were fishing in the tide waters at Tamalpais creek. Mr. T. got four fine salmon trout that measured twenty inches. Others of the party had less luck.

THE KENNEL.

Rabies and Epilepsy.

The dog is a very susceptible and irritable animal. Various diseases, difficult teething, distemper, sudden exertion, over-joy, fright, so hasten or retard or derange the circulation of the blood through the brain, that there is a temporary loss of sensation and consciousness, and a violent spasmodic action of certain of the voluntary muscles. Suppose a dog to be ranging in the field, employed in the busy pursuit of game, or occasionally imagine him to be quiet at home. All at once he starts up, and barks violently, he scampers over the ground, or he dashes around the room; he runs against everything in his way, he turns about, and barks and snaps at it, he takes some kind of circular course until at length he is exhausted, and he falls. Sometimes the limbs are stretched out with tetanic rigidity, at other times they are moving with the utmost velocity, the head dashes again and again on the ground with frightful force, the eyes rolling out in their sockets, the teeth gnashed together, the foam thrown from the month, and all this time the dog is utterly insensible. This continues a quarter or half an hour, and sometimes for several hours, until at length, perfectly exhausted, the spasms cease, and he lies quiet or asleep for a while, and then slowly regains his consciousness, or awakes only to experience a renewed epileptic attack, or awakes at all.

It was only the other day I witnessed a poor animal attacked with these symptoms, while standing at the door of a shoeing forge on Madison street. This case, now fresh in my mind, suggested the advisability of writing this article. The poor brute was knocked on the head with a hammer as being mad. This is the epilepsy to which the dog, from his superior intellectual development or general irritability, is subject to a greater degree than other domesticated animals, and they who know nothing about the matter, who mistake loss of sensation and consciousness for increased mental excitement, cry out that the dog is mad, and they follow him with every weapon of offense, and destroy him if they possibly can, or abandon themselves to unfounded but most distressing terror, if perchance they have been bitten by him during the fit.

There is nothing in this that ought to be for one moment confounded with rabies. Epilepsy and rabies are as plainly distinct as any two cerebral affections can possibly be. The one is a perversion, the other a suspension of intellectual power. The one is an unconscious abandonment of muscular action to irresistible instinctive influence; there is method in the madness of the other, and the mind is actively employed in accomplishing its perverted fearful object. I cannot do better than to quote the language of the first scientific observer of this disease: "There is," says Dr. Blaine, V. S., "no rabid symptom whatever that at all resembles a fit, whether in the irritable or in the dumb variety. An epileptic fit is sudden; it completely bewilders the dog, and, after a determinate period, leaves him perfectly sensible and not at all irritable. In rabies there is no fit, no loss of recollection, no tumbling about wildly in convulsion; neither is there any marked break in the natural irritability attendant on rabies. If a dog in an epileptic fit should be so convulsed as to attempt to bite, it is evidently done without design—his attack is spasmodic—he snaps at anything, and it is quite as likely to be himself as anything beside. The irritability and mischievous attempts of the rabid dog have always method with them, and they evidently result from a mental purpose to do evil. The mad dog has usually a disposition to rove—the distempered one, never."

Farther Caution—Enteritis and spasmodic colic have occasionally somewhat closely simulated rabies, and I confess that more than once I have for a while been unable satisfactorily to distinguish between them. There has been the same restlessness, scraping together of the bed, general irritability, intensely anxious look, and the howl has not been very dissimilar. The distinguishing symptoms of each are not, however, slow in developing themselves. If there is much restlessness and alteration, it is evidently with a design to relieve pain, and not from mere fidgetiness or ill-temper, displayed in the attempt to tear the bed to pieces rather than to smooth it. If there is irritability and ill-temper, it is exhibited only when the dog is annoyed and disturbed; there is no systematic plan to effect mischief. If there is the intensely anxious look, it is expressive more of pain than anger, it is a depressed, supplicating gaze, rather than a fiery, ferocious one; and if there is the howl somewhat resembling the rabid one, it is preceded by a whine and a moan never heard in the rabid dog; it has not the prior characteristic bark of irritability or defiance, it is a howl, and not a mingled bark and howl. You may mistake or be undecided for a little while, but twelve hours will not pass without the different course of the two diseases removing all doubt about the matter.—A. E. Buzard in *American Field*.

A Smart Pup.

A correspondent of the *Forest and Stream*, who writes from San Antonio, Texas, thus describes a young collie. "I have seen him, at a word from the shepherd, round up and put between 1,600 or 1,700 sheep in a pen (many of them wild Mexicans), and not chase nor crowd any of them. The little chap would mass this large flock of scattered sheep and direct them toward the pen in half the time that several men could do it. When penning the sheep he had to work them down a long hill that sloped to a flat that the pen was built upon. When close in on any portion of the flock he could not see over them, and would scamper back up the hill and locate the position of the pen, and then flank his sheep according to his bearing. When the last sheep and frisky lamb was inside, he would lie down at the gate and fling the dust with his tail until the shepherd commenced putting up the poles that formed the gate, and I have seen him attempt to assist in that work by trying to drag the poles to the gate. At night he would keep the sheep in the pen, which consisted of brush, or if they broke out would promptly put them back I have herded those sheep myself, and slept in a small tent a few yards from the pen. In case of the moon rising full the sheep appeared to take it for sunrise and would break out. The first time it occurred during Dick's administration Dick put his paws upon my breast and licked my face and awoke me. I said 'Go for 'em, Dick!' and he did it and put the last sheep back in the pen, and then came back and tried to tell me that all was right. After that night he needed no further hints, but took the business into his own hands, or paws. He had but little tuition, but he guarded that sheep pen as well as though he was five years of age instead of five months. If he had been guilty of any misbehavior for which he knew he deserved punishment, he would rush off and round up his flock of sheep as though he wished to show work to atone for his misconduct. He had a nose like a bloodhound, and could follow a person's footsteps as well. I have left him asleep on the prairie more than once, stolen away

and hidden myself, and watched him follow my footsteps. He would trace every step until he found me, and then would quiver for joy.

Gilroy Field Trials.

On Monday, November 27th, the field trials held under the management of the Gilroy Rod and Gun Club will be run off on some excellent quail grounds near Gilroy. The sportsmanlike spirit of a number of Oregon, San Francisco and Gilroy gentlemen has put these trials in a position to command success. The push, energy and perseverance of Mr. R. Leavesley, the Secretary of the club, upon whose shoulders most if not all of the detail work has fallen, cannot be too highly appreciated by those who hope to see these trials as popular in California as they are in the East. Entries for the trials close at 1 p. m. November the 26th, so at this time of writing (Thursday night) it is not possible to give anything like a complete list though all entered up to last Tuesday will be found below. The omission of pedigrees will be remedied in the future:

By Mr. Frank G. Abell, Portland, Oregon, Gordon setter Scott.

By Mr. Frank G. Abell, Portland, Oregon, Irish setter Bess.

By Mr. R. E. Bybee, Portland, Oregon, Irish setter Sandy.

By Mr. F. M. Spencer, Portland, Oregon, Llewellyn setter Gem.

By Wm. Hedeman, San Francisco, Gordon setter Jim.

By M. F. Whittier, San Francisco, Llewellyn setter Rock.

By Ed M. Moor, San Francisco, Llewellyn setter Linnie.

By M. H. Briggs, Gilroy, Llewellyn setter Count Warwick.

By M. H. Briggs, Gilroy, Irish setter Fern.

By Dan Leddy, San Jose, field trial setter Sport.

By Chas. Doerner, San Jose, field trial setter Blitz.

By E. Leavesley, Gilroy, field trial setter Don.

By E. Leavesley, Gilroy, field trial setter Juno.

By E. Leavesley, Gilroy, field trial setter Duke.

By E. Leavesley, Gilroy, English setter Mollie.

By J. L. Nickel, San Francisco, field trial setter King.

By H. D. Bartlett, San Francisco, field trial setter Rob Roy.

By D. M. Pyle, San Francisco, Llewellyn setter Daisy.

SALE OF BELLE AND ROCK.—Mr. Lewis C. Clark, of New York, has purchased of Mr. Edmund Orgill the well-known pointers Rock (champion Rush ex Swayne's Nan) and Belle. Mr. Orgill has also sold, to Mr. Brewster, of Boston, a promising dog pup, by Champion ex Swayne's Nan.

DOMINION KENNEL CLUB.—The Dominion of Canada Kennel Club will soon increase the capital stock from \$5,000 to \$10,000, and inducements are to be held out, in the shape of important prizes, for the first annual bench show in March next, which will induce a large number of entries from England and the United States.—*Turf, Field and Farm*.

NEW KENNEL OF COCKER SPANIELS.—A new breeding kennel of Cocker spaniels has been recently established at Delhi, N. Y., by Chas. E. Hitt, who has christened it the Fleetwood Kennel.

ATHLETICS.

George Beats Myers.

The attendance at the Polo Grounds, New York, on the 11th inst., to witness the second race between W. G. George, of the Moseley Harriers, of Birmingham, England, and L. E. Myers, of the Manhattan Athletic Club, proved that an athletic event worth seeing still has attractions for the public. Over three thousand persons were present, the ticket sellers being kept busy long after the preliminary races had been commenced, and a large number of ladies were in the grand stand. There was little fault to find with the weather, which was mild and pleasant, though as much time was wasted in preparations for the great race the evening chill was beginning to be perceptible. What wind there was did not hinder the runners, the homestretch being well sheltered, while it was in their favor on the opposite side of the grounds. Two good handicaps and a very tame bicycle race formed the extra programme and they were all decided before the champions made their appearance. The bicycle race was run in heats, best two in three, and was won by F. W. Hunter, Columbia Athletic Club, who, with twenty seconds start, was not caught in either of the first two heats. Time, 3:37, and 3:39 2-5. F. E. Davidson, Lenox Bicycle Club, was second on each occasion. The other starter, F. Jenkins, Manhattan Bicycle Club, was third in the first heat and only rode two laps in the second. A 240 yards handicap produced some interesting racing. S. Derickson, Manhattan Athletic Club, won the first heat from scratch by a foot from S. A. Stafford, of the American Athletic Club, 2 yards start, who beat J. I. Smith, Palisade Bicycle Club, 10 yards start, by the same distance. Time 26 2-5 seconds. The second heat was won by T. W. Stoddart, 2 yards start, C. E. Schnyler, 5 yards start, being beaten by a foot in 26 3-5 seconds. Both are members of the Manhattan Club. G. H. Wood, of the Shamrock Lacrosse Club, started from scratch in this heat, but lost one of his shoes when he had seventy yards further to go, and he then only finished a yard behind the second man. The final heat was taken by Stoddart, Derickson being a yard and a half behind him and a foot in front of Schnyler. Time 26 1-5 seconds. The half-mile handicap produced another close race between T. J. Murphy, Park A. C., the scratch man, and R. Stoll, American A. C., ten yards start. There were six other runners with longer starts, but the two named were in front at the head of the straight. Murphy was then leading, but he was getting very slow as he got opposite the old grand stand, seeing which Stoll made a determined effort and three yards from the tape was level. Murphy was now completely run out, and pitching forward, fell over the finish line as Stoll carried away the tape. Time, 2:2 3-5.

As soon as the half-mile race was over Jack Goulding brought out the horse-roller to give a finishing touch to the track, which he had got into very good shape indeed, though Friday's rain had made it dead. The day was rapidly drawing to a close, and as both Myers and George were anxious to get the race off they were ready before the signal to come out was given. George had again taken up his quarters at the old Polo Club house, from the flag-staff of which the Union Jack of old England floated on the breeze, and as the tall Englishman walked up the track he was greeted in a manner which showed he had plenty of friends. Myers did not keep him waiting a moment, but at once came out of the room he occupied below the grand stand. It had been rumored during the afternoon that Myers was not well and was suffering from a cold, and he certainly did not look as bright as when he went to the scratch the previous Saturday. There

was a darkness under the eye and a pallor on the cheek which indicated anything but the condition he was expected to be in for a race at his opponent's best distance. Still his friends had confidence in his ability and there was a good deal of betting at even money, the Englishman being supported by a few bookmakers, with whose dealings it is only fair to say he had no connection whatever.

The work of removing their coats and wraps was but the work of a few seconds, and Mr. A. H. Curtis, as soon as they were ready, fired the pistol. George again had the inside position, and he at once began making the pace strong. Before he had gone 100 yards George was two yards in front of Myers, and this he increased to three yards on the backstretch. Sweeping around the lower turn George added another yard to his advantage, and at the quarter mile, reached in 1:01½, he was leading by four yards. Coming down the homestretch Myers closed up slightly, and as George completed the first lap in 1:23 Myers was little more than two yards behind. A word from the latter's trainer, Jack Fraser, brought him back to his old place, four yards behind the Englishman, who, it was known, would run quite fast enough for Myers' weakened condition. At the half mile George was leading by five yards and his time was 2:05½. Again did Myers reduce the gap as he came to the stand and at the completion of the second lap, in 2:52 1-5, George was only three yards in front. As soon as the leader entered upon the last quarter of a mile he knew he must make an effort to shake off his fleet opponent and kill his speed if possible, so he dashed away at a great pace, and half way down the backstretch had a good six yards lead. He jumped away so suddenly that the advantage was gained before Myers was aware of it, but the latter in turn increased his pace, and was holding George all the way to the 220 yards mark. As soon as he got there Myers began pacing, and the cry was raised that he now was coming, and come he certainly did for another hundred yards, but then he was run out and commenced to get unsteady. George was doing his very utmost, for he knew by the shouts that Myers was making his expected effort, and bravely the Englishman struggled on, tired and leg weary, but still in good shape. Fifty yards from the tape Myers was rolling about, and it looked as if he would fall, but he managed to keep on his legs, and as George breasted the tape Myers was fully twenty yards behind. The respective times for the full distance were—George, 4:21 2-5; Myers, 4:27 3-5. The crowd could not be restrained when the men were getting near the finish, but broke into the enclosure from all sides. They had good sense enough, however, to keep a clear course and allow the officials to have plenty of room. Cheer after cheer was given for the winner, who was too much exhausted, however, to realize much more than that he had won a hard race.

The timekeepers were distributed at distances of one-twelfth of a mile, and the following were the times returned for each twelfth:

1.....0:20	5.....1:45	9.....3:16
2.....0:40	6.....2:05½	10.....3:36 1-5
3.....1:01½	7.....2:29	11.....3:59½
4.....1:23	8.....2:52 1-5	12.....4:21 2-5

The fractional times when George ran his great race on June 3, at Little Bridge grounds, London, were as follows: One-third, 1:17½; half mile, 2:04½; three-quarters, 3:08 3-5; one mile, 4:19 3-5.

After the race Myers was found in his room lying on a camp bedstead. When asked if he had anything to say respecting his defeat he stated that he was sorry he was not able to make a better fight of it. He had caught cold on Wednesday and had been poorly ever since. "I have lost four pounds and have been doing no work to reduce myself, so you may know I am not in the shape I ought to be for a mile race with such a man as we all know George to be. I was not hopeful of winning, and yet I have run so well at times when I have felt poorly that I thought I might after all come somewhere near my expectations."

Mr. George was just pulling on his coat when the reporter arrived at his quarters at the other end of the grounds. He said: "Well, I tell you, although I beat Myers to-day there is very little between us. We are much nearer together than to-day's races would make us out to be, and the difference is more that of condition than anything else."

On Saturday next the third race of the series will be run, the distance being three-quarters of a mile, and as Myers won the half and George the mile the splitting-the-difference race is to decide who is to have the trophy to be given to the winner of two out of three races.

The University Field games last Saturday were held on their own grounds in Berkeley. Their track is oval-shaped, 300 yards in circumference, and instead of being a cinder path, is composed entirely of the native soil. The grounds are quite sloping, and on the upper side the track is over two feet below the surface, and is correspondingly elevated on the lower side. It is too loose, heavy and uneven for fast time, and the 100 yards finish appeared higher than the starting point. The entire track needs a great deal of scraping and rolling. The grounds for jumping were miserable. The games were conducted in a very quiet and gentlemanly manner, marked by the entire absence of jealousy or ill-feeling in any contest, but dragged so much that several events were omitted on account of darkness. Col. George C. Edwards, of the University, and C. H. Slater and W. R. Melville of the Olympic Club, officiated as timers, and Wm. M. Sims of the O. C. as starter and handicapper in all the running events. The time was poor in every one, but the track is very much slower than the Olympic Club track. We were unable to obtain a detailed account of the events. The best time for 100 yards was 11 seconds. The only open events won by strangers were the 220 yards and one mile, W. R. Stewart, of the O. A. C., winning the first named, and J. S. Grevan, of the Golden Gate Athletic Club, winning the mile easily in the slow time of 5:32.

The Olympic Club will give another out-door meeting Thanksgiving Day, on their grounds in Oakland. The first event will be a base ball game between the Olympic and Redington nines, to be followed by a handicap and bicycle race of one mile; 100 yards scratch run, open, R. S. Haley and Jos. Masterson barred; a 220 yards handicap, open, and 880 yards handicap, open. Finkler has already entered for the bicycle race, and King is expected to. They should both stop talking and start from scratch. Masterson is training specially for the 880 yards. W. R. Stewart is the only one in training that is supposed to be able to compete with him from scratch. Time will be called for the base ball game at 11 a. m.

All who wish to take part in the one-mile, one-half-mile, and one-quarter-mile foot races, also those who desire to enter their hounds in the hound race, which events are to come off at Recreation Park on Thanksgiving Day, will send their names or call at the Grounds before next Tuesday.

ROWING.

The Breeder and Sportsman Cup.

There are four San Francisco crews now in active training for the cup offered by the BREEDER AND SPORTSMAN and which by mutual consent will be regarded as emblematic of the championship of the Pacific coast. Last week there were but three crews in practice for the race but on Monday last a new competitor appeared in the guise of the Golden Gate Rowing Club of which the officers are: Wm. F. Brown, president; H. J. Daly, vice president; T. J. Kane, secretary; J. H. Johnson, treasurer and Jas. B. Brown, captain. This new club has entered as its crew in the race for the cup: James Keegan, stroke; Patrick Keegan, after waist; Wm. Brown, forward waist; Jas. Brown, bow. The crew is a strong one but is handicapped in its boat, as the only craft it can obtain in time for the race is a lapstreak. It ought to be impossible for the new crew in such a craft to keep company over three miles with men boated as well as the Pioneer and Ariel crews will be. There was a flutter among the Pioneer men last Sunday on receipt of a letter from John Sullivan, the stroke of the crew, announcing that he was going to the country and desired the crew to find a substitute. It is not an easy matter within ten days of a race to find a substitute for the stroke-oar of the best crew of a club and Mr. Sullivan's proceeding received anything but complimentary notice. The club did the best it could, however and proceeded to reorganize the crew, though the prospects of winning the cup grew very dim. On Monday Mr. Sullivan reconsidered his decision and wisely resumed his seat in the boat and has during the week kept steadily in training. As now organized the Pioneer Crew is certainly the strongest and should have the race in hand at the stake boat, but boating is a very uncertain sport and until a crew has come to the post well and fit it is unsafe to wager what they will do. The Ariel crew went into training under many disadvantages and at the time seemed a sure loser, but, nevertheless, kept on with admirable pluck and is now in excellent form. The Golden Gate crew which was regarded by the Long Bridge men as the best four on the bay, has left the club and will be replaced by a "four" that is considered greatly inferior and has certainly had insufficient practice. The race will, however, be one of the best ever rowed on San Francisco Bay and will be contested to the full capacity of each of the competitors. The rivalry is almost fierce and the four who win will have to row from pistol shot to finish. It was the intention of the BREEDER AND SPORTSMAN to publish an engraving of the championship cup which has been manufactured by Vanderslice & Co. and is of very handsome design. A delay of the engraving has delayed the publication of the picture but it will be given to the public simultaneously with the report of the race.

The cup is supported by crossed oars and has on one side a shield for the names of the victors and on the other side an engraving of a four-oar crew. The trophy will have to be won twice by one club before it shall become the property of any club. To take charge of arrangements a committee consisting of Charles G. Yale, M. C. Conroy and James Kerr, of the *Call* has been appointed. All three are gentlemen who take a great interest in aquatic sports and will exert themselves to make the race for the championship a credit to the oarsmen of San Francisco. It may not be irrelevant here to remark that it rests with the oarsmen themselves to make the efforts of the committee thoroughly successful. As the competition will doubtless be witnessed by a large number of spectators, it behooves the competitors to conduct themselves with dignity and take success or defeat like men and not accept either with the indiscreet elation of school boys or the effusive ill-nature of an old fish-woman.

Rowing at Long Bridge has suffered more than once in popular estimation by the inability of defeated oarsmen to accept their loss with the composure becoming gentlemen. The next important competition should be one to be remembered with pleasure, and as it will receive much attention the actors in it will not be soon forgotten. The committee of arrangements will select a referee and will if possible induce a popular and fair-minded gentleman from the other side of the bay to officiate. The course will be properly measured so that the performance of the winning crew will constitute the first actual record ever made over the Long Bridge course.

ROSS AND HIS RACE.—A dispatch from St. John, N. B., states that Wallace Ross, who some weeks ago claimed the aquatic championship of the world, will winter at home, taking such exercise as will keep him in good trim for an early opening next year. There is no money on deposit to bind his match with Hanlan, but he says when they meet his deposit will be ready, and he and Hanlan will have the "shy" at one another that many boating men in the States and Canada have longed to see. It is not known where Ross will train for his race with Hanlan, and it is a question whether he will again take his practice in Portland harbor under Kennedy's watchful eye, as he has done for two years past. The copartnership existing between Ross and Kennedy early this year has been dissolved, and, as Kennedy has as much on his hands as he can comfortably attend to, it is doubtful if Ross will row from the Dirigo clubhouse next season. Many people here cannot understand why Ross wanted a race for \$5,000 with Hanlan, and refused to make a match with Conley of the Halifax aquatic combination. It is known that the Nova Scotians were very desirous of getting one race with Ross before cold weather froze up the lakes and rivers, and it is also known that a representative of the Halifax Rowing Association came to St. John and used his best endeavors to get Wallace to row. The first proposition was for a race on Bedford basin. This Ross peremptorily declined. Then the Halifax gentleman proposed a home-and-home match, one race to be rowed on Bedford basin and the other on the Kennebecasis river at St. John. This Ross also declined to consider. Further conversation developed the fact that Ross did not want to row in any event, but, as he made a proposition for one race on the Kennebecasis, he would row that race if he was forced into it. Thereupon, as it appeared that he was an unwilling party, negotiations ceased. To beat Hanlan next June Ross must be in far better condition than he has shown this fall.

MAKING LITTLE OF COURTNEY.—Edward Hanlan says that he will row Courtney next summer any race he chooses to make, not under three miles, for \$2,500 a side, and he will give Courtney \$500 to make the race. He will row on any water that Courtney names. He also says that he will bet \$2,500 that he will beat any record that Courtney will make next summer, he to row over the same course within an hour after Courtney has pulled over it.

A Proposed Sweepstake.

The Boston *Herald* furnishes the following: Mr. Spellman, manager of the Halifax Rowing Association's oarsmen, spent a few days in this city recently, and, in conversation on aquatic topics, said that one of the best means of renewing interest in professional sculling would be a regatta which should bring all the best oarsmen in the world together, and in which the contestants should row for their own money.

"What is your proposition?" he was asked. "Well," said Mr. Spellman, "I have given the subject some consideration, and I think that a sweepstakes race of \$1,000 each ought to bring out at least six good men now on this side of the Atlantic. I think that Hanlan, Courtney, Ross, Kennedy and Lee would enter, and I am pretty sure that Hamm and Conley would be among the first to send their entrance money. I don't say that either of the Halifax men can beat Hanlan or win first money. We don't know until we have given them a trial, you know; but one or the other of them ought to be able to win second or third money, and, in that case, the association would not lose heavily, and we would have the satisfaction of knowing just how good our men were."

"What conditions would you frame for such a race?" he was asked.

"In the first place," was the reply, "I would have a lake or river selected by vote of the competitors, on which there would be ample room for staking out a number of courses. That is, I would have lines of flags, from start to turning stake, to indicate the water which each contestant must keep throughout the race, and I would have any man leaving his own water disqualified. That would prevent fouling, unless an oarsman intended to be deliberately intentional in doing wrong. We would enter our Halifax men only in a race of five miles—two and a half miles and return. If six scullers started, there would be a sweepstake of \$6,000. This I would have divided so that the winner should get \$3,500, the second man \$1,500 and the third man \$1,000. Of course, whenever a race of this kind is rowed, there will be gratuities or purses, and any moneys from such sources I would have divided among the three leading men in the same proportion as the stakes are divided. A race such as I suggest would be the greatest rowing event of the generation, and the public would know that it was rowed on its merits, because I know two men among those I have named who could not be drawn into anything "queer," and would row, from start to finish, for the first prize. Consequently there could be no corrupt combinations which would include these men. I hope to see such a race between the men I have named."

HANLAN'S FUTURE.—Hanlan has been looking all over New York for an opening, and it is very probable that he will decide to locate there if the inducements warrant it. The great sculler realizes how easily he could have made a fortune had he begun his career in New York, and thinks that even now there ought to be a good opportunity for him to do well. There are not enough admirers of good rowing in Toronto to make it a desirable place for a champion to remain in, and, consequently, Hanlan thinks of bidding adieu to his old home and seeking a new one. A gentleman prominent in aquatic sports in Halifax was here a few days ago, and, in course of conversation with Hanlan, suggested a double scull race between Dominion oarsmen, Hanlan and Ross to make one crew and Hamm and Conley the other; the race to take place next season. Hanlan did not take kindly to the proposition, and, in fact, said that, if he should ever decide to row in a double scull boat against the Halifax oarsmen, he would select some one other than Ross to be his mate. The impression among boating men is that a match is ready for Hanlan, no matter who he might select, as the Halifaxians are believed to be the fastest double in the world. Hanlan has thought of spending the greater part of the winter season in the South, giving exhibitions and keeping himself in good condition for his races next year.

WHAT DOES IT MEAN.—The Boston *Herald* thinks that Wallace Ross says and writes many queer things. The oarsman's latest is a letter written to "Pegasus," a writer on aquatic in the London *News of the World*. Pegasus writes: "I have received a letter from Wallace Ross, dated Oct. 14, and the New Brunswick sculler denies the statement that has appeared in the American papers to the effect that he is matched with Hanlan. Ross still appears very anxious to measure blades with Hanlan, and expresses a wish to row him during the winter season on the Thames for the Sportsman cup and £200 a side, or anyone else that aspires to championship honors. To arrive at this conclusion, Largin is the first person to be challenged, but I hear that the levitating young Irishman has no wish or inclination to defend his title to the cup so graciously conceded to him by Laycock. Largin did not go to Australia (as I explained six weeks ago), but settled down in San Francisco, where he is now engaged at his trade (house building), and when he has succeeded in putting up one or two for himself, he may return Mr. Devereux the money due to him." This must mean that the agreement "on honor" between Ross and Hanlan for a race next June was either made for the sake of appearances or that Ross intends to ignore his engagement with Hanlan. Perhaps Wallace can satisfactorily explain his letter to Pegasus.

WARREN SMITH'S DECLINE.—A correspondent writing from Halifax says: Warren Smith will not, in all probability, row another race. Warren has been in bad hands since he separated from the rowing association. He felt mortified and angered because his old friends and employers of the association retired him, and for a long time he did not realize that he had been going backward instead of improving in sculling. One of Smith's pastimes was wild-fowl shooting along the shore in the winter season. He would lie prone on a cake of ice for hours at a time waiting for birds to pass him. In this way he contracted a succession of severe colds, and when, a few months prior to the Hop Bitters regatta in England, it was found that Smith was not as good a man as formerly, his participation in the English race was opposed by many members of the association. Warren's defeat abroad demonstrated that he had lost his staying powers. At one time in his association career he gave great promise of being the premier sculler of the world, and all his old friends and admirers to this day state that he was capable of rowing two or three miles faster than any one ever rowed the distance, but never was a good man for five miles.

Edward Hanlan, the champion oarsman, who for some time past has been stopping in New York, has returned to Toronto by way of Boston to settle up his business affairs there, after which he will return to New York, where he will take up a permanent residence. His racing programme for next season has not yet been made up, but it is stated on good authority that he will row "double" with George W. Lee, the Newark

sculler. This action is in all probability the result of a conversation that Hanlan lately had with Mr. Freeman of Halifax, in which the latter stated his willingness to match Hanlan and Connolly against Kennedy and Davis or any other scullers "under one flag." Hanlan has therefore agreed to become a citizen of the United States to overcome that stipulation, and it may therefore be considered a certainty that the quartet named will compete in a pair-oared or double-scull race next year.

Edward Hanlan was a visitor in this city last week, and spent several days here. He says that John A. Kennedy will give him a harder race than he has ever been obliged to row, and adds: "But I will get there all the same."—*Boston Herald*.

YACHTING.

As big keel boats seem to be all the fashion just now, here is an account of the interior arrangements of one being built on designs by A. Cary Smith, by Poillon Bros. for Vice Commodore Hovey of the Eastern Yacht Club. The dimensions of the yacht are as follows: "Length on water line, 95 feet; length over all, 100 feet; breadth of beam, 22 feet 6 inches; depth, 13 feet; draught of water, 12 feet. The outside ballast, of lead, is about 11 tons. The main saloon will be entered by a companionway 19 feet 6 inches abaft the mainmast. On each side of the companionway a stateroom 8 feet long will be built. Aft of these staterooms, and extending fully across the boat, will be the owner's room, 10 feet in length. Aft the owner's room will be bath and retiring rooms. Forward of the staterooms, on each side of the companionway, is the main saloon, 13 feet 10 inches long by 21 feet wide. The mainmast comes down just abaft the forward bulkhead of the main saloon, on one side of which there will be a tiled fireplace and on the other side a mahogany bookcase, designed so as to harmonize with the fireplace. On the port side, forward of the main saloon, will be a stateroom 7 feet 10 inches long, opening into a bathroom forward. On the starboard side, opposite this stateroom, the pantry will be placed. The captain's room will be forward of the pantry, and on the same side of the boat. Still further forward are the rooms for the mate and steward. Between and forward of these rooms will be the galley, with a mean length of 12 feet. Forward of the galley are the quarters for the crew, which will be very roomy and well ventilated. The main pumps will be placed just forward of the mainmast, where they will be over the deepest part of the boat, thus avoiding long and easily injured lead pipes. The skylights over the owner's room and the galley will be made square, so that the tops may be turned around to act as windsails.

In New York Mr. A. Cary Smith is building a large schooner yacht. He is also engaged in making designs for three sloop yachts. The first will be 75 feet on water line, the second 60 feet on water line and the third 50 feet on water line. These boats will be put in hand as soon as the drawings are ready. Other boats are in contemplation, and without doubt will be definitely decided upon at an early date. The vessels already taking shape will aggregate in cost very close to \$100,000. Mr. Smith will have sole charge of the new boats from the time of laying their keels to their trial trips. He will furnish drawings in detail for all the iron work, and also for the gigs, cutters and other necessary small boats.

Mr. Harry Tevis has made arrangements to have a large fine keel yacht built. Mr. Hall, the builder of the Aggie, has made the design and she has been draughted, no model having been made. Wm. Stone, the builder of the Starlet Fawn, Magic, Peerless, Rambler, Lolita, Whitewing and other yachts, will build the yacht. The yacht will be about the size of that being built by Capt. Turner for the Spreckels brothers, and while smaller than the Casco, will be larger than the Chispa or Nellie. No pains will be spared to make this the finest and fastest yacht in these waters.

The interior of the new yacht for the Spreckels brothers is to be very handsome. The ceiling of the cabin is being ornamented with carved wood. The state-rooms are forward and the main cabin aft, though it was at one time stated that the cabin would be forward like the dining saloon of the Casco.

There is talk of Henry White, who used to own an interest in the Fleur de Lis, having a new 50-foot boat in the spring. She will be a keel boat and will be schooner rigged. Keel boats seem to be coming into favor out here just now.

Jack Purvis is making arrangements to launch the yacht which he has been so long building in his yard in Oakland. He has built a house down on the beach and will finish the yacht there after she is in the water.

The Pacific Yacht Club closed the season formally on Saturday. The occasion was a social affair, no yachting feature being connected with it. The prizes won at the September regatta were presented.

George Farmer is building a new plunger for Lake Merritt. She will be owned by Alexander Smith who now has the fastest boats on that sheet of water. Farmer is building this boat to carry sail well.

A new sharpie has been built in Oakland which is to be taken to Sonoma Creek. She is 26 feet long and will be sloop rigged.

For the next two months there will be very little done by the yachtmen, the short days interfering with the sport.

The Annie went up river last week on a duck hunting expedition having quite a party on board.

The sharpie Daisy was out sailing last Sunday and as the day was light she did very well.

The Ariel is lying in the channel in front of Turner's ship yard, Mission bay.

The Elia has been off up river on a duck hunt, but has returned.

The Magic has been off on a duck hunt but has returned.

The Emerald has been hauled out of water for the winter.

The Fleur de Lis has gone up river on a trip after ducks.

The Lolita is still up in the marshes.

Articles incorporating the Umatilla Land and Sheep Company have been filed. Incorporators are Messrs. John McCracken, Charles Hodge, J. S. Cochran, W. B. Cunningham and F. V. Andrews; capital stock, \$50,000; principal office, Portland. The chief objects of the company are to purchase land near Heppner, Umatilla county, to grow wheat, to buy and operate the Heppner flouring mill, and to raise sheep and hogs. The company have secured nearly 4,000 acres of land, well watered with living springs, and fronting on a creek for three miles.—*Weekly Statesman*.

THE MARYLAND KITCHEN.

How to Cook the Oyster, Terrapin, and Canvasback of the Chesapeake Bay.

Cooks, Connoisseurs, and Catchers—Baltimore Beauties and Baltimore Enterprise.

[Special Correspondence of the BREEDER AND SPORTSMAN.]

BALTIMORE, (Md.) Nov. 8, 1882.

In a former letter I promised to give your readers an account, so far as limited space will permit, of the cooking of three famed delicacies for which Baltimore claims, I think very justly, to lead the world. I refer to the oyster, the canvasback, and the terrapin of the Chesapeake and its tributaries.

Before discussing the subject, however, I beg to quote the following item from the Baltimore *American* of the 27th ult., relating to some of the Arabian horses referred to in my description recently of Mr. John W. Garrett's beautiful farm Montebello:

"The skeleton of the celebrated Arabian mare Saieda, which died at Montebello during the past autumn, and which has been in the hands of Prof. Joseph Palmer, of the Smithsonian Institute, Washington, for mounting, was last week transferred to the Museum of Natural History at Druid Hill Park, Mr. John W. Garrett having presented it to the commissioners as an object of permanent interest. The work of Prof. Palmer has been skilfully and scientifically performed, and visitors to the park will be greatly interested as well as instructed by the opportunity thus afforded to study the distinctive and remarkable points of strength and beauty of the pure Arabian type. Saieda and Esnea, her mate, were purchased for eight thousand dollars in gold in Damascus in 1832, and imported by the late Wm. McDonald. They were considered so valuable that the Arab grooms who attended them in Syria accompanied them to this country. The immediate living descendants of Saieda now at Montebello are Adniack, sired by Burlington, son of George M. Patchen, record 2:23; Sultana, sired by Bashaw Jr., record 2:24; and Gulnare, by Saladin, son of Daniel the Prophet. Mr. Garrett has also at Montebello numerous young animals of great style and beauty descended from Saieda. The skeleton of Esnea, the companion of Saieda, which was prepared under the direction of Prof. O. C. March, of Yale College, is now in the Peabody Museum, at New Haven, where it attracts great attention."

Now to the kitchen. There is an arbitrary sort of tradition which prevails here among cooks and connoisseurs, that the oyster is not fit to eat in any month from which there is absent the alphabetical letter "r." Be this as it may, the sensitive taste of such, I have eaten them at riverside homes fresh from their native beds, fat and throbbing, and as sweet as a unt. No doubt the chill to the water from the frost without is as strengthening to the bivalve in his shell as to a mortal in his overcoat and he comes up to the surface smiling—as it were—on a cold December day in his best condition. There are so many and varied ways of placing the luscious morsel on the table that it has become an inflexible taste that in any form it is equally good to take. It is *en regle*, however, at luncheon, to appetize upon a half dozen uncooked and on the shell, as an earnest of the larger appetite that is thus revived for a banquet. The condition precedent is that such a snack must be lightly fresh, seasoned only with a drop of lemon juice, and to help along it is the thing to munch a cracker. Liquid accompaniment should be a brewed beverage, as it has been found that spirituous drink renders the tender oyster tough and indigestible. You have heard of the restaurateur who coupled his name with the initials, "F. R. S.," and being taken for a Fellow of the Royal Society explained that this addendum meant only "fried, roasted and stewed." This was business, and these are the favorite dishes with the crowd, but the private repast favors the scaloped or the broil, and in these forms, from some old Maryland kitchen, are the most sumptuous. An overdone oyster is a blunder worse than a crime, hence in stew or soup the liquor is first well cooked and savored, and the oyster is only introduced therein, to give it a swim in the boiling mixture. In a minute or two it "plumps," and retains all its form and flavor. One minute too long in the pot, it shrinks out of shape and loses all its luscious qualities. It has taken the experience of a life to render up a first-class fog. Not more than half a dozen Baltimore cooks have ever reached the exalted plane of knowing how to do it, and it is a secret of large profit to get one upon short notice. For be it known that out of this same experience the out-late husband who has been "detained down town on business" has found the sovereign solace for his spouse's ill humor at home in a charming box of fried. So it has become a fashion of long standing for these belated men of the town to take with them these mutual comforts, to assuage the harshness of a wifely greeting, and to ameliorate the conventionalities of a midnight reception. Take a good-sized oyster, plump it, then roll it with care in the best cracker dust, then dip in boiling butter or lard as one would a doughnut, and you have the idea; the exact turn, however, must remain hidden in the brain of the expert.

A roast on a coal fire is talent wasted and a good dish of spoiled. The thing to be cooked by this means is altogether too intimate with the fire and is corrupted by an evil communication with the gaseous influence of the coal. An old-fashioned fire-place is the domain of an oyster roast; a bed of live embers, the resting place of the pride of the epicure, for we can imagine its degree of heat to be just of the right intensity to open the shell almost by a touch, and that is enough to furnish a feast. The broil requires a miniature gridiron, made for the purpose, and I don't if any is yet invented that will cook without scorching. Until some happy accident brings forth the perfected arrangement it is hardly worth our while to dwell upon this feature of the cuisine.

The scaloped is something dainty. It takes its name from a former mode of preparation, when the patty was covered with a fine crust, edged like a baker's pie. Now-a-days, we take a vegetable dish kept hot on the stove, place at the bottom of it a layer of dry toast, and this is the foundation. Cover this with oysters stewed and very little liquor, and so on with alternate layers until the dish is filled, the last top layer of oysters sprinkled with cracker dust and the whole is ready for a very brief basting in the oven. The stew properly flavored with a pinch of some aromatic and watched with care in baking to brown merely, and the toast not permitted to become sodden, you would have an entree done up to the Queen's taste.

As we rise in the scale of the high-liver's delights let us take up next what to the epicure would probably rank first and which *sui generis* has no compeer as it is exclusively and peculiarly a product of the bay shore rivers of Maryland. It is true that the terrapin has been transplanted, and attempts have been made to cultivate and improve, by a system of culture, but the native haunts of the genuine diamond-back are the shoals and inland river-flats adjacent to the Chesapeake. The season is just now near at hand, and there are very few catchers for so large a market, the first for sale bringing prices which the rich alone can afford. Ranging as

high as \$50 per dozen in times of scarcity, and running down to twenty-four, or less, when plentiful, you can measure the expense of the far-famed stew with all the ceteras thrown in. Here let us halt; I am on the brink of the fathomless abyss of science, and fear to advance. Imagine all you may of the choicest compound of edibles, the rarest bird, the tenderest fowl, the most delicate fish, all commingling with spiciest condiments and a smack of royal Burgundy withal, and you can form some conception of the most tasteful viand of a Baltimore table.

There was a vander once, one of those quaint oddities which one will meet in the many strange vocations of a big city, who amassed a small fortune in the calling of the terrapin catcher. He was a portly, good-humored darkey who, beside his ordinary rude habiliments, wore heavy wooden clogs and yarn stockings to the knees, whose wonderful dexterity in always having the best and plenty of them was a marvel to the rest of his tribe. He took his orders from the homes of the well-to-do, disappeared suddenly, and suddenly reappeared with his rickety old wagon and forlorn looking "boss." But alive and kicking under the hay which lined his shattered vehicle, were to be found scores of the rarest and richest terrapins. He was reticent and crafty, and wonder turned to fear at the celerity of his movements and the unvarying good luck of his catch. Darkies shook their heads and shunned him as in league with Satan—just as if the devil knew something about a terrapin stew—others fancied that the clogs and woolens had a special relevance to his strange pursuit. Howbeit, he was watched, tracked, run-down, in short, found out, and his monopoly of the diamond-shields became the spoil of invaders. He has gone out of the business in disgust, and the tramp of his heavy shoes, the creak of his shabby drag, are things of the past.

The next is a duck of a dish, but you who shoot whole flocks in the sport of a day cannot very well comprehend the difficulties and dangers in the hunt of the famous canvasback. Every kind of device has been resorted to, to get within easy shot of the wary fowl for a chance mark on the wing. But the cooking of it when brought down is more in the vein of this letter. Here comes up another of those hidden mysteries, wherein he who holds the key is as exclusive as a Knight Templar. Nevertheless, a young canvasback on the spit must be done to an exact turn, or turned over to the dogs. This nicety is an absolute necessity of the art, for you must know that all the peculiar virtue of the bird's meat lies in the aroma which impregnates the flesh from the food it fattens on. This being of the tenderest roots, and the wild marsh celery, the racy flavor imparted is at once destroyed by bad cooking. I only know when well cooked it comes on a chestnut brown, shimmering in the drippings of country butter, and is a feast for the gods. In quantity it is a little different from the Englishman's turkey which was too much for one meal but not quite enough for two, and two ducks for a hearty man is not much to smack one's chops at.

As to the hunt, the mid-winter cold on a dismal swamp where hunter often wades knee-deep is a sore provocation to rheumatism and kindred ills, but as your readers already know we have for every shooting bag the sovereign pain-curing antidote in the Great German Remedy, St. Jacobs Oil. As this has become the unexampled sensation of Southern enterprise known for its miraculous pain-curing properties, the difficulties of duck shooting are easily overcome. Like fame bearing the banner with a strange device, its career is onward and upward, and the new firm—a combination of great strength and wide business influence—has added increased vitality to its more than wonderful success. Mr. Christian Devries, now the leading partner of the house, himself a restored invalid from the use of the unequalled remedy, is a member of the firm of Wm. Devries & Co., one of the oldest and most substantial mercantile establishments of the country. President of the national bank of Baltimore, one of the oldest and soundest financial institutions of the city, and a director of the Western Maryland Railroad. Mr. H. D. Umbstaetter, the former advertising manager of the old firm, has been advanced to a partnership, and will continue his supervision of the most complete and perfect bureau of its kind in the world, handling as it does thousands and thousands of newspapers, with a corps of short-hand and type-writers, the most expert in the business.

But the point of good fortune taken from the sudden turn in the wheel lies in the fact that the widow of the late Mr. Vogeler should so happily arrange for the continuance of the business in his name in the magnificent structure which becomes a monument to perpetuate his great zeal and industry. She steps into her late husband's place as a partner in the concern.

And speaking of the bravery of women, one cannot do better than to turn to its most graceful adjunct, their beauty. There is something exceedingly attractive in that which gives fame to the pretty faces of the maidens of this place. I have studied it with some care, and have often paused to admire, but while I am free to praise the soft cream complexion and the swimming dark eye, I am just as free to say that the pink and white bloom on the cheek of a Pacific slope girl is a far more delicate type of loveliness. But so as not to invite attack, nor to endanger my peace of mind or personal safety on grounds where angels fear to tread, this is perhaps a good pause in which to close.

HIRAM HAPPY.

As early as 1810 Charles Colling of England sold his Short-horn bull, Comet, for \$5,000.

BASE BALL.

Niantics vs. Renos.

The game at the Recreation Grounds Sunday resulted in the following score:

Earned runs—Niantics 2, Renos 1. Bases on balls—Niantics 5, Renos 1. Struck out—Renos 8, Niantics 4. Wild pitches—McElroy 1. Passed balls—Irwin 2, Finn 5, Creegan 3. Two-base hits—Riordan. Three-base hits—Finn, Sweeney. Home run—Denny. Double play—Sweeney. First base on errors—Renos 9, Niantics 5. Umpire—J. Taylor, Atlantics.

Market Report.

FLOUR—We quote: Best City Extra, \$5 37½¢ to \$5 50¢; Superfine, \$4 50¢ to \$4 75¢; Interior Extra, \$4 75¢ to \$5 25¢; Interior Superfine \$3 66½¢ to \$4 11¢. WHEAT—No demand for any but No. 1 grade which is strong at \$1 70¢ to \$1 71½¢. Good Coast Wheat sells as low as \$1 40¢ per cbl. On call at Produce Exchange recently, sales were recorded as follows: No. 1 White November \$1 74½¢; do December \$1 73½¢ to \$1 75¢ cbl.

BARLEY—Market steady. Recent sales No. 1 Feed December, \$1 48¢ to \$1 48½¢; do January \$1 50¢ to \$1 51¢. Brewing at wharf offered \$1 48½¢, no customers. Spot Feed, \$1 45¢ and \$1 47¢ asked.

OATS—Market steady. Fair Feed, \$1 70¢ to \$1 75¢; Good, \$1 75¢ to \$1 80¢; Choice, \$1 80¢ to \$1 90¢ cbl.

RYE—Quotable at \$2 12½¢ to \$2 25¢ for No. 1, and \$1 75¢ to \$1 90¢ per cbl for No. 2 grade.

FEED—Ground Barley, \$32¢ to \$33¢ per ton; Cracked Corn, \$38¢ per ton. Short, \$20¢ per ton. Oatmeal meal the oilworks sell to the trade at \$32 50¢ per ton, less the usual discount. Middlings, \$27¢ to \$28¢ per ton for lots at the mill.

HAY—Alfalfa, \$11¢ to \$13¢; Wheat \$16¢ to \$17¢; Wild Oat, \$15¢ to \$17¢; Mixed \$12¢ to \$14¢ per ton.

PROVISIONS—Eastern Hams, 19½¢ to 21¢; California Hams, 16½¢ to 16½¢ for plain, 16½¢ to 17¢ for sugar-cured canned; Eastern Breakfast Bacon, 17½¢ to 18¢; California Smoked Bacon 16½¢ to 16½¢ for heavy and medium, and 17½¢ to 18¢ for light and extra light; Clear Sides, 16½¢ to 16½¢; Pork, \$21 50¢ to \$22 for Extra Prime, \$24¢ to 25¢ for Prime Mess, \$25¢ to 25¢ for Mess, \$27 for clear and \$28 to 28 50¢ for extra clear; Pigs' Feet, \$16¢ to \$18 per bbl; Mess beef, \$17 for bbls and \$8 for hf bbls; Extra Mess Beef, \$16 for bbls and \$8 50¢ for hf bbls; Family Beef, \$17 to 17 50¢ per bbl; California Smoked Beef, 14¢ to 14½¢ per lb.

FRUIT—We quote: Apples, 30¢ to 50¢ for common and 75¢ to \$1 per box for good; Pears, 50¢ to 1 25¢ per box; Wine Grapes \$20¢ to \$30 per ton. Figs, 60¢ to 1 per box; Grapes, 75¢ to 1 per box; Lemons, \$6 50¢ to \$7 50 per box for Sicily and \$8 per box for California; Limes, \$3 50¢ to \$6 per box for Mexican; Bananas, \$2 to \$3 50 per bunch; Mexican Oranges \$20¢ to \$25 per thousand; California \$2 25¢ to \$2 75 per box; New crop Western Cranberries are offering at \$15 to \$17 per bbl.

VEGETABLES—We quote: Marrowfat Squash, \$8 to 10¢ per ton; Carrots, 30¢ to 35¢; Turnips, 75¢ to \$1; Cauliflower, 75¢ to \$1 per dozen; Cabbage, 50¢ to 75¢ per cbl; Garlic, 4¢ per lb; Green Peas, 2½¢ to 3¢ per lb; Green Peppers, 50¢ to \$1 per box; Tomatoes, 75¢ to 90¢ per box; Celery, 50¢ per doz; String Beans, 6¢ to 7¢; Lima Beans, 5¢ per lb; Green Corn, 75¢ to \$1 per box; Okra, 75¢ to \$1; Egg Plant, 75¢ to \$1 per box; Dried Okra, 18¢ to 20¢; Dry Peppers, 15¢ to 18¢ per lb.

POTATOES—River Red, 60¢ to 75¢; Early Rose, 75¢ to \$1; Garnet Chile, \$1 to \$1 10¢; Humboldt, 90¢ to \$1; Tomatoes and Potatoes, 87¢ to \$1; Peerless \$1 to \$1 10¢.

ONIONS—Quotable at 50¢ to 75¢ for good and 25¢ to 40¢ per sack for poor. BEANS—Bayos \$3 75¢ to \$4; Butters, \$3 to \$3 10 for small and \$3 20¢ to \$3 30 for large; Lima, \$3 75¢ to \$4; Peas, \$3 to \$3 25; Pink, \$2 75¢ to \$3; Red, \$2 75¢ to \$3; small White, \$3 to \$3 25; large White, \$2 75¢ to \$3 per cbl.

BUTTER—We quote jobbing lots: Fancy, 37¢ to choice, 32½¢ to 35¢; fair to good, 27½¢ to 30¢; inferior lots from country stores, 22¢ to 25¢; firkin, 27¢ to 28¢ for good to choice, and 26¢ to 29¢ for ordinary; pickled roll, 26¢ to 28¢; Eastern, 18¢ to 22¢ per lb.

CHEESE—Prices steady. California, 13¢ to 14¢ for choice; 10¢ to 12½¢ for fair to good; do, factory, in boxes, \$15 to 16; Eastern, 16¢ to 17¢; Western, 8¢ to 12¢ per lb.

EGGS—California choice, 50¢ to 53¢; Eastern, 37½¢ to 45¢ per doz.

POULTRY—Live Turkeys, gobblers, 10¢ to 13¢; do Hens, 10¢ to 12¢; do dressed, 12½¢ to 15¢; Roosters, \$5 50¢ to \$5 50 for old and \$5 50¢ to 60¢ for young; Hens \$5 50¢ to \$6 50; Broilers, \$4 to \$5, according to size; Ducks, \$6 50¢ to \$8 per dozen; Geese, 1¢ to 25¢ per pair; Goslings, \$1 50¢ to \$2 per pair.

GAME—Market well supplied this week. Quail, 75¢ to \$1 per dozen; Mallard Ducks, \$2 to \$3 50; Sprigs, 1 25¢ to \$1 75; Canvasback, \$2 to \$2 50; Brandt, \$1 to \$1 12½; Gray Geese \$2 to \$2 50; White Geese, \$1 25 to \$1 50; Honkers, \$3 75¢ to \$4; Snipe, \$1 25¢ to \$1 50 for English and 50¢ to 75¢ for common; Teal, \$1 to \$1 12½; Wildgeese, \$1 to \$1 12½; Hare, \$1 75¢ to \$2 25; Rabbits, \$1 25¢ to \$1 75.

WOOL—Light trade. No change in the prices. We quote: Choice Fall, 15¢ to 17¢; Fair do, 13¢ to 14¢; Defective Fall, 9¢ to 11¢; Spring (free), 20¢ to 24¢; Spring (defective), 15¢ to 18¢ per lb.

HIDES AND SKINS—Dry hides, usual selection, 20¢ to 21¢ per lb; hides one third less; and Mexican Hides 1¢ to 1½¢ per lb less. Dry Kip, 18¢ to 20¢; Dry Calf, 21¢ to 22¢; Scaled Steers, over 500 lbs, 11¢ to 12¢; Steers and Cows, medium, 10¢; light do, 9¢; Scaled Kip, 15¢ to 30¢ lb; Scaled Calf, 14¢ to 15¢ per lb; Dairy Calf 70¢ to 80¢ each; Sheep Skins, 25¢ to 30¢ for Shearings; 30¢ to 50¢ for short, 60¢ to \$1 for medium, and \$1 to \$1 50 for long wool and wool skins. Butchertown Green Skins bring higher prices.

TALLOW—Quotable at 9¢ to 9½¢ per lb for rendered and 11½¢ to 12¢ for refined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 9¢ to 10¢; medium grade, 7½¢ to 8½¢; inferior, 6¢ to 7¢ per lb.

VEAL—Large Calves, 7½¢ to 8½¢; small ones, 9¢ to 10¢ per lb.

MUTTON—Wethers are quotable at 4¢ to 4½¢ and Ewes at 3½¢ to 4¢ per lb, according to quality.

LAMB—Quotable at 6¢ to 6½¢ per lb.

PORK—Live Hogs, 7½¢ to 7½¢ for hard and 6½¢ to 6½¢ for soft; dressed do 10¢ to 10½¢ per lb for hard grain hogs.

OUR NEW AMERICAN LEVER WATCH!

After months of labor and experiment, we have at last brought to perfection a NEW WATCH. It is a Key Winding Watch with the celebrated Anchor Lever Movement, Expansion Balance, Fully Jeweled. They are made of the best material, and in the very best manner, so as to insure good time-keeping qualities. The Cases are made of our Celebrated Composition metal known as **Aluminum Gold**. This metal has a sufficient amount of gold in the composition to give the watch a genuine gold appearance. Indeed it cannot be told from a genuine Gold Watch except by the best judges as the metal stands the acid test as well as pure gold. The cases are finely engraved or engine turned and are massive and strong and very handsome making it just the watch for Railroad men, Mechanics and all laboring men who require a good strong watch and an accurate time-keeper. For trading and speculative purposes, it is superior to any watch ever before offered. They can be sold readily for \$15 and \$20 each, and traded so as to realize double those amounts. Farmers as well as Agents can handle these watches to advantage, as they can be readily exchanged for stock or goods. We send the watch free by registered mail, on receipt of \$2.00. Or we will send it C. O. D. on receipt of \$1.00 and a count; the balance can be paid at the press office. We also have very fine Aluminum Gold Chains at \$1.00 each. Beautiful Medallion Charms 50 cents. We have hundreds of testimonials, but have room for only two.

Hot Springs, Ark. June 3d, 1882.
World Manuf'g Co. Gents.—The New American Aluminum Gold Watch I ordered of you some time ago is duly received and I am so well pleased with it that I enclose Seven Dollars, P. O. order, on account, for which please forward by express C. O. D. for balance, three more of the same style with chains to match. Respectfully, Carleton Taylor.

Leavenworth, Kan., Aug. 7th, 1882.
World Manuf'g Co. Gents.—The Aluminum Gold American Lever Watch purchased from your firm has proved a good time keeper, and gives perfect satisfaction. Enclosed find cash for two more, same style. Yours, G. P. ECKERT.

Send all orders to **WORLD MANUF'G CO.**
122 Nassau Street, New York.

It is seldom that we meet with an article that so fully corresponds with its advertised good qualities as does the New American Lever Watch. It has the advantage of being made of that precious metal Aluminum Gold; its works are of the best make, and the general style of the case rank it with the best Watches made anywhere. We recommend it to our readers as a Watch that will give entire satisfaction.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879.
REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J, in combination with the elastic connecting-strip I, substantially as described, and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

THE BREEDER AND SPORTSMAN CUP (REDUCED ONE-HALF).

The Race for the Cup.

The race for the cup offered by the BREEDER AND SPORTSMAN took place yesterday and like the majority of honestly contested boat races proved a complete surprise. The popular interest in the race was evinced by the immense number of people that assembled to witness the contest. Long Bridge was crowded with spectators and the rigging of the ships in Mission Bay was black with adventurous admirers of aquatic sport. The race was set for the forenoon but the delay in clearing the course of obstructions and in fixing stakeboats so as not to drag in the flood tide caused the event to be decided in the afternoon. The crowd looked on patiently at the preparations and when the competitors appeared, testified their interest by cheering. The Pioneer crew took a spin over the course an hour before the race, and then returned to their boat house. The Ariels were the first to show up in racing rig and carried a windsail on their boat—a precaution

which proved unnecessary as the air was still and the bay as smooth as a mirror. The Ariel four were Leander Stevenson bow, Oscar and Alf Branch in the waist and Jas. Corcoran stroke. The Golden City crew consisting of the Brown and Keegan brothers was next to appear. They rowed the Ariels old lapstreak boat and were looked upon as entirely out of the race. Their craft weighed at least twice as much as the boats used by the Pioneers and Ariels. The avowed object of the Golden Citys was to prove that handicapped as they were they could make a good showing with the Golden Gate crew. In this they were disappointed by the withdrawal of the Golden Gate crew at the very last moment. Walthour the, stroke of the Golden Gates, exhibited his bruised hand to the judges and declared his inability to row. The other members of the crew had been attending the club ball on the previous night and were even less fit and inclined to row than the stroke and their entry was accordingly scratched from the list of starters. At noon the Pioneers,

Golden Citys and Ariels were afloat and the work of sending them off began.

The flood tide was running in with vigor and it was no easy task to get the boats in line. After several ineffectual attempts to get off on even terms a further delay was caused by the Pioneers breaking the steering wire of their rudder. Half an hour was spent in repairing the damage, and it was nearly 1 o'clock before George Strong, who acted as referee, could send the crews off. While the men were waiting at the line there was a good opportunity to compare them. The Ariels seemed much the lightest crew, and the Golden Citys the strongest. The Golden City four looked a very powerful lot and if well boated would have stood more than an even chance to win. The Ariels had the inside station, the Golden Citys next and the Pioneers outside. The start was fair. The Pioneers were the first to catch the water, but they had hardly pulled twenty strokes when the Ariels began to lead.

(CONCLUDED ON PAGE 356.)

THE STABLE.

"Tips and Toe-Weights."

The editor of the BREEDER AND SPORTSMAN has a work in press which bears the caption of this article. The work consists of a series of papers, the first of which was published in April, 1876, and which were the result of experiments in shoeing conducted by the author extending from the fall of 1875 to the present date. The first article was written in April, 1876, and as the trials were made others followed.

The work will contain an account of the various experiments and the lessons they gave.

The only horses which were available were those we owned and hence the field was narrowed and the trials prolonged. As there has been much discussion of late regarding the use of tips, several of our subscribers being anxious to learn what had been the result in the case of Anteeo, the colt which had elicited the discussion we resolved to anticipate the publication by giving the history of him and his brother Antevolo which has a direct bearing on the question.

In the cases of others experimented with there had been a chance for comparison as different patterns of shoes and tips had been tried, and every change carefully noted. But when Anteeo was broken we had become so thoroughly convinced of the superiority of the system which we now follow, that Anteeo has never worn a shoe on his front feet. A great majority of the trainers are of the opinion that he would trot a great deal faster if shod in the ordinary manner, though that idea is, of course, purely conjectural, not a single one of them having the knowledge that will warrant the authoritative statements promulgated.

When the work appears, those who read it will have an opportunity to form an estimate, as in all the cases cited there was an improvement of speed when tips were worn.

The extract published in this number of the paper was written the 4th of last March, when Anteeo was thirty-four months old, and the next issue will continue the history to the present day. It is also necessary to explain that in a preceding chapter there is an account of the partial conversion of a friend who saw the tips removed, the foot pared, and the tips reset on X.X. Before that no argument could convince him that a horse could be driven daily on the streets of Oakland without further protection than a tip afforded, and not go lame. Argument was met with counter-argument and until he saw the practical results he obstinately adhered to his previous belief.

The chapter is under the title of

"A Perfect Foot."

It may appear somewhat egotistical for the writer to illustrate the lessons on shoeing with histories of his own horses, but owing to the absence of other data, that course is forced upon him, and without entering into minute, and perhaps, in some cases, tedious descriptions, the explanations would not be clear. The few which were available for experiments have necessarily extended the time to a long period, and it is now six years since the departure was made. In every case, excepting the one which will be the subject of this chapter, the animals experimented with had worn full shoes, and though this gave the opportunity of contrasting the systems, it is evident that others were needed to show the benefits which would follow from the functions of the foot never having been interfered with. The colt, Anteeo, gave this opportunity, and so far as can be determined by a trial, extending from the time he was nearly fourteen months old until now, when thirty-four lunar revolutions have elapsed since the date of his birth. The history of these twenty months of childhood had to be quite full in order to give, with clearness, the state of the case, and in order to show our friend the actual every-day life without the trouble of going over the pages of the journal, the information was condensed into the following synopsis:

Anteeo was foaled on the 5th day of May, 1879. This being rather a "late colt" for California, we determined not to breed the mare, and permitted him to suck as long as it was deemed beneficial, though after he was six months old, it would have been as well to wean him, and the two months more were of little benefit. Before he was weaned he was led a few times by the side of his mother, showing fine action when trotting. The day he was eleven months old; led him by the side of X.X., and occasionally afterwards; and on the 26th of April, timed him a quarter of a mile in 1:10. This was certainly a fair beginning, and on the 29th he made 1:07. Nothing more was done with him until June 3d, when led by the side of X.X., he trotted a quarter in 1:05; and on the 5th and 7th, in 1:04. On June 12th he was harnessed and driven by the side of X.X.—the horse in the shafts of a breaking cart, the colt on the off side, his traces hitched to a whistle-tree which was fastened to a bar tied to the shafts, and projecting far enough for the purpose. He had been driven previously with the harness on to accustom him to being reined, etc., and drove very quietly. On the 22d of June, he was shod with tips, weighing about four ounces each. His exercise was confined to leading him by the side of X.X., and on the 26th of June he trotted the "hack-quarter" in 58 seconds and the homestretch in 56 seconds. This was a manifest improvement, which was ascribed to the tips favoring his action; and on the 14th of July, he was hitched to a breaking cart, and he went quietly. On the 20th of July he was harnessed to a light sulky, but he could not trot within 15 seconds to the quarter as fast in that as when led. This was thought to be caused by striking his hind foot when going under the front, and rolls on his hind pasterns improved him, but not enough to show the speed when he was led. To test the effects of the toe-weights, on the 6th of August tips, with a "spur" welded to them, were put on, spur and tip weighing seven and one-half ounces, and on the following day he was driven with them and toe-weights of three and one-half ounces. He trotted better, but pulled up quite lame, which we thought was occasioned by paring the foot. The boy who held him at the shop ascribed it to a twitch the blacksmith gave his leg. He had driven the nails and taken the foot forward to clinch them, when the colt tried to get his foot away. The smith had a grasp with his left hand immediately below the knee, and the foot in his right, and when the colt struggled he snatched it violently upwards. The diagnosis of the boy proved correct, as ultimately there was swelling just below the trapezium. Think-

ing it more trivial than it afterwards proved, on the 9th a pair of hind shoes were put on, in order to hold a scalping boot, but the swelling and lameness continuing, notwithstanding fomentations and cooling appliances, the shoes were pulled off, a light blister applied, and he was allowed to run in a small lot during the day. October 3d he was taken up and driven barefooted a quarter in 58 seconds, and on the 10th in 54 seconds. Previous to this we had given up all expectations of trotting him in the Embryo Stake of 1880, though the move was so satisfactory that it was concluded to give him another trial. On the 13th of October he was shod with tips in front, weighing six ounces each, and shoes behind, so as to attach scalping-boots. On that day he was weighed, and for a colt of seventeen months old he showed plenty of bulk, as the record was 810 pounds, and 14½ hands high. The 23d of October he was a trifle lame, and his work was limited to a jogging, with an occasional spurt of speed. On the 28th the tips were reset and lighter hind shoes put on. The tips had been worn some, and were filed down to 4½ ounces each, including the nails, and the shoes the same weight. He was driven the following day in 3:48, and we were satisfied that he could trot the mile better than 3:20. This view proved to be correct, as on Nov. 5th he won the stake in 3:17½, the last half in 1:37½, and evidently could have gone considerably faster. He was worked slow, and on Nov. 10th the tips were reset, and three-quarter shoes, covering the toe and outside wall of the hind feet, put on. The use of the three-quarter shoes has been partially explained in former articles, but later experiments have shaken the old belief, and the effects are so different from what was formerly anticipated that it is likely there will be a complete change. It will require one or more chapters to present the features, and as this is mainly to show the result of the use of tips, the consideration will be postponed. On the 12th of November he was driven in 46 seconds, and this was the fastest time he made in his yearling form. He was driven a few times on the road and ran in a small lot during the winter, when the days were suitable. On the 4th of April, 1881, his feet were trimmed, and he was led to the track. On the 15th he was hitched to a breaking-cart, driven a few times, and again turned out.

In explanation of the erratic manner he was exercised during the summer of 1881 a brief statement is required. A colored boy who accompanied us from Chicago was the only help kept. He broke the colt and worked him and drove him in the race. From a fall, when hoisting hay into the barn, supplemented with a cold taken when on a duck-hunting expedition, his lungs were affected, and we did not feel that he ought to be permitted to risk the laboring working and taking care of a colt none the easier to manage. He was extremely sensitive about any one else taking care of him or others to drive, and we were too much occupied with work which had to be done to give him personal attention. Thus on the 5th of May he was driven to a breaking cart and turned in a small lot as before until June 1st, when he was driven slow in breaking cart until the 9th. On that date put on tips, weighing four ounces each, the day before he was shod behind with shoes covering the toe and outside, leaving the inner bare. After putting on the tips he was driven to a sulky for the first time since November, and moved fast. He was driven occasionally until June 29th, when having to attend the races at Sacramento he was turned in lot. The 11th of July put on tips weighing five and one-half ounces each, and he wore them until August 8th when they were replaced with others of seven and one-half ounces each. While wearing those he trotted a quarter in 43 seconds, and on the 29th of August they were taken off and others put on of three and three-fourths ounces. With the light ones he handled himself more satisfactorily, though having to attend the fairs of the Golden Gate and State Agricultural Society he was turned out, the tips being always left on when the time was expected to be short. He ran in the small lot during the day from the first to the 28th of September. On Oct. 6th put on weights weighing five and one-half ounces each, and on the 14th drove him a mile in 2:54½, the last half in 1:24, and keeping him all the time well within his rate. On the 18th he trotted a quarter in 40 seconds, and we felt assured that he could show a "thirty gait" if called upon. We drove him in this summer's work, though as is evident, it was of too desultory a character to be called training. Still it was a fair test of the tips both as to the effect on the feet and to improvement in trotting. We were laid up part of the time, confined to our room from the 24th of October, and from then to the race he was in the hands of another colored boy who came from the East with us.

He won the second Embryo with him making the third heat in 2:52, when again he was turned out. On January 2nd of this year tips were put on, the same which he wore in the race, and from that time until the 23th he was allowed to run in the lot or exercise by leading when he was harnessed to the breaking cart. He was driven on the streets of Oakland, daily, generally long drives, and at times fast, the tips having been reset on February 7th, but merely paring enough so that the old nail holes could be used, and on the 23d, of February was the day fixed for our friend to witness the operation, and see the condition of the foot. The tips were semicircles with a diameter of five inches, and this brought the posterior portion about three-quarters of an inch in the rear of the point of the frog. They weighed seven ounces each and were three-eighths of an inch in thickness at the end, being a trifle thicker at the toe, the width at the toe seven-eighths of an inch and at the ends five-eighths. They were made of tool steel, the nail holes countersunk on the ground surface, in place of being "creased," the countersinking deep enough to imbed the head of the nail. From so little horn having been cut away when the tips were reset there was a superabundance of horn, and the shoulder for the end to rest against was cut deeper than was required to imbed the tip. The rasp was used to lower the outside of the wall, beveling it to the gauge mark on the outside, and back as far as the shoulder. We then called the attention of our friend to the heels of the feet, and width and elasticity of the frogs. There had not been wear enough to reduce the wall to the level of the sole and bars, and it was prominent and without a break. From the shoulder for the tip to rest against to the junction of the wall and bars was a little over two inches, and it would be impossible to improve on the general contour of the foot. This our friend admitted and when the knife was used to cut away the superfluous horn, back of the rasping, there was only a slight discoloration which the first shaving entirely removed. The enamel having been cut with the rasp, it was an easy thing to cut the other portion with the keen, thin hoof-knife, though the thinnest shavings were as tough as the best quality of whalebone. It was a work of time to get a smooth, perfect bearing for the tip to rest upon, and when a fine rasp and file was brought into play to perfect the fit it cut slowly. There were three nail holes on each side of the tip, and our friend thought two would be sufficient. The explanation for using three nails in place of two was that we desired a guard against any chance for motion between the end of the tip and the foot, and that where so long a tip was

used the rear nail was at the end. But we are now satisfied that a semicircle extends too far back, and that one-third will be ample protection. We have found that in a great majority of instances the rear nail, on one side or other, was broken, and this was caused by the expansion of the foot and reaching as far forward as the nailing. The nails used being next to the smallest size, the constant pressure from giving the foot an opportunity for free expansion broke the nail, whereas if limited to one-third of the circle, that would not be the case. That this would be ample protection we have not the least doubt and then three nails, one at the toe and one at each end, would hold it firmly in place. At all events when the foot is in a shape which will permit a trial we shall make the experiment. Our friend was also pleased with the system of nailing, viz: Driving the nail from the inside of the wall through it in place of splitting the layers, and also at the use of a small gouge to remove only enough of the horn to receive the "clench," in place of cutting the enamel from one nail to the other as when the file is used. The two exhibitions removed all doubts and he was lavish in his praises of a plan which had left a natural and perfect foot.

CORRESPONDENCE.

Cleora And Col. Dickey.

TISKILWA, Ills., Nov. 22, 1882.

EDITOR BREEDER AND SPORTSMAN, Dear Sir: As Cleora and myself are natives of the same county, i. e., Bureau, I claim the right of singing her praise, criticizing her actions or recording such incidents of her short but brilliant career, as came under my observation. The handsome easy-going black mare, that now makes a mate for the grey horse Independence, was first seen by myself at our agricultural fair of 1880, when she contested in the 3:20 class, winning over the then promising mare Clara M., of Ottawa, Ills. The action of the judges in that race had the effect of prejudicing my feelings against Cleora. Though the black mare trotted as squarely then as now, did not indulge in any running exploits, it was a great effort when she trotted in 2:50 and I have always considered that mark as the figure of her speed that season. In 1882 nothing was heard of Cleora and not until July 4th, 1882, did thoughts regarding her speed come to my mind. On the date mentioned she trotted in a matinee at Mendota, when her mile in 2:29 surprised all of her friends and every last one of them insisted that Cleora must be saved for the fall meeting at Chicago, when all those possessed with a pointer would make themselves rich. We all know how well the secret was kept, for when the first pool was sold Cleora was a great favorite and yet no one had "let the cat out of the bag."

At the La Salle meeting Mr. Harris drew his mare, fearing that she would have to obtain too fast a record, in order to win, and to his credit be it told, that the breeder of Cleora never allows a horse of his to be pulled.

Two weeks later I attended the Davenport meeting where I saw Cleora trot for the first time in a good field of horses, and this same 2:34 race came nearly proving a first class performance, heavy rains causing its final postponement after three heats had been trotted. Owen Farley, Maxie Cobb, Legal R, Milo G, Countryman and Judge Curtis were Cleora's contestants. Owen Farley was supposedly the only horse that could make the black mare trot and when the horses were called and it was seen that Farley showed up lame every one, posted looked to see a hollow race. Had the track been hard and dry the affair would have been devoid of interest; as it was, however, the rain of the day and night previous made the track fully ten seconds slow and a tight race over it meant serious business for green horses.

Cleora gained the lead shortly after the word was given in the first heat and could have distanced every horse in the party had her driver not jogged the mare home.

Owen Farley was now drawn, Milo G had caught the flag and only five horses faced the starter for the second heat. Legal R and Maxie Cobb began to show up some this heat and the black mare was not allowed to come home as easily as upon the first occasion.

The third heat proved that Mr. Morris' fears were well grounded, when he remarked that his mare had received but little fast work, besides being very high in flesh, all of which led him to entertain grave doubts as to whether Cleora could stand another heat in the wind. Legal R was driven by W. H. Homer, in the third heat, in as heroic a manner as I ever saw a horse handled; his skill was rewarded by the manner in which the brown gelding clung to the raven-like mare; twice around that terribly heavy track, shake him off she could not; the heat showed clear grit and hard work, no time for brilliant bursts of speed, for the mare was tired, and when Grey discovered that Homer was likely to get home first he changed his position on the stretch in such a manner that Legal R was brought into dangerous proximity with Cleora's wheel, which fact caused the gelding to swerve and lose his stride. Homer was compelled to take him back, and finding the wire too near at hand to think of regaining the lost ground he contented himself by claiming a foul, which was willingly and promptly granted, thereby giving the heat to Legal R in 2:33. This was the first race that Grey had ever driven over a national track and his foul on the track was not committed with any malicious intent; he acted on the impulse of the moment, doing exactly as he had dozens of times upon the country roads when some neighbor had endeavored to pass him and he drove them into the ditch or fence to keep them from it. Darkness compelled the postponement of the race, and when Friday morning came daylight showed a flooded track, and the rain which had fallen all night still continued to come down so easily that one could not get angry at dame Nature. After dinner, the officers of the society concluded to bring the meeting to a close and called the owners of the 2:34 horses together for settlement. Col. Dickey, whom many on the Pacific know, some to their sorrow, controlled the stallion Countryman, a son of Volunteer. While this sorrel horse is well bred and quite speedy, yet his long residence at Salt Lake and among the mountains of Colorado, wholly unfitted him for trotting in low latitudes and in this race he had to labor hard to save his distance.

The society proposed to settle; allow Cleora first money, Legal R second, Maxie Cobb third and Judge Curtis fourth, but in order to settle an unfinished race, it is necessary to obtain the consent of all interested in the finish. When the adjusters came to speak to Col. Dickey regarding the matter, he blankly says: "Well, gentlemen, what you agoing to do for Countryman?"

"For Countryman! do you suppose he had a show in that field of horses?"

"Most certainly he had, until the race was finished and the summary proved to the contrary. I believe him to be the best wet weather horse that ever stepped from under a blanket, and I for one think this race will yet be an interesting one." "Now see here, Col.," testily remarked one of the adjusters, "we do not propose to have this race trotted;

the owner of Cleora is not willing to trot so valuable a mare in the rain and mud, and the best thing for you to do is to allow the race to go by default." "I am not acquainted with the owner of Cleora; I am only here to look after the best interests of Countryman. If Mr. Norris wishes to become acquainted with me, let him come around and introduce himself, I think he will find me a pleasant man to do business with. What am I to do? Trot it out of course. You haven't an idea that I am here for my health? I am not, and if you will pay me my entrance fee of \$40, Countryman can stand in the stable and eat hay, otherwise, I am here to trot for the purse. Finding that the Colonel was determined, the owners of the four remaining horses decided to pay the \$40 out of their earnings. When the amount was turned over to the manipulator of Countryman, that worthy thanked the givers most cordially, adding that it was a good thing to remember that it required a very cold day for Col. Dickey to get left on. Cleora recovered from this race very quickly and three weeks later obtained a record of 2:18 3/4 at Chicago, after which she was sold for \$15,000. Legal R did not round to so quickly, as he had another severe race at St. Joe, Mo., the week following; however, this horse is a promising one in his class, (2:30) and I think another season will find him such. Maxie Cobb was sold the very day that Cleora was, to Col. A. H. Swan of Cheyenne, Wyoming, for \$10,000, having shown a trial in 2:23 and obtaining a record of 2:30. This young horse is one of Happy Medium's handsomest sons and as a sire he should prove a success, while in the hands of James Page, the driver who brought out Rarus, Maxie Cobb will undoubtedly drop close to 2:20. At Cheyenne Mr. Page has the brown stallion Envoy (2:29), whom he is wintering for the owner, Ben Hershey of Muscatine, Iowa. Envoy has not recovered from a severe attack of the pinkeye and Mr. Hershey thinks a year spent in that high country will restore his formerly splendid lung power. Countryman was shipped direct from Davenport to Salt Lake and we think his first and last race was trotted that Thursday in the mud, in places of low altitudes.

Judge Curtis is being used by his owner, Isaac Waixel of Chicago, as a pole horse. Milo G retired to Cheyenne, along with Clay and Teaser, where they will eat prairie hay and expand their lungs with the rarified air of that locality.

COLUMBUS.

Honolulu Letter.

HONOLULU, Nov. 13, 1882.

EDITOR BREEDER AND SPORTSMAN: The writer is frequently interrogated by correspondents in California regarding the game found in the Hawaiian Islands, and as the majority of visitors here come from San Francisco, perhaps a few words in your journal in relation thereto would not be amiss.

The only four-footed game indigenous to the islands are hogs, of which great numbers were found in all parts of the group when first discovered by white men. They are still quite numerous in the mountains. Cattle and goats were introduced into the islands by Vancouver in the early part of the present century, and their descendants, reinforced by the offspring of more recent importations, are to be met with in a wild state—the cattle are principally on the islands of Hawaii, Oahu and Maui, and the goats in all parts of the archipelago. They are often hunted and are the only game that affords any excitement.

Among the fowl indigenous to the islands are Hawaiian geese—encountered in no other part of the world and in no other group of islands—and a species of duck, both very good eating. Three or four varieties of ducks visit the islands in the fall and winter, leaving for the North again in the spring. They are commonly known as "nor-west ducks." Curlews and plover also visit the islands at the same season, and are found frequenting the same localities as in other countries. Mud-hens exist in the marshes of all the islands but are not hunted. The principal game birds are the common barn-yard chickens and turkeys which have become wild, and are met with in the mountains of Oahu and other of the larger islands. Pheasants and stock-doves, both importations, are now also reckoned among the game birds, as are the California quails, which are multiplying quite rapidly in the islands of Oahu, Maui and Molokai. Pigeons are quite numerous in the vicinity of Honolulu and are frequently shot by the pot hunter. The mynah, a bird introduced from India, and much resembling the American magpie, is eaten by some, though not generally reckoned among the game birds of the islands.

Imported and insectivorous birds are protected by game laws, and in the district of Kona, Oahu, which comprises the district in which Honolulu is situated, persons wishing to shoot game must pay an annual license of \$5. No license is required in any other part of the group. These laws, however, are openly violated every day, and prosecutions rarely, if ever, take place under them.

GEO. W. STEWART.

From Denver, Cal.

DENVER, Cal., Nov. 27, 1882.

EDITOR BREEDER AND SPORTSMAN, Dear Sir: Yesterday beheld the advent in our midst of a sportsman all the way from the bay—quite an event in this part of the country. I refer to Mr. Liddle of the firm of Liddle & Kaeding. May his shadow never grow less. 'Tis rather small now but yesterday twenty-two snipe, thirteen ducks and a couple of geese found it much too large for them. There were four of us in the party. Joe Bassford bagged nineteen snipe and eleven ducks. Johnny Anderson, our deputy sheriff, got away with seventeen snipe, eight ducks and four bottles of St. Louis beer. Your humble servant by several scratch shots managed to pick up fifteen snipe and thirteen ducks, besides which the party killed three or four cocktails apiece. The cocktails is a bird which never flies but will run.

By the way just allow me to say a few words about this section's game resources: On the plains north and west of here a person shooting over goose decoys can easily kill a wagon load a day (small wagon).

In the tules south and west of the town ducks are very plentiful and on the marshy places where the tules have been fed off by cattle, a man can kill on a good day a good bag of snipe. I know of two persons in four hours killing sixty-six, and on Nov. 24th two of us killed eighty-six ducks and one honker; have got the papers to show for it.

Still, for all that, the town is nine miles from the nearest railroad station and no hotel or other accommodations after you get here, so brother sportsman take a friend's advice and keep away. Yours etc.,

JIM MACK.

THE EMBRYO STAKES.

J. McM. Shafter's Letter Published Last Week and the Editor's Erroneous Decision.

EDITOR BREEDER AND SPORTSMAN: The reference to the Embryo Stake at this time is more particularly made to bring to the notice of readers the subject of controversy, than to discuss the decision of the judges in that race, as the District Board of Appeals will probably promulgate their official action on that decision in the BREEDER AND SPORTSMAN of to-day.

But I desire while this matter is fresh to have determined the legality or illegality of a member of the Board of Appeals acting as a judge in any race. I use the term, "Board of Appeals" because right here will be the strength of my reply to Mr. Shafter, and my criticism of the concurrence in Mr. Shafter's views by the editor of this paper. And I must confess that it is with great timidity that I venture to confront two gentlemen, one a most thorough and accomplished lawyer, and the other the best informed and most reliable authority on all questions pertaining to turf matters, rules, laws and customs particularly.

It sometimes happens, however, that even the best learned and most enlightened men fall into error, or jump at conclusions. Premising that this may be the case in the present difference between Mr. Shafter and myself, in the views taken by me in an article of last week over the signature of Lex, I propose to consider whether I was mistaken in the term used, as alleged by Mr. Shafter, when I claimed he was a member of the Board of Appeals, or whether the editor was correct in his concurrence as to my error.

First. Judge Shafter says Section 4 of the by-laws defines what constitutes the Board of Appeals. This is true; and Sec. 4 says: "it shall not consist of more than fifteen members, to be chosen as hereinafter provided." Just so. Now to make this board, fifteen persons were chosen from five different districts in the United States, three in each of the districts, and the first named of each three was to be understood as the chairman of that portion of the "Board of Appeals," or "District Board of Appeals," as they are termed and known.

There is not, there never has been, and it was never intended there should be, any other body constituting a Board of Appeals. The action of a District Board of Appeals is conclusive in its decision, unless appeal is taken to the board of review, which is constituted of the five several chairmen of the District Board of Appeals, with the addition of the ex-officio members, the President and Vice-Presidents of the National Trotting association. The District Board, if it were not an integral of the Board of Appeals, would unquestionably have its decisions reviewed by such board if any existed, but there being no such creation or existence, the course followed is as in law to the next highest court, which is a Board of Review. I call upon Hon. J. McM. Shafter to point at a law or rule appointing or creating any other Board of Appeals than I have named above, and I ask him as a direct matter of fact and law, whether it is possible to escape the conviction that the Board of Appeals is apportioned to such district, with full power only to be reviewed by the Board of Review. Secs. 15, 16 and 17, of Art. 7 do not conflict with this stand. Sec. 18 of the same article very properly refers to the rejection of members of the Board of Appeals from the judges' stand at races, and this was introduced because it has been the custom of members of the Board of Appeals to assert this right, and in the stand, presuming upon their official position, to interfere with the rulings and decision of judges. There were vain men, weak men, and men barren of modesty and disregardful of propriety, that were accustomed to present themselves, claim admission by right, and evince overbearing insolence and officiousness toward judges in a race. They were wisely and properly excluded by the amendment of Sec. 18; Art. 7, quoted by Judge McM. Shafter.

So notorious and constant was the demand made, particularly at the last, by these gentlemen of the District Board of Appeals, and so offensive and disgusting did their presence and exercise of authority become, to patrons of the turf, and to officers of racing associations, that the National Association was petitioned for redress, which they gave in the amendment of Sec. 18, Art. 7.

To argue as to the propriety of this amendment, as to its requirement, or as to its justice, there is no occasion. Judge McShafter says there can be but one opinion on this point, and the editor of the BREEDER AND SPORTSMAN states if "The law does not read so, it should." Judge Shafter says: "the District Board is not the Board of Appeals." If it is not, what is it, Judge? An appeal from a District Board if it were not the District Board of Appeals, I apprehend, would have to be taken to the Board of Appeals, as in regular order and from them to the Board of Review.

By every rule of common guidance, through sources of reason, and from every rule of legal rotation, I fail to see in the appointment of the fifteen gentlemen named in the by-laws of the National Association, and apportioned in five different districts, any other formation than a Board of Appeals in each district, call them District Boards or what you will. If they are not, then I ask Judge McShafter to point out who and what constitute the Board of Appeals.

Sec. 2 of Art. 52 of Rules and Regulations National Association, says: "All decisions and rulings of the judges of any race, and of the several associations and proprietors belonging to the National Trotting Association, may be appealed to the 'Board of Review' or to a 'District Board.'"

Now here is the point drawn down to an end. There is no intermediate board named or recognized. It is simply the District Board of Appeals and the final decision of the court of last resort, the Board of Review. I refer Judge McShafter to Art. 7 of the by-law of the National Association, Secs. 6, 7, 8 and 9, which states that the Board of Review shall possess the authority conferred upon the Board of Appeals and shall hear all appeals from the District Board, etc., also to Sec. 4, Rule 51 of the by-laws, confirmatory of appeal from District Board to Board of Review, and to Rule 52, Sec. 2, as to appeals from an association to a District Board or to the Board of Review. In other words, to the lower court, the Board of Appeals, or to the court of last resort, the Board of Review.

I entered into this controversy with timidity as stated in the beginning of this communication, but I felt even though I was sadly at fault in my arguments and conclusions, and should be routed by Judge McShafter, and his superior ability, yet withal there was a gratification in differing with

an old and esteemed friend as I regard the gentleman, and I should be benefited at any rate by his superior wisdom and knowledge, and if I felt so toward this honorable gentleman I am quite sure the feelings were akin in undertaking any reply to the editor of this journal, but I must express surprise that in face of the rules and laws governing the Board of Appeals and his knowledge of how it was made up and for what purpose, and that the line of appeals was from judges to District Boards of Appeals and thence to the Board of Reviews that he should hold that Lex was only correct as the rules "ought to be, not what they are." One word more and I have done. Judge Shafter has been pleased to allude to me as a legal gentleman. In this he might have intended sarcasm, or he may have been ignorant that I am simply a "hewer of wood and a drawer of water," but having in days gone by indulged somewhat in the ownership of trotters, and having a love of turf sports, I naturally have an interest in all races and decisions of any merit, and a relish for the observance of strict rule and propriety in all contests.

LEX.

THE PADDOCK.

Big Colts.

The Visalia Delta says: In September we mentioned Mr. O. A. Norse, living near Antioch, had a two-year-old colt that weighed 1,419 pounds on the 16th of that month. On Wednesday of last week the animal was again weighed on the Government scales at the distillery, and tipped the beam at 1,530 pounds. Can any of our exchanges find a heavier animal?

From an exchange we learn that there is a colt at Elmira two years old and weighs 1,590 pounds. The animal was foaled on the 17th of May, is the property of M. D. Cooper and is a Norman and Clydesdale.

Both of these are of the heavy draft breeds, and now comes the information from the breeder of Goldust and Fred Arnold that he has a trotting-bred colt that is a "whapper" sure for one of the light harness division.

The following is Mr. Johnson's letter:

My colt was foaled April 20, 1880, and weighed August 27, 1882, 1,140 pounds, in common growing order, fed on hay; only his height at the same time was 16 hands and one-half inch. He is by Nephew, his dam by Chieftain, granddam by Young Chloroform, great granddam by Peacock, he by Gray Eagle. Young Chloroform's dam by Boston, his sire Oddfellow. Taking his breeding into consideration I think he gets away with the draft colts and if he was put in the same order I think he will outweigh them; as he is a very large framed, heavy boned colt he would carry a good load of fat. I think he will weigh over 1,200 now; he is growing very fast. He is a mahogany bay, one hind foot white, with bone and muscle enough to satisfy anybody and I think he is the making of the fastest horse I ever raised.

W. JOHNSON.

Accompanying the letter was a certificate of A. C. Taylor, weigher, Gridley hay scales, verifying the weight.

OLD NOTIONS.—The old superstition that horseshoeing was an occult art, and the legend of St. Dustin, may have something to do in making people so obstinate in their adherence to the traditions of the forge, and there is little question that St. Dustin, ten centuries ago, fabricated the same kind of shoes which smiths take delight in fashioning at the present day.

That "Equine Epizootic."

STOCKTON, Nov. 28, 1882.

TO THE EDITOR OF THE BREEDER AND SPORTSMAN, Dear Sir: I read in your publication of last week an article headed, "an equine epizootic," in which you informed your readers that according to a Stockton newspaper a bad disease is playing fearful havoc among the horses of San Joaquin county. At the same time you requested of your correspondents to favor you with their views of this incurable disease, their methods of treatment and results.

Now I, for one of your readers, will satisfy you with a little information about that terrible disease. I am a veterinarian, practicing in Stockton for the last thirteen months, and say that I never found the horses of San Joaquin county so healthy as they have been for the last three or four weeks. It is true, the first few cold nights caused a few cases of pneumonia, and of a blood disease having a typhoid character, of which none turned out fatally; but it seems that now they are accustomed to the cold nights and can stand the weather and work admirably well.

As to those horses of John McNeill, mentioned in your paper, I must say that no regular veterinary surgeon has ever seen or examined them, and that, therefore, the real nature of that disease can be questioned. Most likely it was an aggravated case of influenza or pinkeye, and as this last named disease has been raging several months ago in Stanislaus county with a lenient character, and as only a few horses died out of so many affected, it can reasonably be supposed that the horses of J. McNeill would have recovered if the proper treatment had been applied at the proper time. There is no reason whatever for the Stockton newspaper to injure the trade in horses in our county and to publish all over California that as yet no remedy has been discovered that will cure that disease, except what they know from hearsay. In all probability these horses have died through improper treatment, bad care and sheer neglect on the part of the proprietor to call for the assistance of a competent adviser. That is the whole truth about this terrible disease. We find occasionally during the year similar cases, but they are isolated and of a purely sporadic type. Yours very respectfully,

J. P. KLENCH.

The Napa Register says: "Malaga makes about 2,500,000 boxes annually, but there is abundant room in California for the culture of raisins to expand without coming in conflict with the foreign crop. Twenty-pound boxes of raisins bring at wholesale about ten to twelve cents per pound. The crop of last year raised in Yolo, Fresno and Los Angeles counties, including some small productions in Butte, Yuba and some of the foothill counties, is figured up at 150,000 boxes, which does not include the stock in the vicinity of production. An approximation of the crop for this year gives 139,200 boxes, although it is believed that the early raisins not set in the total would have reached 200,000 boxes, worth from \$400,000 to \$500,000. The shipment East last year was 70,000 boxes. From these facts it is evident that raisin production is becoming a settled industry in California."

About Fires.

If a careless hunter fires your woods, and, much to his consternation, the flames spread to your fields, and run along the fences to your barn, he is responsible for the whole loss, although he did his best to stay its progress. A man who wrongfully sets in operation a dangerous instrument, must take all the consequences directly caused thereby (21 Pick., 378; 43 Cal., 437; 2 Harr., 343). But as any farmer has a legal right to burn the brush, old stumps, etc., on his own land, if he does so at the proper times and in a proper manner, he is not responsible, if, by a sudden rise of wind or other cause, without negligence on his part, the fire is accidentally communicated to a neighbor's premises, and causes him serious injury. The gist of his liability in such cases is some carelessness either in the time of setting the fire, or the manner of doing so, or in watching it afterward; and the man who suffers is bound to make it clear that the other was to blame; (54 Me., 259; 22 Barb., 619; 44 Barb., 424; 18 Me., 32; 11 Met., 460). But even your negligence will not always render you liable for the spread of a fire, unless it was originally kindled by you intentionally. Therefore, if your barn takes fire through your carelessness with the lantern, or that of your man with his pipe, and thereby your neighbor's property is also consumed, you are not bound to pay for it; the law seems to consider that you have suffered enough for your conduct in the loss of your own property; (1 Bl., Com. 431; 37 Barb., 15; 35 N. Y., 210; 62 Penn. St., 353).

Still less would you be responsible if the fire originated from causes beyond your control. If your barn is struck by lightning, or your hay stack ignites by spontaneous combustion, without any fault on your part, and the flames spread to the adjoining owner's property, it would be hard indeed if you had not only to lose your own, but to pay for his also; (8 Johns., 422; 11 Q. B., 347). And I suppose, even if you were careless in not promptly and energetically putting it out when you could have done so, and it spreads beyond your control, this would not render you liable, as perhaps it might have done had you purposely set fire to your brush heap or stubble.

As to railroad fires the law is somewhat different from that relating to individuals. Formerly, and antecedently to any statutes, railroad companies were not liable for fires caused by locomotives, without proof of some negligence, either in the construction or mode of running the engine by which the fire was caused, or otherwise (5 H. & N., 694; 18 Barb., 50; 30 Iowa, 420; 15 Conn., 124; 37 Me., 93) but as the liability to such fires was so great, and the amount of damage so caused was very extensive, it became necessary to enlarge their liability; and now in Mass., by Gen. Stat., chap. 63, § 101, railroad corporations are liable for all damages to the buildings or personal property of the land owners along their route, arising from fire communicated by their locomotives, and without any proof of negligence or carelessness either in the company or any of its employees.

And this statute has a very liberal construction, extending not only to buildings immediately adjoining the railroad, and which are fired directly by sparks from the locomotives, but also to buildings a long distance from the road, and which are set on fire by sparks flying through the air from some building nearer by, which had first taken fire from the engines (13 Met., 90; 98 Mass., 414; 103 Mass., 586).

TURF AND TRACK.

Thanksgiving Day Races at Oakland Track.

"Spring-time, the last day of November," was the remark of an Eastern tourist at the Oakland Trotting Park yesterday afternoon. "The telegraph says fine sleighing in New York on Thanksgiving, and here are pasture fields with the grass above the horses' hoofs," was the response of his companion. The hills on the Contra Costa range even showed a green tinge, and there were watery-looking clouds with patches of blue sky, and at times the sun shone brightly. The temperature was in accordance with the other spring-like features, and the track was in good order; not quite so "fast" perhaps, as when in the best condition, though safe and only a trifle slow. The attendance was fair when the counter attractions of the day are considered, and there were a good many speculators investing in the pools. The first race was a dash of three-quarters of a mile for two-year-olds, the starters Marian, Daivism and May B. At first Daivism was the favorite, bringing \$20 to \$11 on Marian and \$5 on May B. Then Marian took the lead, and the race changed to \$22 on her, \$18 on Daivism, and \$10 on May B. A capital start was given the fillies, and when they passed the quarter pole there was not half a length between them, though May B making the pace rapid from the outset, established a lead of a length when half way down the backstretch. The others closed on her, and by the time they were half way around the further turn all were "lapped." From the three-quarters Marian had the race safe, and although the others kept close to her until within one hundred yards of home, came away a couple of lengths in front of Daivism, who was then some distance in front of May B. Time, 1:16½.

The next race proved a windfall to the betters who took the "short end." It was a dash of 1½ miles, the starters Jim Renwick and Euchre. Even at the long odds of \$20 to \$6, it was difficult to obtain backers for Renwick. Those who had bought the big, blazed-faced chestnut had little hopes of winning, and many of them sold their tickets at a discount. Again there was a good start, the horses being exactly parallel when the flag fell. Jim Renwick had the inside position, which he surrendered to Euchre, the evident intention being to make a waiting race of it. Euchre led at the stand, the furlong being made in twelve seconds, and at the quarter pole, in twenty-nine seconds, Euchre was leading by six lengths. Euchre increased the speed, and at the half mile the watches marked 1:07. Renwick closed the gap somewhat when rounding the turn, and when fairly straightened into the homestretch, he made his run. Coming with a long sweeping stride, he rapidly overhauled Euchre. He was in the lead at the trotting distance, and though for a short time it appeared that Euchre would win, Renwick had another link in reserve, and he swept past the stand a length in front of his competitor. Time, 1:58½. The winner was admirably driven by Billy Appleby, and showed a better capacity for a distance than anyone gave him credit for. He is not thoroughbred, as his dam, Big Gun, was of Oregon short stock. His sire, Joe Hooker, is one of the most promising of the young sires of California, and is a very highly formed horse of the most fashionable breeding, being by Monday from Mayflower, by imported Eclipse, and his grandam Heenie Parrow.

The next race was a dash of one and one-quarter miles, the starters Jocko and Frank Rhoads. Jocko was the favorite in the pools, steadily increasing in favor from the opening until a start was effected. This was still a greater fall for the buyers than in the preceding race, inasmuch as there were plenty of supporters for Frank Rhoads at odds averag-

ing \$40 on him to \$80 on Jocko. The race was unexpectedly one-sided. Rhoads took the lead from the start at a fast pace. The first quarter was run in 25 seconds, the half-mile in 50½, three-quarters in 1:16½, the mile in 1:43, and though the official timers reported 2:11, the divergence from others in a better position to see, and who made it 2:09½, was doubtless owing to the white flag of the starter being held against the whitewashed fence. Though Jocko made several efforts he could not get nearer than two lengths of Rhoads, who won by twice that distance. For so few starters it was a fine afternoon's sport, and every one excepting the losers was well satisfied. The race came to a close in time for those who attended to come back to the city on the train leaving Shell Mound at 4:30, and the sail across the bay in the twilight of a spring evening was very enjoyable. There was a rush for seats on the deck of the steamer, and never in the glorious merry month of May was a seat in the open air more welcome. Ladies carried bouquets of gay flowers, and the perfume of mignonette and violets made the illusion complete. The excitement of the racing and trip combined gave zest for the Thanksgiving dinner, and the evening festivities were better relished.

SUMMARIES.

OAKLAND TROTTING PARK, Thursday, November 30.—Juvenile Stake: dash of three-quarters of a mile, for two-year-olds.

1 B. Chase names b f Marian..... 1
C. Pacheco name b f Daivism..... 2
P. Robson names ch f May B..... 3
Time—1:16½.

Hard Luck Stake: dash of one and an eighth miles.

Stemler & Ayres name s g Renwick..... 1
M. M. Allen names ch f Euchre..... 2
J. P. Woolman names h m Bolls..... p'd forfeit
Time—1:58½.

Handicap: dash of one and a quarter miles.

W. L. Pritchard names b c f Rhoads, 103 lbs..... 1
J. P. Woolman names b c Jocko, 100 lbs..... 2
Stemler & Ayres name b g Joe Howell..... declared out
Official time—2:11. Outside, and probably correct, 2:09½.

Morgan Blackhawk, Lancet and David Hill Jr

Morgan Black Hawk was sired by Hill's celebrated trotting horse, Black Hawk, and he by Sherman Morgan, and he by Justin Morgan, and he by True Briton, who was imported from England and used by General De Lancy as a charger while commanding the British forces on Long Island in 1777; True Briton was a thoroughbred horse of great speed and beauty. Black Hawk's dam, bred in New Brunswick, was three-fourths thoroughbred and distinguished for fast trotting. Morgan Black Hawk's dam was got by Liberty, and he by Duroc, grandam by Sir Charles; Sir Charles was got by Sir Archy, and he by imported Diomed (see stud-book); Sir Charles' dam was got by Plato, and he by imported Messenger—his grandam by Brutus, out of imported Brutus. Morgan Black Hawk was bred by Mr. Howard, of Addison, Vermont, and sold to Solomon Jewett, Esq., of Waybridge, Vermont, when two days old, and was afterwards sold by Mr. Jewett to Gen. Silas M. Borroughs of Medina, Orleans county, New York, when five months old. Old Liberty was bred by Col. Allen Smith of Addison, Vermont. Col. Smith rode Liberty from Troy, N. Y., to Boston, and then to Addison, Vermont, in four consecutive days, 360 miles; stayed in Boston one night, and returned to Boston again next day, when he set out with a drove of cattle, and was offered on his arrival \$600 (which was equal to \$6,000 now) for the horse. He was then about eighteen years old. Liberty served mares when he was twenty-seven years old, and died at twenty-nine years.

Morgan Black Hawk is sire of more fast trotting stock than any other horse of his age in America, some of which are enumerated, as follows: Young Flora Temple; Black Swan, of Wisconsin; Billy McCracken, that took the first premium at the State Fair of Wisconsin, when five years old, beating stallions of all blood and ages; Clifford, (two years old), that took the first premium at the International Fair at Buffalo, N. Y., in 1859, the fifth time he was harnessed, distancing colt by Toronto Chief, and colt by State of Maine, distance three-quarters of a mile, time, 2:47; Grey Eagle, Young Tib Hinman, Young Daniel Webster, Billy Pratt; Niagara, now in Tennessee; Paul Jones of Oregon; and Lancet, now in Sacramento, who took the first premium at Racine, Wisconsin, in 1859, in 2:48, drawing man and sulky, weighing 300 pounds.

Said Black Hawk is half-brother to Paul Clifford, Black Ralph, (who has trotted in 2:27 at Saratoga Springs,) Belle of Saratoga, (who trotted in 2:28,) gelding Lancet, (who has trotted in 2:27,) Black Hawk Maid, Ethan Allen, (the fastest stallion in America,) Washtenaw Chief, and Stockbridge Chief of Ohio.

Lancet was sired by J. C. McCracken's Old Black Hawk; he by Sherman Morgan; he by Justin Morgan; he by True Briton, who was imported from England and used by General De Lancy as a charger while commanding the British forces on Long Island, in 1777. True Briton was a thoroughbred horse, of great speed and beauty.

Lancet's dam was the Adams filly; was a fast trotter; was sired by Emigrant, and imported from England.

Lancet is half-brother to Brown Mac, Billy McCracken, Dutchman, Lady Dooly, and numerous other trotters.

David Hill Jr., was sired by J. G. McCracken's celebrated horse, David Hill; he by Black Lyon; he by David Hill's famous trotting stallion Black Hawk; he by Sherman Morgan; he by Justice Morgan; he by True Briton, a thoroughbred horse of great speed and beauty, who was imported from England in 1777. David Hill's dam was got by Hambletonian; he by Abdallah; he by old Membrino; and he by imported Messenger. The dam of Hambletonian was the Charles Kent Mare by imported Bellfounder; Black Lyon's dam was by Liberty; he by Duroc; Grandam by Sir Charles; he by Sir Archy; and he by imported Diomed—see stud book—Sir Charles' dam was got by Plato, and he by imported Messenger; his grandam by Brutus, out of imported Brutus.

David Hill Jr.'s dam was sired by the original St. Lawrence, a thoroughbred Norman horse, and the fastest stallion in the world of his day; grand dam, Old Champlain, one of the best four mile thoroughbred Messenger horses in the United States.

David Hill Jr. is the sire of A. F. Smith's colt, George Trent, the fastest colt of his age in the United States. Also, F. M. Chapman's colt; also, a two-year-old filly which could show a three-minute gait, which J. L. Eoff paid \$1,000 for one-half of her; also half brother to Dutchman, Sorrel Ned, Mountain Boy, and St. Lawrence, they all being out of the same mare by the original St. Lawrence. I have several others just as promising.

David Hill Jr. is a beautiful bay, with flowing mane and tail, is now nine years old, and weighs 1,180 lbs. and though he has never been trained is a very fast trotter. He was awarded first premium at the State Fair when one year old, also, at two years old. At three years old he was not on exhibition; at four years old, he took first premium, where there were twenty-six competitors, his father being one of them.

FROM THE ANTIPODES.

Turf Notes and Anticipations—A Visit to the Cripps' Stud Farm—Etc.

The Wollongong Turf Club to-day conclude their races, and the Burrowa Jockey Club commence their spring meeting, so our friends in New South Wales have choice of diversion; and in Tasmania the Southern Hunt Club meeting eventuates. To-morrow the Burrowa meeting will end, and the New Zealanders will be racing at Cromwell.

On Saturday the weights for the Berrima Handicaps will appear in New South Wales and in Victoria the Victoria Amateur Turf Club hold high festival at Caulfield when the Guineas and Great Foal Stakes will be run for, and one of the grandest days' racing yet seen south of the line may be anticipated. Since last meeting wonderful improvements have been carried out in paddock and stand by Mr. Bond, the energetic secretary, and his stannish henchman Mr. Broadbridge. The course never looked so well, and a gala day may be anticipated. Of probabilities I descant in another column; suffice it to say that, besides two big events above alluded to, a selling race, a handicap hurdle race, the Victoria Amateur Challenge Cup, and the Toorak Handicap furnish such attractions that all who have the slightest love of sport or pretensions to fashion should attend.

On Tuesday, the 10th inst., the weights for the minor handicaps of the second days' racing of the V. A. T. C. will be declared. In New Zealand the Hawkes Bay Club hold their gathering. In New South Wales non-acceptances must be declared, and general entries made, for the Berrima meeting.

In that colony, also, it is holiday time at Tamworth on Wednesday, the 11th, and Thursday, the 12th, the annual races being held on those dates, and from the character of the entries the sport should be good. Also, on Thursday, the 12th, non-acceptors must declare in the Caulfield Cnp, or they will be considered acceptors, and held liable for the whole of the stake.

From Adelaide I learn that great dissatisfaction has been caused by the disqualification of Hotspur for the Hunters' Stakes at Morphettville, on the ground that the horse was not running for the entire benefit of his nominator, Mr. Birchford. The totalisator dividend has been paid, and, as it appears by the steward's decision that Hotspur was unqualified, and therefore not in the race, those who backed him had no chance to win, so ought to get their money back. I sincerely wish they may get it. His backers with the books refuse to part.

Among those defeated by Bandalbion at Mauritius were Trout, Greyhound, and Valentine. The first-named pair were for some time in Griffin's charge at Brighton.

The Adelaide division of the ring caught it very hot over Rory O'More in the Hunt Club Cnp, the horse having been backed to win £2,000 by his party.

I have to acknowledge the receipt from the secretary, Mr. N. R. D. Bond, of the balance-sheet of receipts and expenditure of the Victoria Amateur Turf Club, for the year ending August 31, 1882, showing the income to be £2,412 for the past year, leaving £1,548 profit on the six meetings already held. So whilst a very heavy amount has been expended the club has lessened its liabilities by £591 19s. 11d. since last year. Every credit is due both to committee and secretary for this result.

I was rather lucky in my Dubbo and Muswellbrook fancies, Hesitation, Norman, Hypatia, and Wheel of Fortune, all proving winners. They had a repetition of the Navigator and Solitude business at Dubbo, as the owner of Kettledrum declared to win with Norman—but the rider of the former horse beat his stable companion by a neck after a punishing finish, having misunderstood orders.

Segenoe and Hecla have improved greatly.

The Burrowa weights are out and appear herewith. Willeroo and Faith look best on paper for the Ballyryan Handicap. Juggler should win the hurdle race, and Willeroo and Mollie McCarthy should fill the places in the Spring Handicap.

The Parramatta Jockey Club will celebrate the Prince of Wales' Birthday with a pleasant programme of five events, with added money amounting to 330 sovs. whilst on Saturday, the 11th of November, they add 300 sovs., to five races.

The Adelaide *Licensed Victuallers' Gazette* has the following pertinent remarks on "pleasing the public": "No one who has not had actual experience of the position can possibly realize the difficulties that beset the owner of a popular favorite for an important race, and the various ways—in which he is called upon to please the public. It is a fortunate thing for the turf in this colony that its most prominent patron is a gentleman who, like Lord Falmouth, 'never bets,' and to whom the amount of money spent in connection with his training stud is no object whatever. Sir Thomas Elder spares no expense in furthering his ambition to participate in sport of the highest class for itself alone, apart from any consideration of profit, and yet he cannot succeed in pleasing every section of our racing community at one and the same time. After Bassanio was beaten in the Derby, grumblers sprang up like mushrooms, and his defeat was charitably attributed to every cause but the right one. Had the horse been withdrawn from the race prior to the start, the ranks of the growlers would have been increased fourfold, and if the owner had made a public declaration in favor of the chestnut it would have been viewed with suspicion by a class who are ever ready to ascribe improper motives to any movement that conflicts with their own interests. Not one of those who lost money over Bassanio last Saturday can say that they were induced to do so by any representations emanating from either owner or trainer, and if they had only taken the trouble to make proper inquiry before investing their money on a forlorn hope, they would have learned how little chance they possessed of their realizing profit. Such a sensible course, however, was to them quite unnecessary; it was enough that Bassanio was bound to beat Guesswork on public form without harassing themselves by any thought of the relative condition of the pair at the present time, and so they assume the garb of injured innocence when called upon to pay the penalty of their neglect, and indulge in vituperation because the result of the race does not accord with their preconceived opinions. It is a monstrous doctrine that an owner shall be compelled to run his horses to please the public—or rather the sharps who have backed them—but we have no anticipation of ever seeing it enforced. If the poor public will persist in burning their fingers by meddling with other people's property, they must be content to pay the penalty, or reserve their investments for the totalisator, when they can make sure of having a race for their money."

The very handsome gold vase given to the Victoria Amateur Turf Club by Messrs. Wilson and Quirk, as the chief prize in the V. A. T. C. Challenge Cup, is on view at Messrs. Brush and Drummond's, Collins street. Of chaste Etruscan

design, its outlines are most graceful, and standing on a beautifully worked silver pediment, it shows to great advantage. The handles are ornamented with vine leaves of solid gold, and a horse's head springing from a circle of leaves surmounts the cover. The body of the vase has a spirited representation of the finish of a race above and below while it is handsomely chased with scroll and leaf work. This handsome prize will doubtless be daringly won, and highly prized by its fortunate recipient.

From New Zealand I learn that at the South Canterbury Hunt Club steeplechase, Mr. Armitage's Don won the cup, ridden by Mr. J. H. R. King, Leap Year and Warlock filling the places. The race was a severe one and only won by a length. Ten ran. The Ladies' Purse fell to Mr. H. Ford's Nutmeg, ridden by Mr. R. Ford, Gentle Annie being second, and Wild Rose third. The Don fell and struck Mr. King on the head, rendering him insensible. The Consolation was won by Warlock, piloted by Mr. J. R. Brown, and was won by a neck from Gentle Annie.

Mr. Pearson having resigned his position on the committee of the Victorian rooms, Mr. C. D. O'Halloran has been elected in his stead, whilst as chairman Mr. A. F. Sullivan succeeds him.

We are sorry to hear that Mr. Hassall's recent purchase for Western Australia, Orient, was, through rough weather, killed on the voyage thither. Although insured by Mr. Yuille for £350, the loss of this horse is a very great one, as he was one of the best sons Fireworks left behind him.

The South Australian horses all arrived safely and most of the Sydney division are here, but Lord Burghley knocked himself about a good deal in transit.

Richmond has been sold to Mr. Blackler at a satisfactory price.

I have been requested by the trainer of Verdure, and by the gentlemen connected with the stable, to give a flat contradiction to a statement which has appeared in one or two of our contemporaries alleging that O'Brien was weighed out for, or was put on, Scandal in order to deceive the public in the Handicap Flat Race, and afterwards was changed to Verdure. O'Brien weighed out for Verdure only, saddled the mare himself, and got on no other horse up to the time of the race ending.

The A. J. C. have decided to follow the V. R. C.'s lead, and register bookmakers on payment of a fee.

That well known trainer, Mr. R. Howie, has commenced an action for £2,000 damages against the *Bellarat Courier* on account of a paragraph in that paper having asserted that this well known trainer had been placed under restraint in a Sydney Lunatic Asylum. It is stated that Howie has suffered material loss by consequent removal of his patron's horses from his charge.

The Hons. James White and W. J. Clark are expected to arrive from England in time for the V. R. C. Spring Meeting.

In another column appears the advertisement of the popular Williamstown Racing Club's meeting, and the 9th of November, the Prince of Wales's Birthday, is the date chosen for the gathering, and thus direct opposition to the usurper V. A. T. C. is avoided. The programme is most racing-like, consisting of a handicap hurdle race of 50 sovs., two miles; Trugena Stakes handicap of 75 sovs., five furlongs; Telegraph Stakes of 75 sovs., half a mile (a selling event), Galloway handicap of 40 sovs., five furlongs; Laverton Steeplechase of 50 sovs., two miles; and Williamstown Handicap of 100 sovs., one mile and a quarter, whilst in each event nominations are only 1 sov.

The second volume of the *Australian Stud Book* has made its appearance. From a hasty glance it appears a vast improvement even on its predecessor, and the compiler and publishers have done everything to make the book a necessity and an ornament. In our next issue I will deal more fully with this important subject.

In another column appears the advertisement of the Racing Result Telegram Agency, under the conduct of the very enterprising firm of H. Byron Moore and Macleod, of the Exchange, Melbourne. This will meet a long felt want, as now the payment of a very trifling fee will allow any one in the most distant parts of Australia, in any country town, to be immediately apprised of the result of any race in which he may be interested. Messrs. Moore & Co. have secured a concession from the Telegraph Department, by which the rendering of this information will be wonderfully facilitated.

I paid a visit to the stables and stud farm of the Brothers Cripps, at Flemington, yesterday, and, finding them at home, was received with every courtesy, and at once shown the sires and the training stables. During my stay the celebrated racing-galloway, Elsa May, arrived on a visit to Motea, whose strains of Melbourne, Touchstone, and Pantaloon blood should harmonize well with the Orlando, Stockwell, and Kingston blood she derives from Proto-Martyr and Ariel. The first horse shown me was Motea; and the chestnut brother to Durebin is even of greater substance than the celebrated Derby winner. His temper seems perfection, and although an immense horse, he is on such short legs and so well-proportioned that his size is hardly apparent, whilst his liberty of action is very noticeable. This young sire if properly mated cannot fail to achieve distinction. Alarm was next visited. A very lengthy brown horse, full of the characteristics of his sire Panic, a beautiful mover, and with enormously lengthy quarters. As a sire of trotters he has already gained celebrity, but in appearance he is all over a racehorse, and should get racehorses if a chance is afforded him. I next interviewed the galloway sire, Van Tromp; for a model of strength and symmetry it would be hard to find his equal. Barely 14.2 in height, with clean, flat bones, he has the quality of the racehorse, and substance to carry 14 stone. A rich chestnut in color, his head is of the true Stockwell type, whilst the speed he possesses has been evinced by repeated victories on the flat. His blood is a combination of that of Ace of Clubs, Touchstone, and the Premier. He should be well patronized by those desiring stylish pairs. The paddocks, which are situated at Essendon, comprise 160 acres of splendid grazing land. I now made a move for the training stables, and Expert, a lengthy chestnut colt by Sunlight, out of Express, was the first shown me. A white blaze and white hind foot give him a good deal of character, but he is rather narrow looking as yet, although, I should fancy, speedy. Squireen, who is hardly over his Maryborough gruel, occupied the opposite box, whilst next the colt Mistake, by Dante, out of Stockdove, is located, and very fresh and full of life this speedy colt looks, and wonderfully improved since I saw him in Adelaide. His pace as a two-year-old was marvelous, and his back now looks like carrying a bit of weight. Opposite the Derby candidate was Drumstick, a light bay three-year old by The Drummer, marked with the running blaze and white hind foot so often seen in that horse's stock. This horse has grown, and improved greatly since he last appeared in public. Bismark is a very nice little bay horse by Glorious out of Regina, and is thickening up greatly, and next to him is Hector, a powerful son of Little Fish, whom I once saw win a steeplechase in the far West. He has also improved greatly since coming into his present quarters. Mariner, a

hardy-looking bay jumper by Troubadour out of Daisy, will yet win a name over sticks, and Andover is another in the same category; whilst that clever hunter, Pulex, is also located here. Coquette an old acquaintance was next visited, but the black mare evidently needs time, and Miss Panic, who will also visit Motea, and the British Lion, who like most of the John Bull's looks light, were the remaining tenants of the boxes.

I regret to learn that the well-known trainer, F. Leng, whilst in a state of intoxication, scratched Van Tromp, without the owner's consent, and on being brought before the stewards was so incapable of realizing his position that he was suspended for six months; this sentence is indorsed by the V. R. C., and is likely to be by the V. A. T. C. committee. He being one of our best trainers, it is to be hoped that, in punishing him, care will be taken to conserve the interest of the innocent owners who have horses in his charge, as change of stable and treatment so near to important engagements may seriously imperil their chances.

The weights for the Findon Harriers gold vases appear herewith, and seem to have been most carefully adjusted. Although Ajax is top weight, he relatively meets all the horses which finished in front of him on Saturday on much better terms, and a most interesting contest should result. Several horses have been declared ineligible for the stake, and it is possible that among those which have been handicapped there are others who do not fulfil the conditions. Variable, Brownlock and Paddy Crutch, Fish and Murrumbong, with the top weights, and Bon Accord look most dangerous, but the task of picking a winner here is beyond me.

I am sorry to hear that that truly sporting metalician, Mr. S. G. Cook, had really bad luck with his fine colt, George Rignold, by King Cole from Gonfalon, by the Hermit, purchased by him as a yearling at Messrs. Finlay's sale. In the race for the Flying Stakes on Saturday, the colt slipped and strained his back badly, but ran the race right out. On Saturday night he showed signs of severe internal injuries, and on Monday he had to be destroyed.—*Federal Australian*, Oct. 5th.

What the Season has Demonstrated.

The fastest record made during the season of 1882 was by Clingstone in the great race with Edwin Thorne, So-So and J. B. Thomas at Cleveland, July 29. In the first heat every inch of the ground was contested, and Clingstone beat Edwin Thorne to the score by half a length in 2:14. In the second heat the quarter was trotted in 32½ seconds, and the half-mile completed in 1:05. Here Edwin Thorne weakened through lack of condition, and Clingstone was left to finish the heat at his ease in 2:16½. This practically ended the race. The time of the third heat was 2:23½. At Buffalo the following week Clingstone and Edwin Thorne trotted the first heat side by side, and finished almost nose and nose in 2:14½. The judges decided in favor of Clingstone, who went on and won the race. At Rochester, Clingstone was again victorious, but at Utica, Hartford and Boston he met with defeat. His legs are none of the best, and the severe campaign told upon him. He is of light build, and has the drooping hip usually associated with the pacer. His sire, Rysdyk, was got by Rysdyk's Hambletonian, out of Lady Duke, thoroughbred daughter of Lexington, and his dam, Gretchen, was by Choroos, out of Lady Fallis, by Seely's American Star. He is inbred to Hambletonian, and has a double infusion of running blood. His trotting action is smooth, almost perfect, and yet his blood lines are not in harmony with the theories of the little school which holds that every drop of thoroughbred is detrimental to trotting disposition and structure. The time of Edwin Thorne in the race at Cleveland was 2:14½. He trotted on the outside of Clingstone the entire mile, and so he traveled the greater distance. At Buffalo he was beaten not over four inches in 2:14½, and at Utica, on a cold, raw day, he turned the tables on Clingstone, winning in 2:18½, 2:20½, 2:21. The track was slow. At Poughkeepsie he was defeated by Santa Claus, but at Hartford he was successful in 2:17, 2:22½, 2:21, after losing the first heat to Clingstone in 2:17. At Beacon Park, Boston, a track not adapted to fast time, he won, Sept. 14, the Blanchard \$10,000 purse, beating in straight heats Clingstone, Helene, Santa Claus, Fanny Witherspoon, Parana and Humboldt, in 2:19, 2:19, 2:18½. Then he went into winter quarters. He is a horse of great substance, with sound legs, and does not wear out or weaken under the heavy work of a long campaign. His sire, Thorndale, was got by Alexander's Abdallah, out of Dolly, by Mambrino Chief, she out of a mare by a son of thoroughbred Potomac, and her dam by thoroughbred Saxe Weimar. Lady Lightfoot, the dam of Edwin Thorne, was got by Ashland, out of a mare by Eureka, and Ashland was by Mambrino Chief, out of Uilla, thoroughbred daughter of imported Margrave. The great chesnut who vanquished the thought-to-be invincible Clingstone is inbred to Mambrino Chief, and he has a double infusion of the stout racing blood. He is pure gaited, but has a nervous temperament. Minnie R, now a member of the powerful Kittson stable, defeated at Chicago, in the 2:23 class, Unolala, Buzz Medium and Tariff, reducing her record to 2:19. At Buffalo, in the special race, she started against Clingstone, Edwin Thorne, Kate Sprague and J. B. Thomas. In the first heat, which was trotted in 2:14½, she was a good third, and in the third heat she came down the homestretch like a phantom, having the inside. McCarthy, who was behind her, took desperate chances to get through a narrow gap, but failed, and the mare tripped and fell when she looked very dangerous. At first it was thought she was dead, but she pulled herself together, and her injuries were found to be slight. Had she been able to get through and win the heat, the chances are that she would have captured the race, because she is a mare of superior bottom. At Poughkeepsie she was unsteady, and finished behind Santa Claus and Edwin Thorne, but at Hartford, on a track made heavy by rain, she won the 2:19 class, after losing the first heat to William H in 2:21, and the second and third heats to Pickard in 2:21½, 2:20½. The time of the heats which she won was 2:20, 2:21½, 2:23. She is a courageous mare, with wonderful flashes of speed. She was bred in Lyon County, Kentucky, and she was got by a son of John C. Breckenridge, out of a blind mare of untraced blood, but having the form and characteristics of a thoroughbred. Her sire was advertised and patronized as a thoroughbred horse. She wears a 14-ounce shoe and a 4-ounce toe-weight. Rosa Wilkes made a great name on the turf. She challenged attention at Chicago in the 2:25 class, beating with ease Early Rose, Forrest Patchen and Joe Bunker, in 2:20½, 2:18½, 2:20½. At Cleveland she cut down a powerful field, composed of J. P. Morris, Fanny Witherspoon, William H, Early Rose, Annie W, Driver, Forrest Patchen and Calmar, and won in 2:19½, 2:18½, 2:18½. After this her face was turned to the setting sun, and her next great race was at Lexington, in October, where she surrendered to Monroe Chief. Her toes were too long at the time for severe work, and Doble, who drove the stallion, out-generated Cook, who was behind the mare. It was the hard-

est fought race of the year. Monroe Chief won the first heat in 2:19½, Rosa Wilkes the second and third in 2:19½, 2:19½, the fourth was dead in 2:20, and the fifth and sixth heats were taken by the Chief in 2:20½, 2:21½. Had the driving been equal the mare, even with her neglected feet, would have proved victorious. The sire of Rosa Wilkes was George Wilkes, and her dam was by Mambrino Patchen, son of Mambrino Chief, and a mare by Gano, by American Eclipse. In her we have a welding of Hambletonian, Mambrino Chief and thoroughbred strains.

In the 2:19 class at Chicago Fanny Witherspoon was the strongest competitor of Clingstone. She trotted four lengths farther in the first heat than any other horse, and she was upon Clingstone's wheel at the wire in 2:17, and she was second to him in the second and third heats in 2:18, 2:20. At Cleveland she was beaten by Rosa Wilkes; at Buffalo she was beaten by Adele Gould, after winning the second heat in 2:19½ and the third heat in 2:19; at Utica she captured second money; at Poughkeepsie she showed her heels to Driver, Picard, Humboldt, William H and Capt. Emmons in 2:19, 2:18½, 2:18½; and at Hartford, on a heavy track, she made the backers of Santa Claus look uneasy. The stallion won in 2:17½, 2:19½, 2:21½ but the mare came down the homestretch in each heat like uncorked lightning. She trotted the last half of the third mile in 1:06. At Boston she was unsteady and met with defeat in the Blanchard Purse. The trouble with her is that she is a slow scorer; she gets off badly on that account. She also is a big strider and does not like sharp turns. She was not driven with the greatest skill last summer and consequently does not stand as well in the summary as she otherwise would do. We heard Hickok rate her, just before he started for California, as a faster trotter than Clingstone. Her sire was Almont, and her dam was by Gough's Wagner, son of the great four-mile racehorse. She is level-headed and pure-gaited, and trots without weights in light plates. She got her harness action from Almont, and her high form and length of stride from her running-bred ancestors. The horses which have fought the stubborn battles of the turf, and which have borne the colors of their owners to the front, are not descended from soft and plebian families. In them we discover that trotting blood is warmly and stoutly supported by the blood of the horse whose form is of the highest type, a type identified with the greatest speed, that of the thoroughbred; and with the facts before him the wise man can draw his own conclusions.—*Turf, Field and Farm*.

The Grey Trotter Joe Bunker.

It appears very probable to us that Joe Bunker is one of the very best horses ever got by the renowned George Wilkes. The breeder and owner of this young horse stood with us in the old stand on the far-side of the Fashion course and saw "The Brown Stallion" defeat Ethan Allen in his first great race. That was twenty years ago. Mr. Dunn then owned a beautiful blood-like gray mare, afterward called Lady, and she, in her old age, brought him Joe Bunker to the cover of George Wilkes. This gray mare Lady was an excellent roadster, fast, game and more intelligent than many men. She ambled off at the start just as another famous gray mare, Mr. Bonner's Peerless, used to do. They were both by American Star. The dam of Lady was the famous gray mare of the Messenger blood, owned and driven by the gentleman who built the high bridge over the Harlem river when the Croton water was brought into New York. She was called after him, and no trotter was ever more justly renowned in the vicinity of New York for speed, ability to pull weight, capacity to trot all day, and the next day too, and invincible game and courage. Lady inherited these qualities from this mare and also from the valiant and unflinching horse American Star, her sire. They appear to have descended to her son Joe Bunker, as will be seen by the list of his performances below. He is seven years old, was not hurried in his early days, and is a steadily improving, fast, and stout young horse.

Joe Bunker started as a five-year-old at St. Louis, Mo., Sept. 30, 1880, in the 2:48 class, and was beaten by Alta, winning the first heat and the third money in 2:28½. We next find him at Louisville, Ky., Oct. 6, where he won his maiden victory in a five-heat race, beating Largesce, Big Julia, Hardie, Lillian, Bill Bodifer and Annie Snyder, in 2:27½, 2:27½, 2:26. He wound up at Cincinnati, Oct. 2, winning a good five-heat race from Alta, Largesce, Effie G and Belle G. Time—2:31½, 2:33, 2:32½. Chester Park is a half-mile track, and was slow on this occasion. These three performances of Joe Bunker for the year 1880 were enough to show that he was cut out for a campaigner, and fit to stay in good company.

In 1881 he laid up, starting but once, at Cincinnati, in the latter part of the season, and was beaten by his half-brother, Lumps, without getting a piece of the purse. This season he started at Chicago, July 18, and was beaten by Rose Wilkes and four others, being placed last in the first heat and distanced in the second. He next trotted at Cleveland, July 27, and was beaten by Aldine, getting fourth money. At La Salle, Ill., Aug. 16, he won a good five-heat race, beating Lucy, Big Soap, Scion and Emma Earl, all old hands, in 2:29, 2:26½, 2:27½. This race demonstrated that Joe had not lost his speed nor failed in his staying powers. At Cleveland, Sept. 7, he repeated the performance, defeating Dr. Norman—a very fast five-year-old—Ewing, Joe Rea, Hardwood, Gladiator, Abdallah Boy, H. M. Strong, Lady Thorne, and Harry Velox, in 2:21½, 2:24, 2:23½. He was at Toledo Sept. 12, where he won handsomely in a four-heat race, beating Harry Velox, Gift Jr., Abdallah Boy, Will Benham and Gladiator, in 2:24½, 2:28, 2:27. His next contest was at Chicago, Sept. 18, where he won in straight heats, Ewing, Gladiator and George K being defeated in 2:25, 2:21, 2:23. His last appearance for the season was at Lexington, Ky., Oct. 11. Joe Rea, Lillian, Alice Stoner, and Judge Hawes lowered their flags to him in a four-heat race. The first heat he won was trotted in 2:20½—his best record—the remaining two in 2:23½ and 2:26. He has nineteen heats in 2:30 or better to his credit, no heat, with the exception of his race at Chester Park in 1880, being slower than 2:29. The performances enumerated above are no indication of Joe Bunker's abilities. He is a very speedy horse, and game as they make them. Joe Bunker is by right of inheritance a trotting horse. His sire, George Wilkes, was himself a great trotter and a sire of trotters, nineteen of his get holding places in the great 2:30 list, seven of which entered this year. This is the greatest number contributed in one season by any trotting sire, with the exception of Blue Bull, who has an equal number for 1882. Through Joe's veins courses the stout and lasting Hambletonian blood, commingled with the speedy Clay and game American Star strains. The Star and Hambletonian cross is one of the best on the American trotting turf; witness Dexter, 2:17½; Nettie, 2:18, Driver, 2:19½; Orange Girl, 2:25; Huntress, 2:20½; Powers, 2:21; Robert McGregor, 2:18; and Jay Gould, 2:21½. George Wilkes' great daughter, Rosa Wilkes, is one of the sensational performers of the year, and there is no reason to believe Joe Bunker will not prove equally as great.—*New York Sportsman*.

RACING REMINISCENCES.

Trotters I Have Driven—Piedmont and the Races He Won for Me.

I now come to the stallion Piedmont, one of the fastest horses that I ever pulled a line over. He became a member of my stable in the spring of 1880, being at that time nine years old. Five years previous he had won the *Spirit of the Times* stake for four-year-olds, getting a record of 2:30½, which he had never lowered, although trotting some each year, and in addition had acquired the reputation of being a quitter. The first race I started him in was at Adrian, Mich., where he lost the first heat to Katie Barium, but won the next three easily, the time of the second heat being 2:29½—a reduction of his previous record of a full second. At Detroit the next week there was a large field, Black Cloud, who has since gained a record of 2:17½, being a hot favorite, but I beat him with Piedmont in three heats without a struggle, the time being 2:24, 2:24½, 2:24½, my horse again reducing his record—this time five and a half seconds. We were to have trotted at Pontiac the following week, but the track was such a bad one we concluded not to start, and so Piedmont's next race was at Columbus, Ohio, where he met a large field of good horses. Abdallah Boy had won a good race at Toledo the week before, and was well backed, the pool-selling being lively, but Piedmont won handily in straight heats, the fastest one being in 2:25. This was the first time that Mr. S. J. Morgan, who owned the horse, had seen him trot. The first half-mile on this Columbus track is up hill, and the first turn a very short one. Piedmont could never trot a short turn fast, and in getting away for the last heat I sent him along too fast at this place, and he broke. When he caught I did not dare to go too fast up the hill for fear of pumping him out, as he had quit in all his western races, previous to this season, and I had not driven him long enough to know just what he was capable of doing. So I trailed along easily, and at the half-mile pole was fifth or sixth horse, but once on top of the hill Piedmont was set going, and at the three-quarter pole was in the lead. After the heat was over Mr. Morgan said he saw Piedmont break and fall behind. Just then he turned round to speak to a friend, and when he looked at the horses again Piedmont was in the lead. This was Morgan's version of it, but I told him he was so afraid the horse would be beaten that he could not bear to look at him, and shut his eyes. From Columbus we went to Fort Wayne, and there Piedmont was beaten in straight heats by Kitty Bates, who went the first mile in 2:23½—a merry clip over a half-mile track in the early part of the season. Piedmont could never trot a half-mile track fast, nor a mile track that cupped out, as he always wanted good footing, and the smoother and harder it was the better he liked it.

Then we came to Chicago, where Piedmont was engaged in two races: the stake for stallions that had never beaten 2:30, and the regular 2:30 race. In the first race the field of starters was a large one, including Piedmont, Black Cloud, Amber, Hambletonian Bashaw, and other good ones. Amber had been trotting good races down East, and was first choice in the pools, being backed very heavily by the Rochester party that came here with him. In the first heat Amber got off with the lead and passed the quarter pole first, but as soon as we straightened into the back stretch I sent Piedmont after him, and before we reached the three-quarter pole was in the lead and easing my horse back to him. Feck made several brushes at me with Amber going down the home stretch, but Piedmont won easily in 2:21½, which was his fastest record up to that time. He also took the second and third heats, Hambletonian Bashaw being second in each of them. We did not start in the 2:30 race at this meeting.

After this race we thought it best to give Piedmont a rest during the hot summer months, and he was not trotted again until September, when he went to Minneapolis to trot against Hambletonian Bashaw and Bonsetter. Bashaw won the first heat in 2:27, and that was the first time that any stallion had beaten Piedmont a heat. I had always been afraid to drive him more than was absolutely necessary in order to keep the lead, and in this heat was pursuing the usual tactics. When about half-way down the home stretch Crawford set Hambletonian Bashaw to going; and as he was a horse of wonderful speed for a little ways, beat me for the heat in spite of all I could do. Bashaw was a horse that, if allowed to go the first three-quarters of a mile at moderate speed, would trot the last one very fast; and knowing this fact I resolved to drive the second heat differently. When we got the word I set the pace pretty strong, and Bashaw never got near me, Piedmont winning in 2:22, and also taking the next two heats. At Chicago, the following week, he had an easy race, Voltaire and Lida Bassett being the only other starters. Crawford had an idea that when Voltaire was just right he had a chance to beat Piedmont, and drove me out one heat in 2:21½.

Then came the race at St. Louis with France's Alexander. Both stallions had started out at the beginning of the season with records exactly alike, and Mr. France had made so much talk about his horse beating Piedmont that I was very glad to meet him right in his own town. In the draw for positions Alexander secured the pole, and Piedmont the outside, which reminded me of a meeting in Iowa that I once attended, where drivers knew several days in advance just what positions their horses were going to draw. When we got the word for the first heat Alexander had a little the best of the start, and led around the turn into the back stretch. Once into the straight work I let Piedmont step along some, and by the time the half-mile pole was reached he was leading Alexander. Half-way between the half and three-quarter poles Piedmont had trotted past Alexander, taken the pole from him, and I had taken my horse back and was watching the other horse. The first quarter of this mile was trotted in 35 seconds, and the half in 1:08, making 33 seconds for the second quarter; and as Piedmont was behind at the quarter pole and ahead at the half he must have been going some. That kind of work took all the trot out of Alexander, and just before reaching the three-quarter pole he made a break, and as he was not one of the kind that could catch and came again I won the heat in the slow time of 2:22½. The next two heats Piedmont won easily in slow time, one fast half-mile being all the medicine that Alexander wanted that day.

The next place at which Piedmont trotted was at Louisville, the other starters being Von Arnim and Voltaire, and at no time were they able to extend my horse. At the Lexington meeting we did not start Piedmont, but I drove him a mile one morning in his work in 2:18, and the next week showed him at Cynthia, Ky., where he trotted an exhibition mile in 2:18½, that being the last race of the season.

In the spring of 1881 I took charge of Piedmont again, and thought by the way he moved up in his work when asked to extend himself that he had more speed than ever, although I did not drive him a fast half or quarter before going to Michigan with my other horses. When I came back to Chicago, having been gone two weeks, with the intention of giving the

horse a "repeat," Mr. Morgan said he was out of form, but could not tell why. The horse, he said, did not seem to have his speed, and seemed unwilling to do what he could. However, I "repeated" him, and the result only confirmed what Mr. Morgan had told me, as I had to work pretty hard to get a mile in 2:26 out of him. This, from a horse that had trotted quarters for me better than 33 seconds the previous season, was not very encouraging, especially as the first race in which we were to start him was the \$5,000 stallion purse at Chicago in July, and as the time for that event was rapidly approaching, the prospect for winning any part of the money seemed slim, as against such competitors as Santa Claus, Robert McGregor, Wedgewood and Hannis, it was evident that none but a first-class horse, in first-class trim, stood any show. After this mile in 2:26 I went to Michigan again, but returned at the end of a week to see how the stallion was getting along. I gave him a slow mile, cooled out, and then sent him for the best he could do, the time being 2:23. This was an improvement of three seconds in seven days; but the time before the race was so short that it did not seem possible for a horse to improve sufficiently to put in three or four heats better than 2:20, as we knew must be done by the winner of the stallion purse. Piedmont was also entered in the 2:21 race at the Chicago meeting, and in it would meet France's Alexander, the horse he had beaten so easily at St. Louis the previous season, but that had since won the \$10,000 stallion race at Rochester, N. Y., on the Fourth of July. Piedmont had not been entered in the Rochester race, and as Alexander had stayed out of the stallion race at Chicago they would have their first meeting in the 2:21 race. On the Sunday before the Chicago meeting I gave Piedmont his last fast work previous to the stallion race, which was to be trotted Tuesday. As before, I gave him one slow mile, and then drove him right up to his speed. The time was 2:19½; but I noticed that in the last part of the mile he seemed to have his old-time speed, and then, for the first time, it seemed to me that he ought to get a place in the stallion race, and win in the 2:21 class, for I knew the first race would do him good.

When the day of the stallion race came everybody knew that Piedmont had been out of form for a month, and in consequence he sold for about \$10 in pools of \$100 and over. My ideas on the subject were so strong that I did not back the horse, having only four pools on him, for which I paid \$32, and taking those more as a matter of form than anything else. When we drew for positions Piedmont got the pole, and it occurred to me if I could win the first heat it would give me a good place in the race, and so when the word was given I drove for it. Robert McGregor and Santa Claus were my principal opponents in this mile, all being well together from the quarter pole, and in the homestretch it was a neck-and-neck struggle for supremacy. No one could pick the winner a hundred feet from the wire, but right at the finish McGregor came along with a burst of speed and won the heat by a head in 2:18, Santa Claus being second and Piedmont third; and persons who did not see this heat may know how close the finish was when I state that although Piedmont was the third horse his nose was not over three feet behind that of Santa Claus when the latter went under the wire. Hannis was fourth in this heat, Wedgewood fifth and Monroe Chief last. As my calculations in regard to this heat had gone so far amiss I concluded to lay my horse up in the second heat, thinking that perhaps such action would enable him to go the third mile better than he had the first. Consequently I was not particular in going away from the stand to hold my position, but after we had trotted three-quarters of a mile, it seemed to me that Piedmont could win. So I cut him loose, Santa Claus being the contending horse, but he beat me out a head in 2:17½ after one of the prettiest finishes ever seen.

There was now a great revolution in the betting, and as Piedmont was a Chicago horse, and had fought so well for every heat, his success was a popular one, especially as the time was, with the exception of Smuggler's 2:15½, the fastest that had ever been made by a stallion. The other drivers had all been backing their own horses—the pool selling showed that—and seeing that matters were beginning to look squally, a caucus was held in regard to how the next heat was to be driven. It was finally decided to have Wedgewood sent after Piedmont single-handed. This arrangement suited me exactly, as I knew Piedmont could beat Wedgewood and have an easy heat himself. The result was in accordance with my views, as Piedmont won by four or five lengths in 2:19½, never being headed in the mile.

Wedgewood, Hannis and Monroe Chief now went to the barn, not having won one heat in five, and only Piedmont, Santa Claus and McGregor started for the sixth heat, which Piedmont won easily by several lengths in 2:21, thus ending the fastest stallion race ever trotted, and one of the best six-heat races on record.

This race was trotted July 19th, and on the 26th Piedmont started in the 2:21 class against France's Alexander and Lucy. This was quite a betting race, as the Alexander party were confident that no stallion could defeat their horse, arguing that his seven-heat race at Rochester was better than the one trotted and won by Piedmont at Chicago, although if some of them had known more about that race perhaps they would not have been so sure of beating the chestnut. At all events they put up their money freely, and as the Chicago boys did likewise, the pool-selling the evening before the race and the next day was of the liveliest description, even money being the rate at which the bets were made. All this time it seemed to me like a sure thing for Piedmont to beat Alexander; for the previous season he had trotted right around him over the St. Louis track, when Alexander had all his speed; and Piedmont's performance in the stallion race had demonstrated that he could stay. When we came to trot the race my expectations were fulfilled to the letter. Not having, apparently, profited by his experience the previous season, Gus Wilson, who drove Alexander, attempted to take the pole from Piedmont as soon as the word for the first heat was given, but when he came down to the inside he found a horse there that could not only hold his own, but go faster than Alexander ever could. Wilson kept trying to get ahead of me, however, and when Alexander had reached the top of his speed, he naturally went into the air, and that was the last I saw of him in the heat, which Piedmont won easily in 2:18. In the second heat Wilson attempted to repeat the tactics of the first, and the result of this was that Alexander was distanced in 2:19½, leaving only Lucy to be beaten the third heat, which Piedmont won in 2:19.

Then I concluded not to try for the next heat, and let the other horses go away ahead of me. McGregor got away with the lead, and when Splan came up with Wedgewood I let him go right past me, but when John got alongside of McGregor he asked Crawford, who was driving that horse, to let him have the heat. I thought Crawford said he would do so, and then I knew it would be necessary for me to go along with Piedmont in order to prevent Wedgewood's winning. I succeeded in doing this, but in going for McGregor Splan made me trot so wide on the turn that Turner slipped up on the inside with Hannis and beat me out for second

place, McGregor winning the heat in 2:18½. But although my calculations regarding this heat had been upset, I was now more confident than ever, and began, for the first time, to think that Piedmont would win the race. McGregor, I could see, was tired, and as Mr. Morgan and myself walked to the stable I told him what I thought, and said that in the next heat I should drive for it from the time the word was given. When the horses came out Piedmont felt as gay as a lark, and in scoring for the send-off I could see that all his speed had returned. When the word was given I sent him along at a merry clip, had taken the pole before the first turn was reached, and was never headed in the mile, winning the heat easily in 2:17½, the fastest one of the race. Santa Claus was second, but a long way off, and the rest strung out.

Then came Piedmont's races through the Central Circuit in the 2:21 class, winning at Buffalo in 2:20½, 2:22, 2:22; at Rochester in 2:20½, 2:19½, 2:17½; and at Utica in 2:21, 2:23½, 2:19½. In neither of these races did he lose a heat, but at Hartford he struck Edwin Thorne for the first time, and was beaten in straight heats, the time being 2:17½, 2:18½, 2:18½, which was a good enough race to beat most horses. Our next engagement with Piedmont was in the \$10,000 stallion race to be trotted at Boston, September 15th, and as the Hartford race took place August 25th, I had nearly three weeks' idle time on my hands. I kept my horse at Hartford until three or four days before the Boston race, and about a week previous to that event gave him five heats over the Hartford track in 2:27, 2:20½, 2:16½, 2:17½, 2:27. On the day the Boston race was trotted the Beacon Park track was rather soft, and the day a chilly one. Santa Claus won this race easily enough, the time of the fastest heat being 2:17½. A great many people have asked me if Piedmont was not "off" that day. I don't think he was. The day was cold, and the track soft and cuppy, being exactly the condition of affairs which Piedmont did not like, a hot day and hard track being always necessary for him when his best performance was to be expected.

The turns on the Beacon Park track are very short, the same as on a half-mile track, and this was against Piedmont, as he never could trot that style of track while I had him. This was the only race that Piedmont ever lost to a stallion, and in turn he has beaten nearly all the prominent stallions in this country, the list of those who have succumbed to him including Monroe Chief, Black Cloud, Von Arnim, Kentucky Wilkes, Robert McGregor, Wedgewood, Hannis, Bonsetter, Hambletonian Bashaw, Amber, Abdallah Boy, Santa Claus, France's Alexander and Voltaire. Piedmont was a horse that required a great deal of work to get him into condition for a race, and if he did not receive it he would lose his speed and be dull and sluggish. He was a hearty feeder. One peculiarity of his was that between the heats of a race he would puff and blow in a style that would make anyone think he was tired; but it was only a habit of his—he would make as much fuss after trotting a heat in 2:30 as if it had been 2:20. In the winter of 1881-82 Piedmont was sold to ex-Gov. Stanford, of California, for \$27,500, and is now in the stud at the Palo Alto farm.—*Peter V. Johnson in the Breeders' Gazette.*

Close of the Fall Race Meeting.

The fall meeting of the Pacific Coast Blood-Horse Association came to a close on Saturday last, and now it can be ranked as one of the successes of the season. The man who does the horse for a morning paper thus descants on the weather, and as he has come nearly describing it as it was, it comes in appropriately in this place.

"Dreary November." So say the English turf scribes when recording the races at the close of the season. In California the reverse is more generally the case, and more lovely weather it would be difficult to imagine than that which prevails for a good portion of the month. Yesterday there was an exception. Dreary, almost dismal, when compared with that of the preceding race day. There were clouds and fogs in the morning. At noon the sun, it was thought, would break the veil of vapor, and for a few minutes it was visible. Not bright and effulgent, however, but more like the broadside of a skimmed milk cheese suspended from the rafters of a smoky cabin. The clouds again closed, ominous, a warning of a downfall. The mists climbed the hills and hung in the ravines, and seemed to be ready on short notice to take the more palpable form of rain. The barometers in the windows of the shops gave forebodings of a change, and many who consulted them countermanded the order to get the carriage ready, and concluded that the promise of sport was too indefinite to warrant the journey. Notwithstanding the signs and omens, there was a very good attendance, more than was expected under the untoward circumstances, and somewhat relieved the somberness of the surroundings. The course was in bad condition. There had been clouds and vapor hanging over it since the rains of Wednesday night, and it was heavy, sticky, slow and altogether bad—slower than when the horses splashed through it on Thursday, the light mud having dried so that it was the consistence of thick mortar, and increasing the labor of getting through it, while the foothold was still more insecure.

Though the metaphor comparing the sun to a "skimmed milk cheese" is on the Hudibrastic order, he was a lucky scribe to get a glimpse of the great luminary at all. At the course the veil was too dense to show the least token that the sun had not set and at times the heavy fog would come in streamers of vapor, partially obscuring part of the track. It is safe to assert that it was the "slowest track" for horses to run a long race upon that had ever been known here. That is when racehorses actually ran, and the "old-timers" could not understand why the horses were called. The general idea was that there was likely to be a postponement, and this notion was so prevalent in the city that a very large majority of those who intended to go countermanded the order for teams and stayed at home.

A better idea of the slowness of the track can be obtained from the other races than the data furnished by the time of the four miles. Seven minutes, forty-five and a half seconds is not bad on a fair track and to arrive at a just estimate it will be better to consider the time of the other races.

Joe Howell carrying 124 pounds beat Frank Rhoads the shortest of short heads in 2:17. Frank Rhoads had a concession of 15 pounds, and Atlanta, who was a good third, carried 90 pounds. The time of 2:17 is at least six seconds slower than either of the horses could make the distance on a good track, and even this difference of nearly five seconds to a mile is not enough when the effect on a four-mile race is to be calculated. Twenty seconds off is

none too much, and there can scarcely be a question that on a good day and a good track 7:25 would be beaten by the winner.

The weather was as great a drawback to the attendance as it was to the horses, though we were glad to see one at least who was determined that all the discomforts should not stop him from enjoying the "four-mile-day." Colonel W. P. Barnes turned out in a very handsome drag—four-in-hand with everything requisite for the enjoyment of family and friends. There were hampers of wine, and a luncheon which Fortsum and Mason could not surpass, and the colored man who had charge of the commissary gave proof that it was not a new job to him. Under the sheds were a goodly number of road horses, the rawness and dampness of the air precluding the field display of carriages.

While the great interest centered in the four-mile race, that which preceded it evoked a good share of attention. It was a handicap stake of \$25 each, with \$250 added; one and a quarter miles. The starters were Joe Howell, 124 pounds; Bolis, 105 pounds; Frank Rhoads, 103 pounds; Atlanta, 90 pounds and Garfield, 85 pounds. Patsy Duffy had the mount on Joe Howell, Williams on Bolis, Howson, Rhoads; Luke rode Atlanta and Sam Carter Garfield. At the opening of the pool sales Howell was the favorite, bringing \$50 to \$30 on Garfield, and \$26 on the field, which embraced the other three. The field appreciated before the start, and quite a large amount was bet. There was a capital start, and that without much delay, and as they swept past the stand Howell was in the lead with Garfield second, but on the first turn Rhoads passed both, and at the quarter-mile had established himself first, the half-mile being made in 54 seconds. At the half-mile mark, in 1:22, he was still leading, Howell second, the others together, and there was not much change until the horses were within a short distance of the stretch. Then Atlanta came with a rush, closing on the leaders, and the run home was very exciting. Howell passed Frank Rhoads, and at the dragway it appeared as though he would win, "hands down." Rhoads was not beaten yet, however, and though half a length behind when within one hundred feet of the score he came again gamely, and was only beaten by a "short head." The weight was telling on the old veteran, though bravely he carried it, and the crowd heartily cheered him as he came back for his rider to weigh. Atlanta was third, Garfield fourth and Bolis fifth. Time, 2:17.

SUMMARY.

BAY DISTRICT COURSE, Saturday, Nov. 25 1882.—First Race; handicap, \$25 each; \$100 if declared; \$200 added; \$75 second horse. Free for all. Dash of a mile and a quarter.

Stemler & Ayres' b g Joe Howell, aged, by Bonnie Scotland—Eva Sheppard, 124 lbs. (Duffy).....1
W. L. Pritchard's b c Frank Rhoads, 4 years, by Leicester—Ada A., 103 lbs. (Howson).....2
Theo. Winters' ch m Atlanta, 3 years, by Norfolk—Lady Jane, 90 lbs. (Carter).....3
J. P. Woolman's b m Bolis, 5 years, by imported Buckden—Jennie H., 105 lbs.0
R. J. Green's gr c Garfield, 3 years, by California—Queen, 85 lbs.0
Jocko and Hattie B paid forfeit.

Time—2:17.

The betting was heavy on the four-mile race. A great deal of money went into the box the night previous, and those who had held aloof until they could get some line to guide them, rushed their money in with a will. There were only slight variations in the odds. The Palo Alto filly Precious was the favorite from the first. She held that position all through, and her supporters never wavered in their faith, nor lost confidence in the handsome filly. A fair average of all was: Precious, \$100; the field, Clara D, and Nathan Coombs, \$85; Fred Collier, \$80. A dense crowd surrounded the auctioneer, and it was lively times for the clerks to receive the money and make out the tickets. When the horses appeared they were eagerly scanned, and cognoscenti were on the qui vive for some sign or token to guide them in their choice. Clara D did quite a strong gallop down the stretch, and though she evidently had picked up a good deal since her return from the East, she still showed a lack of flesh for a race of four miles on such a heavy track. Fred Collier took it more leisurely, and when he was disrobed he appeared to the eye to be in good condition. Precious was "blooming." The covering removed, and her coat glistened even under the lowering clouds, and if there had been bright sunshine it would have been like the shield of Fingal that shone through the fogs of the North. Nathan Coombs looked robust in body, though his legs were palpably affected, and there were prognostications of a breakdown, which proved to be well-founded.

The drawing for positions gave Precious the pole, Clara D second, Nathan Coombs third, Fred Collier on the outside. Precious was ridden by Ed Fallon, Clara D by Fred Carrillo, Nathan Coombs by Fred Ross and Fred Collier by Patsy Duffy. There was little time wasted after the riders were mounted, and no trial of patience to the spectators. At the second attempt the horses received a very good start, and as they rounded the turn Clara D led, Precious second, Fred Collier third and Nathan Coombs fourth. At the quarter pole Clara D was three lengths ahead of Precious, Fred Collier being third and Nathan Coombs fourth. Time, 28½. Down the backstretch there was but little change in their respective positions, but Clara D. had a little wider gap between her and Precious. Time at the half mile, 1:01. Rounding the further turn Clara D led Precious by six lengths, with seven or eight lengths between her and Fred Collier, Nathan Coombs two lengths in the rear of the latter, last of all. At the three-quarter pole the time was 1:29, Clara D still leading, with about the same advantage. In the run down the homestretch the leaders closed upon each other, but the others were the same as before. Precious was within three lengths of the leader. First mile, 1:59, Clara D leading.

She still led on, making the first turn the second time, with Precious close up, Fred Collier third and Nathan Coombs away in the rear. The time for the mile and a quarter was 2:29, Clara D two lengths ahead of Precious, who was several lengths ahead of Fred Collier, third, Nathan Coombs being last. Clara D was running easily, and the filly still more so. Time at the mile and a half, 2:58½, Clara D still leading. Rounding the further turn there was a very long gap between the two leaders and Fred Collier and Nathan Coombs. Time for a mile and three-quarters, 3:29. Again those in the rear closed up some on the gap, Clara D running strong and fresh, and Precious very easily. The time for the two miles was 3:58, Clara D three lengths ahead, Precious a length in advance of Coombs, Collier fourth. This time around the turn there was little change, only Clara D opened more of a gap between her and Precious, she being at least fifty yards in front of Coombs and Collier, who were running side by side. Time for the two miles and a quarter, 4:47, Clara D leading at a good pace, Precious pulling hard. When they went down the backstretch for the third mile Collier took the lead of Coombs and moved up a little closer. At the half-

mile pole Clara D led Precious about twelve yards, Fred Collier being third and Nathan Coombs falling back. Time, 4:56. Around the northern turn Clara D still led, with the horses strung out behind, Fred Collier closing the gap at the three-quarters, so that it was perceptibly reduced between him and Precious as the three-quarter pole was passed in 5:25. In the run down the homestretch Collier closed still more of the gap that marked the difference, and when Clara D went under the wire for the third time in 5:53 he was almost as near Precious as she was to the leader. But the filly had not run hard yet, having pulled so hard that the saddle slipped at the close of the first mile, and the rider was almost on her withers, and when the tension on the reins was removed she darted forward at a rate of speed that rapidly diminished the distance between her and Clara D. Collier fell back beaten, and Nathan, who had given way in his ailing leg on the previous mile, was far in the rear. The nose of Precious was parallel with the hip of Clara before reaching the quarter pole, and it was evident that the race from there was to be a hot contest for the supremacy.

At every stride Precious was gaining, but at the half-mile there was no perceptible difference, Collier at least forty yards behind. It was also evident that whichever got the best of the brush was almost sure to be the winner, and eagerly, anxiously, excitedly the battle was watched. The man who was taking the time of the fractions became so much interested that he forgot to touch the spring of the "split," and at the quarter and half no time was recorded. A little beyond the half-mile the nose of Precious was seen in front, a few strides and there was a head to her advantage, a little further and the neck was seen. The gallant old mare made a heroic effort, reducing for a moment or two the lead by a few inches. Bravely done, it was the last expiring throb. Heart, lungs, muscles were overdone, and the gain came from the nerve force, which was all that carried her along. The race was ended. Precious keeping up her easy stride, widened the gap, and though the other was lengths behind, she never faltered or slackened, going under the wire with her "ears pricked" and her action still showing vigor, Clara D some twelve lengths in the rear, Collier a long way behind, and Nathan Coombs, who had given away in a hind leg as well as the front, hobbling midway of the stretch. The time of the four miles was 7:45½, which was very fast for the state of the track and the weight carried. The winner, Precious, as a three-year-old filly, carried ninety-nine pounds; Fred Collier, four years old, 115 pounds; Clara D, "aged," 120 pounds, and Nathan Coombs, also aged, 123 pounds.

The winner is one of the most promising three-year-olds for a distance that has ever appeared on the Pacific Coast. She is quite a handsome filly, and of the best breeding. Her sire is Lever, a son of Lexington, and her dam was by another son, Thunder, from an imported mare.

SUMMARY.

Same day—Second race; Baldwin Stake; \$250 each, p.p. \$1,000 added; second to receive \$400; third to save stake. Dash of four miles.

George Hearst's (Palo Alto) b m Precious (Ed. Fallon).....1
E. J. Baldwin's b m Clara D, (Fred Carrillo).....2
2 Stemler & Ayres' s g Fred Collier (Patsy Duffy).....3
W. Boots' br h Nathan Coombs (Fred Ross).....0
Time—7:45½.

No starters for the subscriptions of W. L. Pritchard and J. T. Gilmore.

The Consolation Purse was the next on the cards. This was a dash of a mile for a purse of \$200, the weights being governed by the number of times the entries had been beaten. The starters were Haddington, 113 pounds; Frank Rhoads, 103 pounds; Forest King, 94 pounds, and Lou Spencer, 82 pounds. At the first Haddington was the favorite, bringing \$70; Forest King \$47½, and the other two \$52½. Before the start the field, containing Frank Rhoads, was the first choice, and this proved to be the correct estimate. At the fall of the starter's flag Frank Rhoads took the lead, and though Lou Spencer ran on the extreme outside of the track, she was only a short distance behind him at the quarter. The run down the backstretch was very pretty, Rhoads and Lou having the fun all to themselves. She kept close to him on the turn, but was never able to reach him, though she finished a very fair second, her jockey "Luke" worked bravely to secure the victory till the last moment. Forest King was a poor third a half length in front of Haddington. Time, 1:49½.

SUMMARY.

Same day—Third race; Consolation Purse, \$200. Entrance free; second horse to receive \$50. Dash of a mile. Horses beaten once allowed five pounds; twice ten pounds, and three times fifteen pounds. Entries to be made at Judges' Stand immediately after the running of the handicap race.

W. L. Pritchard names Frank Rhoads 4 years, 103 pounds.....1
Theo. Winters names Lou Spencer, 2 years, 82 pounds.....2
Palo Alto names Forest King, 3 years, 94 pounds.....3
J. McShaffer names Haddington, 5 years, 103 pounds.....0
Time—1:49½.

The hurdle race proved to be a very good one. The starters were the same as the previous week, viz.: Hattie B, and Mollie H. The former was a "tremendous favorite," and a great deal of money was put on her at the rate of \$160 to \$47. The now favorite had greatly improved in the interim, and had also the advantage of a better jockey. She was ridden by a young man who had just returned from a cruise in the Arctic, and the perils of the North had seasoned him so that surmounting such trifling obstacles as a three-foot-six hurdle was lightly thought. It was one of the closest contests of the kind ever witnessed. Many of the jumps were taken side by side, and Mollie H on this occasion made the cleverest work. The first heat was nearly as close as that between Howell and Rhoads, being won by Mollie H by a short neck, and for the heavy, sticky track, the time was fast—1:58½. In the second heat Hattie B took the lead, and making cleaner jumps than before, she was first until the last hurdle was cleared. Again the run home was close, but this time Mollie B won by a length in 1:59. Thus closed the fall meeting of the Pacific Coast Blood Horse Association, which, notwithstanding the bad weather of the last two racing days, has been a success from every point of view.

SUMMARY.

Same day—Fourth race; Purse, \$250; entrance free; \$50 to second horse. Heats of a mile over four hurdles.

W. Boots' b m Mollie H, 5 years, by Wildside—Mamie Hall.....1
Theo. Winters' ch f Hattie B, 3 years, by Norfolk—Maggie Dale.....2
Time—1:58½, 1:59.

Yellow Dock.

NEW YORK, Nov. 22, 1882.

J. C. SIMPSON ESQ., Dear Sir: It was at first expected that the owners of Yellow Dock were to send her to California this winter but they have concluded not to do so.

Yours truly,

W. J. WELCH.

We are sorry to hear that the owners of this celebrated mare have given up the idea of wintering her on this coast. Although Overman has beaten her, the great knack she displayed in getting over the ground with running mate is an augury that she may have acquired a better method of keeping up her clip than when she met the son of Elmo. Romero, Overman, Yellow Dock and others here would be an attraction which would bring thousands to see them.

ATHLETICS.

George's Offer to Myers.

The New York World says: The unpleasant episode in the series of international races between Messrs. George and Myers, caused by the sickness of the latter, and the refusal of the Committee of Games to agree to a postponement of the three-quarters of a mile race, which was to be the deciding event of the series, has been counterbalanced by the graceful manner in which George, after reflection, has waived his point and accepted the proposition of the Manhattan Athletic Club to run Myers three-quarters of a mile on Thanksgiving day on the grounds of the club. In a conversation with a reporter of the World yesterday George said: "The reports printed in many of the newspapers are unjust to me; they attribute motives to me that I never entertained. They endeavor to make me appear as a runner seeking only empty honors and gate money. I will run Myers three-quarters of a mile on Thanksgiving Day. I want nothing to do with the arrangements of the affair, but will go to the grounds prepared to race. In doing this I am but accepting the proposal of the committee, and should they withdraw it then the public will see that I am not at fault and am not the pot-hunter that I have been represented to be. I like Myers very much and I know that he is willing to run me at any time, and would have run me to-day but for the pressure brought to bear on him. It is a pity that he has not the management of his own affairs."

Myers was found at the grounds of his club, Fifty-sixth street and Eighth avenue. He said: "I am better to-day, but not by any means well. I think it mean that George should accuse me of shamming sickness to escape defeat. I gave him the race last Saturday, and I did not think it fair to sacrifice my friends by giving him another to-day. I was sick, as my father and doctor can testify. The proposal of George that we should race, and the fact that I was ill was not to be made public until after my defeat, shows that he was after the share of the gate money, which goes to his club."

Mr. Wm. B. Curtis, the referee of the two contests that have taken place between George and Myers, was found at his office in Chambers street. He said: "The letter that was published over George's name in which he says that I was not his financial agent left no other course open to me but to resign the position to which I was appointed by Mr. Jackson, the President of the Moseley Harriers Club, of which George is a member. He has behaved in a very unreasonable manner all through this affair. When I told him that the only thing I could do would be to postpone the race, run three-quarters of a mile against time or a handicap of the same distance, he would not listen to me and I left disgusted with the whole affair."

Mr. George W. Thomas said: "I believe George is willing to run, but he was obliged to cause us to forfeit in order to win bets. It is a well known fact that he was around the Brower House all the evening previous to the last race, and that it was through him that the gamblers were present in such large numbers on that occasion. Why, he knew to a penny what all the gamblers won—how much Arthur Chambers won, how much Lovell won, and so on, and still he has the courage to say that we are the people who are more than fond of betting."

In answer to this, Mr. Wm. H. Caldicott, George's friend and club mate, said: "Of course, we were around the Brower House. We claim the same right to bet a few pounds on the race as the men of Myers' crowd had to bet the thousands of dollars that they lost."

The following letter has been issued by George:

TO THE EDITOR OF THE WORLD, Sir: I have read in several papers of this morning, with mingled feelings of regret and surprise, many things untrue and others only partially so—altogether heaps which, if only half correct, would be a disgrace to both English and American athletic sport. I therefore beg to state that I will run Mr. L. E. Myers on Thanksgiving Day (Nov. 30) certain. Every arrangement I leave to the Manhattan Club. I deny that my object in visiting this country was otherwise than in the interests of amateur athletic sport, and remain yours truly,

W. G. GEORGE.

Knickerbocker Hotel, Mott Haven, N. Y., Nov. 18.

Myers' Condition—Bets.

The New York World publishes the following communications, replying to the second that backers of George are winners:

In reading the World of this morning I see in your published account of the Myers-George trouble that Mr. George said that he never saw a man in finer condition than Myers, and he thought that Myers would beat the record. Now, on Sunday morning after that race Mr. Myers' father told me that his son had been coughing throughout the night and that he was evidently suffering from a severe cold. During the week following Myers did little running, and that at a slow pace, and he was still very ill when he went into the mile race. Notwithstanding this, he beat his last previous record at the distance, and at that walked in the last thirty yards, which proves, to my mind at least, that Myers was not overtrained, as I cannot see how a man could be too fine and yet run up to this form. JOHN FRASER.

Cannot you manage to give in your paper an explicit statement as to how the bets on the George-Myers match go—especially the point of those made in which George was backed to win two out of three events? E.

In the Examiner of last week Peter McIntyre is accused of running a job race of 440 yards with the well-known professional F. R. Davis. McIntyre has never been known to run an unfair race, and never countenanced a fraud in any match in which he was interested. More than that, the reports of all the daily papers, as well as the weekly sporting journals, of that date will prove that G. Guerrero, with 60 yards handicap, was Davis' opponent in the race named by the Examiner, and will also show that at the time McIntyre was 3,000 miles away, in the East. No doubt the Examiner will gladly correct the error.

The Honolulu Athletic Association, organized some months ago, and which has a large membership, is now erecting a building for their gymnasium. This they will add to it from time to time as funds permit. The Y. M. C. A. of Honolulu have a fine large brick building in process of construction in the central part of the city, a portion of which will also be devoted to a gymnasium.

The 135 yards match between Harmon and Gibson for \$250 a side was won easily by the former, in San Jose last Saturday. The time taken was all the way from 13½ to 14 seconds. Gibson was beaten fully four yards.

DISTRICT BOARD NO. 5 AND THE HON. JAMES McM. SHAFTER.

We feel that the time has come when duty compels us to enter a vigorous protest against the manner in which a member of the board, James McM. Shafter, works against the interests of trotting on this Coast.

We shall do so plainly, emphatically, giving the reasons why we consider him unfit for the position he occupies, and that his present conduct and his antecedents are in direct opposition to the welfare and popularization of the sports of the track. There is an immense moneyed interest depending. There are graver questions at issue than dollars and cents.

While we are so situated as to have a direct personal interest, that has only a slight bearing in comparison with that of the people who look for us to defend the cause of truth, honesty, fair dealing in whatever concerns the "turf and track," and as we have stated before, we will not prove recalcitrant to the trust. In the first place we will present the objections to his present line of conduct, and then refer to the past, which is still further back, for the reasons why we have undertaken the unpleasant task, and why we demand that he shall be ousted from a position he does not fill as the incumbent of the place should.

In previous articles the manner in which he performed the duties of presiding judge has been duly commented upon. An appeal was taken from a decision given by him, and another decision so palpably wrong that the Chairman of the Board, N. T. Smith, felt it to be his duty to review it, and without a direct appeal called a session of the board to take testimony and pass upon them. This was done under the authority which the rules give, and this prompt action met with universal and hearty approbation from every one, and the meeting was held last Monday.

A man in the same situation as Mr. Shafter, and who was at all sensitive about placing himself above just criticism, would have declined to act when former decisions were impugned and appeals taken.

The by-laws of the National Trotting Association expressly forbid a person who has sat and taken part in a District Board from voting when it comes before the Board of Review, and it certainly is as bad when a man makes a decision in the judges' stand and then takes part in a court, as one of the court, when it is acted upon for concurrence or reversal. Mr. Shafter not only did that but he took upon himself to be both judge and counsel, arbitrator and advocate, and availing himself of the license of a retained barrister, argued from the standpoint of clientage. And when rebuked in the latter character sought shelter beneath the ermine of judicial functions.

It was provoking though ludicrous, and the double part he was playing a source of surprise to those who attended. It was a repetition of "the form" he displayed in the stand, his evident aim being to guard one of the cases that was postponed until next Monday. Arbitrary, dogmatic, consequential, he sought to shape things to his own views, and asked question after question in relation to matters that had not the least bearing on the subject at issue. It was only necessary to contrast the behavior of the associate members of the board to obtain a striking exemplification of the difference between a judge who desires to obtain evidence bearing on both sides and one who is still more determined to twist and quibble.

The report of the Board, which will be found on the opposite page, came to this office Tuesday between 11 a.

m. and 12 m. It was in the writing of Mr. Shafter, sent for publication and signed by both members of the Board. The decision in the case of Antevolo was not correctly reported. That decision was that the protest was not sustained while the writing stated that "the decision of the judges in the case of Antevolo was affirmed." The decision of the judges was that all were protested, and all should start," leaving the settlement of the dispute to a future time, and to a higher court. Noticing this discrepancy we called upon Mr. Smith at his office and he made the interlineation which is in accordance with the facts. There could only be one purpose in using that language, and that to influence the cases undetermined. The next point on trial was the awarding of the third heat to Bonnie, when Fred Arnold came to the score first, the only charge being loud shouting. That of Dawn would have been given priority, but Mr. Whitney solicited time to obtain affidavits, and that morning having received a letter from L. U. Shippee requesting us to look after his interests, we asked that if time were given to Mr. Whitney the others should be postponed also. The only thing necessary in the case of the "Sister to Honesty" was an affidavit from her breeder, that the filly that trotted was the daughter of "Priam by Whipple's Hambletonian and Western Girl by Chieftain." The other clause in the protest had nothing to do with the case at all.

In the case of the three-year-old Embryo the ruling is correctly given and was all that could be done under the circumstances. The only power which the District Board has to correct it used, but the injustice of the judges could only be partially remedied. That Bonnie could win one heat easily is beyond question. That she won another, not quite so easily, was also apparent. The third heat she lost and there was a probability that the fourth on the same afternoon would go against her. Continued until the next day there might be "soreness," or from her characteristics she might be "sour" and not disposed to trot. After an interval of four weeks she has only a first heat to win. That Mr. Shafter concurred in the reversal of his own decision is absolute proof of his unfitness for a place where his decision can work so much injustice. This is not the first instance of his obstinately "sticking" to a wrong ruling. At Petaluma three years ago he decided that Santa Claus was not entitled to a part of the entrance money for a "walk-over," adhered to it during the fair, and when on the boat coming home acknowledged in presence of Mr. Finigan and another that he was wrong. The agreeing with his associates may be offered to prove his candor in acknowledging his error when convinced. Should this view be accepted there must be an admission of imbecility, a lack of intelligence entirely at variance with the functions of a judge. There is little satisfaction in the admission of a wrong when the injury is beyond repair, though there may be cases in which confession will bring absolution. But after such an atonement, it can scarcely be expected that the parties who have suffered will put themselves in the way of injury from the same quarter. If a boy handles a gun so carelessly that there is imminent danger to others he is deprived of the arm. Should his incompetency result in wounding another there will be a closer surveillance.

There is a mass of verbiage in the report which may mislead those who merely glance at the rulings. That there was a proper appeal taken from the decision of the judges in the case of Dawn is beyond question. Mr. Williams made a verbal protest, and we wrote another and left it in the hands of the secretary to file should the decision be that Dawn could start. This Mr. Harris testified to, and as further proof that an appeal had been properly taken, a demand was made for the fee of \$10, and the money accepted. But there is no necessity for occupying time as any person who will take the trouble to read Rule 16 will see. Rule 16 is quoted to sustain the queer decision that "the protestant should follow up an adverse decision by appeal." The word appeal is not found in Rule 16, protest being the term, and in this case synonymous. The "protest," written, was left in the hands of the secretary to file in case of an adverse decision to the verbal protest entered by John Williams; the secretary swore that such were his instructions, and that he followed them. No one questioned the right of the Board "to proceed as of original jurisdiction to inquire into any decision," and under this the three-year-old race was adjudicated. No appeal was taken in that case, Mr. Hinds declining to do so, thinking that it would require a long time to bring it to trial, and that the colt might be out of his hands long before a decision was reached. The promptness with which the chairman acted was not foreseen, and Mr. Hinds, being under the impression that it would have to go before the Board of Review, owing to the vacancy in the District Board, felt that he could not lie out of the money for, perhaps, a year or two.

The last paragraph commencing "we find as fact" has not a single fact to sustain it, and we feel confident that

Captain Smith did not understand that paragraph when he affixed his signature.

The Embryo Stakes have always had an organization behind them. In those for foals of 1879 and 1880 the organization was Joseph Cairn Simpson Chairman, A. P. Whitney Treasurer, and Ben E. Harris Secretary.

The only one turned over to the Pacific Breeders' Association (not the "Breeder Association") was that for foals of 1881, of which Jas. McM. Shafter was President, and A. P. Whitney Vice-President, and N. T. Smith Treasurer. The license was taken in the name of the Embryo Stakes in order to cover all three of the races, and the judges were the same all through excepting that A. P. Whitney took John Howes' place after the yearling race was decided. There is not one-half of the members of the National Association having a better organization, neither is an organization necessary to obtain membership, and the question of jurisdiction was a quibble raised by the "learned counsel" to embarrass the proceedings. We stated then that not one of the parties interested could afford to avail themselves of such a quibble, and no one did, even after the "member" of District Board No. 5 suggested the idea. The license granted by the National Association embraced all the Embryo Stakes to be decided this year, and all come under its protection.

Now if we understand the money part right—and we think we do—nominating fee, declarations, forfeits and stakes have been collected by the secretary, Ben E. Harris, and turned over to the treasurer, N. T. Smith, in the yearling race. That belonging to the two and three-year-old Mr. Whitney was the custodian of, and neither the funds nor the control of these races could be transferred to any one else. We have not the least doubt that such funds have been placed in the custody of Mr. Whitney, and no one will question the integrity or responsibility of either of the treasurers.

This is as far as there is the least necessity for arguments at present, so far as relates to the report. That report is presented as nearly in accordance with the copy as compositors and proofreader could accomplish. It is a literal transcript, and though there may be an excess of periods, the instructions were to follow the MS. as closely as possible.

Having occupied more space than can well be given at this time, other facts bearing on the incompatibility of Mr. Shafter are withheld. We sincerely hope that it will be unnecessary to give them more publicity than already is awarded. Yet we feel that as the editor of a paper established to protect the interests threatened it is an imperative duty, and one we cannot shirk, to demand for the good of the breeding, turf and track interests of the Pacific coast that the position Mr. Shafter occupies be filled by another, trusting that he will be convinced from nearly unanimous and overwhelming public opinion that he is not the "right man in the right place," and resign his membership in District Board No. 5. His peculiar temperament unfits him for that, or to be placed in the judges' stand, regardless of other and weightier considerations, and this is the verdict of every one we have heard speak in relation to the subject.

Proue to favor those from whom he expects favors, perverse to the verge of malignity to those he dislikes; arrogant, domineering, insulting to those who differ with him in opinion, he has brought trouble into every association he has been connected with, and these palpable and universally accredited characteristics cannot be overcome by either social, financial or "political" standing, and this handicap to the trotting interests of the coast imposes a burden which cannot be borne.

CHRISTMAS NUMBER SPIRIT OF THE NEW YORK TIMES.

Our spirited and enterprising contemporary under the above title is following its annual custom of publishing a Christmas number that will excel even its former efforts in that line. Acting on the principle that there must be an occasional relief from the usual themes and topics that are its distinguishing features, the best talent is employed in distinct branches of the literary professions, and a story by the great Wilkie Collins, an essay by Edmund Yates are among the offerings. The ranks of the old nobility are drawn upon, and Lady Violet Greville contributes the history of "Lord Carlton's Debt," while Dion Boucicault, George R. Sims, and others of great celebrity, complete the force. Any person who has the least taste for literary work "cannot afford" to miss purchasing the Christmas number of the "Spirit."

HADDINGTON FOR SALE.

This well-bred horse is offered for sale and from his form and performances it is reasonable to expect that he will be successful in the stud. We have always regarded his sire, imported Haddington, as one of the finest bred horses ever brought here from England, and some of his blood will be an addition to any stud. The Norfolk strain gives additional value, and there is also a combination which has proved good on the trotting tracks.

THE OCCIDENT CUP AND STANFORD STAKES.

The advertisement for the Occident Stake will be found in the appropriate column, and we feel confident that it will receive a hearty support from the breeders of the Pacific Coast.

The importance of keeping up trotting colt stakes is becoming more apparent every season, and there is not a question that before many years they will be the crowning glory of the tracks. That there should be occasional failures is to be expected, but for all that, the races in some instances do not come up to previous anticipations; the failures will decrease as the years roll around. There is a grand outlook for the youngsters of the sunny slope. There is not a State in the Union that can present such an array of trotting sires, not one of the older commonwealths which can display a superiority in trotting dams. Outside of Palo Alto, with Electioneer, Whipple's Hambletonian, General Benton and Piedmont in the boxes, and the fields and paddocks containing hundreds of the highest bred mares and foals in the world, there are other large establishments as well stocked, excepting in numbers, and scores of small breeders who are not afraid to meet the "big guns", in actual warfare. Look at the array: Echo, Elmo, A. W. Richmond, Buccaneer, Sultan, Brigadier, Abbottsford, Algona, Nephew, Arthurton, Steinway, Priam, Del Sur, Gibraltar, Albert W, Romero and Director, the get of Nutwood, Santa Claus, and many others which could be added the list. Is there anything "rash" in the prediction that in future years there will be an abundance of nominations, plenty of starters.

These two stakes are gotten up on the correct principle, and we hope that after this year all will follow the plan. In racing the practice has been to give the nominator or subscriber until the time the race took place, or at a previous date, named in the conditions, the right to enter without the payment of any sum. Followed in trotting stakes it has led to confusion and misunderstanding. The complicated conditions of the Embryo has been peculiarly prolific of entanglements. People engaged in racing are acquainted with what is required, the comparatively recent adoption of trotting stakes has prevented a complete understanding and numerous disagreeable features have sprung from the lack of knowledge. Thus a man who paid his forfeits in the two-year-old Embryo of last year considered that the payment absolved him from future engagements, notwithstanding that he had also entered for the three-year-old. It would take pages of this paper to describe the misunderstandings which have arisen, but in both the Occident and Stanford there is no chance for disagreement. In the former, \$25 must accompany the nomination, in the latter \$100. In the Occident if another \$25 is not posted on the first of January the first payment is forfeited, and in the Stanford \$100 has to go up on the same date to secure a continuation of the chances to contend. Ninety days before the time fixed for the race \$50 more in the Occident, \$100 in the Stanford, and at that time it can be definitely stated just how much money will be the reward of first, second and third. The Occident is under the control of the State Agricultural Society, and when the advertisement of the Stanford is published there will be a full account of the conditions. In this connection it may be as well to state that the second payment in the Stanford Stake, which closed on the first of January last, will be due and must be paid on or before the first of January, 1883, to N. T. Smith, Treasurer.

Next week we will publish a list of the nominations in that Stake so that the subscribers can be prepared. The second payment in the Occident is also due at the same date, Edwin F. Smith, Secretary of the State Agricultural Society, being the party to address. We have strayed away from the subject, though the digression was applicable, and return to the Stakes which close this year. Notwithstanding the phenomenal performances which were the great feature of 1881, we are of the opinion that the yearlings of 1882 are superior as a lot. There are very many which are well worthy of being named in the Stakes, and engagement will double their value.

We confidently anticipate a long list of names in both of these stakes.

CLOSE OF THE FALL RACE MEETING.

The Fall Meeting of the Pacific Coast Blood Horse Association came to a conclusion Saturday. That it was successful is conceded by every one who attended, and another bright chapter can be added to those that have preceded it. We have witnessed many race meetings and can safely say that in the whole range of twenty-five years experience those of this association have given the most satisfaction to the public. The confidence now so firmly established will sustain the future, and with the advent of "better times" the financial success will be such as to warrant more money in purses, larger additions to stakes.

The whole object of this association is the advancement of the breeding and racing interests, and every dollar beyond expenses will be expended to further these interests. The only salary is to be to the person who performs the duties of Secretary, and that is only a reasonable compensation for the work done.

We have alluded before to the labor performed by the President, Theo. Winters, but desire to emphasize it more directly. He has added a large amount of money to stakes, though the loss of time and the traveling expenses would aggregate a much larger sum. If necessary he would leave his business, however urgent, and come from his home in Carson Valley to attend the meeting of the Board of Trustees, and at the race meetings none were more active, and his judgment never at fault regarding the best course to pursue. It is rare good fortune to the association that owing to the excitement of election day, the annual meeting was allowed to lapse, so that his services are secured for another year. Had an election been held he would have insisted on being released and no matter how good a man was chosen, in the present state of affairs it would have been detrimental to the interest of the society.

Again we must repeat the encomiums heretofore given to Messrs. P. A. Finigan and Henry Schwartz. Their locality necessarily throws a great deal of work on them, and this was performed so thoroughly, freely, unselfishly that the labor was underrated by those who are not versed in the amount of work a race meeting necessitates.

We have been so very busy that it was out of the question to do any part of the work, and the duties of Trustee were also neglected. The gentleman, C. M. Chase, who has filled the place has done so in an eminently satisfactory manner, and not a solitary grumbler has found fault although the working members of the P. C. B. H. A. are worthy of high praise.

PRECIOUS.

We feel sure that another bright luminary has surmounted the horizon, and that the filly which won the Baldwin Stake, no mishaps befalling, will figure conspicuously in the annals of the sport. She has the "right to be a good one." By Lever by Lexington, his dam Levy by imported Trustee, grandam the dam of Vandal by imported Tranby, and running into the same family maternally as Lexington, what could be better? Then her dam was a daughter of Thnnder, a son of Lexington and Blue Bonnet, and the next dam was imported Siskiu by Muscovite, and her dam Little Finch by Hornsea, and then comes Hinda by Sultan. Muscovite was by Hetman Platoff from a Camel mare, and her dam Lady Elizabeth by Lottery.

The pedigree is a "cracker" and accounts for the manner in which Precious ran through the heavy mud, and came to the finish with ears "pricked." While admitting the high excellence of the game little mare we must not lose sight of the part her trainer, Henry Walsh, played in the fight. That he has not a superior in the profession has long been our belief, and when a distance of ground has to be measured we doubt if he has an equal, although there are others of recognized ability, and of as high rank as those in the East.

To successfully prepare a horse for a four-mile race requires a blending of the old and new schools, and those which commenced their education in the old and completed in the new are the most likely to excel. Matt Allen, Piggott, De Peyster, Albert and several others are well worthy of more than a passing notice.

OUR SANDWICH ISLAND CORRESPONDENT.

We are much gratified to number among our corps of correspondents George W. Stewart, who will, our readers, duly portend on what is going on in the sporting line in the "islands." Mr. Stewart is a thorough journalist, and his communications will be read with great attention.

LEX ON THE BOARD OF APPEALS.

The argument of our esteemed correspondent Lex, regarding the Status of the Board of Appeals, is beyond question correct. We never disagreed with him on this point, and in the curt indorsement our intention was not to take opposite grounds to Lex on that point. The application of the clause he mentions is the only difference between us, and the meaning of the clause (after February 1880 this provision will not include the privilege of the judges' stand) is the only point at issue. This we construe that members of the Board of Appeals cannot claim the right, formerly granted, to occupy the stand in company with the elected judges, but when a member has been selected to fill the position of Judge the rules do not forbid him doing so. There is a manifest impropriety in doing so, especially if the member is in his own district, and if he acts as such no fair-minded man would afterwards take part in the District

Board when appeals were taken from his decisions as judge of a race. The prohibition by a definite rule will be a wise provision, and when the next biennial meeting is held we will endeavor to have it adopted.

NATIONAL TROTTING ASSOCIATION,
District Board No. 5.
November, 27—1882.

Present. N. T. Smith, President J. McM Shafter. Member.

Upon hearing of objections to the rulings and decision of the Judges of the race for the Embryo Stakes trotted at Oakland, Nov. 13th 1882, and testimony relative thereto, the said Board have arrived at the following conclusions

The decision of said judges, as to the protest against Antevolo affirmed [to wit the protest against Antevolo is not sustained.]

The decision made in the three year old race, that Bonnie won the third heat and race is reversed, the said heat assigned to Frank Arnold, Bonnie second. Anteo third, and said Race is ordered to be concluded on Saturday December 9th.

We think further that judges in said race should have fined both the drivers of Arnold and Anteo for improper noise but this duty having been neglected this Board does not in this instance inflict the penalty.

All other questions are adjourned until Monday Dec 4--1882.

The judges as to the reversed ruling seem to have proceeded upon the ground that shouting and improper noise, constitutes foul driving within rule 48. We think to bring the case within the principle of the rules that the offence should have been one which affected some other horse which in this case did not occur.

Rules 47. 8. relate principally to the punishment of the driver, but the closing paragraph relates to the placing of the horse. The judges seem to have affixed a mitigated penalty instead of the second one of distancing, for foul driving. We think still further that there are no appeals in either of these cases, a protest is simply to prevent an act to be done, an objection which the objector is at liberty to follow up or abandon at pleasure subject to rule 16. The protestant should follow up an adverse decision by appeal.

We likewise are of opinion that this Board has the right to proceed as of original jurisdiction to enquire into any decision at any race made under the rule of the National Association upon any information properly influencing their discretion, and have in these cases assumed such jurisdiction.

We find as fact, that the so called Embryo Stakes, has a very imperfect if any organization and that after many subscriptions had been obtained, said subscriptions were turned over to the Breeder association, to take further subscriptions and collect stakes and that it was this last association under which said races were held. The only license under which such races were trotted, was to the Embryo Association. We regret that our jurisdiction should be put in doubt, by this uncertainty as to whether we are acting pursuant to the authority of the National Association. The remaining questions will be disposed of as above indicated.

N. T. SMITH, President.
J. McM SHAFTER Member

* The words inclosed in the brackets were interlined by Mr. Smith after Judge Shafter had written and signed the foregoing report.—ED. BREEDER AND SPORTSMAN.

THE KENNEL.

The Dominion of Canada Kennel Club are making arrangements for a bench show, to be held at Ottawa the coming winter during the session of the Canadian Parliament. They have secured the services of Mr. Charles Lincoln, whose success in managing the details of bench shows is too well known to need further mention. Arrangements are being made to secure a large entry of dogs from England. One of the board of directors, a gentleman with a large acquaintance among the sportsmen of Great Britain, will attend all the leading shows in that country in the interests of the club. In addition to the exhibit of dogs, the club desire to make a full exhibit of all kinds of sportsman's materials, and to that end will shortly issue a circular addressed to the manufacturers of such goods in the United States. They propose to attend to the customs duties upon all goods shipped them, place them in charge of competent men to exhibit and sell, if possible, making returns free of commission, and shipping back unsold goods in good order. As the residents of the Dominion depend largely upon American firms for their supply of guns and other material, and as they have no firms engaged in that branch of business, this scheme should meet with favor from our manufacturers. It will also tend to promote the harmony that already exists between the sportsmen of the two countries. The club will offer between \$1,500 and \$2,000 in premiums, and confidently expect a fine exhibit of dogs, and a large attendance of representative men from all parts of the Dominion. Some of our California coursing men should exhibit greyhounds. They would surely be prize winners.

ENGLISH COURSEING.—The South Lancashire Open Meeting for coursing was held October 17, and opened with the South Lancashire Derby, for dog puppies of 1881, with thirty-five starters. The stake was divided between Mr. T. D. Horusby's Hesketh Bank (Meols Boy—Helen Stanley), Mr. J. Blackburn's Boundaway (Achilles—Bounceaway) and Mr. G. Foxcroft's Joykin (Banker—Miss Hawkins). The South Lancashire Oaks, for bitch puppies of 1881, had thirty-one starters, and was won by Mr. A. Myers' Mendicant (Hardy—Minx). The Scarisbrick Cup, for all ages, had thirty-two starters, and was divided between Mr. F. Skinner's Sheffield Steel (Master Sam—Thropham) and Mr. J. Smith's Stormer (Blucher—Gaudy Mary). The Crossens Stakes, for all ages, had thirty-two starters, and was won by Mr. R. V. Mather's Meols Diamond (King of Diamonds—Sal o' the Mill). The Consolation Stakes, limited to eight dogs of all ages, was divided between Mr. R. S. Walker's Wright (Master Banrigh—Kennet Ale) and Mr. T. Graham's Glentakit (Misterton—Annie McPherson). At the Tamworth Open Meeting, held October 18 and 19, the Drayton Manor Stakes, for fifteen dogs of all ages, was won by Mr. S. P. Heatley's Hylan Prince (Highlander—Grace Cup); the Tweedale Stakes, for five dog puppies, was won by Mr. J. Bonnett's Benedict (Hylactor—Lady Jane); the Tamworth Stakes, for seven bitch puppies, was won by Mr. Byrne's Why! Dark Laura (Misterton—Helen); and the Bonehill Paddock Stakes, for eleven dogs of all ages, was divided between Mr. J. Parker's Worcester (Sir Arthur—Fly) and Mr. G. Ainge's Bagman (Recorder—Pulborough Lass).

HERD AND SWINE.

Holstein Milk Records.

Notwithstanding the fact that we, as well as other breeders of the Holstein cattle, have frequently published the yearly milk record of our entire milking herd, yet we almost daily get inquiries in substance as follows: What amount of milk can a choice, well-selected, nice-bred herd of Holstein cows be expected to average, etc.? This is not an easy question to answer definitely, as Holsteins, like all other breeds, vary more or less according to selection, breeding, family, etc. Certain families are more uniformly deep milkers and hold out better. Blood will tell in the dairy cow as well as in the race horse. This fact does not seem to be fully appreciated by dairymen generally. When this fact is more fully appreciated by dairymen in making selections, they will meet with more uniformly good success. We have in our herd this season nine three-year-old heifers (which include all the milking heifers of that age in our herd) which were all (except one which we bred) selected by us in Holland from dams with deep records and of the best breeding. The result we think fully justifies our belief that breeding is fully as essential in dairy cows as in any other class of stock. Most of them were imported in the fall as yearlings and dropped their first calves soon after coming out of quarantine, before some of them were two years old. As two-year-olds, although not acclimated, they milked remarkably, the highest record reaching 10,600 lbs. 13 oz. within the year. They all dropped their second calves during the last part of the past winter and spring, when nearly half of them were not yet three years old. The highest daily yield for the respective animals varies from 49 lbs. 4 oz. to 60 lbs., the highest daily average being 54 lbs. 12½ oz. The best month's record for each varied from 1,307 lbs. 11 oz. (one that was out of condition) to 1,733 lbs. 10 oz. Over half the number exceeded 1,600 lbs. in a month, the highest average being 1,561 lbs. 3 oz. Two of the number have not quite completed a six months' record, but the smallest milker for that time will go a little over 6,600 lbs., and the largest has made 8,703 lbs. 7 oz.; and the average will be, for the whole number, for the six months, a little over 7,500 lbs. Seven of these heifers were tested for butter late in the winter and early spring, on winter feed (the other coming in after our creamery was to full to admit of trial of single animals). The highest yield per week was 11 lbs. 8 oz. and the highest 14 lbs. 11½ oz., the average for the lot being 12 lbs. 12 oz. The butter was weighed after thorough working and before salting. These heifers were given only one trial of a week each, and two only one churning of four days; but we give the exact rate per week. Had we been able to give repeated tests, and had we fed for butter instead of milk, we think some of these better records might have been increased. It should be borne in mind that these better records were all made on winter feed, also that the above milk records include every milking three-year-old in our herd. Three of the lot are of the Netherland family.—*Smiths & Powell in the Breeders' Gazette.*

Changing Breeds.

It is not always good policy for the novice to start with too many breeds in the beginning. One may keep sitters and non sitters at the same time but until he becomes thoroughly posted in the cultivation of pure bred poultry two breeds at one time are enough. Too often we see young fanciers indulge in the habit of changing the breeds of their first choice for others before they have fairly tested their qualities and quit them for something else no better, perhaps not so valuable, with nothing to guide or prompt them except the words of interested breeders who claim for their fowls transcendent merits, if they are to be believed.

Now, whatever may be said or written about pure bred fowls the majority of amateurs will have a first choice either in contemplation or in the beginning as they start out. Some will choose fowls of a certain color of plumage, because it suits their fancy or taste; others will have nothing but pure white or black plumaged birds, and many prefer variegated colors or tints in preference to all others.

We frequently see those whose tastes run to size or diminitiveness, and others to grotesque appearance or oddities. Taste is capricious with some, and in others it is permanent and unyielding. We are not willing to blame poultrymen for diversity of taste, when the example is set us by Dame Nature, who gives us such diversified beauty in the objects of the featherly creation. But the object of our suggestion as we set out is to advise young poultrymen to avoid the see-saw habit of changing breeds for some trivial reason, and to urge them not to keep a half-dozen or more varieties about them at the same time until they have thoroughly mastered the necessary knowledge and experience of keeping poultry in separate flocks.—*Poultry Monthly.*

The Traveling Dairy.

It is refreshing to read of the journeys and lectures of a traveling educational dairy through parts of Ireland, including districts from which we have had horrifying accounts of boycotting and butchery. The staff consisted of a lecturer (an Englishman) an Irish dairyman, John, in neat white jacket, and his wife, Ellen, in a dainty holland dress, both well gifted with brogue and bright in looks. They were aided at times by "pretty Maggie Doyle," a deft handler of the pats of butter, which were made large or small in proportion to the demand and sold at the rate of two shillings per pound. The churn and other utensils were, of course, of the most approved pattern, and each day about sixteen gallons of cream were worked up morning and evening, the lecturer explaining the reasons for each step, and especially for the divergencies from old customs. Cleanliness and system were the foundation rules. A very interesting part of the proceedings everywhere was the conversation allowed after the lecture, and curious were many of the questions asked. The explanations and practical illustrations seemed to be well appreciated and observed with intelligent interest. The dairy was invited to many different places by some of the large landlords.—*New York Tribune.*

In the last fourteen years the number of sheep in Iowa has shrunk from 1,354,600 to 435,560 a loss of 67 per cent. Lack of proper shelter and food in winter, of fences to enable farmers to keep small flocks, and the ravages of the wolf and his congener, the ubiquitous dog, are the chief causes of the decline of the most important branches of farming.

The Shorthorn herd owned and lately sold by Earl Beauchamp, Madresfield Court, Malvern, were noteworthy dairy stock. At a show a pair of cows gave twenty-three quarts before the judges. At the sale ninety-six animals averaged \$168, which was considered very satisfactory.

In fat animals seventy-five to eighty-five per cent. of the total ash constituents are found in the bones.

The Meat Supply.

The alarming discovery that the meat supply of the Pacific coast is failing, so much so that at least one San Francisco slaughtering firm is about importing cattle by the car-load from Chicago, is attracting attention to the subject of improvement in the breeds of cattle. The rapid appropriation for grain-growing of the vast ranges which have been devoted to cattle-raising on this coast, together with the natural and steady increase of manufactures and the consequent demand for food for operatives, may be set down as the principal causes for this shortage in meat. The shortage is not owing to any season of drouth, nor to any disease having swept off our stock, but to the above causes, and therefore cannot be treated as a temporary affair likely to disappear in a year or two. We may as well look the fact in the face that the meat shortage is a condition of affairs that has come to stay. As a result prices of meat will be higher; following this there will be a reduction in the per cent. of meat to vegetable foods consumed. The food of this coast has hitherto been more largely animal than of any other part of the Union. Probably one-third more beef and mutton per head of population is eaten in California than in Massachusetts. The tendency of density of population is toward vegetarianism in diet. And in proportion as meat becomes less a principal article of diet and more a semi-luxury, the demand for the best quality increases. The *North Pacific Rural Spirit* says:

There is not a civilized country under the sun that is not manifesting a deep interest in the question of meat supply. This is not unnatural, but on the other hand is in perfect keeping with a wise and comprehensive view of domestic economy. The progress of civilization is much more rapid than the unthinking people imagine. The progress, too, is in more ways than one, and each line of advancement, it may be said, tends to effect the same thing, and so effecting, necessarily tends to produce the same results. The world is fast being peopled and in consequence of this the public domain is rapidly becoming occupied. This lessens cheap supply, because as the public domain becomes settled, lands are enhanced in value. This cuts off the cheap herd system of live stock production. Lands that have for many years produced but one common beef animal to each four or five acres, are now worth \$10 an acre to grow wheat and other productions upon. As a consequence the cheap meat supply is curtailed, and to supply the demand (a better word, however, is necessity), meat must be grown that costs much more, and so much more that the general consumer is becoming alarmed, while, as a consequence, the wise producers are inquiring how they can best grow the supply. Civilization, however, is changing from a lower to a higher grade. The ways and customs of our forefathers are things of the past. A better article is required, and this applies as much to eatables as wearing apparel, or vehicles or implements, or to the houses that we live in, or to the furniture that fits them up. The scrub, grass-fed animals may be used for a while yet, but no longer than the demand lasts for canned meats for the poorer classes. The butcher's block must be supplied with meat that presents the trade mark of domestic feeding. The writer of this article becomes more than ordinarily interested when discussing this subject, for he is a witness as to what was but a few years ago thought to be an everlasting range here in the West. Two-thirds of the Willamette valley was covered with the best natural grass ever looked upon, while from the Missouri river to the Cascade range of mountains was one great and grand pasture. It is either fenced up now and the land producing wheat or it is grazed off to the extent that we must admit that the range will last but a few years longer. The story is not half told. Greely's words "go West" are about to be fulfilled. This country is to be peopled not with pioneers from the West, but from the older countries and states, where for years they have been accustomed to beef that was produced by a wise system of feeding in place of beef taken from the range and slaughtered whether fat or lean. With these facts before us we submit that the question is one of very great importance. By another year the cattle men, not the present kind of cattle men exactly, but butchers, will be coming into Idaho and Eastern Oregon by the way of the Short Line Railroad, while the same class will be coming into Western Montana, Eastern Washington and Oregon by way of the Northern Pacific Railroad. These men will want fat beef cattle; beef that will do well for the Eastern cities without having first to be taken East and stall-fed. But then we must bear in mind that with these buyers will come immigration that will want breeding stock, and the people will want improved breeds and no others; if we have them, they will buy, but if not, they will import them. At this point we would ask our breeders to stick a peg, for this state of affairs is calculated to operate to advantage if we have the quality of stock, for in this case the new comers can be supplied with breeding stock, while we will be prepared to furnish such beef as will suit the demand of those that will eat but the best. But suppose we have no breeding stock to sell to the new comers, and they are compelled to import breeding stock, they will, before our breeders can change off the scrubs for a better class, become the suppliers to the markets that many here are now expecting to supply. We are almost ashamed to urge the adoption of a course that is so plain. There are but three ways of improving stock, namely: by breeding the best, feeding and care. The improvement of meat animals is not so much of an undertaking as the improvement of horses. Good blooded males in the line of cattle, sheep and hogs can be purchased cheaper than stallions, and they are used for propagation at earlier ages. These advantages make their introduction cheaper than the introduction of horses. Then, again, the care of stallions is much more than is required of other breeding males.

OVERFED PIGS.—The *Irish Farmers' Gazette* says: When young pigs are sick it may be pretty certainly understood that they have been overfed. The general treatment of pigs seems to be based upon the idea that they are naturally greedy and gluttonous animals, and that this habit should be encouraged as much as possible. Hence all the diseases which so frequently affect pigs. When a young pig is a tender animal, his stomach is not much larger than that of a human infant about as old, and yet people will cram the little creature with sour slop, grease, milk and corn meal until it can swallow no more. And when the pig is sick one wonders what is the matter. We do not feed lambs or calves, or colts, in that fashion, hence these are rarely diseased. Cough and difficulty of breathing is caused by indigestion, and the common disease of which partial paralysis of the hind parts is the chief symptom, and which is cerebrospinal meningitis, is caused by indigestion and mal nutrition, which cause disturbance of the circulation and congestion of the brain and spinal marrow, with loss of nervous power. The treatment is to give a dose of salts and one scruple of saltpeter daily afterwards, and feed very sparingly.

A tax of five shillings per head of cattle is imposed on the stockmen in Melbourne, Australia. They naturally seek the repeal of the oppressive law.

Why the Difference.

"Well, Mr. Smith, I am out this morning to see if I can find a few fine beef steers. I heard you had some that you desired to dispose of."

"Yes, sir; I have ten or twelve, and they are what I call much above the average. They are three, four and five-year-olds; in good condition, and I believe they will pull down 1,000 pounds each."

"Mr. Smith, what would you think if I were to tell you that I had just bought and paid for ten head of nice yearlings and two-year-olds that average 1,200 pounds?"

"Well, sir, I would travel some distance to see such a lot."

"Well, come along with me, it will not take us over an hour and a half to reach the spot."

"Are you in earnest? Have you cattle that will average 1,200 pounds, they being yearlings and two-year-olds?"

"Certainly I have. Here are the weights:"

4 yearling steers.....	4,000 lbs
2 " " heifers.....	1,600 lbs
4 two-year-old steers.....	6,000 lbs
Total.....	11,600 lbs

"What kind of cattle are they, my friend?"

"They are three-quarter Durhams."

"Well, what are such cattle worth?"

"I paid \$7 50 per hundred for them."

"Do you want to see mine?"

"Yes, I will look at them. What breed are they, Mr. Smith?"

"I don't know sir. They are from cattle we have had in the family ever since I can remember."

"Good morning, Mr. Smith."

"Don't you want to buy them?"

"At what price?"

"Why, \$7 50 of course; that's what you said you pay!"

"Mr. Smith, look here. I have the latest—the very latest—Chicago prices current, which reads, 'Choice to fancy, \$8 25.' That is the kind I have bought. Your stock comes under the head of 'Lower quality or common steers,' and you see they are quoted at '\$3 75@ \$4 00.'"

The above is one way of presenting a reality. Any breeder of stock who will take pains to read the Eastern market reports will see that there is just the difference between inferior to common steers and choice steers as cited above; and yet hundreds of people go right on raising the common stock.—*Exchange.*

Berkshire Standard of Excellence.

In a note to the *Breeders' Gazette* "J. L. H." says: "To settle a dispute please publish a scale of points by which to judge Berkshire hogs—how many points, where located on the hog, and how to proceed to judge by points. What form should a hog have to be a perfect Berkshire? I contend there is a standard scale."

In reply that paper prints the following:

In Vol. II of the "American Berkshire Record" will be found the following standard of excellence and scale of points adopted by the American Berkshire Association:

Color—Black, with white feet, face, tip of tail, and an occasional splash on the arm.....	4
Face and snout—Short; the former fine and well dished, and broad between the eyes.....	7
Eyes—Very clear, rather large, dark hazel or gray.....	2
Ears—Generally almost erect, but sometimes inclined forward with advancing age; medium size, thin and soft.....	4
Jowl—Full and heavy, running well back on neck.....	4
Neck—Short, and broad on top.....	4
Hair—Fine and soft, medium thickness.....	3
Skin—Smooth and pliable.....	4
Shoulder—Thick and even, broad on top, and thick through the chest.....	7
Back—Broad, short and straight; ribs well sprung, coupling close up to hip.....	8
Side—Deep, and well let down; straight on bottom line.....	6
Flank—Well back, and low down on leg, making nearly a straight line with lower part of side.....	5
Loin—Full and wide.....	9
Ham—Deep and thick, extending well up on the back, and holding thickness well down the leg.....	10
Tail—Well set on back, tapering and not coarse.....	2
Leg—Short, straight and strong, set wide apart, with hoofs erect, and capable of holding good weight.....	5
Symmetry—Proportioned throughout good, depending largely on condition.....	6
Condition—In a good healthy growing state, not over fed.....	5
Style—Attractive, spirited, indicative of thorough breeding and constitutional vigor.....	5

100

Imported Cattle.

The steamship *Greece* of the National line, which arrived on Saturday evening, brought a large consignment of thoroughbred stock, the property of Mr. T. S. Cooper of Coopersburg, Pa., consisting of ninety-eight head of Jersey cattle, thirty-six Oxfordshire down sheep and some Berkshire pigs. Considering the rough passage the stock arrived in excellent condition and there was not a single casualty to report. Mr. Cooper is well known in connection with the Jersey furor, and at the sale of his stock held at the American Horse Exchange on the 4th of last month the bull Sir George was sold for \$5,100, while thirty-five of the prized Coomassie strain averaged \$910 each. The present consignment of cattle was purchased prior to the news of that sale having reached the Channel Islands, but yet so great has been the demand for choice stock that Mr. Cooper had to give large sums for the more valuable animals. One of the cows, Khedive's Primrose, two years old, is stated in the *London Live Stock Journal* to have cost \$5,000, which is the largest sum ever paid on the island. The herdsman was unable to give a full list of the Jerseys, but stated that nine were sired by Khedive and three by Vertumnus, both sons of Coomassie; nine by Guy Fawkes, two by Royalist and a number by Sir George, Cicero and other noted bulls. All together about two-thirds are of the Coomassie family. The Jerseys will be taken to Coopersburg and there quarantined for the usual ninety days. The Oxfordshire downs were a fine level lot of sheep—two rams and thirty-four ewes—and were from the noted flocks of Messrs. John Tredwell and Street. They were shipped to their destination last night and the Jerseys go on to-day.

The composition of cow's milk is affected by various circumstances; under extreme conditions it may contain from ten to fifteen per cent. of dry matter. The milk is poorer when the quantity produced is large, or the diet insufficient, and richer when these conditions are reversed. A cow is generally in full milk from the second to the seventh week after calving; after this period the milk gradually diminishes in quantity, but increases in richness. A separation of cream takes place in the udder; the milk first drawn is poor in fat, the richness increasing as milking proceeds, the last drawn milk containing two or three times as much fat as the first drawn. The milk of old cows is commonly poorer than that of young ones.

Creamery Outfits.

Where it is only intended to handle the cream from a certain quantity of milk for butter making, the lists below will be found to comprise all the articles absolutely required, with the exception of the boiler required for making steam to warm the cream-tempering vats in cold weather.

To handle the cream from milk of 50 cows for butter-making alone: One 100-gallon cream tempering vat; one 150-gallon revolving box churn, to run with hand or power, as desired; one factory size hand butter worker; two butter ladles; one 240-lb. Union counter scale with platform and tin scoop; two 14-quart iron clad pails; one 1-gallon dipper.

To make butter from cream of 100 cows: One 150-gallon cream tempering vat; one 200-gallon revolving box churn, to run with hand or power; one factory size hand butter worker; two butter ladles; one 240-lb. Union counter scale with platform and tin scoop; two 14-quart iron clad pails; one 1-gallon dipper.

From cream of 150 cows: One 200-gallon cream tempering vat; one 250-gallon revolving box churn; one factory size hand butter worker; two butter ladles; one 240-lb. Union counter scale with platform and tin scoop; two 14-quart iron clad dairy pails; one 1-gallon dipper.

From cream of 200 cows: Two 150-gallon cream tempering vats; one 300-gallon revolving box churn; one factory size hand butter worker; two butter ladles; one 240-lb. Union counter scale with platform and tin scoop; two 14-quart iron clad tin pails; one 1-gallon dipper.

From cream of 400 cows: Two 300-gallon cream tempering vats; one 300-gallon revolving box churn, to run by power; one power butter worker; two butter ladles; one 240-lb. Union counter scale with platform and tin scoop; two 14-quart iron clad tin pails; one 1-gallon dipper.

From cream of 600 cows: Two 300-gallon cream tempering vats; two 300-gallon revolving box churns, for power; one power butter worker; two butter ladles; one 240-lb. Union counter scale, with platform and tin scoop; two 14-quart iron clad dairy pails; one 1-gallon dipper.

Cream tempering vats are made of all sizes. They are also complete cheese vats and may be used for cheese making if ever needed for that purpose. They are so constructed that cold water can be run around the tin vat in summer to cool the cream, and steam run on in cold weather to warm the cream, thus tempering it evenly and ripening it for churning as quickly as desired. It is a well established fact that cream should not be churned until slightly sour to obtain best results.—*Prairie Farmer*.

Judging Fat Cattle.

Three classes may be supposed to have a direct interest in fat cattle—breeders and feeders, butchers and the consumers of beef. These will not have exactly the same standard. The feeder naturally prefers the animal which will make the largest return for the food eaten and the labor expended. The butcher desires the animal which will have the least waste—the greatest percentage of salable product. The consumer cares little so that he can get good beef, without an excess or deficiency of fat. The butcher may give his preference to an animal which has not been so profitable to the feeder as a somewhat coarser steer, with more offal. Admitting this difference in standard of judgment, it is still true that there are common sense principles governing the selection of beef animals. We name a few for those new in the business. We look for an animal which has made good use of a large quantity of food—converting it mainly into good salable product. We can not dispense with head, feet, legs, tail, etc., but we want these as small as is consistent with their serving their proper purposes. Coarseness in these is also indicative of coarseness in all bones. We look for the most meat in the best places. The top half of a beef animal is worth more than the bottom; the back than the front. Heavy necks, excessive development of pannor or brisket, shoulders heavy and hind quarters light—these we all count undesirable points.

The old statement that the side view of the body of a fat steer, excluding head, neck and legs, should be as nearly as possible a parallelogram is a good one. Length is desirable, but usually the failure will be in depth rather than in length. Behind and before we should also have a near approach to a parallelogram, especially as seen from behind or at hips. It is more important that the top line should be straight than that the bottom line should be so. A well-filled flank is desirable but not so important as thickness of meat over the loins and back of the shoulders.

We may help our judgment by carefully considering the general appearance of the animal. A compact, symmetrical form, with shortish neck, short legs, well placed, good length from hip to rump, fully developed "round;" in general, broad, low, deep, well rounded body is every way preferable to the opposite qualities. Yet we may have too much of a good thing. "Pony built" steers are not always the best. An inch or two extra length of leg may be easily counterbalanced by some more important quality.

The quality of the beef can not be certainly told while the animal is living. "Handling" quality will help us to form a correct estimate. Given a bright, healthful look, an abundant coat of soft, bright-looking hair, we want an animal with flesh evenly laid on, free from all patches or lumps of fat; a hide of medium thickness and softness, and flesh free from hardness and harshness on the one hand and from a soft, yielding, blubber-like feeling on the other.

The degree of fatness can not always be told by simply looking at the body. The rump bones well covered with fat, the scrotum broad and full, the neck well filled out, so that it is difficult to point out its line of union with the body, are indicative of a heavy coat of fat.

There are many nice points difficult to explain. Good judges may be decided in their preference for different animals. There are minor distinctions in judging males and females. There are special breed characteristics which assume undue importance to the admirers of each breed. But oftentimes the first good "all around look" at a lot of animals will enable one to give a correct judgment as to their relative merit. In acquiring this art, as in most others, long-continued practice—better if under guidance of a good teacher—is the surest means of becoming proficient. For this purpose, the Fat-Stock Show is the best school in America.—*The Breeders' Gazette*.

C. W. Garrett, Enfield, N. C., writes the Department of Agriculture that his experience with ensilage has been of a general nature. He has used pea vines chiefly, because in his early experiments he found his stock preferred them to any other material, and they were easily and cheaply produced. With the system of ensilage he claims to be feeding his stock at much less cost and trouble than ever before. His cattle perform their work and keep in much better condition than when fed on hay and fodder.

HIGH PRICED JERSEYS.—The creme-de-la-creme of imported Jersey cattle were sold as we have already announced in New York a week or two ago. It was reported by one of the papers as follows:

At the late sale of Mr. T. S. Cooper at New York city, 76 head of cattle brought an average of \$624, the highest average ever attained for so many Jerseys at a public sale. Col. H. S. Russel, Home Farm, Milton, Mass., secured the bull, Sir George, winner of first prize over the Island in 1880 and 1881, at \$5,100, the highest price ever made by a Jersey at public or private sale; Mabel 2d by Coffee, son of Coomassie, sold for \$2,200, and goes to Home Farm, Cicero, winner of first prize on the Island in April last as a two-year-old, was sold to W. H. Wilkinson of Holyoke, Mass., for \$3,100.

In animals that will sell for such prices there certainly must be some outcome, high though the prices are.—*Live Stock Journal*.

SALE OF CHOICE CATTLE.—A draft from the Hereford and Polled Angus herds of M. H. Cochran of Hillhurst, Quebec, Canada, was sold at auction at Dexter Park, Chicago, Nov. 22, and thirty-one Hereford and thirty-eight Angus were disposed of for a total of \$32,960. The Herefords averaged \$375, and the Angus, females \$664, males \$407. The Polled cattle were just out of quarantine after importation.

To ascertain the weight of cattle the following general rule will be of service to stockmen: Measure in inches the girth around the breast just behind the shoulder blade, and the length of the back from the tail to the shoulder blade. Multiply girth by length and divide by 114. If the girth is less than three feet, multiply the quotient by 11; if between three and five by 16; between five and seven by 23; between seven and nine by 31. If the animal is lean, deduct one-twentieth from the result, or take girth and length in feet, multiply square of girth by length, and multiply the product by 3.36. Live weight multiplied by 1.06 gives net weight—nearly.—*Live Stock Journal*.

There is a real basis for the high prices of pedigree stock, whether sheep, cows or horses. It may seem absurd to pay \$200 for a ram that weighs little more than 100 pounds; but if the progeny of this ram will shear eight to ten pounds of wool while common sheep average from five to six pounds, with the same cost of keeping, the use of the pedigree sheep as a breeder will pay heavy interest on much more than his increased price. It is not every farmer who can breed fancy stock with profit, but there is none who cannot improve his herds by the use of the best male parentage.—*Chicago Tribune*.

Stock-raising and feeding in the Northwest Territory has proved a success. In the spring of 1881 Wyld & Rourke wintered seventy-five cattle from the United States on the north side of the Saskatchewan. They were pleased with the results, and will carry as many more cattle through next winter.

POULTRY.

Chicken Chat.

We have been so busy getting ready for winter that we have had no time to attend to other people's business, but now that our chickens are all snug we feel like looking around and telling other people what they ought to do; so here we are again, ready to talk about poultry, answer your conundrums and make ourselves useful generally.

Let me see, Mr. Editor, didn't you say something about "seasonable suggestions?" Well, if you can find anything just now that is more seasonable than getting ready for cold weather, we would like to have you mention it. We have had a lovely, lingering fall, and the fowls have evidently appreciated it, for the early pullets have been laying this two months, the old hens have kept pretty steadily at work, and the late hatched chicks have been growing like weeds. But this pleasant weather will not last forever; one of these days, just when you get ready to quote the "oldest inhabitants," an "Arctic wave" will come along and freeze everything right up solid. So we advise the poultry keepers, who have not already prepared for cold weather, to set about the work without delay. Go right to work and make the hen house as comfortable as possible. There's no use talking—a comfortable house goes a long way towards inducing hens to perform their duties in the egg line. You may have the finest lot of early pullets in the State, but if you compel them to roost out of doors, or in a shed where the wind, rain, snow and cold can get in without going round to the door, they won't lay one bit better than the scraggiest old hen on the premises. Mend the leaky roofs; no decent hen likes to sleep under a miniature shower bath. Mend the broken glass in the windows; and while you are about it, it would be a good plan to wash those windows—hens like to see daylight once in a while. Batten the cracks and line the inside of the house with building paper. Air is a good thing, but no hen who has any regard for her health want to roost in front of a crack big enough to let in a small hurricane. And if the house is so situated that the wind can blow underneath, bank it up—the house, not the wind—it will add vastly to the comfort of the fowls.

Examine the perches, nests, and likewise the fowls, and if you find lice, have a general clearing up before that Arctic wave gets along.

When your house is ready get the young fowl-stock out of the trees and put them under cover. Don't go out with a pole and beat about the trees and yell enough to raise the neighbors two miles away; but wait until it is quite dark, then take a ladder and an assistant, go quietly into the tree, secure the fowls and carry them to their quarters. If you happen to lose one don't chase it all over creation and frighten it out of a month's growth, just let it go and try again the next night. Keep the fowls in the hen house for several days, and the first time you let them out open the doors only an hour or so before sunset; in most cases every last chicken will return to the house to roost.

Look out for those late hatched chickens; if well fed and provided with a comfortable place to live in, they will grow right along, and the pullets will be ready to lay next spring, just when your early pullets are taking a rest; while the males will make first class market birds in March.

If you intend to buy any fowls to "improve" your present stock, buy now; you can buy cheaper than in the spring, and besides it is a wise plan to have the fowls together long enough to get acquainted, before the breeding season begins.

When you sell off the turkeys don't sell all the largest and keep only the small, late-hatched broods. Before you sell or kill a single turkey, select the very best for the next season's breeding stock. Sometimes it is good policy to keep the late turkeys through the winter and send them to market in March. They will grow right through the winter, and turkeys, good ones, always command a good price during the latter part of February and in March.—*Fanny Field in Prairie Farmer*.

The Inspection of Eggs.

Many a housewife in this vicinity has expressed her surprise when purchasing fresh eggs from the market, and being in total ignorance whence they came, that they were so uniformly perfect and gave no signs of decay. The old joke of "spring chickens" in the eggs at boarding houses and hotels has also gone out of date and people now buy and eat of this favorite food with perfect confidence that it is fresh and wholesome. This state of affairs has been brought about by the custom, which has been universally adopted, of inspecting each egg separately by the dealers, and rejecting all that show the least sign of not being perfectly fresh.
